The accompanying illustration shows the sample car built by the Eastern Car Co., New Glasgow, N.S., on an order for 1,000 4 wheel freight cars for the French State Railways, the contract for which was given in June, 1915, its execution having been held up owing to impossibility of getting material. It is however hoped to make shipments shortly. These cars are of material to C.P.R. specifications, with the exception of the screw coupling, drawbar hook and all springs, which are to a modified French specification suitable for American practice, especially regarding tests. All rolled shapes of American standard are inter-

Length over end sills.....23 ft. 11 $\frac{3}{4}$ ins.
Length inside.....21 ft. 7 $\frac{7}{8}$ ins.
Width inside.....8 ft. 2 $\frac{7}{16}$ ins.
Height from top of rail to top of cabin 11 ft. 4 $\frac{1}{2}$ ins.

Canadian Government Railways Mileage, Operation, Etc.

The acting Minister of Railways, in discussing the Department estimates for the current financial year in the House of Commons recently, said: The mileage of railways operated by the Government is as follows:—

Intercolonial Ry.	1,457
Prince Edward Island Ry.	272
National Transcontinental Ry., Moncton to Winnipeg	1,804
Lake Superior Branch, G.T.P.R.	188
New Brunswick & Prince Edward Island Ry.	36

traction, stronger bridges, and other facilities, if we could get an increased share of freight business, we could handle it successfully and make a much better showing. We have been able to get that extra business, and have been able to handle it with a very slight increase of cost in operation. To put it in concrete form, our gross earnings at the end of Dec. 1915, were increased by \$1,191,000, while the increase in working expenses was only \$43,000. Having given particulars of items in which economy had been made, the acting Minister gave the following statement of the operations of the I.R.C. for the year ended Mar. 31, the figures for Jan., Feb. and March being estimated:—

Actual earnings to Dec. 31, 1915...\$10,613,264.99
Estimated for Jan., Feb. and Mar.,

changeable with the French as far as possible, and the side end stakes and floor stringers are of French section. The siding, ending and sheathing for cabin is of yellow pine, and the floor and cabin framing of oak. The buffers are of cast steel, and the brake of the usual clamp type with counterweights operated from the cabin. Brakeshoes are of cast iron with trussed type brake beam; journal boxes of malleable iron with drop forged wedges, lead lined bearings and special oil lubricator. The wheels are of solid forged steel, interchangeable with the French wheels of spoked type, and are on French type axle with journals 140 by 250 m.m. Following are the chief dimensions:—

Length over buffers.....27 ft. 8 $\frac{5}{8}$ ins.
Wheel base.....11 ft. 9 $\frac{1}{2}$ ins.
Width over side steps.....10 ft. 9 $\frac{1}{2}$ ins.

Canadian Built Freight Car for French State Railways.

International Ry.	112
Dartmouth to Deans Branch.....	67
Quebec & St. John Valley Ry.	124

Total 4,057

"The operation of these lines is under the direction of one General Manager, with two general superintendents, one for the Intercolonial and its branches, and the other in charge of the National Transcontinental and the G.T.P.R. Lake Superior Branch. During the present year the Intercolonial has received its share of the increased business enjoyed by railways generally, so much so that the result has been that the current year will be the best in the history of the road. The Minister of Railways has always been of the impression, and I concur with him, that, with the staff at present operating the road, and its good roadbed, increased

1916.	3,800,000.00
Total	\$14,413,264.99
Actual expenses to Dec. 31, 1915.....	\$ 8,896,754.84
Estimated expenses for Jan., Feb. and Mar., 1916	3,360,000.00
Transferred during year to renewal of equipment account.....	600,000.00
Rail renewal account.....	400,000.00
Fire renewal account.....	100,000.00
Total	\$13,356,754.84

Showing a surplus of.....\$ 1,056,510.15

Following are the traffic statistics:—

	Tons (revenue) and passengers moved.	
	Passengers Number.	Freight Tons.
1913-14	3,983,511	5,287,740
1914-15	3,613,371	4,539,002
Decrease	370,140	758,738

Tons (revenue) and passengers moved one ton mile:

	Passengers Number.	Freight Tons.
1914-15	176,189,749	1,189,017,914
1913-14	159,843,276	970,395,253
Increase	16,346,473	218,622,661

	Passengers Number.	Freight Tons.
1914-15	3,234,202	5,893,003
1913-14	2,355,268	4,869,879
Increase	878,934	1,023,124

In regard to the Prince Edward Island Ry., the acting Minister said: "Up to Nov. 30, 1915, we have succeeded in reducing the operating expenses nearly \$34,200. The earnings, however, were \$8,700 less than for the same period last year. The deficit on this road this year as compared with the same period last year, has been reduced \$25,500, and unless winter conditions are severe the same relation should continue until the end of the year. Last year the deficit in the operation of this road was \$182,731.53."

Referring to the operation of the National Transcontinental Ry., the acting Minister stated that a service was placed in operation on the line from Superior Jct. to Quebec, June 1, the G.T.P.R. Lake Superior branch having been leased from that company May 15. The G.T.P.R. operated the line from Winnipeg to Superior Jct., and the Lake Superior branch as agents of the Government until July 1, when the Department took over the entire operation of the lines, the G.T.P.R. employees being retained. The terminals at Transcona were made joint terminals between the National Transcontinental and the G.T.P.R. and the latter company's locomotives are repaired in the Transcona shops at cost, plus 10%. A daily through westbound freight service between Cochrane and Winnipeg was started in August, which gives an average of 15 paying loads a day. A daily passenger service is given between Quebec and La Tuque and between Levis and Monk. Bi-weekly mixed trains are run between La Tuque and Cochrane, and tri-weekly mixed trains between Moncton and Chaudiere, and as many freight trains are run as the traffic requires. From early in September to the end of the season of navigation, 26,173 cars of grain were delivered at Fort William, which is about two and one-half times that handled last year under G.T.P.R. operation. To relieve the grain blockade at Fort William and take advantage of elevator space at Quebec and Montreal, an emergency freight rate which would compare favorably with lake and rail rate was put into effect, under which the National Transcontinental undertakes to handle grain from Armstrong (the geographical position of which corresponds with Fort William) to Quebec and Montreal at 6c a bushel. A considerable amount of traffic is being arranged for in this way. To relieve the Fort William situation further, grain is now being hauled from Fort William to Atlantic ports, which requires a back haul to Superior Jct., and in this way 50 cars of grain a day are being moved."

The N.T.R. gross earnings to Dec. 1, were \$2,962,113.40, and the operating expenses \$1,975,994.36 to which must be added the rental of the Lake Superior branch for seven months, \$350,000, showing a deficit of \$30,000 to that date. The reports received since indicate that the traffic handled during December gave a small surplus. For the remaining three months of the fiscal year to Mar. 31, deficits are to be expected.

James A. Allan, formerly a director of the Allan Line Steamship Co., at Glasgow, Scotland, died there Apr. 17.

Railway Land Grants Extended by Quebec Legislature.

The Quebec Legislature has extended for four years the time for earning lands granted in aid of railway construction as follows:

Argenteuil Ry.—2,000 acres a mile for line from the Grenville Canal in Grenville Tsp., in the direction of Arundle, 15 miles. (June, 1912, pg. 299.)

Canada & Gulf Terminal Ry.—3,000 acres a mile for line from Matane to Gaspé Basin, 190 miles. (Dec., 1914, pg. 545.)

Canadian Pacific Ry.—2,000 acres a mile for line from Waltham station to Creuse River or Ferguson Point, 20 miles.

Caughnawaga to Dundee, Que.—2,000 acres a mile for line from Caughnawaga, Que., near Adirondack Jct., on the New York Central Rd. to St. Jean, and on to Dundee, Huntingdon County, 60 miles.

Chaudiere Jct. to Sherbrooke, etc.—2,000 acres a mile for line from Chaudiere Jct. to Sherbrooke, 120 miles, with a branch from St. Agathe to Lyster, 10 miles, and another branch from St. Agathe to Black Lake, 30 miles. (May, 1912, pg. 238.)

Grand Lake & Bell River Ry.—2,000 acres a mile for line from National Transcontinental Ry. at Bell River to Twenty-one Mile Bay on Grand Lake, Pontiac County. (Nov., 1912, pg. 557.)

Great Northern Ry.—2,000 acres a mile for line from St. Sauveur to St. Jerome, 15 miles; and to the C.N.Q.Ry. 3,000 acres a mile for 16 miles of line in Montcalm County; 2,000 acres a mile for 65 miles from near Montreal to a junction with the C.N.Q.Ry. near Grenville; 2,000 acres a mile for 82 miles from Quebec to Garneau Jct., with a five mile branch to the Quebec bridge, and a 7½ mile line from Limoilou to the Montmorency River.

Ha Ha Bay Ry.—2,000 acres a mile for line north of Chicoutimi, 4 miles, and a 12 mile line through Laterriere towards Lake Kenogami. (See Roberval-Saguenay Ry., April, pg. 139.)

Indian River Ry.—3,000 acres a mile for line from north end of Lake Megantic to the International Boundary, 19 miles. (May, 1912, pg. 238.)

Interprovincial & James Bay Ry.—4,000 acres a mile for line from the present C.P.R. terminus at Gordon Creek to Ville Marie, 50 miles.

James Bay & Eastern Ry.—4,000 acres a mile for line from Roberval westerly towards James Bay, 30 miles.

Joliette & Lake Manuan Ry.—4,000 acres a mile for a line from Joliette in the direction of Lake Manuan, 60 miles. (Feb., pg. 49.)

Kamouraska & L'Islet Ry.—2,000 acres a mile for line from River Ouelle wharf on the St. Lawrence River to the National Transcontinental Ry. at St. Perpetue, 25 miles.

Little Nation Ry.—3,000 acres a mile for line from Cheneville to Lake Nominig near the C.P.R., 30 miles. (July, 1913, pg. 331.)

Metabetchouan Ry.—1,000 acres a mile for line from Lake Audette to St. Andre, on the Metabetchouan River, 13 miles.

Napierville Jct. Ry.—2,000 acres a mile for line from St. Constant to the International Boundary, 27.25 miles. (See Delaware & Hudson Co., Jan., pg. 11.)

North Ry.—2,000 acres a mile for line

from Montreal to the National Transcontinental Ry., 837 miles west of Moncton, N.B., 200 miles; and 5,000 acres a mile for line in extension of the above to the mouth of the Nottaway River, on James Bay, 300 miles. (May, 1915, pg. 171.)

North Shore Power, Ry. & Navigation Co.—3,000 acres a mile for line from Seven Islands Bay to Clarke City on St. Marys River, 15 miles.

Northern Colonization Ry.—3,000 acres a mile for line from Mount Laurier, 100 miles, in the direction of Lac des Turges.

Orford Mountain Ry.—2,000 acres a mile for line from Bolton via Mansonville to the International Boundary, 10.66 miles; from Windsor Mills to Brampton Falls, 8 miles; and from the Melbourne railway crossing into the Village of Melbourne, 3.50 miles.

Quebec & Lake St. John Ry.—3,000 acres a mile for line from Valcartier to St. Catharines; from Valcartier towards Gosford, 4.50 miles; and a 12 mile extension of a branch line to Valcartier.

Quebec & Saguenay Ry.—3,000 acres a mile for a line from St. Joachim to Nairn Falls, 63 miles, and thence to Ha Ha Bay, 72 miles. (Nov., pg. 422.)

Quebec Central Ry.—3,000 acres a mile for a line from mileage 30 beyond St. George to mileage 31.34, and 2,000 acres a mile for a further distance of 25 miles easterly. (April, pg. 139.)

Quebec Eastern Ry.—2,000 acres a mile for a line from Chaudiere Jct. to Levis, 120 miles; from Ste. Agathe to Lyster, 10 miles, and from Ste. Agathe to Black Lake, 30 miles. (May, 1913, pg. 220.)

Quebec, Montreal & Southern Ry.—2,000 acres a mile for a line from Ste. Philomene towards Levis, 52.66 miles, and from Becancourt to the St. Lawrence River, 3.37 miles. (See Delaware & Hudson Co., Jan., pg. 11.)

Roberval-Saguenay Ry.—3,000 acres a mile for a line from the junction at Jonquieres Jct., of the Ha Ha Bay Ry. and the Quebec & Lake St. John Ry., crossing the Saguenay River, and extending to the north of Lake Mistassini, 80 miles. (April, pg. 129.)

Richmond, Magog & Stanstead Ry.—2,000 acres a mile for line from Richmond, passing through Magog, to Stanstead, 55 miles, with a branch from Cherry River to Waterloo, 20 miles.

Richmond to Drummondville.—2,000 acres a mile for line from Richmond or Melbourne to Drummondville, 27 miles.

St. Charles & Huron River Ry.—2,000 acres a mile for line from Lorette on the Quebec & Lake St. John Ry. to Stoneham, 7.5 miles.

St. Leonard to Duddeswell.—2,000 acres a mile for line from St. Leonard, on the Intercolonial Ry., to a junction with the Quebec Central Ry. and the Maine Central Rd. in Duddeswell Tsp.

Accidents to G.T.R. Employees.—H. G. Kelley, Vice President, G.T.R., has issued a message to employees as follows: "There has been a gratifying reduction in the number of employees injured. This improvement, it is believed, is due largely to the exercise of care and diligence, which is expected as a matter of course from railway men. The management, however, takes this opportunity to express grateful appreciation to officers and employees whose fidelity to duty has made this announcement possible."

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Atlin Ry.—The Dominion Parliament has extended for two years the time within which the company may start the construction of its projected railway from Atlin, or the southern end of Atlin Lake, southerly to where the Falcon River intersects the International Boundary, B.C. (Mar., pg. 106.)

Burrard Inlet Tunnel & Bridge Co.—The Dominion Parliament has extended for two years the time within which the company may build its proposed bridge and tunnel at Burrard Inlet, Vancouver, B.C., and the connecting railways. (Feb., pg. 49.)

Canadian Pacific Ry.—It is said that the construction of stock yards at Saskatoon, Sask., will be started at an early date.

A press report states that a six stall addition to the locomotive house at Weyburn, Sask., is to be erected at an early date. The new ice house at Weyburn is reported to be partially completed.

Grant Hall, Vice President and General Manager, Western Lines, is reported to have informed a deputation from the district to be served by the proposed Retlaw-Suffield line, that it is expected to have an appropriation for its construction in the estimates for 1917. (April, pg. 138.)

Canton & Grand Lake Ry.—The New Brunswick Legislature is being asked to give authority to build a railway from Canton, on the National Transcontinental Ry., to Flower Cove on the St. John River, to open up a new coal mining area. (April, pg. 139.)

Edmonton, Dunvegan & British Columbia Ry.—Tracklaying on the Grand Prairie Branch, extending from Spirit River to Grand Prairie, 60 miles, was completed Mar. 29, when there was a popular celebration at the track end. W. R. Smith, General Manager and Chief Engineer, is reported to have stated that ballasting would be rushed to completion, and that two trains a week in each direction, would be operated between McLennan and Grand Prairie City, at as early a date as possible. (Mar., pg. 106.)

Edmonton & South Western Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Edmonton, southwesterly to the Blue Rapids on the Saskatchewan River, 70 miles. This railway is projected in connection with a power development company, which secured an understanding with the Edmonton City Council respecting a contract. The bylaw authorizing the council to enter into a contract with the company was approved by the rate-payers in 1915, and was after considerable discussion finally passed by the council, and steps were taken to have it ratified by the Legislature. Subsequently the council rescinded the bylaw, and notified the Alberta Legislature that it was no longer a party to the bill for the ratification of the bylaw. The resulting tangle has not been straightened out. (See Hydro Electric Power Projects at Edmonton, April, pg. 155.)

Farnham & Granby Ry.—The Dominion Parliament has extended for two years the time within which the company may build its projected railway from Farnham, on the C.P.R., to Granby, and thence to Windsor Mills or Montreal, Que. C. L. Hervey, M.Can.Soc.C.E., Montreal, is one of the provisional directors. (Nov., 1915, pg. 437.)

Grand Trunk Ry.—Preparatory work is

being done at Bathurst St., Toronto, for the erection of a new bridge across the railway tracks.

The company proposes to build a new station at Ferguson Ave., Hamilton, Ont., at an estimated cost of \$8,000. (April, pg. 138.)

Grand Trunk Pacific Ry.—The Board of Railway Commissioners has ordered the company to build an interchange track between its spur to the Government elevator, and the G.T.R. Outlook Branch at Moose Jaw, Sask., by June 1. The cost of building and maintaining the track is to be apportioned by the commissioners at the next sitting in Moose Jaw. (Mar., pg. 106.)

Great Northern Ry.—A press report states that it is proposed to start construction at an early date on a line 14 miles long to connect the present Cloverdale-Abbotsford line with the Canadian Northern Pacific Ry. at Sam's Landing, B.C.

The building line for the station building on the False Creek site, 375 ft. east of Main St., has been finally approved by the Vancouver City Council. The question of the cost of the station building, which has been raised by the B.C. Government, the Council decided, was not one with which it had to do. A contract for the erection of the station is reported to have been let to Grant, Smith & McDonnell, who will start work at once. F. L. Townley, Vancouver, is the architect in charge. The plans provide for a structure of two units, a main building with terminal facilities on the main floor, and office accommodation above, and an L wing containing the baggage, mail and express offices and rooms. The building will be of brick with terra cotta trimmings. The main structure will be 235 x 60 ft., and the L will be 130 x 42½ ft. There will be a glass covered concourse leading to 11 sets of tracks, and in the centre of the main building will be a domed waiting room which will reach up above the roof of the two storied wings. The open space to Main St., 375 ft., will be laid out in grass and shrubberies.

Application is being made to the Board of Railway Commissioners for approval of an agreement dated Nov. 6, 1915, whereby the Victoria, Vancouver & Eastern Ry. & Navigation Co. grants the Canadian Northern Pacific Ry. joint and equal use in common, of the main and passenger tracks (subject to certain reservations), and the train, standing and industrial spurs, from the north approach of the Fraser River bridge at New Westminster, to the junction of the two companies' tracks at the east boundary of the C.N.P.R. property at False Creek, Vancouver, subject to all exceptions and upon terms set out in the agreement. (Mar., pg. 107.)

Hudson Bay, Peace River & Pacific Ry.—A press report states that it is proposed to start some construction on this projected railway from Winnipeg along the east shore of Lake Winnipeg, at an early date, but it is not stated where work will be started. Some time ago the company asked the Transcona City Council for concessions in that city for terminal purposes, but the project was not favorably entertained, and nothing has transpired since as to the company's proposal for terminals. Although it is reported that the New York syndicate interested "has a backing of \$200,000,000," it is not thought likely that anything will

be done in the way of construction at present at least. The route and other plans have not yet been approved by the Minister of Railways and the Board of Railway Commissioners. (May, 1915, pg. 171.)

Intercolonial Ry.—We are officially advised that the plans for the new station at Levis, Que., are being revised, and that no work will be undertaken in connection with the project until the revision is approved.

Joliette & Lake Manuan Colonization Ry.—The Dominion Parliament has extended for two years the time for the construction of this projected railway from Joliette northerly to Lake Manuan and the National Transcontinental Ry., and from Joliette southerly to Montreal. (Feb., pg. 49.)

Kettle Valley Lines.—The Dominion Parliament has extended for two years the time for the construction of a number of branch lines, and has confirmed an agreement made with the Vancouver, Victoria & Eastern Ry. and Navigation Co., respecting joint sections of railway. Under the terms of the agreement dated July 19, 1914, the latter company has constructed a railway from the headblock of the east switch of the K.V. lines at Princeton to the headblock of the west switch of the K.V. lines at Otter Summit, and the agreement provides for the use of the same by the K.V. Lines, on payment of 5% on the ascertained cost of construction. The agreement provides what each company may do on the joint section, and is to run for 999 years. It is endorsed for the K.V. Lines by the C.P.R., and for the V.V. & E. Ry. and N. Co., by the Great Northern Ry., U. S. (Feb., pg. 49.)

Lake Huron & Northern Ontario Ry.—There was a discussion in the Ontario Legislature April 7, on a motion not to renew or extend the time within which the company might earn the right to purchase land estimated at 1,230,000 acres, as provided in the statutes of 1913, chap. 134. It was explained that under the provisions of the act the company had a certain time within which to extend its railway from the present terminus at Rock Lake, to the National Transcontinental Ry., and that in order to earn the right to take up the land, a certain number of settlers had to be brought into the area, a certain sum expended upon development and other conditions fulfilled before any areas of land were sold, and before a price was fixed. The government was not, it was stated, taking any risk in the matter. The time limit fixed would expire within a few months, and there need be no worry about extensions of it. The motion was thereupon withdrawn. (April, pg. 138.)

Michigan Central Rd.—A press report states that the company proposes to expend about \$250,000 upon a new locomotive house, etc., at Montrose, Ont., during this current year. (Sept., 1915, pg. 310.)

National Transcontinental Ry.—The car shops at Quebec have been completed, and are reported to be ready for the installation of the machinery. The electric power plant is to be operated by steam, and the plant for this purpose is being installed. It is expected that the shops will be used at first for repair work only. (April, pg. 138.)

Ontario Niagara Connecting Bridge Co.—The Dominion Parliament has incorporated a company with this title to build

a bridge across the Niagara River, with connecting railways, in connection with a company incorporated for a similar purpose in New York State. It is said that this company is being promoted by Canadian Northern Ry. interests to connect up the Toronto, Niagara & Western Ry. or the Niagara, St. Catharines & Toronto Ry., or both of them, with the railways in the U. S. (April, pg. 139.)

Pacific Great Eastern Ry.—The Minister of Railways for British Columbia answered a large number of questions relating to the cost of building this railway, in the Legislature April 4. The really important fact stated was that it was estimated that the total cost of completing the line from the Second Narrows of Burrard Inlet to Prince George, 479.6 miles, would be \$11,463,730.11. (April, pg. 138.)

Pacific, Peace River & Athabaska Ry.—Negotiations are reported to have been carried on since early in March between C. A. Law, Vancouver, representing the promoters of the P., P. R. & A. Ry. to obtain a government guarantee of bonds for \$35,000 a mile from the British Columbia Government for building a railway from Prince George into the Peace River country, as a part of its railway. The projected line from Prince George would connect with the projected main line at Kitimat Arm on the Pacific Ocean, at Hudsons Hope on the Peace River, and would be 150 miles long. (May, 1915, pg. 171.)

Peace River Tramway & Navigation Co.—The Dominion Parliament has extended for two years the time within which the company may build its projected railways to connect up certain stretches of navigation on the Peace River, Alta. This is one of the projects which are being worked out in Alberta and Northern British Columbia, in which Baron Rhondda (D. A. Thomas), of Cardiff, Wales, is interested. (April, pg. 138.)

Prince Edward Island Car Ferries.—Work in connection with the car ferry terminals at Carleton Point, P.E.I., has been opened up for the season. There are reported to be seven concrete cribs yet to be placed on the pier to form the berth for the vessel, together with considerable other work. The work is expected to be completed by Dec. 1. There is about half a mile of the branch railway yet to be built to connect the terminals with the island railway system. The main part of the branch line was graded and two miles of track laid to Carleton Point in 1914. (April, pg. 139.)

Quebec & Saguenay Ry.—The Premier stated in the House of Commons, April 4, that representations had been made to the Government from time to time with regard to the desirability of completing this railway, because a very large part of the expenditure which would make it serviceable had already been made. There was no announcement, however, to be made at present, and no decision had been reached by the Government with regard to it. (Nov. 1915, pg. 422.)

St. John & Quebec Ry.—A delegation representing the New Brunswick Government waited on the acting Minister of Railways at Ottawa, April 5 in connection with the construction of this railway. The point at issue is the route to be followed from St. John to Gagetown. As originally planned, the route would carry the line across the St. John and Kennebecasis Rivers, by two bridges which it is estimated would cost about \$3,000,000. These bridges were to have been built by the Dominion, and leased to the railway company. Recent surveys show that,

owing to the nature of the river bottom, it would be a difficult matter to erect the bridges, and it is recommended that their construction be abandoned, and a new route laid out along the west bank of the St. John River, via Westfield, thus giving the line temporary entry into St. John over the C.P.R. The negotiations between the two governments are progressing. (April, pg. 139.)

Canadian Government Railways Officials, Salaries, Etc.

In reply to questions in the Senate recently, respecting the position and salaries of certain Canadian Government Railways officials, Senator Loughheed said: "F. P. Gutelius is Manager of the Canadian Government Railways, in which the Eastern Division of the National Transcontinental Ry. is included. His salary is \$20,000 a year.

"W. H. Ferguson, M.D., is Chief Medical Officer. The position is a new one, rendered necessary by the enlargement of the Government Railways system, by the taking over for operation of the National Transcontinental Ry., the Grand Trunk Pacific Ry.'s Lake Superior Branch, the International Ry. of New Brunswick, the New Brunswick & Prince Edward Island Ry., the St. John & Quebec Ry., the Dartmouth to Deans branch, in addition to the Intercolonial Ry. and the Prince Edward Island Ry. His salary as Chief Medical Officer of the Employees' Relief and Insurance Association is \$500; as Chief Medical Officer of the Provident Fund, \$1,000; as Chief Medical Officer of the C.G.R., \$1,000, total \$2,500. Dr. Ferguson has supervision of all medical work on the Ry.'s, personally looks after work on the railways, personally looks after all serious damage claims for alleged injuries and passes on all claims on the Insurance Association or Provident Fund."

Demurrage Charges on Privately Owned Cars on Private Sidings.

The Assistant Chief Railway Commissioner, D'Arcy Scott, has given the following judgment:—The Board have been asked to give a ruling on the application of Car Service Rule 12 to the following facts: The Nichols Chemical Co., Ltd., of Toronto, owns a number of private cars specially constructed for the transportation of acids. The railway companies pay $\frac{3}{4}$ c a mile hauled to the owners of such private cars for the use of the cars. It was contended by the company that the tank cars used for the transportation of acids are different from any other class of cars in that the unloading connections often become corroded and buyers are unable to unload without the assistance of the shippers. The consignees have sometimes to send to the Chemical Co. for men to repair the outlet pipes, they being afraid to allow their own men to make the necessary repairs on account of the nature of the material. The Chemical Co. is, therefore, agreeable to leave its cars with consignees till they can be conveniently unloaded. The cars are unloaded on the private sidings of the consignees. It was contended by the Chemical Co. that its cars were leased to its consignees till released by the consignee after being unloaded, but I have been unable to get evidence in substantiation of that statement. Where delays over the free time have occurred in unloading, the railway companies have charged the consignee demurrage.

Canadian Car Service Rule 12 is as follows:—"When both cars and tracks are owned by the same private party, no car service tolls shall be charged." These cars are not owned by the consignee and therefore are not exempt under this rule from the usual demurrage charges. The object of the car service rules is not to secure additional revenue for the railways so much as to bring about the prompt release of cars so that they may be available for other shipments. This applies to privately owned cars as well as cars owned by railway companies.

If the contention of the Chemical Co. that more free time is required for the unloading of these cars because of the liability of the outlet pipe to corrode is to be pressed, then its application should be to amend the Car Service Rule accordingly. I think on the present application the parties might be informed that Rule 12 does not exempt the consignees of the Chemical Co. from the payment of demurrage.

Cost and Speed of Constructing Rogers Pass Tunnel.

By J. G. Sullivan, Chief Engineer, Western Lines,
Canadian Pacific Ry.

Since writing the paper (printed on pgs. 169 to 171 of this issue), I have been asked by several persons to give the figures showing the cost of driving this tunnel on the method adopted. The work has proceeded far enough now that we can state with safety that the cost of driving this tunnel through rock, including in this price the cost of driving 19,610 lin. ft. of pioneer tunnel, 12 cross cuts, each 40 ft. long, installation of plant, including freight on it, the proportionate cost of building 5 miles of railway tracks, and other overhead charges, plus 10% on all expenditures, will amount to a little less than \$5 a cubic yard for tunnel excavation in the tunnel proper. This is just about half the amount bid by contractors who proposed to use the European method, and who required a time limit of from 42 to 48 months.

The progress of the work up till Apr. 15 is as follows: The drilling for the enlargement has all been completed during the past week. The plan was to continue the pioneer tunnels until such time that the work required to remove the centre heading between the last two cross cuts, and to drill for the enlargement between these cross cuts, would be completed before the steam shovels had the enlargement completed up to the last cross cut, for the reason that after the steam shovel passed the last cross cut, drilling could not be done for the enlargement without carrying air pipes over the muck pile in front of the shovels. This work was carried out on schedule time, with only 10 or 15 days to spare.

On April 15 the enlargement from the west end had reached a point 150 ft. east of cross cut no. 6. The shovel doing the enlargement from the east end had reached a point 130 ft. east of cross cut no. 6 from the east pioneer, leaving 4,604 ft. to be completed between shovels at this date. During March, 1916, the steam shovels on the west end advanced 1,050 ft., or at the rate of over 2.3 miles a year, in a single heading.

The Eastern Canadian Passenger Association's territory has been changed to embrace territory in Canada east of and including Armstrong, Port Arthur and Sault Ste. Marie, Ont., and the St. Clair and Detroit Rivers.

Freight and Passenger Traffic Notes.

The C.P.R. put into effect April 4, reduced fares for farm laborers from Pacific Coast points to the prairie provinces.

The Grand Trunk Pacific Ry. has arranged with the Saskatoon Taxicab Co., Ltd., to operate a passenger transfer between South Saskatoon station and the hotels in Saskatoon.

It is reported that a daily train service will be put on the Canadian Northern Ry., between Vancouver and Edmonton, June 1, replacing the present tri-weekly service; and that an extra train to take care of the increasing local traffic will be put on between Vancouver and Hope, B.C.

The Kent Northern Ry., which has hitherto operated its trains daily, Sundays excepted, between Kent Jct. on the Intercolonial Ry. and Richibucto, N.B., has put in force a new schedule, giving a service on Mondays, Wednesdays, Fridays and Saturdays only.

The Canadian Northern Ry. has been ordered by the Board of Railway Commissioners, to furnish a tri-weekly train and mail service on its Winnipegosis Branch from June 1 to Sept. 15, when the company may, if it so desires, reduce the service to a semi weekly one.

The Quebec Central Ry. has extended its Chaudiere subdivision from St. Camille, the former terminus, to Daaquam, 10 miles, and to English Lake, 19 miles. There are three trains a day from Valley Jct., the connection with the main line, to St. Camille, and an accommodation train from St. Camille to English Lake, on Tuesdays, Thursdays and Saturdays.

The C.P.R. has issued new rate cards showing increases made in fares to single trip rates on its steamship from Seattle, Wash., Victoria and Vancouver, B.C., to Alaskan points. The rates are increased \$2 on the first class rates to Ketchikan and \$3 to Juneau, Wrangel and Skagway, and \$2 on second class fares to Skagway and Juneau, and \$1 to Wrangel and Ketchikan.

C. H. Nicholson, Manager Grand Trunk Pacific Steamships, is reported to have said that an official courier will be attached to each of the company's steamships running to Alaska, after June 1. The couriers will be thoroughly acquainted with Alaska and the Yukon, and their special duty will be to entertain, and give information to travellers going into the country.

The Chicago, Milwaukee & Pacific Ry., through its connection with the Bellingham Bay & Northern Ry., reaches the International Boundary at Sumas, Wash., where a connection has been made with the British Columbia Electric Ry. An arrangement has been made with the B.C. Government by which the C.M. & St.P.R. cars run over the Fraser River bridge at New Westminster. The B.C.E.R. is handling the traffic for the C.M. & St.P.R. into New Westminster and Vancouver.

The C.P.R. announces that a daily train service will be inaugurated, via the Kettle Valley Lines, between Vancouver and Nelson, June 3. This is possible owing to the completion of the K.V.R. Coquihalla Valley section, extending from Hope to Otter Summit. A train will leave Vancouver every evening, reaching Nelson on the following evening, and a train will leave Nelson every morning, reaching Vancouver on the following morning. It takes practically two days to make this trip at present via the Arrowhead and Slocan Lakes.

Canadian Government Railways Construction and Betterments.

Speaking of capital expenditure on permanent betterments and on new works for the development of service on the Intercolonial and Prince Edward Island Railways, the acting Minister of Railways said in the House of Commons recently: "There was in last year's estimates a vote of \$9,290,650 for capital expenditure. The estimated expenditure under this head is expected to be about \$7,100,000. One of the most important and necessary works undertaken has been the strengthening of bridges to allow the use of the heavier power rendered necessary by modern railway practice. This work will, it is expected, be completed during the fiscal year ending Mar. 31, 1917. Additional facilities for the economical handling of business have been provided at 27 points. About 5 miles of double tracking between Chaudiere Jct. and St. Romuald have been completed. Diversions of the line between Nelson and Derby Jct., as well as a diversion between North Sydney and Leitches Creek (4.3 miles), have been completed. Pier 2 at Halifax is completed and in use. The subway at Moncton is practically completed. The car ferry Scotia, 2 has been delivered and is in use, and the Bathurst spur line has been completed. The Levis coaling plant has been completed, and is in operation.

"When improvement of the terminals at Halifax and St. John was first considered by the Minister with a view to the necessity of providing for the future increase in the business of the Government Railways, we all agreed that it was necessary that some provision should be made to properly take care of the increasing development of the Dominion, and this is more than ever true now that we have the National Transcontinental under Government control, and my own opinion is that the necessity for this terminal work is much greater than ever before, and the work of providing the required accommodation is being pressed as fast as possible. The situation so far as Halifax is concerned is as follows: Sections 1 and 2 of the railway from Rockingham to Jubilee House, His Majesty's lumber yard and Reid Rock in Halifax Harbor, are under construction for a total distance of 7½ miles. Work to the value of \$1,574,834.71 has been done. Good progress is being made on the first unit of docks, and 6,500 ft. of quay walls have been dredged and filled. Also substructures for buildings, sewers, etc., have been completed. Work to the value of \$1,349,119.64 has been done, and the work is about 30% completed. The unit should be finished by Nov. 1, 1917. The expenditure in connection with the Cook Construction Co. and Wheaton Bros. contracts has been \$1,574,834.71, and in connection with Foley Bros., Welch, Stewart and Fauquier's contract, \$1,349,119.64. On the opposite side of the harbor at Halifax, from the town of Dartmouth, we have completed the construction of a railway locally known as the Dartmouth to Deans branch and which at present extends to Upper Musquodoboit, 67 miles. The contract for this work was let to M. P. & J. T. Davis in Feb. of 1912, and was completed in January last. There still remains a number of station buildings to be erected, tenders for which are being called for by the department. A triweekly service has been installed by the Intercolonial Ry. since Jan. 1, 1916.

The total expenditure to Jan. 3, 1916, was \$2,189,485.81. This has been on construction and chargeable to capital account. The work being done at St. John is being carried on by the Public Works Department.

"The work connected with the provision of a car ferry service to Prince Edward Island has not made such progress as was desired and expected. The New Brunswick & Prince Edward Island Ry. has been acquired and is being put into shape to form an adequate link between the main line of the Intercolonial and the ferry landing, at the P.E.I. Ry. The contract with Armstrong, Whitworth Co. was satisfactorily completed, and the car ferry Prince Edward Island was delivered during the summer notwithstanding war conditions. The situation has not been as satisfactory with respect to the terminal works. At the outset a season was lost at Carleton Point through the default of those to whom the contract for this terminal was at first awarded. Further serious delays have resulted from the stormy weather and exposed conditions under which the work has necessarily had to be carried on. With the advance of the breakwater these conditions improve. At Cape Tormentine the principal work remaining to be done is the completion of the breakwater, the dredging, and the placing of riprap on exposed faces of the pier head. At Carleton Point several more cribs are necessary to complete the car ferry landing, some dredging has to be done, and further work done on the breakwater and rock approach pier. The contract for the steel transfer bridges, to connect the car ferry's deck with the pier, has been let, and works are ready for their reception. The total estimated cost of the car ferry and terminals is \$2,850,000, of which \$1,975,000 has been expended."

National Transcontinental Ry. Operation.—The Premier stated in the House of Commons, Mar. 31, that the operation of the National Transcontinental Ry., from Moncton to Winnipeg, by the government could not be a permanent arrangement until the government had entered into an agreement to take over the road and to relieve the Grand Trunk Pacific Ry. from its operation. No such agreement had been made, and the government had no power to make one without the authority of Parliament.

Canadian Society of Civil Engineers.—At the regular monthly meeting in Montreal, April 13, John Murphy, chairman of the Ottawa Branch, gave an informal talk, illustrated by views, describing his trip over the Panama Canal, and referring particularly to the difficulties of earth slides in the Culebra Cut. Lt.-Col. F. A. Snyder described an original diagram for making military scales for interpolation of contours and reduction and enlargement of maps.

Canadian Railway Club.—At the monthly meeting in Montreal April 11, S. J. Sarjant, M.I.C.E., ex-Locomotive Superintendent, Great Indian Peninsula Ry., read a paper on the railways of India, which was illustrated by stereopticon views.

The C.P.R. has put in operation a rule to compel passengers to show their tickets on boarding trains at all terminal points on its western lines.

Railway Rolling Stock Notes.

The Canadian Pacific is going to purchase 26 steel ore cars, 2 scale test cars and 2 ditchers.

The Canadian Northern has received 5 mail cars, nos. 4000 to 4004, from Preston Car & Coach Co.

The Canadian Government Railways has been voted \$1,100,000 to expend on rolling stock during this fiscal year.

The Canadian Cement Co. has received 12 narrow gauge charging cars and 30 narrow gauge ingot cars from Canadian Car & Foundry Co.

Canadian Government Railways have received one consolidation freight locomotive for the Intercolonial Division, from Canadian Allis-Chalmers, Ltd.

The Canadian Pacific is building the following rolling stock at its Angus shops, Montreal: 12 steel mail cars, 4 steel baggage cars, 1 steel dining car, 1 steel mail and express car, 100 passenger refrigerator cars, 302 freight refrigerator cars, 1,399 box cars, 28 stock cars, 180 automobile cars, 1 auto furniture car, 3 furniture cars, 20 steel coal cars.

The Canadian Pacific has given orders for the conversion of cars at its Angus shops, Montreal, as follows: 4 sleeping cars to cafe parlor cars, 8 sleeping cars to parlor cars, 4 parlor cars to smoking cars, 6 first or second class cars to baggage and smoking cars. Four cafe parlor cars, 8 parlor cars and 48 sleeping cars, heretofore gas lighted, are to be electric lighted. Twelve combination cars are to be electric lighted.

The acting Minister of Railways stated in the House of Commons, April 5, that the Canadian Government Railways leased locomotives recently as follows:—From the C.P.R., at \$13.50 a day; from

Canada Iron Foundries, Ltd., and the Bangor & Aroostook Rd., at \$15 a day. These locomotives have an effective tractive capacity of 27,000 lbs. for C.P.R. locomotives, 37,000 for Canada Iron Foundries locomotives, and 23,152 for Bangor & Aroostook Rd. locomotives.

Canadian Car & Foundry Co. has received an order from the French State Railways, for 1,000 high sided gondola cars, type L.F.C., to be fitted with brakeman's cab and hand screw brake gear. Following are the chief details:

Length of underframe.....23 ft. 11½ ins.
Length inside box.....21 ft. 7¾ ins.
Width inside.....8 ft. 2¾ ins.
Depth inside.....4 ft. 9 ins.
Car type.....Steel underframe and wood siding
Wheels, no. and details....4 with cast steel centres and tires, 41½ ins. diam.
Axles.....6½ ins. diam.
Journals.....5½ by 9 13/16 ins.

The Algoma Eastern Ry. has ordered 2 consolidation locomotives from Canadian Locomotive Co. Following are the chief details:—

Weight on drivers.....175,400 lbs.
Weight, total.....200,400 lbs.
Wheel base, rigid.....15 ft. 10 ins.
Wheel base, engine, total.....24 ft. 4½ ins.
Wheel base engine and tender.....53 ft. 6¼ ins.
Heating surface, firebox.....161 sq. ft.
Heating surface, tubes.....2,078 sq. ft.
Heating surface, total.....2,239 sq. ft.
Driving wheels, diam.....56 ins.
Driving wheels, centres.....Cast steel
Driving journals, diam. and length.....9 and 9½ by 12 ins.

Cylinders, diam. and stroke.....22 by 28 ins.
Boiler, type.....Radial stayed
Boiler pressure.....200 lbs.
Tubes, no. and diam.....206-2 ins.; 28-5½ ins.
Tubes, length.....14 ft. 2½ ins.
Air brakes.....Westinghouse American E.T.6
Superheater.....Locomotive Superheater Co. Type A
Weight of tender loaded.....126,500 lbs.
Tank type.....Water bottom
Tank capacity.....5,000 imp. gals.
Coal capacity.....10 tons
Truck type.....Equalizer
Truck wheels, diam.....34 ins.
Truck wheels, type.....Steel tired, cast steel centres
Truck journals.....5½ by 10 ins.
Brake beam.....M.C.B. steel

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, for Western Lines, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$921,000	\$285,100	x\$145,400
Aug.	1,192,800	954,000	238,800	x5,900
Sept.	2,014,500	1,358,000	661,600	1,900
	\$4,413,600	\$3,227,000	\$1,186,600	x\$79,300
Decr.	\$658,300	\$579,000	\$79,300	

x Decrease.
Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with October, the figures show the earnings of the entire system, both eastern and western lines.

	Gross Earnings	Expenses	Net Earnings	Increase
Oct.	\$3,678,500	\$2,421,500	\$1,257,000	\$537,800
Nov.	3,535,200	2,323,800	1,211,400	618,400
Dec.	3,435,600	2,233,500	1,202,100	768,900
Jan.	2,086,800	1,831,400	255,400	88,100
Feb.	2,089,200	1,959,800	129,400	x193,500
	\$14,825,300	\$10,770,000	\$4,055,300	\$1,841,200
Inc.	\$5,189,300	\$3,348,100	\$1,841,200	

x Decrease.
February was the worst month in the company's history for operating its business, continuous snow storms and low temperature extending over the entire system caused inconceivable difficulties in maintaining a partial service at very excessive cost.

Approximate earnings for March, \$2,517,000, against \$1,898,500 for March, 1915, and for two weeks ended Apr. 14, \$1,340,900, against \$910,700 for same period 1915.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$7,895,375.47	\$5,094,972.35	\$2,800,403.12	\$978,042.71
Aug.	8,801,451.52	5,359,136.80	3,442,314.72	79,157.02
Sept.	10,273,165.45	5,527,864.81	4,745,300.64	378,252.25
Oct.	13,453,206.88	6,863,780.29	6,589,426.59	3,258,105.79
Nov.	13,351,283.51	6,996,870.48	6,354,413.03	3,710,340.86
Dec.	12,705,673.45	7,003,351.97	5,702,321.48	3,502,797.67
Jan.	8,588,826.04	6,498,417.81	2,090,408.23	954,174.93
Feb.	9,795,830.30	6,501,487.56	3,294,342.74	315,328.12

\$83,854,820.18 \$49,845,882.07 \$34,008,938.11 \$11,216,113.93
Inc. \$15,071,989.17 \$3,855,875.24 \$11,216,113.93

Approximate earnings for March, \$10,228,000, against \$7,700,000 for March, 1915, and for three weeks ended Apr. 21, \$7,402,000, against \$5,090,000 for same period 1915.

Grand Trunk Railway Earnings.

Following are the earnings and expenses for the G.T.R., including the Canada Atlantic Ry., the G.T.W.R. and the D.G.H. & M.R., for February, compared with those for February, 1915.

	1916.	1915.
Earnings.....	\$3,094,000	\$2,624,400
Expenses.....	2,546,600	2,210,100
Net earnings.....	\$ 547,600	\$ 414,300
Grand Trunk Western Railway.		
Earnings.....	\$ 693,450	\$ 521,900
Expenses.....	594,450	559,400
Net earnings.....	\$ 99,000	\$ 37,500
Detroit, Grand Haven & Milwaukee Ry.		
Earnings.....	\$ 245,300	\$ 178,600
Expenses.....	146,800	212,800
Deficit.....	\$ 1,500	\$ 34,200

TRAFFIC RECEIPTS OF THE SYSTEM.

	1916.	1915.	Increase
Aggregate from Jan. 1 to Feb. 29, —			
G.T.R.	\$9,390,685	\$8,341,996	\$1,048,689
G.T.W.R.	2,094,631	1,665,394	429,237

Mainly About Railway People Throughout Canada.

Francis J. Hunter, Montreal, has been elected a director of the Reid Newfoundland Co.

Dr. C. M. Sanford, for many years local surgeon for the G.T.R., at Brighton, Ont., died there, Apr. 17.

J. J. Hill of the Great Northern Ry., St. Paul, Minn., telegraphed \$5,000 to the Winnipeg Patriotic Fund recently.

F. C. Salter, European Traffic Manager, G.T.R., London, Eng., spent April at Falmouth, Eng., recuperating after two operations.

Mrs. E. Tiffin, wife of the General Western Agent, Canadian Government Railways, Toronto, has left to spend some time at the Pacific coast.

J. W. Leonard, General Manager, Toronto Terminals Ry. Co., has removed from Montreal and taken a house on Roxborough St. East, Toronto.

J. M. Gibbon, General Publicity Agent, C.P.R., Montreal, has been appointed chairman of the Audit Bureau of Circulations' Canadian Advisory Board.

J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, Western Lines, C.P.R., Winnipeg, has been elected First Vice President of the American Railway Engineering Association for 1916-17.

Lieut. Wm. Blythe Hanna, 92nd Battalion, 48th Highlanders, C.E.F., only son of D. B. Hanna, Third Vice President, Canadian Northern Ry., was married in Toronto, April 21, to Miss M. O. Powis.

F. H. Phippen, K.C., General Counsel, Canadian Northern Ry., returned to Toronto early in April, from Mexico, where he went in connection with some of the enterprises Sir Wm. Mackenzie is interested in.

W. E. Rispin, ticket agent, G.T.R., Chatham, Ont., was advised by cablegram recently that his son-in-law, Major Templeton, of the 48th British Columbia Battalion, had been wounded while on service overseas.

R. J. Mackenzie, of Winnipeg, son of Sir Wm. Mackenzie, President, Canadian Northern Ry., has given the use of Deer Lodge Hotel and grounds, near Winnipeg, for a military convalescent home, rent free, for a term of years.

Capt. C. S. L. Hertzberg, of the Canadian Engineers, C.E.F., son of A. L. Hertzberg, M.Can.Soc.C.E., Division Engineer, C.P.R., Toronto, was invested with the Military Cross by the King at Buckingham Palace, April 16.

Sir Thos. Tait, President, Fredericton & Grand Lake Coal & Ry. Co., was operated on in Montreal, April 8, for a gathering between his left eye and ear. On April 20 he was reported to be convalescing satisfactorily at the Ritz Carlton Hotel, Montreal.

S. J. Montgomery, who has resigned the position of City Passenger Agent, Canadian Northern Ry., Ottawa, has been appointed Manager for Ottawa and district, of the Manufacturers Life Insurance Co.

Walter Maughan, Assistant General Passenger Agent C.P.R., Montreal, has been appointed an honorary lieutenant-colonel in the Canadian Militia, in recognition of services in connection with the movement of troops for overseas service.

The Hon. Frank Cochrane, M.P., Minister of Railways, and Mrs. and Miss Cochrane, who have had an apartment in Washington for several weeks, were to go on to Atlantic City at Easter and are

expected to return to Canada early in May.

W. A. Griffith, formerly secretary to Manager, Natural Resources Department, C.P.R., Calgary, Alta., has been appointed Traffic Assistant, Gold Coast Government Ry., Secondee, West Africa, the appointment being practically for war purposes.

Lieut. Angus R. Sinclair, of the 92nd Highlanders, C.E.F., youngest son of Angus Sinclair, railway contractor, Toronto, while at the front early in April, was slightly wounded in the arm and knee by shrapnel and was taken to Le Touquet Hospital.

B. R. Hepburn, M.P. for Prince Edward, Ont., and formerly President, Ontario & Quebec Steamship Co., who is going overseas as Major of the Forestry Battalion, C.E.F., was entertained at a public dinner at Picton, Ont., recently and given an address and a wrist watch.

G. C. Briggs
Supervisor of Buildings, Eastern Lines, Canadian Northern Railway.

The engagement is announced of **G. A. Suckling**, son of **H. E. Suckling**, Treasurer, C.P.R., Montreal, to **Miss A. M. Angstrom**, daughter of **A. Angstrom**, Naval Architect, Canadian Northern Ry., Toronto. The wedding will take place early in May.

Mrs. W. B. Howard, wife of the District Passenger Agent, C.P.R., Toronto, died at St. John, N.B., Apr. 20. She had been ill for some time, and when Mr. Howard removed from St. John to Toronto a few months ago, she was unable to accompany him, but her death was not expected.

W. E. Mann, a civil engineer, who died at Edmonton, Alta., Mar. 30, from injuries received by falling down an elevator shaft at the Alberta Hotel on the previous evening, was formerly in Grand Trunk Pacific Ry. service as Branch Lines Engineer at Winnipeg, and Division Engineer, Edmonton, Alta.

George Blackbird, who died at the Royal Victoria Hospital, Montreal, March 30, aged 67, was in the G.T.R. service for many years, during which, among other positions, he was Locomotive Foreman at Allandale, Ont., Montreal and Richmond, Que. Since retiring a year or two ago he lived in Montreal. He was buried in Toronto.

William E. Germain, whose appointment as agent, G.T.R., Sarnia, Ont., was announced in our last issue, was born at Gananoque, Ont., Oct. 18, 1870, and entered G.T.R. service in 1888, since when he has been, to 1891, ticket clerk, Petrolia, Ont.; 1891 to 1893, operator, Watford, Ont.; 1897 to March 1916, agent, Alvinston, Ont.

David C. Paisley, who was appointed General Yardmaster, C.P.R., Windsor, Ont., recently, was born at Toronto, Feb. 16, 1881, and entered railway service in 1900, since when he has been, to 1906, switch tender, trainman and yardman, G. T.R.; Aug. 26, 1906, to Sept. 24, 1910, brakeman, C.P.R., London, Ont.; Sept. 24, 1910 to Dec. 20, 1915, conductor, C.P.R., London, Ont.

John Donald McMillan, who has been appointed acting Superintendent, Belleville Division, Ontario Lines, G.T.R., Belleville, was born in Eldon Tp., Ont., Apr. 5, 1858, and entered railway service in March 1876, since when he has been, to Aug. 1878, brakeman, Toronto & Nipissing Ry., Uxbridge and Sutton, Ont.; 1878 to 1910, conductor and rule instructor, G.T.R., Toronto and Belleville, Ont.; 1910 to Apr. 1, 1916, Trainmaster, Lindsay, Ont.

E. J. Wearing, whose appointment as General Agent, G.T.R., Central Vermont Ry. and Canadian Express Co., Liverpool, Eng., was mentioned in a previous issue, was born at Birkenhead, Eng., Nov. 12, 1872, entered G.T.R. service, Jan. 1, 1888, and has since served in all departments of the company's office at Liverpool. He visited Canada from Sept. to Nov., 1911, covering the chief points from Montreal to Prince Rupert, Vancouver and Victoria, in order to become personally acquainted with the handling of freight, passenger and express traffic.

J. L. Reycraft, Solicitor, Manitoba and Saskatchewan Divisions, C.P.R., was born in Orford Tp., Kent County, Ont., June 20, 1868, and was educated at Ridgetown Collegiate Institute and Osgoode Hall Law School, Toronto. He served his articles in Chatham, Ont., and was admitted to the bar in 1896, and practised in Ridgetown until Mar. 1913, when he was appointed Solicitor, Manitoba Division, C.P.R. In July, 1915, he was also appointed Solicitor for the Saskatchewan Division and now has charge of the company's legal business from Port Arthur, Ont., to the western boundary of the Saskatchewan Division.

Baron Shaughnessy's second son, **Capt. Hon. A. T. Shaughnessy**, was killed in action in France, about Apr. 2. He was born at Montreal Oct. 18, 1887, and after completing his education at McGill University, was for some little time in the C.P.R. Traffic Department, leaving there to join the brokerage firm of C. Meredith & Co. He joined the Victoria Rifles in Montreal in 1910, and enlisted for overseas service with the 60th Battalion in June, 1915, and was in command of Company A. He was married in 1912 and is survived by his widow and two children. About ten years ago he travelled round

the world, by the C.P.R., using only that company's steamships and railways. A requiem mass was held at St. Patrick's Church, Montreal, Apr. 19, attended by members of the family, representatives of the Dominion and British Governments, and of all the transportation interests in the city.

G. I. Evans, who has resigned as District Master Mechanic, Districts 3 and 4, Ontario Division, C.P.R., Toronto, has been appointed General Manager, Imperial Iron & Steel Works, Collingwood, Ont. He was born at Montreal in May, 1880, and entered C.P.R. service in Apr., 1900, since when he has been, to Mar., 1906, draughtsman; Mar., 1906, to July, 1910, Chief Draughtsman; July, 1910, to Aug., 1912, Mechanical Engineer; Aug., 1912, to May, 1915, Superintendent, Angus Locomotive Shops, all at Montreal; May, 1915, to Mar., 1916, District Master Mechanic, Districts 3 and 4, Ontario Division, Toronto.

Andrew Duncan Davidson, Land Commissioner, Canadian Northern Ry., Toronto, died at Rochester, Minn., Apr. 22, of acute stomach trouble and frequent hemorrhages. He was born at Glencoe, Ont., May 18, 1853, and entered land business in Minnesota, where he also engaged in banking, and was eventually appointed a Colonel by the State Governor for services in the settlement of Minnesota and Dakota. On his return to Canada in 1905, he was appointed Land Commissioner, Canadian Northern Ry., and has been closely associated with many of the Mackenzie and Mann interests. D. B. Hanna, Third Vice President, C.N.R., attended the funeral at Duluth, Minn.

X. H. Cornell, who has been appointed General Superintendent, Chicago and Alton Rd., Bloomington, Ill., was from 1900 to Dec. 1910, in G.T.R. service at Durand, Mich., first as Chief Dispatcher, then as Trainmaster, and from 1904, as Master of Transportation. From Dec. 1910, to Apr. 1912, he was Inspector of Transportation, Chicago and Alton Rd., and Toledo, St. Louis and Western Rd., Chicago, Ill., and from Apr. to Oct. 1912, was Superintendent of Transportation, same roads. From Oct. 1912, to June 1914, he was Superintendent of Transportation, Pere Marquette Rd., Detroit, Mich., returning to the Chicago and Alton Rd. as Master of Transportation, which position he occupied until his present appointment.

Lewis Ketcham Silcox, whose appointment as Mechanical Engineer, Illinois Central Rd., Chicago, Ill., was announced in our last issue, was born at Germantown, Pa., Apr. 30, 1886, and educated at Trinity School, New York, and at the Institute of Mechanical and Electrical Engineering, Brussels, Belgium. From 1903 to 1906, he was an apprentice, New York, New Haven & Hartford Rd., High Bridge, N.Y.; 1907 to 1909, machinist and assistant superintendent in charge of foundries and machine shops, McSherry Mfg. Co., Middletown, Ohio; 1912 to Apr. 1, 1916, Shop Engineer, Canadian Car & Foundry Co., Montreal, and latterly Mechanical Engineer, Canadian Northern Ry., Toronto.

Charles Ketchum Howard, whose appointment as Commercial Agent, Canadian Government Railways, Boston, Mass., was announced in our last issue, was born at St. Andrews, N.B., Aug. 28, 1877, and entered railway service in Apr. 1893, since when he has been, to 1900, operator and agent, at various points, Atlantic Division, C.P.R.; 1900 to 1901, agent, C.P.R., Brownville Jct., Me.; 1901

to 1906, agent, C.P.R., McAdam Jct., N. B.; 1906 to 1910, agent, C.P.R., Fredericton, N.B.; 1910 to 1911, Superintendent, Aroostook Valley Rd., Presque Isle, Me.; 1911 to 1912, Travelling Freight Agent, C.P.R., St. John, N.B.; 1912 to 1915, Right of Way Agent, St. John and Quebec Ry., Fredericton, N.B.; 1915 to Mar. 1916, agent, Canadian Government Railways, Woodstock, N.B.

W. G. Manders, whose appointment as General Freight Agent, Western Lines, Canadian Northern Ry., Winnipeg, was announced in our last issue, was born at Owen Sound, Ont., July 24, 1876, and entered railway service in Apr. 1897, since when he has been to Feb. 1901, clerk and stenographer, Local Freight Office, C.P.R., Owen Sound, Ont.; Feb. to July 1901, chief clerk, Local Freight Office, C.P.R., Fernie, B.C.; July 1901 to Dec. 31, 1903, clerk, General Freight Office, Canadian Northern Ry., Winnipeg; Jan. 1, 1904, to Jan. 1, 1907, chief clerk in charge of loss and damage and overcharge freight claims, General Freight Office,

E. J. Wearing
General Agent, Grand Trunk Railway System,
Liverpool, England.

C.N.R., Winnipeg; Jan. 1, 1907, to May 1, 1909, chief clerk, Freight Traffic Department, C.N.R., Winnipeg; May 1, 1909, to Feb. 29, 1916, Assistant General Freight Agent, C.N.R., Winnipeg.

David H. Williams, who was appointed Assistant to General Manager, Canadian Government Railways, Moncton, N.B., recently, was born at Toronto, June 22, 1879, and entered railway service, Aug. 1, 1896, since when he has been to June 1, 1901, clerk, and chief clerk to Superintendent, C.P.R., Toronto; June 1, 1901, to Dec., 1902, clerk to General Superintendent, C.P.R., North Bay, Ont.; July, 1903, to Jan., 1905, chief clerk to Superintendent, C.P.R., White River, Ont.; Jan., 1905, to June, 1912, chief clerk to General Superintendent, C.P.R., North Bay, Ont.; June to Dec., 1912, Traffic Manager, Canada Cement Co., Montreal; Dec., 1912, to June, 1913, Superintendent, National Transcontinental Ry., Cochrane, Ont.; June, 1913, to Jan., 1916, chief clerk to

General Manager, Canadian Government Railways, Moncton, N.B.

C. A. Cotterell, who has been appointed Superintendent, District 2, Alberta Division, C.P.R., Lethbridge, was born at Enden, Eng., Jan. 18, 1877. He entered C.P.R. service as a messenger boy at Montreal in June 1888, and in Feb. 1894 was appointed an operator on the Farnham Subdivision, south of Montreal, and until 1898 occupied various positions as operator, relieving agent and station agent on the Eastern Lines, after which he was transferred to the Crowsnest Subdivision and acted as agent at various points and as dispatcher at Cranbrook, B.C. until 1901, when he was transferred to Fort William, Ont., as dispatcher, and subsequently served in that capacity at various points on the Western Lines, and as Chief Dispatcher at Fort William, Ont., Regina and Saskatoon, Sask., and Revelstoke, B.C.; as Trainmaster at Revelstoke, B.C.; Terminal Trainmaster, Vancouver, B.C.; acting Superintendent at Revelstoke, Nelson and Vancouver, B. C., until Sept. 1, 1913, when he was appointed Superintendent, District 2, British Columbia Division, Vancouver, which position he held to Apr. 1, the date of his present appointment.

Dominion Aid Toward Railway Construction.

A series of questions as to grants in aid of the Canadian Pacific, Canadian Northern and Grand Trunk Railways were answered in the House of Commons, recently, by Mr. Blondin. The answers given contained the following facts:—

Canadian Pacific Ry.—Total money paid out by way of subsidy, \$30,369,374.70. Land granted, main line, 18,206,986 acres; Souris Branch, 1,408,704 acres; Pipestone extension, 200,320 acres; total, 19,816,010 acres. Total amount of guaranteed issues, £3,093,700. This obligation was assumed direct by the Government in Dec., 1906.

Canadian Northern Ry.—Total money paid out by way of subsidy, \$26,155,360.65. Total area of land granted by way of subsidy, 3,422,528 acres. Bond guarantees: Principal and interest of £1,923,287 of 3% 50 year bonds, authorized 1903; principal and interest of £1,622,586 19s 9d of 3½% 50 year debenture stock, authorized 1908; guarantee of securities to an amount not exceeding \$45,000,000 at 4%, of which amount £3,500,000 have been sold, the remainder being pledged for the purposes set out in the Act, authorized 1914; principal and interest of £7,493,935 12s 4d of 3½% 50 year debenture stock of the C. N. Ontario Ry., authorized 1911; principal and interest of £647,260 5s 6d 3½% 50 year debenture stock of the C. N. Alberta Ry., authorized 1910; principal and interest of £733,561 12s 6d 3½% 50 year debenture stock, N. C. Alberta Ry., authorized 1912.

Grand Trunk Ry.—Subsidy for Victoria Jubilee Bridge, Montreal, \$500,000. No grants of land were voted to the company, neither were there any guarantees of bonds or other issues of securities by the Dominion Government for the G.T.R.

We are officially advised that the rolling stock used on the Intercolonial Ry. and the National Transcontinental Ry. is all being lettered Canadian Government Railways, Intercolonial Division, or Transcontinental Division, as the case may be. The rolling stock on the Prince Edward Island Ry. remains as heretofore, for the present.

Flagging Rules for Impassable Track.

The Board of Railway Commissioners has passed general order 161, prescribing the following regulations for the uniform maintenance of way flagging rules for impassable track:—

1. When the track is found to be impassable due to any obstruction or defect, or before undertaking any work which will render it impassable, trackmen, bridgemen, or other employees of the company shall protect the same as follows:—

2. On all mountain subdivisions, by day, place a red flag supported on two staffs, with flag drawn out between them, at right angles to the track and 5 ft. above rail level; and in addition, by night, a red light on the same side of the track as the engineer of an approaching train, at a point 600 ft., in both directions, from the defective or working points, with two torpedoes placed on the rail, opposite each other, so as to cause but one explosion, 150 ft. in advance of the red signal. Such red signal shall be changed to green and the torpedoes removed as soon as the work will permit; and the said green signal shall be displayed until other protection signals are withdrawn; and send out a flagman in each direction with stop signals at least 1500 ft. in daytime, if there is no down grade towards the obstruction within one mile, and there is a clear view of 6000 ft. from an approaching train; 3600 ft. at other times and places, if there is no down grade towards the obstruction within one mile; 5400 ft. if there is a down grade towards the obstruction within one mile. The flagman must, after going the required distance from the obstruction to ensure full protection, take up a position where there will be an unobstructed view of him from an approaching train of, if possible, 1500 ft., first placing two torpedoes on the rail (not more than 200 nor less than 100 ft. apart), on the same side as the engineer of an approaching train, 300 ft. beyond such position. The flagman must display a red flag by day and a red light by night, and remain in such position until recalled or relieved.

3. On all main lines and on the portions of branch lines over which main line traffic is handled, send out a flagman in each direction with stop signals at least 1500 ft. in daytime, if there is no down grade towards the obstruction within one mile, and there is a clear view of 6000 ft. from an approaching train; 3600 ft. at other times and places, if there is no down grade towards the obstruction within one mile; 5400 ft. if there is a down grade towards the obstruction within one mile. The flagman must, after going the required distance from the obstruction to ensure full protection, take up a position where there will be an unobstructed view of him from approaching train of, if possible, 1500 ft., first placing two torpedoes on the rail (not more than 200 nor less than 100 ft. apart), on the same side as the engineer of an approaching train, 300 ft. beyond such position. The flagman must display a red flag by day and a red light by night, and remain in such position until recalled or relieved.

4. On all other branch lines (a) a flagman must be sent out in each direction, who shall place a red flag supported on two staffs, with flag drawn out between them, at right angles to the track and 5 ft. above rail level; and in addition a red light by night, on the same side of the track as the engineer of an approaching train, at a point 600 ft. from the defective

or working point, with two torpedoes placed on the rail opposite each other, so as to cause but one explosion, 150 ft. in advance of the red signal. Such red signal shall be changed to green and the torpedoes removed as soon as the work will permit, and the said green signal shall be displayed until other protection signals are withdrawn; and provide further protection as follows: (b) By day, place a flag supported on two staffs, with flag drawn out between them, at right angles to the track and 5 ft. above rail level; and in addition a red light by night, on the same side of the track as the engineer of an approaching train, so that it will be clearly in his view at least 3600 ft. from the defective or working point, if there is no down grade towards the obstruction; 5400 ft. if there is a down grade within one mile of the obstruction, or as much further as may be necessary to ensure full protection. (c) Place two torpedoes (not more than 200 ft. nor less than 100 ft. apart) on the rail on the same side as the engineer of an approaching train, 300 ft. in advance of the red signal.

5. Trains stopped by flagman, as per rule 2, shall be governed by his instructions and proceed to the working point signal and there be governed by signal or instructions of the foreman in charge, unless in the meantime stop signal has been removed and proceed signal displayed.

6. Trains stopped by flagman, as per rule 3, shall be governed by his instructions and proceed to the working point, and there be governed by signal or instructions of the foreman in charge.

7. Train stopped by flagman, as per rule 4, shall replace the torpedoes exploded and proceed to the working point signal, and from there shall be governed by the signal or instructions of the foreman in charge, unless in the meantime stop signal has been taken down and proceed signal displayed.

8. In the event of a train order protection being provided, yellow flags by day and, in addition, yellow lights by night may be used as markers without torpedoes on the rail, placed 3600 ft. from the defective or working point, and in addition red signals, in both directions, 600 ft. from the defective or working point.

9. When weather or other conditions obscure day signals, night signals must be used in addition.

The foregoing rules are to be printed in the railway companies' working time-tables for the guidance of enginemen and trainmen.

Canadian Freight Association, Eastern Lines.

The annual meeting of the association was held at Montreal, Apr. 13, when the standing committees were elected for the current year, as follows:—Advisory—G. H. Shaw, C. E. Dewey, H. E. Macdonell and J. H. Meglemry; Executive—H. E. Macdonell, F. F. Backus, G. Tombs and H. C. Martin; Classification—H. E. Macdonell, G. Tombs, F. J. Watson, E. N. Todd, L. Macdonald, A. O. Secord, G. T. Pettigrew, M. H. Brown, R. E. Perry and James Edward; Freight Inspection—R. W. Long, F. A. Shaw, M. H. Brown, R. W. Youngs, R. J. S. Weatherston, Jas. Edward, G. H. Clark, W. B. Bamford, W. S. Elliott and G. C. Martin.

Proposed Removal of Car Building Plant.

Representatives of the Russian Government have secured an option on the Canadian Car & Foundry Co.'s plant at Fort William, Ont., for a sum in the neighborhood of \$2,500,000, the intention being, if a purchase is effected, to remove it to Russia. The purchase would include the entire plant, buildings and machinery, and everything used in the construction, particularly the steel work, with the exception of the concrete, brick and hollow tile work, together with the machinery, would be removed to Russia and re-erected there. Russia is very short of railway rolling stock and to partly supply the deficiency has, since war began, ordered 20,000 freight cars in the United States and 2,000 in Canada, delivery of which is being made in knock down form at Vladivostok, where it is to be erected. The Russian Government wants shops there for erection purposes and also for building further rolling stock, and as the Fort William plant is considered the last word in car works construction, it is believed the purchase would be an advantageous one for the Russian Government, and would enable it to obtain the necessary structural steel, etc., much more quickly than from any other source.

The Fort William plant has a capacity of from 50 to 60 cars a day, but has not been operated owing to war conditions. W. W. Butler, Vice President, and K. W. Blackwell, another of the Canadian Car & Foundry Co.'s directors, met the Fort William City Council on April 19 in regard to the matter, when the councillors put themselves on record as being opposed to the plant's removal, although the company is willing to undertake to re-erect it after the war's conclusion.

The Dominion has already assisted Russia by letting it have two icebreaking steamships, and a Fort William icebreaking tug, the J. T. Horne, was sent to Archangel last year. The transfer of the Fort William car building plant would be in line with the policy in regard to icebreaking steamships and would undoubtedly be of great assistance to our Russian allies. It is hoped that Fort William's objections will be got over. If they are not, there is of course the possibility of the plant being commandeered by Government action.

Grain Inspection at Western Points.

The following figures issued by the Department of Trade and Commerce, show the number of cars of grain inspected at Winnipeg and other points on the Western Division for railways, for March, and for seven months ended Mar. 31, with a comparison of the number of cars inspected for seven months ended Mar. 31, 1915.

	March	Seven months to Mar. 31, 1916	Seven months to Mar. 31, 1915
C.P.R.	10,784	126,854	48,966
C.P.R. Calgary	1,600	4,886	5,195
C.N.R.	7,112	65,807	32,279
G.N.R. Duluth	1,081	4,177	1,262
G.T.P.R.	5,220	31,691	12,870
Totals	22,797	232,434	100,572

The United States Lake Survey reports the levels of the Great Lakes in feet above tidewater for February, as follows: Superior, 602.44; Michigan and Huron, 579.57; Erie, 571.99; Ontario, 245.41. Compared with the average February levels for the past ten years, Superior was 0.70 ft. above; Michigan and Huron, 0.53 ft. below; Erie, 0.31 ft. above, and Ontario, 0.31 ft. below.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,

Lacombe & Blindman Valley Electric
Ry.—We are officially advised that the
company has no definite plans as to fur-
ther construction this year.

Saskatoon Municipal Ry.—Revenue for
March, \$17,690.02; operating and over-
head charges, \$15,177.55; profit, \$2,512.47.
Passengers carried, 344,933, against 237,-
787 for Mar. 1915.

The Immensity of the Transporta- tion Interests.

Sir Henry L. Drayton, K.C., Chief Rail-
way Commissioner for Canada, in giving
judgment in March, 1916, on the question
of freight rates on tank and still struc-
tural material from Sarnia to Regina,
said: "There is, of course, another public
interest to be considered, that is, the
transportation interest, possibly repre-
senting, next to the great agricultural
industry of the country, the largest public
interest."

Algoma Central and Hudson Bay Railway Settlement.

A special general meeting of share-
holders at Sault Ste. Marie, Ont., on Mar.
28 ratified a scheme of arrangement be-
tween the company and its creditors,
approved all the steps taken to put the
scheme into effect, and took the necessary
steps to complete and carry out the ar-
rangement.

The company has been in the hands of
receivers for some time pending the ar-
rangement of its finances. This was
finally agreed to and was approved by
the Exchequer Court Feb. 28. The ar-
rangement affects the A.C. & H.B. Ry.
and the Algoma Central Terminals,
Limited, and covers the adjustment of
relations between these two companies;
"the modification and compromise of the
rights of the holders of the bonds of the
companies in respect of the mortgages
respectively securing the same and the
rights of each class of bondholders in
respect of the other for reducing the
existing preference shares of the railway
company from \$5,000,000 to \$2,000,000,
and creating and issuing a new class of
preference shares to the amount of \$3,-
000,000, having rights similar to the pres-
ent issue, and for the formation of a
bondholders' committee and the transfer
to it of the common stock of the said
companies and vesting in it certain rights
and power." This arrangement was ap-
proved by the Dominion Parliament Mar.
14.

In connection with the carrying out of
the arrangement, a meeting of the holders
of the railway company's 5% first mort-
gage 50 year gold bonds was called, to be
held in London, Eng., Mar. 24. Resolu-
tions were submitted to sanction the
scheme of arrangement and readjust-
ment; for the formation of a bondholders'
committee; for the payment of moneys
held by the terminals receiver and the
Supreme Court Accountant to the bond-
holders' committee under conditions set
forth in the agreement; for the payment
of interest on the railway bonds from
June 1, 1914, and interest and sinking
fund on the terminals bonds only if the
joint net earnings permit; for the pre-
servation of the guarantee of the Lake
Superior Corporation endorsed on the
railway bonds, such guarantee not to be
enforced by any single bondholder so long
as the bondholders' committee exists; for
reducing certain preference shares now
outstanding of the value of \$5,000,000 by
60%, and creating a new class of prefer-
ence shares to be distributed three-fourths
to the railway bondholders and one-fourth
to the Terminal Co. bondholders pari
passu; for the exercising of voting pow-
ers of the railway; for the conversion of
the second mortgage bonds of the com-
pany into income bonds; for the modifi-
cation of the lease of the terminals to
the railway company for the operation of
the railways and terminals companies by

two boards of directors and a General
Manager; for the payment of unsecured
creditors, and other necessary detail pur-
poses.

The Dominion Parliament has con-
firmed the agreement between the A.C. &
H.B. Ry., the Algoma Central Terminals,
Limited, and the shareholders and bond-
holders of the company respectively, and
giving power to the companies to carry
out all the terms of the agreements. The
proclamation of the Governor General in
Council, which may be issued upon evi-
dence being produced satisfactory to the
Minister of Railways that he scheme of
arrangement has been properly approved
by the shareholders of the several com-
panies. The scheme of arrangement is
fully set forth in the schedule of the act.

Tests of British Columbia Ties in England.

Canadian Railway and Marine World
for March contained the results of tests
of Douglas fir and red cedar ties from
British Columbia made by the Great
Eastern Ry. of England. We now have
a report on the use of British Columbia
Douglas fir ties on the Great Western Ry.
of England, which is also very satisfac-
tory. The tests on these two great Eng-
lish railways are especially important as
convincing testimony of the work of Brit-
ish Columbia ties for South African,
Indian and Chinese railways, which are
practically controlled by English engin-
eers. The Great Western report follows:

Date placed—May 1, 1898.

Date reported—Sept. 26, 1914.

Time of service—Still in line.

Distance—Down Main Line, 78 m. 8 c. and 78 m.

31 c.

Number of ties—616.

Subgrade soil—Marl and gravel, embankment.

Kind of ballast—Crushed.

Drainage—Good.

Whether ties have been used with spikes or
soleplates for flat bottom rail road; or with chairs
for bull headed rail road—Chairs for bull headed
road.

Rail—92 lbs. per yard, bull headed.

Ties per mile of track—2,142.

Average curve and maximum curve—On curve
of 200 chains radius.

Average grade and maximum grade—1 in 1,660,
falling.

Traffic, tons per annum—Approximately 15,000,-
000.

Kind of wood—Douglas fir.

Size—9 ft. x 10 in. x 5 in.

Class—Highest.

Sawn or hewn—Sawn.

Kind of treatment—Creosoted.

Absorption of preservative per cubic foot—0.8 of
a gallon.

Seasoning—Only kept in stock 9 weeks before
being creosoted as they were dry when received.

Condition of ties at last inspection—Very good,
considering they had actually been in line 16 years
and 5 months.

Number removed—On account of decay, 23; me-
chanical wear, nil; other causes, nil; total number
removed, 23.

Average life—Still in line, present life 17½ years.

Press reports emanating from Mont-
real state that Canada Steamship Lines
Ltd. is purchasing all the steamships,
suitable for freight purposes, which are
offering, that several vessels which have
been running out of Ogdensburg, N.Y.,
have been acquired, and that several
vessels which were not in use last year
for passenger purposes, are being fitted
up for business this season.

George Bury, Vice President, C.P.R., is
reported to have stated at Vancouver
recently that the company had placed
orders in British Columbia for about
10,000,000 ft. of lumber, the principal por-
tion of which is to be used in building
freight cars at Angus Shops, Montreal.

The Canadian Locomotive Co. has ship-
ped 7 decapod locomotives, similar to
those illustrated and described in Cana-
dian Railway and Marine World for Janu-
ary, to the Russian Government.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry.—T. F. RAHILLY, heretofore Travelling Auditor, has been appointed acting Trainmaster, vice W. M. Hugill, enlisted for active service. Office, Sault Ste. Marie, Ont.

Canada Steamship Lines, Ltd.—See under separate heading in Marine Department, pg. 204.

Canadian Northern Ry.—The Engineering Department, Eastern Lines, has been organized as follows:—Chief Engineer, A. F. STEWART; Assistant Engineer, R. A. BALDWIN; Assistant Engineer, E. W. OLIVER; Bridge Engineer, W. P. CHAPMAN; Supervisor of Buildings, G. C. BRIGGS; Chief Draughtsman, W. H. ARMS. The Chief Engineer has charge of all engineering matters, the prescribing of standards and will be in direct charge of new work or special assignments of work not otherwise delegated to the Division officers. All maintenance of way work, including ordinary maintenance of way and structures, continues to be handled under the jurisdiction of the division officers as heretofore. Offices, Toronto.

L. W. BULLER, heretofore agent, has been appointed General Agent, Ottawa, with jurisdiction over the Ottawa Terminal. His duties include those previously carried out by G. A. Hoag, as Assistant Superintendent.

I. G. REECE, heretofore Travelling Passenger Agent, Toronto, has been appointed City Passenger Agent, Ottawa, vice S. J. Montgomery, resigned to enter private business.

G. A. HOAG, heretofore Assistant Superintendent, Ottawa, has been appointed Assistant Superintendent, Toronto District, Ontario Division, vice W. J. Curle, whose appointment as General Superintendent, Chatham, Wallaceburg & Lake Erie Ry., was announced in our last issue. Office, Trenton, instead of Rose-dale, Toronto, where the Assistant Superintendent's office was previously located.

H. D. CAMERON, heretofore chief draughtsman, Winnipeg, has been appointed Mechanical Engineer, Toronto, vice L. K. Silcox, whose resignation to enter Illinois Central Rd. service was announced in our last issue.

W. H. LONG, heretofore Car Foreman, Trenton, Ont., has been appointed General Car Foreman, Ontario Division. Office, Toronto.

R. C. GADSBY, heretofore Soliciting Passenger Agent, Toronto, has been appointed Travelling Passenger Agent there, vice I. G. Reece, promoted.

H. J. LeCLAIR, heretofore City Ticket Agent, Toronto, has been appointed Soliciting Passenger Agent there, vice R. C. Gadsby, promoted.

F. G. WARD has been appointed City Ticket Agent, Toronto, vice H. J. LeClair, promoted.

F. L. WILLIS has been appointed Night Locomotive Foreman at Dauphin, Man.

Canadian Pacific Ry.—R. E. HALL, heretofore Storekeeper, North Bay, Ont., has been appointed Storekeeper, Angus Shops, Montreal.

R. V. NICHOLSON, heretofore Bridge and Building Master, Schreiber, Ont., has been appointed Bridge and Building Mas-

ter, Ottawa, Ont., vice F. O'Hara, deceased.

T. H. HAMILTON, heretofore locomotive driver, West Toronto, has been appointed District Master Mechanic, Districts 1, 3 and 4, Ontario Division, vice G. I. Evans, on leave of absence. Office, Toronto.

J. JARRETT, heretofore Storekeeper, Chapleau, Ont., has been appointed Storekeeper, North Bay, Ont., vice R. E. Hall, transferred.

S. A. POTTLE has been appointed Storekeeper, Chapleau, Ont., vice J. Jarrett, transferred.

N. BERGER has been appointed Roadmaster with territory from White River to Schreiber, Ont. Office, Schreiber, Ont.

J. COUGHLIN has been appointed Roadmaster with territory from Schreiber to Port Arthur, Ont. Office, Schreiber, Ont.

R. A. McPHERSON has been appointed Locomotive Foreman, Ignace, Ont., vice A. J. Pentland, transferred.

J. A. MacARTHUR has been appointed Superintendent, District 1, Manitoba Division, vice A. Halkett, transferred. Office, Kenora, Ont.

F. SADLIER, heretofore Shop Foreman, Revelstoke, B.C., has been appointed District Master Mechanic, Fort William, Ont., vice G. Twist, transferred.

A. J. PENTLAND, heretofore Locomotive Foreman, Ignace, Ont., has been appointed Locomotive Foreman, Souris, Man., vice H. J. Reed, transferred.

G. TWIST, heretofore District Master Mechanic, Fort William, Ont., has been appointed District Master Mechanic, Winnipeg, vice A. Brown, transferred.

J. D. MUIR, heretofore Locomotive Foreman, Medicine Hat, Alta., has been appointed Locomotive Foreman, Winnipeg, vice G. Pratt, transferred.

H. B. JACKSON, heretofore Manager, Empress Hotel, Victoria, B.C., has been appointed Manager, Royal Alexandra Hotel, Winnipeg, vice J. J. McGuire, who has left the service.

G. C. GIBSON, heretofore Locomotive Foreman, Strathcona, Alta., has been appointed Locomotive Foreman, Saskatoon, Sask., vice C. A. Perry, transferred.

A. HALKETT, heretofore Superintendent, District 1, Manitoba Division, Kenora, Ont., has been appointed Superintendent, District 2, Saskatchewan Division, vice H. H. Boyd, transferred. Office, Moose Jaw.

W. J. RENIX, heretofore District Master Mechanic, District 1, British Columbia Division, Revelstoke, has been appointed District Master Mechanic, Moose Jaw, Sask.

G. PRATT, heretofore Locomotive Foreman, Winnipeg, has been appointed Locomotive Foreman, Strathcona, Alta., vice G. C. Gibson, transferred.

C. A. COTTERELL, heretofore Superintendent, District 2, British Columbia Division, Vancouver, has been appointed Superintendent, District 2, Alberta Division, vice F. Walker, who is on leave owing to illness. Office, Lethbridge.

C. A. PERRY, heretofore Locomotive Foreman, Saskatoon, Sask., has been appointed Locomotive Foreman, Medicine Hat, Alta., vice J. D. Muir, transferred.

JAMES McGOWN, Jr., heretofore machinist, has been appointed Locomotive Foreman, Rogers Pass, B.C., vice J. W. Jackson, transferred.

J. A. REID, heretofore Locomotive Foreman, Souris, Man., has been appointed Locomotive Foreman, Cranbrook, B.C.,

vice D. G. MacDonald, who, at his own request, has resumed work at the bench, at Lethbridge, Alta.

A. BROWN, heretofore District Master Mechanic, Winnipeg, has been appointed District Master Mechanic, District 1, British Columbia Division, Revelstoke, vice W. J. Renix, transferred.

W. J. BARBER, heretofore acting Locomotive Foreman, North Bend, B.C., has been appointed Locomotive Foreman, Revelstoke, B.C., vice F. D. Warner, transferred.

R. QUINN, heretofore in Winnipeg shops, has been appointed Shop Foreman, Revelstoke, B.C., vice F. W. Sadlier, transferred.

F. D. WARNER, heretofore Locomotive Foreman, Revelstoke, B.C., has been appointed Locomotive Foreman, Nelson, B.C., vice W. Pitts, superannuated.

J. W. JACKSON, heretofore Locomotive Foreman, Rogers Pass, B.C., has been appointed Locomotive Foreman, Kamloops, B.C., vice John Macrae, acting Locomotive Foreman, transferred.

JOHN MACRAE, heretofore acting Locomotive Foreman, Kamloops, B.C., has resumed his former position as Locomotive Foreman, North Bend, B.C.

C. HOOD, heretofore Trainmaster, Grand Forks, B.C., has had his headquarters transferred to Nelson, B.C.

J. HOLLONQUIST, heretofore Roadmaster, Moose Jaw, Sask., has been appointed Roadmaster, with territory from North Bend to mileage 110, Cascade Sub-division, B.C., vice J. Esslemont, deceased. Headquarters, Mission, B.C.

H. H. BOYD, heretofore Superintendent, District 2, Saskatchewan Division, Moose Jaw, has been appointed Superintendent, District 2, British Columbia Division, vice C. A. Cotterell, transferred. Office, Vancouver.

W. H. DEACON has been appointed Travelling Passenger Agent, Vancouver, B.C., vice F. H. Daly.

A. BENAGLIA has been appointed acting Manager, Empress Hotel, Victoria, B.C., vice H. B. Jackson, transferred.

C. E. PHELPS, heretofore Travelling Passenger Agent, New York, has been appointed City Passenger Agent, Washington, D.C. Office, 1419 New York Ave.

A. G. BROOKER has been appointed Travelling Passenger Agent, New York, vice C. E. Phelps, promoted. Office, 1231, Broadway.

G. J. WEIDMAN, heretofore City Passenger Agent, Washington, D.C., has been appointed City Passenger Agent, Cleveland, Ohio.

H. M. BEYERS has been appointed City Passenger Agent, Spokane, Wash.

D. C. O'KEEFE has been appointed City Passenger Agent, Tacoma, Wash., vice C. H. Naylor.

Grand Trunk Ry.—R. E. ORR, heretofore dispatcher, Belleville, Ont., has been appointed acting Trainmaster, Districts 8, 9 and 10, Belleville Division, vice J. D. McMillan, assigned to other duties. Office, Lindsay, Ont.

J. D. McMILLAN, heretofore Trainmaster, Lindsay, Ont., has been appointed acting Superintendent, Belleville Division, comprising Districts 5, 6, 7, 8, 9 and 10, Ontario Lines, vice H. F. Coyle, on leave of absence on account of illness. Office, Belleville.

J. S. CARRUTHERS has been appointed City Passenger Agent, Prescott, Ont., during the absence of P. B. Whiteley, who has enlisted for overseas military service.

J. R. MELVILLE, heretofore chief

clerk to Vice President Dalrymple, Montreal, has been appointed General Agent, Passenger Department, Toronto. This is a new position.

R. E. NEWCOMER, heretofore in office of General Manager, Wabash Ry., has been appointed Trainmaster, Districts 17, 18, 19 and 24, London Division, G.T.R., vice W. J. Durkin, who has resigned and at his own request been assigned to train service. Office, London, Ont.

The following station agents have been appointed:—Millbrook, Ont., P. Stinson; Seagrave, Ont., A. J. Dance; Madawaska, Ont., F. D. O'Connor; Pottersburg, Ont., outside agency, J. M. Duncan.

Grand Trunk Pacific Ry.—C. N. McMATH has been appointed Car Inspector, Transcona, Man., vice N. C. Hopper, who has enlisted for overseas military service.

S. M. GREENE, heretofore City Passenger and Ticket Agent, Saskatoon, Sask., has been appointed City Passenger and Ticket Agent, Regina, Sask., vice G. Powell, promoted.

J. J. RALEIGH, heretofore Mixed Train Agent, Smithers, B.C., has been appointed Agent, Ketchikan, Alaska.

J. D. McAULEY, heretofore Chief Clerk to Commercial Agent, Regina, Sask., has been appointed Travelling Freight and Passenger Agent, Juneau, Alaska.

GORDON POWELL, heretofore City Passenger and Ticket Agent, Regina, Sask., has been appointed Freight and Passenger Agent, Skagway, Alaska.

The following station agents have been appointed:—Central Butte, Sask., A. Jackson; Gilroy, Sask., W. G. Stimpson.

Great Northern Ry.—G. H. SMITTON, Assistant General Freight Agent, Portland, Ore., is reported to have been appointed Assistant Traffic Manager, St. Paul, Minn., vice H. A. Jackson, transferred to Great Northern Pacific Steamship Co.'s service.

H. H. BROWN, heretofore Assistant General Freight Agent, St. Paul, Minn., has been appointed General Freight Agent there. This is a new position.

F. H. PARKER, heretofore Assistant Comptroller, St. Paul, Minn., has been appointed Assistant General Freight Agent, St. Paul, Minn., vice H. H. Brown, promoted.

P. B. BEIDELMAN, heretofore General Agent, Refrigerator Service, has been appointed Assistant General Freight Agent, St. Paul, Minn., vice W. J. Power, resigned.

H. COSTIGAN is reported to have been appointed General Agent, Freight Department, Seattle, Wash., vice R. K. Pretty, transferred.

R. K. PRETTY, General Agent, Freight Department, Seattle, Wash., is reported to have been appointed Assistant General Freight Agent, Portland, Ore., vice G. H. Smitton, promoted.

Great Northern Pacific Steamship Co.—H. A. JACKSON, heretofore Assistant Traffic Manager, Great Northern Ry., St. Paul, Minn., has been appointed General Traffic Manager, G.N.P.S.Co., vice C. E. Stone. Office, San Francisco, Cal.

Illinois Central Rd.—G. B. WYLIE, heretofore Travelling Passenger Agent, Buffalo, N.Y., has been appointed Travelling Passenger Agent, Chicago, Ill.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—C. E. PHELPS has been appointed City Passenger Agent, Washington, D.C., vice G. J. Weidman.

New York Central Rd.—G. H. CLARK, Division Freight Agent, has had his jurisdiction extended to include stations on the extension from Cornwall to Ottawa, Ont. Office, Ottawa.

Northern Navigation Co.—C. LEIDICH has been appointed District Passenger Agent, 69 Fort St. West, Detroit, Mich.

A. RAY LAWRENCE has been appointed District Passenger Agent, 733 Euclid Ave., Cleveland, Ohio.

Lake and Rail Rate Cancellations Forbidden.

The Interstate Commerce Commission has given the following decision:—Tariffs of the Grand Trunk, designated as Supplement 16 to I. C. C. 1535, Supplement 10 to I. C. C. 2110, and I. C. C. 2297, filed to become effective Sept. 15, 1915, proposed to cancel the joint class and commodity rates on traffic from Duluth, Minn., and other ports at the head of Lake Superior to points in eastern trunk line territory, published in connection with the Port Huron & Duluth Steamship Co., which operates a line of boats between Port Huron, Mich., and Duluth, Minn. By tariff of the Chicago, St. Paul, Minneapolis & Omaha Ry., designated as Supplement 23 to I. C. C. 3868, filed to become effective Oct. 8, 1915, cancellation was proposed of joint rail-lake-and-rail commodity rates published in connection with the same boat line from Minneapolis, Minn., and other points to eastern trunk line territory. By orders of the commission the tariffs were suspended until July 13, 1916, pending investigation. Cancellation of the joint rates would leave in effect combination rates only, with the result that through freight charges via the Port Huron & Duluth Steamship Co.'s line would be materially increased. The evidence shows that the tariffs filed by the G.T.R., are the result of a dispute with the rail lines east of Buffalo over the divisions of the joint rates claimed by such rail lines. The Chicago, St. Paul, Minneapolis & Omaha did not appear at the hearing, and no evidence was offered in support of its tariff.

The Port Huron & Duluth Steamship Co. is a common carrier, entirely independent of railway ownership. At Duluth it connects with rail lines which serve Minneapolis and other interior points. At Port Huron traffic is interchanged with the G.T.R., whose lines connect at Buffalo with the eastern trunk lines. Through routes and joint rates via these lines, excepting the Pennsylvania east of Buffalo, have been in effect for many years; the freight tonnage over the water line during the season of navigation is considerable, and there is public demand for the continuance of such through routes and joint rates.

The question of through routes and joint rates in connection with the Pennsylvania east of Buffalo was before the commission in a recent case, and we held that such routes and rates should be established and maintained for two years, and that the rates should not exceed as maxima the joint rates in effect via other rail-and-lake and rail-lake-and-rail routes. Port Huron & Duluth Steamship Co. v P. R. R. Co., 35 I. C. C., 475. Portions of the evidence in that case were introduction and filed in this proceeding. On the record we have no doubt that the public interests will be best served by a continuance of through routes and joint rates, and we find nothing in the evidence to justify the cancellations proposed. The mere fact of disagreement between the carriers as to divisions does not prove that the joint rates are unreasonable, or that the routes over which they are applied should be abandoned. We hold that the proposed cancellations have not been

justified and that the suspended tariffs should be cancelled and that the through routes and joint rates applicable thereto should be maintained. It will be so ordered. The carriers should make further endeavor to agree upon the divisions of such joint rates, and if they cannot so agree they should present the question of divisions to the Commission in a supplementary proceeding.

H. C. Martin, General Freight Agent, G.T.R., represented that company at the hearing.

Reid Newfoundland Co's Railway Operations.

The operations of the Reid Newfoundland Co.'s railways for the year ended June 30, 1915, show the following results:

Earnings.		1914-1915.	1913-1914.
Passenger traffic		\$301,401.04	\$354,657.56
Freight traffic		382,510.00	311,175.61
Mails		53,370.21	50,865.06
Other sources		54,305.50	63,549.12
		\$691,586.75	\$782,247.35
Operating Expenses.		1915.	1914.
Maintenance of lines, build- ings, etc.		\$174,253.29	\$161,796.53
Operation and repairs of locomotives		283,465.93	321,932.77
Repairs of cars		66,843.41	75,210.70
General		375,475.63	430,275.28
		\$900,038.26	\$989,215.28
Operating Results for Five Years.		Earnings.	Expenses.
1911		\$626,303.56	\$663,771.29
1912		633,797.91	766,920.49
1913		740,231.88	875,862.08
1914		782,247.35	989,215.28
1915		691,586.75	900,038.26
		Freight Carried	Deficit.
		1914-1915	1913-1914
		lbs.	lbs.
Flour		50,581,800	34,506,760
Live stock		2,700,000	2,956,610
Lumber		60,555,890	52,431,470
Fish		9,266,610	13,071,660
Manufactured goods		3,113,710	3,181,120
Other articles		212,194,030	256,534,850
Totals		338,412,040	362,682,470

Quebec Bridge Construction Progress.

During the discussion of the estimates in the House of Commons recently, the acting Minister of Railways said: The car ferry Leonard is in service between Quebec and Levis and handling very satisfactorily the National Transcontinental and Intercolonial business. The car ferry was rendered necessary owing to the delay involved in this project by the collapse of the first Quebec bridge. Work is now progressing rapidly on the construction of the second bridge. On the north shore the entire cantilever arm has been completed, thus practically completing all the steel work on that side. On the south side the steel work has been completed up to and including the main post over the main pier. This year the south cantilever arm will be erected, and the work of erecting the suspended span will be commenced early in the spring at Sillery Cove and will be completed by the time the cantilever arm is ready to receive it. It will then be floated into place and suspended from the two ends of the cantilever arms. Thus, it is expected that all the main members of the bridge will be erected this year, and the connection from shore to shore made, though it will take another year to finish riveting and painting and to clean up the work. The expenditure on the bridge to date amounts to \$18,257,621, of which \$10,473,346 has been on the new bridge. The total cost of completing the bridge, taking the old bridge and the new bridge together, is estimated at \$27,000,000.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1901, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates of orders, immediately following the numbers, are those on which they were drawn.

General order 162, Mar. 30.—Approving conditions on telegraph forms used by telegraph companies on which messages to be transmitted are to be written.

General order 163, Mar. 31.—Ordering that terms of judgment, re telegraph companies' tariffs of tolls, Mar. 28, delivered by Commissioner McLean and concurred in by the other Commissioners, which is made part of this order and the tariff changes therein directed to be made, be complied with and become effective not later than July 1.

24814. Mar. 16. Authorizing C.P.R. to build road diversion at mileage 27.5 from Golden, B.C.

24815. Mar. 17. Approving G.T.R. detail plans showing substructure of Bathurst St. bridge, Toronto.

24816. Mar. 17. Authorizing Canadian Northern Ontario Ry. to build across certain highways in York Tp., mileage 0 to 14.9, northerly from new Union Station site, Toronto.

24817. Mar. 18. Amending order 24651, Jan. 13, re protection of C.P.R. crossing near Binscarth, Man.

24818. Mar. 20. Relieving G.T.R. from providing further protection at Wilson's public crossing, Iroquois, Ont.

24819. Mar. 20. Authorizing Canadian Northern Ry. to build across and divert road in s.w. ¼ Sec. 3-28-10, w. 3 m., Sask.

24820. Mar. 20. Approving Canadian Northern Ontario Ry. location of temporary main line passenger station in Parry Sound.

24821. Mar. 20. Authorizing Canadian Northern Ry. to build and divert east and west road allowance between n.w. ¼ Sec. 33-39 and s.w. ¼ Sec. 4-40-9, w. 3 m., Sask.

24822. Mar. 18. Authorizing Ancaster Tp., Ont., to build highway crossing over Toronto, Hamilton & Buffalo Ry on Leland St. West, Hamilton.

24823. Mar. 20. Approving agreement between Bell Telephone Co. and Addison Rural Independent Telephone Co., March 1.

24824. Mar. 21. Authorizing Grand Trunk Pacific Ry. to operate branch line required under order 24080, Aug. 13, 1915, to connect with Board of Grain Commissioners' elevator at Moose Jaw, Sask.

24825. Mar. 10. Authorizing G.T.R. to operate over tracks to be built by C.P.R. on Lots 22 and 23, Con. 1, Chatham, Ont., for Dominion Sugar Co., crossing to be protected by interlocking plant to be provided and operated by C.P.R., at cost of G.T.R.

24826. Mar. 22. Authorizing C.P.R. to build across First Ave., Shaanavon, Sask.

24827. Mar. 23. Ordering Canadian Northern Ry. to keep station waiting room at Tiny, Sask., heated, clean and lighted for accommodation of passengers on arrival and departure of trains, and to take care of freight and express matter.

24828. Mar. 23. Amending order 24698, Jan. 31, re C.P.R. spur for Ford Motor Co. at Winnipeg.

24829. Mar. 22. Authorizing C.P.R. to build diversion, in lieu of road allowance between Secs. 22 and 27-13-11, w. 4 m., Alta.

24830. Mar. 24. Dismissing applications of Ivey & Co., Port Dover, Ont., for order directing G.T.R. to build siding at Port Dover, without prejudice to an application under Sec. 226 of Railway Act.

24831. Mar. 23. Approving G.T.R. plans showing temporary repairs to Bonaventure station, Montreal.

24832. Mar. 27. Authorizing Grand Trunk Pacific Branch Lines Co. to build highway over Battleford Branch in n.e. ¼ Sec. 4-43-16, w. 3 m., in rural municipality 438, West Saskatchewan District, Sask.

24833. Mar. 27. Approving New York Central Rd. bylaw passed March 15, and rescinding order 23265, Feb. 9, 1915.

24834. Mar. 25. Authorizing Canadian Northern Ry. to cross and divert special road in s.e. ¼ Sec. 33-27-10, w. 3 m., Sask.

24835. Mar. 27. Ordering Canadian Northern Ry. to appoint station agent by May 1, at Excel, Alta.

24836. Mar. 27. Ordering Grand Trunk Pacific Ry. to appoint station agent by May 1 at Smiley, Sask.

24837. Mar. 28.—Extending, finally, to Aug. 1, the effective date of item on page 9 of Supplement 5 to Canadian Freight Classification 16, giving specifications of cheese boxes for carriage as freight.

24838. Mar. 28.—Authorizing Toronto & Hamilton Highway Commission to build temporary industrial railway along right of way and tracks of Hamilton Radial Electric Ry. in Oakville, Ont., rights so granted not to extend beyond Sept. 1.

24839. Mar. 28.—Relieving Canadian Northern

Ry. from providing further protection at highway just east of Kamsack yards, Sask.

24840. Mar. 29.—Postponing, until further order, effective date of increased minimum weight for fir, spruce, hemlock and common cedar lumber, when loaded in cars under 36 ft. long, from 30,000 to 35,000 lbs. per car, as appearing in C.P.R. Supplement 59 to C. R. C. no. W. 1806.

24841. Mar. 30.—Ordering Canadian Northern Ry. to fence both sides of its right of way, from mileage 387.2 to 2 miles east of Bedford, Man., running easterly to Sandilands, mileage 381.7, by May 15.

24842. Mar. 30.—Authorizing Canadian Northern Quebec Ry. to build across public road between Lots 41 and 42, R. 7, Ponsby Tp.

24843. Mar. 30.—Authorizing Canadian Northern Ontario Ry. to build spur on parts of lots 13 and 14, Con. 5, Field Tp., Ont.

24844. Mar. 30.—Authorizing Canadian Northern Quebec Ry. to build across public road in lot 36, R. 1, Arundel Tp.

24845. Apr. 1.—Approving Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) plan of location for station and facilities in Vancouver, B.C.

24846. Mar. 31.—Authorizing British Columbia Government to build highway over Grand Trunk Pacific Ry. at Newlands station.

24847. Mar. 30.—Ordering Canadian Northern Ry. to furnish tri-weekly train and mail service on its Winnipegosis Branch, from June 1 to Sept. 15, when it may reduce service to semi-weekly.

24848. Apr. 3.—Authorizing Quebec, Montreal & Southern Ry., until further order, to remove station agent at St. Robert, Que.; caretaker to be appointed for accommodation of passengers and to care for freight and express matter.

24849. Apr. 3.—Authorizing Canadian Northern Quebec Ry. to build across and divert certain highways in Amherst Tp.

24850. Apr. 1.—Relieving Grand Trunk Pacific Branch Lines Co. from erecting fences, gates and cattle guards on its Regina-Boundary Branch, on east side of station grounds at Huntoon, Sask.

24851. Apr. 3.—Authorizing G.T.R. to build siding for Canada Forge Co., Welland, Ont.

24852. Apr. 3.—Authorizing C.P.R. to build diversion in lieu of road allowance at mileage 129.91, Hardisty Subdivision, Alta.

24853. Apr. 3.—Authorizing C.P.R. to build spur for Martinon Lumber Co. at mileage 65.67, Shore Line Subdivision, N.B.

24854. Apr. 4.—Authorizing Canadian Northern Quebec Ry. to build across public road in Lot. 40, R. 7, Ponsby Tp.

24855. Apr. 4.—Authorizing C.P.R. to build across and divert highways at mileage 371.38; 375.73; 363.84; 420.65, and 421.41, on its Pheasant Hills Branch, Sask.

24856. Apr. 4.—Amending order 24029, July 28, 1915, re G.T.R. crossing at Barton St. and Ferguson Ave., Hamilton, Ont.

24857. Apr. 4.—Dismissing complaint of Hunting-Meritt Lumber Co., Vancouver, B.C., against refusal of British Columbia Electric Ry. to handle cars destined or to for furtherance via Great Northern or Northern Pacific Rys. and rate on lumber and shingles of 1c per 100 lbs. over Vancouver rates which complainants have to pay on shipments from Eburne to points in Canada and United States.

24858. Mar. 29.—Authorizing Canadian Northern Ontario Ry. to build across highways, mileage 44.78 to 47.81, Scott Tp.

24859. Apr. 4.—Approving London Railway Commission's bylaw authorizing J. E. Richards, Manager and Treasurer, London & Port Stanley Ry., to prepare and issue tariffs of tolls.

24860. Apr. 1.—Ordering G.T.R. to open railway crossing as a continuance of Pitt St., Glen Robertson, Ont.

24861. Apr. 5.—Ordering G.T.R. forthwith to desist from charging any toll other than that prescribed under order 4988, on traffic from and to interchange with Canadian Northern Ry., as authorized by order 24416, Nov. 5, 1915, near Ottawa, Ont.

24862. Apr. 4.—Approving agreement between Bell Telephone Co. and La Cie. de Telephone St. Ours, March 27.

24863. Apr. 4.—Relieving C.P.R. from providing further protection at Hawkesbury Road, near Vankleek Hill Station, Ont.

24864. Apr. 4.—Authorizing C.P.R. to use bridge at Ninth Ave., Broadview, Sask.

24865. Apr. 4.—Approving agreement between Bell Telephone Co. and Malahide & Bayham Telephone Association, March 27.

24866. Apr. 5.—Approving plans of signalling for Montreal & Southern Counties Ry. across Victoria Jubilee Bridge, Montreal.

24867. Apr. 4.—Ordering Canadian Northern Ry. to put in cattle pass when it fills trestle at mileage 757.7, on e. ½, sec. 27, tsp. 52, range 15 w., 4th meridian.

24868. Apr. 5.—Dismissing complaints of T. H. Taylor and Canada Flour Mills Co., Chatham, Ont., against interswitching charge of 2c per 100 lbs. on grain, ex-lake, milled in transit at Chatham.

24869. Apr. 5.—Ordering Vancouver, Victoria

& Eastern Ry. and Navigation Co. (G.N.R.) to protect tracks between Ocean Park and White Rock, B.C., from May 15 to Nov. 15 each year, one watchman to patrol track between mileposts 123 and 127 from 7 p.m. to 7 a.m., and from Nov. 15 to May 15 each year, two watchmen to patrol track from 7 p.m. to 7 a.m., one from milepost 123 to 125, and other from 125 to 127; speed of all trains and locomotives not to exceed 10 miles an hour between mileposts 123 and 127 throughout year; and rescinding orders 17959, Nov. 5, 1912, and 23885, June 21, 1915.

24870. Apr. 6.—Ordering G.T.R., within 60 days, to install bell at Talbot Road, just east of Courtland Station, Ont., 20 per cent. of cost to be paid out of railway grade crossing fund.

24871. Apr. 6.—Authorizing Grand Trunk Pacific Ry. to build highway over its main line and siding between lots 361 and 369, R. 5, Coast District, B.C.

24872. Apr. 6.—Amending order 24825, March 10, re G.T.R. operation over Dominion Sugar Co.'s spur at Chatham, Ont.

24873. Apr. 7.—Ordering C.P.R. to inaugurate on or about June 1, daily, except Sunday, service between Empress and Swift Current, Sask.

24874. Apr. 6.—Relieving C.P.R. from providing further protection at Third St., London Tp., Ont.

24875. Apr. 8.—Ordering Grand Trunk Pacific Ry. to appoint caretaker at Cando Station, Sask.

24876. Apr. 7.—Authorizing City of Windsor, Ont., to build overhead crossing at Wyandotte St.

24877. Apr. 8.—Authorizing G.T.R., Toronto, Hamilton & Buffalo Ry. and Hamilton St. Ry. to operate over crossing at Burlington St., Hamilton, Ont., and authorizing G.T.R. and T.H. & B.R. to operate trains over same without stopping; speed not to exceed 10 miles an hour.

24878. Apr. 10.—Amending order 24856, Apr. 4, re G.T.R. crossing at Barton St. and Ferguson Ave., Hamilton, Ont.

24879. Apr. 10.—Extending for one year from date, time within which City of Regina, Sask., shall build bridge across C.P.R. on Hamilton St.

24880. Apr. 8.—Ordering Canadian Northern Ry. to appoint caretaker at Fairmount Station, Sask.

24881. Apr. 10.—Ordering Great Northern Ry. to erect fences along right of way on property of J. Rinn, Elm Creek, Man., on west side of railway for 1,287 ft., on east side for 2,850 ft., to install gates through station grounds at Magnus, Man., and cattle guards at crossing of Government road allowance, by May 31.

24882. Apr. 8.—Ordering G.T.R. to place day watchman at highway crossing east of Coteau, Que., mileage 37.58, between 7 a.m. and 7 p.m.; wages to be paid 75 per cent. by G.T.R. and balance by Soulanges County, Que.

24883. Apr. 8.—Relieving Grand Trunk Pacific Branch Lines Co. from erecting fences, gates and cattle guards on its Tofield-Calgary Branch, mileage 0 to 201, Alta.

24884. Apr. 11.—Authorizing Essex Terminal Ry. to build spur across Mercer St. and Hanna Ave., Windsor, Ont.

24885. Apr. 11.—Approving plan and specifications of Turvey drain, to be constructed under G.T.R. in Morris Tp. about 32.62 miles west of Palmerston, Ont.

24886. Apr. 11.—Dismissing application of Brotherhood of Locomotive Firemen and Engineers for order directing railway companies to erect railway crossing sign posts (mile whistle boards) at railway crossings, at grade.

24887. Apr. 11.—Approving Toronto, Hamilton & Buffalo Ry. form of release and power of attorney 147, to be signed by persons who desire, for special reasons, to travel in cars which are not intended to carry passengers.

24888. Apr. 11.—Authorizing Canadian Northern Ontario Ry. to connect its Montreal-Ottawa line with G.T.R. near Ottawa.

24889. Apr. 11.—Relieving C.P.R. from providing further protection at highway at mileage 8.4 from Place Viger, 1½ miles east of Jacques-Cartier Jct., St. Laurent, known as Cremazie Road, Montreal.

24890. Apr. 11.—Relieving C.P.R. from providing further protection at highway first west of Herbert station, Sask.

24891. Apr. 11.—Authorizing Canadian Northern Ry. to build connecting track with G.T.R. across public road in Lot. 11, Gloucester Tp., Ont.; protection at crossing reserved for further consideration.

24892. Apr. 11.—Dismissing C.P.R. application for order amending general order 65, Nov. 9, 1910, as amended by general order 68, Feb. 6, 1911, re clearances.

T.H. & B.R. Wages.—Arbitration proceedings in connection with the demand for increased wages by mechanics employed on the Toronto, Hamilton & Buffalo Ry., were opened at Hamilton, Ont., April 10, before the arbitrators, Judge Snider, G. S. Kerr, K.C., and Jas. Simpson.

Electric Railway Department

Recent Developments in Electric Railway Car Equipment.

By W. G. Gordon, Transportation Engineer, Canadian General Electric Co., Ltd.

(Continued from last issue.)

Control.—Modern methods of control, including both hand control and multiple unit control, also show great advances of recent years. The number of operations that a car controller must perform daily is remarkable, and the work that is accomplished with the platform controller is still more remarkable. In city streets the controller is kept in almost constant movement, making and breaking large currents, and doing its required work indefinitely, requiring very little attention, and receiving considerable abuse. A big advance in the design of the platform type of controller was made in applying individual magnetic blowouts to each finger, and also in rearranging the internal connections so as to secure the minimum potential between adjacent contacts. With the individual blowouts, the burning of the arc chutes has been practically eliminated; and the platform controller as it stands today is absolutely safe, reliable and dependable. Where field control is desired with this type of controller it is secured by the use of extra fingers in the controller. This form of control is built to handle a total motor equipment of 360 h.p. at 600 volts; although, for various reasons, with equipments of this capacity and even considerably smaller, it may be advisable to use multiple unit control either for single car or train operation. The hand operated platform type of controller has been built and operated up to 1,500 volts, successful operation being secured by increased creepage, insulation, and current rupturing capacity. This is the highest voltage at which this type of controller has so far been called on to operate.

Multiple unit control generally replaces hand control with platform type of controller, for a total horsepower of equipment between 200 and 300 h.p., depending largely on local conditions of car layout, space available for location of controller, and desirability of securing train operation with two or more cars. Very decided advances have been made in simplifying the apparatus comprising a multiple unit equipment of recent years, especially from the point of view of mounting the apparatus under the car body and wiring up between the contactors (whether electrically or pneumatically operated), reverser, rheostats and motors. Whether the multiple unit control should be non automatic or automatic depends, for any given service, on the conditions and requirements. Automatic control is recommended where several motor cars are operated in a train and where it is desirable to prevent high current peaks. It secures a minimum slipping of the wheels with high acceleration. An interesting application of automatic control is used by one of the large railway companies in the United States. The passenger load is a higher percentage than usual of the total loaded weight of car, so the setting of the current relay is varied automatically corresponding with the varying compression of the truck springs.

For interurban work there promises to be a big development throughout Canada in the use of high voltage direct current, with multiple unit operation. 600 volts,

1,500 volts, 2,400 volts and 3,000 volts form a natural progression; and in laying out new work it is a simple matter, and involves a very small relative increase in cost, to make provision in the line construction and power supply for going up to the next highest voltage step when future conditions will warrant the change. With regard to supply for auxiliary circuits, when operating on 1,500 volts or higher, for control, lights, heaters (if electric heaters are used) and pump motor, various combinations are used, depending largely on local conditions. The most common method of obtaining low voltage current for the control circuit is by the use of either a motor generator set or a dynamotor. The dynamotor is smaller, lighter, and cheaper than the motor generator, and is quite generally used up to and including 1,500 volts; its operation having proved entirely satisfactory and its maintenance cost almost negligible. In this connection I might mention with regard to the motor equipments which I referred to as showing such small brush wear after years of service, that the dynamotors in operation with those equipments were also running with the original brushes.

The most satisfactory arrangement for the air compressor is to provide it with a high voltage motor. It is found that a 1,500 volt motor of this size can be built with excellent characteristics. Another arrangement for use on 2,400 volts consists in having two 1,200 volt motors, one on each side of the compressor; and for 3,000 volt operation the use of two 1,500 volt motors.

With regard to electric car heaters, the design of 1,500 volt heaters was not a serious matter, the chief precaution being to provide against foreign objects coming in contact with the live parts, and at the same time not to restrict free air circulation. 2,400 and 3,000 volt individual heaters are in successful operation for locomotive cabs; but for cars operating at these voltages, the plan adopted is to mount the heater under the car. A fan blows air over the heated coils and the hot air is distributed evenly through ducts along both sides of the car.

With regard to car lighting, in many cases the amount of current required for this purpose is small enough to make it desirable to supply the lights from the dynamotor. It was found unsafe to connect lights across 1,500 volts using the standard 600 volt sockets, as the leading in wires are close enough together to hold the arc in case of a filament breaking. A new socket has been produced, similar to that used for series street lighting, and twelve 125 volt lamps can be used in series on 1,500 volts. The receptacle for the socket covers the lamp base and all the live parts and is thoroughly grounded, thus affording very thorough protection.

The luminous arc type of headlight has been very successful and is very economical in maintenance. This type of headlight, with parabolic metal reflector, throws a wide beam of light; and, with a semaphore lens, throws a concentrated beam for a great distance ahead. This latter type is largely used on high speed roads. Dimming can be arranged for,

either by reversing the polarity of the arc or, with incandescent lamps. A smaller headlight of the same type throwing a concentrated beam for 600 to 800 ft. is excellently adapted for city and suburban work. Some roads consider the results obtained with high efficiency metal filament lamps with concentrated filament used with parabolic reflector warrant for providing a special low voltage supply of from 6 to 30 volts for the headlights.

In the case of combined 600 and 1,500 volt operation, which is a condition sometimes met with, a protective device is necessary to prevent the higher voltage from ever being maintained on the low voltage circuits. A protective relay is used for this purpose which is connected so that the low voltage circuits are instantly opened in case the higher voltage is impressed on them. These circuits cannot be restored till the proper steps have been taken and the higher voltage removed from the relay. When going from 1,500 volt to 600 volt operation, provision must be made to supply the lower voltage to the auxiliary circuits, and also to disconnect the dynamotor. This is done by means of a two position selector relay. In the down or normal position the 1,500 volt trolley is connected to the dynamotor, and the low voltage tap on the dynamotor is connected to the auxiliary circuits. When going from 1,200 to 600 volts the motorman closes a switch energizing the relay coil, thus disconnecting the dynamotor from the trolley and transferring the auxiliary circuits from the low voltage tap on the dynamotor directly to the 600 volt trolley. The protective relay prevents damage in case the motorman throws the switch energizing this relay while still on 1,500 volt trolley or neglects to throw the switch when going from 600 volt to 1,500 volt trolley.

Generally, in city running, on 600 volts with 1,500 volt equipment, it is satisfactory to operate at less than half speed; however, in some cases where there is a lot of suburban running on 600 volts, it is desirable to run at a higher speed. To do this it is necessary to parallel the motors, which are run two in series on 1,500 volts, and also to change the rheostat connections to provide sufficient current for the motors during accelerating on the lower voltage. Both of these operations are performed on a commutating switch. This switch has two positions, one for 600 volts and another for 1,500 volts, in which the motors and various rheostat sections are connected in parallel and series respectively. The proper connections of the auxiliary circuits to the low voltage tap of the dynamotor when running on 1,500 volts, or to trolley when on 600 volts, are also made on the commutating switch. The commutating cylinder may be thrown by a handle connected directly to the cylinder, or from the cab by means of an air valve and pneumatic cylinders connected to the switch, when it is mounted under the car body.

Several years experience has shown that the operating expenses of high voltage control apparatus are exceptionally low, in many cases less than with 600 volt

operation, this being largely due to the smaller currents handled. In connection with control, I may refer to the advance made from a maintenance point in the present type of rheostat, where a broken grid can be easily and quickly replaced without having to take down and dismantle the rheostat.

Modern car wiring has also been put on a sound basis to insure long life and protection to the wiring with practically no maintenance cost. If special protection by lightning arresters for car service is desired in localities with severe lightning conditions, the direct current aluminum type of arrester should be used. This type will solve any problem in direct current electric railway protection. They, however, require proper inspection. Their maintenance, therefore, is considerably higher than the magnetic blow-out type of arrester. The question of the use of the aluminum type for car work depends then on the amount of protection desired; and whether the absolute assurance of this protection warrants the additional maintenance charges which their use entails.

The best types of arresters, however, are placed at a very great disadvantage if the car wiring is so laid out that electro magnetic induction from lightning can take place. To avoid this, do not place any wire that carries lightning current near and parallel to, for any considerable length, any of the wiring where damage can be done by an induced charge. A second point to note is that the wiring may be such that electrostatic induction will shunt the choke coil and render it useless. To avoid this, never bring wires connected to the opposite terminals of a lightning choke coil within one foot of each other. By observing these instructions, electrostatic induction in car wiring will be avoided and the arresters given a proper show to arrest.

Current Collectors.—The use of a wheel collector is almost universal throughout Canada, and is an important maintenance item. The trolley wheels most largely in use today range from 2½ to 5 ins. diameter at the tread, with overall diameters of from 4 to 7 ins. The larger size wheels are used for the higher speeds and the smaller for city service, though the tendency is towards the use of the larger wheel for all classes of service. The great majority of wheels are of alloy, hardness and conductivity being obtained by a mixture of over 90% copper with a small amount of tin and zinc. The claim of long life has been made for the use of the iron trolley wheel. This is true, but they cause excessive wear on the wire, as the contact surfaces become pitted and covered with fine points from the arcing. These points are chilled by the air to a cutting hardness, conditions much exaggerated during rain and sleet storms. The principal trouble with a wheel collector is to get satisfactory lubrication and to carry the current from the wheel to the harp. The ordinary method of lubrication is the use of graphite paste pressed into spiral grooves in a brass bushing, although grease and oil are also used in a number of ways. The general tendency seems to be toward the use of a pin from ¾ to 1 in. in diameter as against the smaller sizes. With a wheel collector, the limitation in current carrying capacity is due to the difficulty in collecting current from the moving faces of the trolley wheel. Side springs and washers are generally used for this purpose; but in addition to the difficulty of getting sufficient contact area, friction is a serious matter, and in order to prevent

slipping between the wheel and wire the spring pressure must be kept very low. The use of ball and roller bearings to give greater sensitiveness to the trolley base has been a decided advance, and the use of a number of tension springs instead of one for holding the pole up, is also of benefit in this regard. The best pressure to use against the wire depends on local conditions. For service not over 30 m. p.h. with accelerating current of from 200 to 300 amperes, 20 to 30 lbs. is used. For heavier service the pressure may be as high as 40 lbs. for the best results.

A large amount of work has been expended in experimenting on pantographs, with both rollers and pans as the collecting devices. The first cost of a pantograph is considerably higher than the standard form of trolley base with pole, harp and wheel, but it possesses a number of important advantages over the standard trolley. It requires no attention either during running over special work or in reversing, and can be raised and lowered by air operation, controlled from a grounded valve, by the motorman. All these features are of value in the operation of two or more motor cars together, the latter feature especially in high voltage operation. The London & Port Stanley Ry. is operating very successfully with slider type pantographs on locomotives and motor cars.

The catenary type of line construction presents no difficulties over the usual overhead construction; and, on account of the greater pole spacing possible with its use, can meet the latter on a cost comparison on almost equal terms, while having very distinct advantages even with wheel operation for high speed service. As the catenary overhead construction suitable for wheel operation does not differ materially from that required for pantograph operation, in construction suitable for the former, providing certain standard line fixtures suitable for pantograph operation are included, a change can readily and economically be made at any later date to the latter.

Windsor, Essex and Lake Shore Rapid Ry. Appointments.

A. Eastman, Vice President and General Manager, has issued a circular making the following appointments, consequent on the accidental death of W. W. Chisholm, Electrical Engineer. The appointments follow the rule adopted some time ago by the company, of advancing officers and employees. A. BALTZER, heretofore Master Mechanic, has been appointed Electrical Engineer, in charge of power house and rolling stock; G. R. McKENZIE, heretofore second engineer, has been appointed first engineer, power house; W. L. McLARTY, heretofore third engineer, has been appointed second engineer, power house; W. BOWLES has been appointed third engineer, power house; E. BUTLER has been appointed Shop Foreman, Kingsville shops; C. PETERSON, heretofore line foreman, has been appointed Superintendent of Line Department, reporting to Superintendent O. P. Cooper.

Following are the commissioners and officials responsible for the operation of the Port Arthur Civic Ry., Port Arthur, Ont.: Commissioners, W. P. Cooke, Chairman; G. H. Rapsey, I. L. Matthews, A. E. Wideman, and the Mayor, D. J. Cowan, ex officio; acting Secretary, G. H. Rapsey; General Manager (Operation), M. M. Inglis; Master Mechanic, F. Philp; Roadmaster, James Dillon.

Toronto Suburban Railway Office Building.

The Toronto Suburban Ry. is about to erect an office building at 938 Keele St., Toronto, on the west side of the street a few doors north of Dundas Street. The front of the building will make an angle with the sides, giving a length on one side of 109¼ ft. over all and on the other side 100 ft. The width will be 28 ft. There will be basement, ground floor, and one upstairs floor. The basement will contain boiler and coal rooms aggregating 30 ft. and a fireproof vault 4½ x 7 ft. inside dimensions. The rest of the basement will be used for stores. The ground floor will contain a waiting room 56 x 25½ ft. inside dimensions, out of which space a ticket office 16 x 16 ft. will be taken. The back of the building will be an express room 35 x 25½ ft. Between the waiting and express rooms will be the stairs leading to the upper floor, a vault 7 x 4½ ft. and women's lavatory. The upstairs will have offices over the waiting room, and conductors' and motormen's room over the express room, the sizes corresponding to the lower rooms in each case. The office space will be divided by light frame and glass partitions into offices for the officials, with a general office and space for the public immediately at the entrance from the stairs. There will be employees' laboratories on this floor.

The foundation walls will be of concrete 18 in. thick and the main building walls will be brick 13½ in. thick. About the centre of the building there will be a cross wall of concrete in the basement and brick above carried to the roof. The basement floor will be 2 in. of cinders and 4 in. of concrete, finished with ½ in. dressing of rich mortar. Upper floors will be of ¾ in. birch, dressed, matched and scraped. Lavatory floors will be of composition. The building will have a store front of plate glass windows and double door, the whole having a span of about 24 ft. The wall above this span will be carried on two 15 in. I beams which will rest upon columns composed of 5 in. I beams with standard cap and base. The roof will be of ¾ t. & g. lumber, covered with tar, felt and gravel on asbestos. The waiting rooms and offices will have lath and plaster walls and will be finished in hardwood throughout. Hot water heating will be used. The building was designed by Geo. C. Briggs, Architect, under the direction of H. T. Hazen, M. Can.Soc.C.E., Chief Engineer.

The Sherbrooke Street Railway may be taken over by the municipal authorities if negotiations now pending result successfully. An offer is said to have been made by the Sherbrooke Railway & Power Co. to sell the system to the City of Sherbrooke, Que., for \$250,000. As an alternative proposition the company offers to lease the road to the city for 25 years at a semi-annual rental of \$9,000. At the end of this period the system would become the city's property.

Automobiles and Electric Car Traffic.—The Ontario Legislature has passed an amendment to the Ontario Motor Act, which prevents automobiles from creeping up to the rear of standing electric cars and thus blocking the exit for passengers. It is provided that motorists must not approach nearer than 6 ft. to any standing car, while passengers are being discharged or taken on. This applies to suburban as well as city cars, and all vehicular traffic.

Hydro Electric Railway Projects in Ontario.

In the Hydro Electric Power Commission of Ontario's report for the year ended Oct. 31, 1915, the various proposals received by the Commission for the construction of radial electric railways under the Hydro Electric Railway Act of 1914, are dealt with. During the year requests for reports and estimates on proposed lines were received, and Canadian Railway and Marine World has already covered these in detail in previous issues. From the passing of the act, applications have been received from 158 townships, 47 villages, 46 towns, 15 cities, 8 police villages, and 7 miscellaneous committees, boards of trade, etc. Two engineering parties have been maintained in the field constantly, making preliminary surveys and gathering traffic statistics for the preparation of cost of construction and equipment, probable revenue, etc. Preliminary surveys have been made, and estimates submitted for the construction of approximately 2,000 miles of line, a considerable portion of which is in the nature of alternative routes. The preparation of standard specifications for roadbed, commenced in 1913, was continued and this data is now available for use in the construction of any of the lines with which it is decided to proceed, so that tenders may be called for with as little delay as possible. In reaching the decision of a standard roadbed construction, the standards of prominent roads in Canada and the United States, and the recommendations of the various railway societies, were carefully studied. Following is the list of the various surveys, with mileage, made by the Commission, to Oct. 31, 1915:—

	Miles.
Toronto northeasterly	295.00
Kingston-Cornwall	115.00
Barrie-C.P.R.	8.20
Huron County	222.20
Guelph-Georgian Bay east line.....	226.62
London-Lambton County	126.78
London-Stratford	52.27
Guelph-Hespeler	10.00
Berlin-Woodstock	31.00
Guelph-Hamilton	35.00
London-Port Stanley	24.05
St. Marys-Exeter	19.84
St. Thomas-Aylmer	11.30
London-Aylmer	18.50
Hamilton-Galt	35.00
Lyons-Tillsonburg	17.00
Guelph-Orangeville	33.00
Aylmer-Port Burwell	15.00
Drumbo-Linwood	21.20
Tillsonburg-Woodstock	23.00
Hamilton-St. Catharines	32.10
Hamilton-Welland	10.00
St. Catharines-Queenston	8.10
Dunnville-Beamsville	24.00
Welland-Port Colborne	7.10
Port Colborne-Bridgburg	20.00
Port Credit-Hamilton	22.50
Port Colborne-Dunnville	31.74
Listowel-Fullarton	2.00

In the Toronto northeastern district, 11 municipalities have sent signed copies of an agreement with the Commission to provide for the construction and operation of approximately 80 miles of line. On the request of the municipalities inter-

ested in the Ontario West Shore Ry., the Commission has prepared estimates of the cost of completing the construction of the line and of operating it by electric or gasoline power.

A report has also been prepared and submitted to the municipalities in the Aylmer district, for the construction and operation of a line from Westminster Jct., on the London & Port Stanley Ry., through Belmont to Aylmer, with connection to Springfield, Brownsville and Tillsonburg.

The year's work also covered the completion of the work undertaken for the London Railway Commission in the electrification of the London & Port Stanley Ry., which was opened for traffic, July 1, 1915.

Before specifications and plans could be prepared for rolling stock, equipment and sub stations, it was necessary to select a system of electrification. During the past ten years there has been considerable discussion between the most prominent engineers in Canada and the United States on this subject and opinions have been divided between the 1,500 volt direct current system and the high tension single phase alternating current system. However, during the past five years there has been a distinct movement in favor of the first mentioned system for purely interurban railways, the chief reason being that the equipment is lighter, cheaper and more standard, as well as being cheaper to maintain and capable of being operated over existing 600 volt city lines. The chief advantage of the single phase system is that the sub stations may be placed at greater intervals and the overhead system can be designed much cheaper. The Commission decided that the proposed Ontario system should be constructed on the 1,500 and 3,000 volt direct current system.

The centre entrance type of car has been in use on some of the prominent lines in the United States in recent years, chiefly for the reason that it gives greater seating capacity for the same length of car, and is also a more pleasant car to ride in, due to a better separation of the smoking, baggage and main passenger compartments. After consultation with the more prominent car manufacturing companies, it was decided that the centre entrance type of car was impracticable for the proposed Ontario lines, chiefly from the standpoint of safety. A properly designed steel car, provided with a vestibule, has been demonstrated as being the safest type of car to ride in, inasmuch as the vestibule can be designed to collapse when in collision so that the main framing of the car itself will be able to withstand the strain in a satisfactory manner. Specifications have therefore been prepared for a modern 60 ft., three compartment steel car.

Statement in the Legislature.

The Attorney General of Ontario stated in the Legislature, April 5, that no municipal corporation had been authorized by the Lieutenant Governor in Council to enter into agreements with the Hydro Electric Power Commission of Ontario for the construction, equipment and operation of electric railways to be operated by electric power or energy supplied by the Commission under the provisions of the Hydro Electric Railway Act of 1914, sec. 4, other than those mentioned in the Hydro Electric Railway Act, 1915. No agreement had been entered into for the purchase of any existing electric or street

railway or any part of any such railway, to form part of the line to be constructed and operated by the commission. Secs. 1, 2 and 3 of the act of 1915 became operative on the day of assent, April 8, 1915, but sections 4, 5 and 6 will not become operative until they are proclaimed by the Lieutenant Governor in Council.

The first three sections of the act of 1915 deal with what agreements for the building on lines may contain and the power of the municipalities to pass by-laws, to levy rates and to issue debentures, and gave power to purchase existing lines. The other sections of the act, which are not yet in operation, provide as follows: Sec. 4 confirms the contract entered into between the commission and the municipal corporations of Scarborough, Markham, Pickering, Whitby Beach, Whitby, Markham Town, Stouffville and Port Perry, subject to certain amendments set out in the sections. Sec. 5 provides for the execution of separate copies of the contract by each municipality; and Sec. 6 confirms the several by-laws passed approving of the agreement.

Edmonton Municipal Railway Operating Results.

The audited report for the year ended Dec. 31, 1915, presented to the Edmonton, Alta., City Commissioners, Mar. 15, showed total receipts of \$520,322.38, with expenditure as follows: Transportation expenses, \$294,534.91; maintenance, \$11,374.53; equipment, \$33,996.53; general, \$30,362.20; interest and redemption charges, \$259,836; depreciation, \$25,551.05; altogether showing a deficit of \$155,758.71. At Dec. 31, 1914, the total deficiency was \$630,955.19, and this has been increased during the year to \$644,431.52. From this amount has to be taken \$198,585.20, the readjustment of the depreciation reserve as recommended by the investigation committee and approved by the council. The total capital expenditure up to Dec. 31, 1915, was \$3,089,612.00.

The total number of passengers carried in 1915 was 10,658,219, against 14,081,564 in 1914. The average number carried per day in 1915 was 25,200, against 38,579. Passengers paid an average fare of 4.9, against 4.6. The difference in the fare was due to the reduction in price from 6 to 5 for 25c. Car miles run were 2,014,262 against 2,093,373.

The traffic manager has prepared a chart showing the number of passengers carried each month. The traffic dropped considerably until September, when a rerouting of the cars was instituted and the soldiers returned to the city. In December, 48,996 more passengers were carried than in Dec. 1914, and the expenses were reduced from 25.8c per car mile to 19.8c. The running expenses for 1915 were 12.5c per car mile, exclusive of power charges, against 16.6 per car mile in 1914.

Deficit for Jan. 1916, \$9,587.34; deficit for Feb. 1916, \$5,743.45.

Soldiers Not to Obstruct Street Railway Traffic. Brigadier General Lorne has issued the following order in Toronto: "It has been brought to attention that troops on the march, and small squads and bands for recruiting purposes, are interfering with street car traffic in the city. Officers commanding units will be held personally responsible that proper march discipline is preserved in the streets and no interference with the street railway company is permitted."

The Moncton Tramways, Electricity & Gas Co. is adding two p.a.y.e. one man cars to its equipment.

Toronto Suburban Railway's Car Barn Etc. at Lambton.

The Toronto Suburban Ry., in anticipation of the completion of its extension to Guelph, Ont., has built a car barn on the property between Dundas St. and the C.P.R. Toronto-Windsor line, at the top of the hill east of the Humber River and at the junction of the new Lambton-Guelph line with the old West Toronto-Lambton line. The buildings are as follows:

Inspection shop.....	63 ft. 3 in. x 151 ft. 0 in.
Repair shop.....	61 ft. 1 in. x 83 ft. 7½ in.
Machine shop.....	40 ft. 10 in. x 66 ft. 7½ in.
Paint shop.....	19 ft. 6 in. x 66 ft. 7½ in.
Blacksmith shop.....	28 ft. 0 in. x 30 ft. 0 in.
Boiler room.....	30 ft. 0 in. x 33 ft. 0 in.
Coal store.....	30 ft. 0 in. x 29 ft. 1 in.
Men's lavatory.....	30 ft. 1 in. x 11 ft. 0 in.

Lambton Car Barn, etc., Toronto Suburban Ry., South Elevation.

The track shown in the foreground is the main line, which joins the old line on Dundas St., immediately to the right of the view.

The administrative offices are on the first floor over the store and lavatory. The walls throughout are of good hard burned brick with massive buttresses to the outside. Toronto pressed brick is used for facing. The different shops, etc., are separated by brick walls, with substantial pilasters, and intercommunicating large sliding doors are provided between each. Excellent lighting is provided by large windows 8½ ft. wide and averaging about 13 ft. in height, and by ample roof lights to every portion. The roof is of mill construction, covered with asbestos and tarred and gravelled. One row of posts runs longitudinally down the centre of the inspection shop spaced at 17 ft. centres, and two rows similarly in the repair shop; one of these continuing through the machine shop. These rest on tapered concrete pedestals. The posts are 12 x 12 in., 22 ft. long, and have 6 x 8 in. braces with 10 x 12 in. corbel heads, the latter bolted to posts with ¾ x 24 in. drift bolts. These take the main 12 x 12 in. roof beams, the ends of which at brick walls are spiked to 3 x 8 in. wood plates bolted down to walls. Into these main beams are framed, with duplex hangers, the 6 x 8 in. transverse beams which carry the 2 x 8 in. dressed roof planking. Large skylights are framed in roof. The floors generally are of concrete, except in the inspection shop, which has a 4 in. cinder floor on sand. The administrative offices have wood floors. The average height of the shops is about 21 ft.

The repair shop has three tracks; 4½ in. x 60 lb. rails A.S.C.E. section are used, supported on 10 in. I's at 25 lb. resting on 4½ in. steam pipe columns, set on concrete bases 24 x 24 x 9 in. These columns have companion flange cap and base. The 10 in. I's are secured to the companion cap flanges by four ¾ in. bolts and the column bases are anchored to the concrete bases with two ½ in. pins 4 in. long. The

floor is of concrete, 4 in. thick; 1, 2 and 4 mixture, with 1 in. fine finish and 3 in. mesh. Six gauge expanded metal, resting on 7 in. I's at 15 lb. at 8½ centres. These 7 in. I beams rest on and are bolted with angles to the 10 in. I beams and at external walls, and anchored to foundation wall at piers with ¾ in. diameter w.i. hook bolts, 4¾ x 6 x 6 in. w.i. plate to outside. The whole of the space under the repair shop is excavated for a depth of about 4 ft. and has a 4 in. concrete floor on 4 in. of gravel, laid with fall to sub pit of ½ in. to the foot. Below the tracks, on this floor, rails 2½ ft. gauge are laid on solid concrete beds. On these

set at any desired height. Twelve standard skylights 8 x 17 ft. are framed in roof.

The machine shop is to be equipped with: 100 ton capacity wheel press; two in one lathe for axle, wheel and small work; spindle lathe; combination radial drill; air trip hammer; wheel grinder; shaper; slotting machine; babbitting furnace; soldering iron furnace; forge; air compressor; 2 pit jacks; 2 cranes; travelling crane; benches, vises, machinist's and blacksmith's tools; full set wood working tools and machines. Two skylights, 8 x 68 ft., run longitudinally in centre of each span and provide excellent lighting to every portion of the shop.

In the paint shop, in addition to the windows, a skylight, 8 x 68 ft., is placed over tracks giving sufficient light for every purpose. The blacksmith shop also contains a standard ventilated skylight 8 x 11 ft. The men's lavatory is provided with 6 water closets, wash basin and urinal troughs and 6 lockers. There is a large ventilated top light.

The boiler room contains a 75 h.p. locomotive type boiler. There is a skylight 8 x 11 ft. The coal storage is very conveniently located, and is so arranged that the coal will be brought direct in cars over the company's own tracks and shovelled through a high doorway level with the coal car, thus necessitating a minimum of handling. The coal space is well placed in relation to boiler. The chimney rests on a solid concrete foundation and the brick work, 7 ft. square, is carried 15 ft. above grade. The steel stack, 36 in. diameter, is 65 ft. above grade.

At the southeast corner of the building entrance is provided to the administrative offices on the first floor. They are placed over the store and lavatory and consist of five offices; public waiting space, separated from the larger office by counter, with office lavatory and private lavatory. The rooms are 9 ft. high and are finished with ¾ in. birch floors and the walls and partitions are plastered.

Lambton Car Barn, etc., Toronto Suburban Ry., Front or West Elevation.

with wired rolled plate glass, set on 4 in. solid wood curbs, are placed in roof.

The inspection shop contains 4 tracks, each of which will accommodate 2 cars. The rails rest on tapered concrete piers placed 4 ft. centres. The floor is hollowed out around these piers below the general floor level, thus permitting the workmen to make minor repairs. To further facilitate in the light repair work, cleaning and painting of the cars, movable iron brackets can be attached to the structural wood posts, on which plank scaffolding can be placed. The posts are bored at intervals to receive the ends of these brackets, so that the scaffolding can be

A low pressure vacuum steam heating system has been installed. By means of a pressure reducing valve sufficient live steam is admitted automatically to effectively heat the buildings. The radiation amounts to 4,500 sq. ft., with the mains and returns included as radiation, and the following temperatures are provided for: Offices, 75° Fahr.; store, 60°; blacksmith shop, 50°; paint shop, 65°; machine shop, 60°; repair shop, 50°; inspection shop, 50°. These temperatures are guaranteed at 5° below zero, at 2 lbs. pressure, and at 15° below zero at 5 lbs. pressure.

A wood tank of 10,000 gall. capacity is placed outside the southeast corner of the

building, supported on steel framework, set on tapered concrete bases. The water supply is obtained from two wells sunk nearby and is pumped to the tank by means of a small electrically operated pump.

The building cost about \$25,000, inclusive of heating and lighting, but not including water tank. It was designed and its erection carried out under the superintendence of Geo. C. Briggs, architect under the general direction of H. T. Hazen, M.Can.Soc.C.E., Chief Engineer.

St. John Railway Co's Annual Report and Meeting.

Following are extracts from the report for the calendar year 1915, presented at the annual meeting in St. John, N.B., recently: The earnings for the year, after

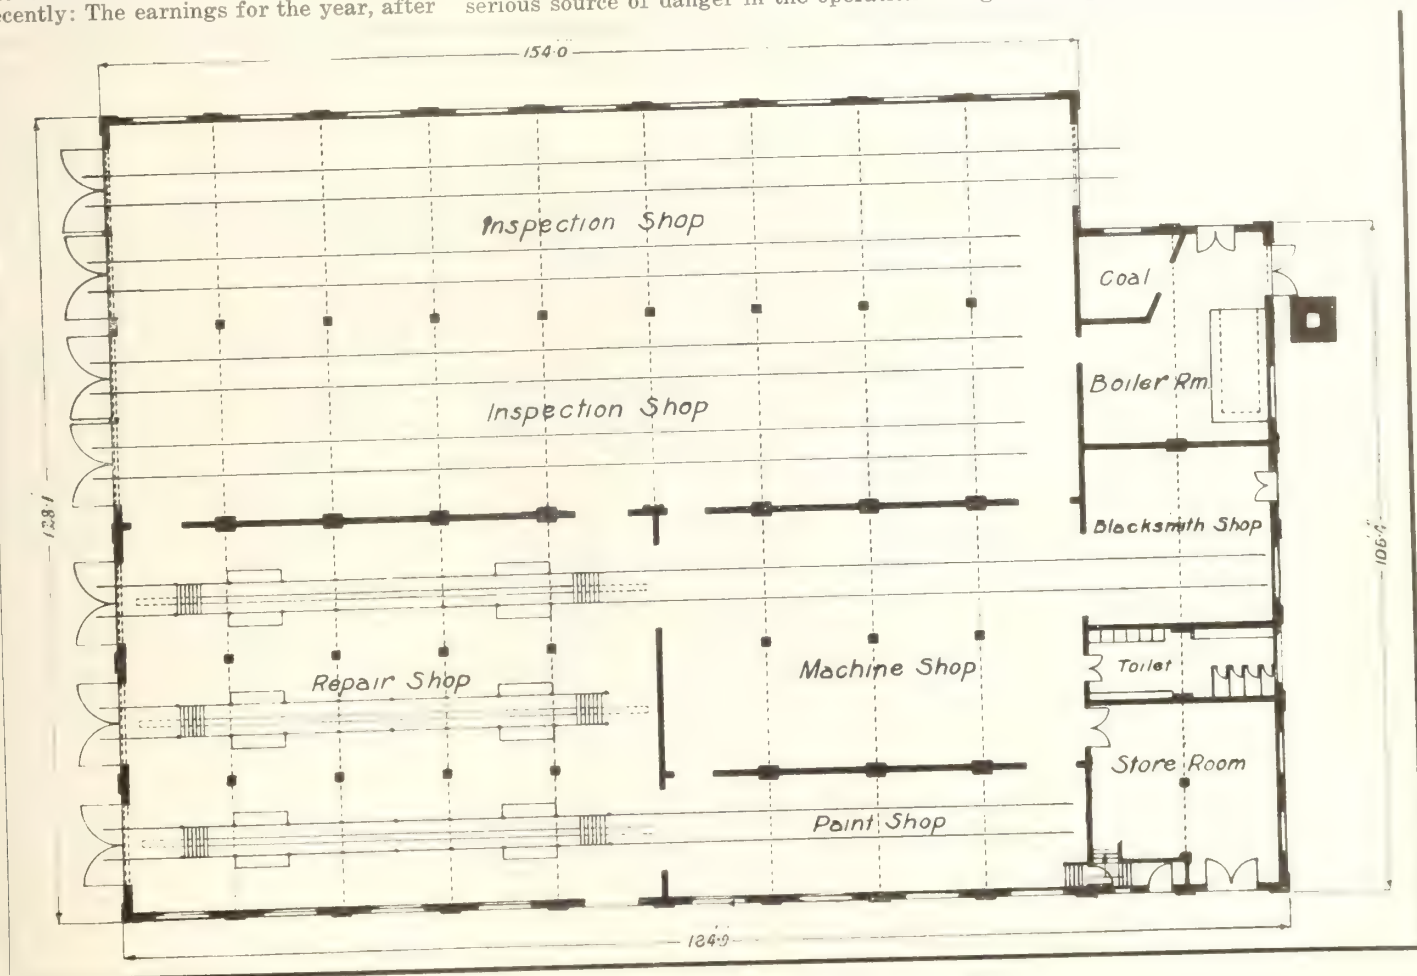

first submitted the legal points to the judgment of the court before taking the law in its own hands.

During the year we completed the Glen Falls extension to the Manor House, and commenced operating it on May 24, 1915. Crouchville extension was completed and operation commenced on Aug. 19, 1915. These extensions are operated at a heavy loss. The completion of the new bridge over the falls enabled us to connect up the east and west sides of our railway system, and a through service was inaugurated on Jan. 1 last. The cost of this work was upwards of \$50,000. A considerable sum was expended in the upkeep of the property, which is in a high state of efficiency. The curves at the foot of King, Prince William and Dock Streets were relaid, and the sharp curves eliminated. This work will remove a serious source of danger in the operation

Dominion Power and Transmission Co's Annual Report.

Following are extracts from the report for the calendar year 1915:

The directors have considerable satisfaction in laying before the shareholders the report on the business of the past year. While the statement shows no marked change over the previous year, the general course of the business must be regarded in estimating its significance. The depression and unfavorable conditions of 1914 continued during the first six months and onward through Aug., 1915, and until that month the decline in our earnings continued. The falling off was somewhat emphasized during June, July and August, by the operations of the so called jitney system. At the end of August the gross earnings had declined,

Lambton Car Barn, Toronto Suburban Ry., General Plan View.

providing for the interest on the bonds and all other charges, were \$71,066.89, out of which your directors declared and paid four quarterly dividends of 1½¢ each, amounting to \$60,000, leaving a balance of \$11,066.89, which has been transferred to profit and loss account.

The company's street railway earnings were seriously affected by the action of the City's Department of Public Works in tearing up our rails on Union and Main Streets, and filling in the track section with concrete, also removing our rails on Princess St. This stopped the circulation of our cars, made it necessary to transfer at points where our tracks had been torn up, and seriously inconvenienced the travelling public. The legal points involved were submitted to the Supreme Court of New Brunswick, and judgment was given in our favor. It would have been better if the city had

of that section of the railway. We were delayed for over eight months in carrying out this work by the action of the city authorities, which greatly increased the cost.

Electric Railway Statistical Statement.		
	1914.	1915.
Gross earnings	\$242,859 83	\$242,217 31
Operating expenses	257,282 64	250,714 34
Expenses per cent. of earnings	105.91	103.51
Deficit	14,422 81	8,497 03
Passengers carried	5,576,455	5,541,417
Car earnings per passgr.	4.35c.	4.37c.
Transfers	2,036,363	2,241,562
Total passengers carried ..	7,612,818	7,782,979
Car earnings per passenger total carried	3.19c.	3.11c.
Number of miles of track ..	21½	25

The directors for the current year are: Col. Hugh H. McLean, K.C., M.P., President; F. R. Taylor, Vice President; R. B. Emerson, J. Manchester, W. H. Thorne, J. K. L. Ross. The General Manager and Secretary is H. M. Hopper.

as compared with the same period of 1914, by \$128,437.88. During the remainder of the year the falling off was reversed, the larger part of the recovery taking place in November and December, indicating that a decided improvement may be expected in 1916. The policy of setting apart from gross earnings 20% thereof for maintenance and renewal has been continued. After having provided \$384,771.38 for bond interest, \$386,613.25 for dividends, and \$109,640.38 of unexpended maintenance and renewal reserve, there stood at the credit of profit and loss \$1,139,259.49, from which account \$500,000 has been transferred to the regular reserve account, which now stands at \$1,500,000, leaving still at the credit of profit and loss \$639,259.49. Under the business and money conditions which have been prevailing, it was decided to suspend proceeding with the steam station

construction, but it is intended to proceed to completion as soon as the weather permits satisfactory building work. Operation for the past year has been smooth and uneventful, and the directors look forward to the coming year with confidence and satisfaction. Eighty three employees have joined the military forces of the Empire, being contributed from all parts of the staff. The profit and loss accounts for 1915 and 1914 compare as follows, the cents being omitted:—

	1915.	1914.
Operating expenses	\$2,353,956	\$2,395,967
Net	1,352,001	1,390,846
Transfer to maintenance and renewal account..	1,001,955	1,005,020
Balance	109,640	101,023
Bond interest & interest	892,314	904,096
Surplus earnings	384,771	377,105
Previous balance	507,543	526,991
Dividends	1,020,405	955,861
Bad debts	386,613	461,932
Reserve	2,075	1,055
Balance	500,000
	639,259	1,020,405

The City of Toronto and the Toronto Suburban Railway.

The bill which the City of Toronto was promoting, providing that all the Toronto Suburban Ry Co.'s rights and privileges to operate railways or exercise any other franchise rights within the part of ward 7 south of Dundas St. be forfeited and cancelled, was dealt with by the Ontario Legislature's Private Bill Committee, Apr. 5, and rejected. The Chairman, Hon. I. B. Lucas, Attorney General, stated that it was the feeling of the committee that the request to cancel the franchise and interfere with the vested rights of a company was absurd and outrageous. He characterized the mayor's remark that the whole hydro radial railway plans would fall to the ground unless the franchise was cancelled, as nonsense.

This was the second attempt by the city to obtain legislation cancelling the franchise within the city limits. The previous attempt was made Mar. 23, when a bill was promoted to give the city power to expropriate the portion of the railway within the city limits, declaring that the franchise or control of tracks on the highways was to be estimated as of no value whatever, and also declaring that the company's rights and privileges within the city be cancelled and forfeited. The bill included some other matters relating to the company and to the Toronto Ry. Co., but the whole was rejected.

The Toronto Suburban Ry., under its agreement with York Tp., dated Sept. 4, 1899, has the exclusive right to build and operate a single and double track railway on Davenport Road from the northern limits of the city to the east limit of the town of Toronto Junction, and in the part of Bathurst St., between Davenport Road and the northern limits of the City of Toronto. The franchise is for 30 years and expires Sept. 4, 1929, and on the expiration of the 30 years the company is entitled to a renewal for a further 20 years upon such terms as may be agreed upon between the company and the township, and so on at the end of each 20 year period. The township at the end of any of these periods, may take over the railway at a valuation by agreement or arbitration. Since this agreement was entered into, the town of Toronto Junction, and other outlying portions over which the company has rights, have been incorporated in the city of Toronto, and disputes have been of constant occurrence.

Mainly About Electric Railway People.

Robt. W. Moore, heretofore Master Mechanic, Moose Jaw Electric Ry., Moose Jaw, Sask., has been appointed Assistant Superintendent.

Hugh Logan, who has been connected with the British Columbia Electric Ry's office staff, has been granted leave of absence to enlist for overseas service.

J. E. Hutcheson, General Manager, Montreal Tramways Co., returned to Montreal early in April, after spending about a month at St. Augustine, Florida.

Bion J. Arnold, of Chicago, has been appointed on the United States Naval Consulting Board, to represent the American Society of Aeronautic Engineers.

W. H. Dinsmore, heretofore one of the traffic inspectors, British Columbia Electric Ry., has been appointed acting Traffic Superintendent, J. Hilton, Traffic Superintendent, having retired.

C. H. Batchelor, heretofore Roadmaster, St. Clair Line, Toronto Civic Ry., has

of Ontario pays the following yearly salaries, as announced in the Ontario Legislature recently: **F. A. Gaby**, Chief Engineer, \$10,000; **W. W. Pope**, Secretary, \$4,000; **W. S. Andrews**, Auditor, \$3,000.

G. W. Lang, whose portrait was published in our last issue, and who was mentioned as Claims Agent, Ottawa Electric Ry., is, as we previously announced, also acting Superintendent during the absence on military service of **F. D. Burpee**.

Duncan McDonald, who has been one of the city controllers of Montreal for the past year or two, was defeated for the mayoralty Apr. 3 by Mayor Mederic Martin. Alderman Lapointe, another candidate, lost his deposit. The votes were: Martin, 33,247; McDonald, 23,300; Lapointe, 16,566.

James Hilton, whose resignation as Traffic Superintendent, City and Suburban Lines, British Columbia Electric Ry., Vancouver, was announced in our last issue, began railway work with the Montreal St. Ry. in 1897, and in 1908 was appointed Superintendent, Third Avenue Division, Third Avenue Ry., New York, resigning in Oct. 1911 on his appointment to the B.C.E.R.

D. L. Welch, who was recently appointed General Freight and Passenger Agent, Chatham, Wallaceburg & Lake Erie Ry., Chatham, Ont., was born at Clinton, Ont., Feb. 29, 1892, and entered railway service, May 24, 1909, since when he has been to June 1911, relieving agent, Pere Marquette Rd., Buffalo Division; June 1911 to May 1913, cashier, P.M.R., Wallaceburg, Ont.; May 1913 to Feb. 20, 1916, Local Freight and Passenger Agent, Chatham, Wallaceburg & Lake Erie Ry., Chatham, Ont.

T. F. Ahearn, only son of Thos. Ahearn, President, Ottawa Electric Ry., and who is himself a director of that company, entered the Governor General's Foot Guards as a subaltern in 1906. In Oct. 1914, he entered the Canadian Army Service Corps, went to England in Mar. 1915, and on to France in Sept. 1915. He was promoted to a captaincy and early this year was recalled to militia headquarters at Ottawa to assist in munitions work. He has now been seconded from the C.A.S.C. and has been appointed A.D.C. to the Minister of Militia.

Charles Harper Batchelor, who has been appointed Traffic Manager, Toronto Civic Ry., Toronto, was born at Bradford, Eng., May 18, 1885, and entered electric railway service in Aug., 1907. He has been, from Apr. 9, 1909, to Apr. 1, 1913, conductor and motor man, Bradford City Tramways, and also motor man on the rail-less electric car system, Bradford, Eng.; Apr. 20 to June 1, 1913, motor man, Toronto Ry., Toronto; June 6 to Aug. 22, controller man, Toronto & York Radial Ry., Toronto; Aug. 22, 1913, to Mar. 21, 1916, Roadmaster, Toronto Civic Ry., Toronto.

James J. Callahan, Manager of Operation, London & Port Stanley Ry., London, Ont., resigned Apr. 8. He was appointed to that position in July 1915, on the completion of the electrification of the line. He was born at New Glasgow, Que., Feb. 25, 1875, and entered electric railway service, Apr. 27, 1897, since when he has been, to 1901, motorman, Montreal Park & Island Ry., Montreal; 1901 to 1908, Inspector and Chief Instructor, Montreal St. Ry., Montreal; 1908 to 1909, Chief

F. D. Burpee
Superintendent, Ottawa Electric Railway.

been appointed Traffic Manager, succeeding **J. Metcalf**, who has enlisted in the Canadian Expeditionary Forces.

Hiram Williams, Assistant Comptroller, British Columbia Electric Ry., has resigned and left Vancouver for England. No other appointment to the position will be made for the present at least.

J. L. Perron, K.C., of Montreal, who is the Montreal Tramways Co.'s solicitor, and who has represented Vercheres in the Quebec Legislative Assembly for some years, has been appointed to the Quebec Legislative Council.

Moses Switzer has been appointed examiner of motormen for the Toronto Civic Ry., and his appointment has been confirmed in pursuance of the provisions of the Ontario Railway Act. by the Ontario Railway and Municipal Board.

The Hydro Electric Power Commission

Inspector, New York and Queens County Ry., Long Island, New York; 1909 to July 1915, Superintendent of Transportation, Montreal & Southern Counties Ry., Montreal.

W. J. Curle, whose appointment as General Superintendent, Chatham, Wallaceburg & Lake Erie Ry., Chatham, Ont., was announced in our last issue, entered railway service with the G.T.R. at Brockville, Ont., about 34 years ago, and about two years later transferred to the C.P.R., being successively, car checker, telegraph operator, night agent, outside agent, and General Yardmaster at Carleton Place, Ont. He was appointed Superintendent, Brockville, Westport & Northwestern Ry., Brockville, Ont., in Aug., 1904, and subsequently also General Freight and Passenger Agent, and from July, 1914, to Aug., 1915, was Superintendent, Toronto Division, Canadian Northern Ry., Toronto; Aug. to Oct., 1915, Superintendent, Lake Superior District, C.N.R., Capreol, Ont.; Oct., 1915, to March, 1916, Assistant Superintendent, Toronto District, C.N.R., Toronto.

Malcolm M. Inglis, whose appointment as Manager, Port Arthur Civic Ry., Port Arthur, Ont., was announced in our last issue, was born in Lanarkshire, Scotland, Oct. 10, 1884, and between Sept. 1901 and Nov. 1908 served a regular apprenticeship with Mavor & Coulson, Ltd., engineers and electricians, Glasgow, Scotland towards the latter portion of that period acting as assistant designer in the machinery department there. From Nov. 1908 to Aug. 1909, he was chief tester and erector for Johnson & Phillips, Ltd., London, England; Aug. 1900 to 1910, assistant designer of machinery, British Electrical Engineering Co., Ltd., Loughborough, England; 1910 to 1911, Chief Electrical Engineer, W. Y. Craig & Co., Ltd., Brynkinalt Collieries, North Wales; 1911 to the date of his present appointment, Electrical and Consulting Engineer for the Town of Yorkton, Sask.

F. D. Burpee, Superintendent, Ottawa Electric Ry., Ottawa, Ont., who has been granted leave of absence for military service, has been given command of no. 1 company, 207th Battalion, with rank of captain. He was born at Ottawa Apr. 25, 1876 and commenced railway work in 1891 under H. B. Spencer, Superintendent, District 4, Eastern Division, C.P.R., Ottawa. He entered electric railway service in 1893, since when he was to 1896 stenographer; 1896 to 1898 cashier and paymaster; 1908 to Aug. 1912, accountant, during which time he also acted as assistant to the Secretary-Treasurer and Superintendent. He was appointed Superintendent in Aug. 1912, when J. E. Hutcheson resigned to enter Montreal Tramways Co's service. In 1894 he enlisted in the Ottawa & Carleton Rifles and was afterwards in the O.A.A.C.Co. of the 43rd Regiment, which he rejoined last year. He has taken an active part in athletics, particularly canoeing and swimming.

In connection with the death of **W. W. Chisholm**, Electrical Engineer, Windsor, Essex and Lake Shore Rapid Ry., Kingsville, Ont., mentioned in our last issue, we have been advised that so far as can be ascertained, the accident happened as follows: Owing to the heavy snow storm the cars were blocked at a cut near Leamington, and Mr. Chisholm with some employees, was endeavoring to get the cars moving. One truck of a passenger car was off the track. The car had been moved a few inches by use of the truck, and before making another move, he

went between the car and a locomotive to straighten out a drawhead. He laid his hand on the drawhead of the passenger car and gradually collapsed, one of the employees noticing a slight puff of smoke from the hand that was resting on the drawhead. He was wearing rubber boots, and after a careful investigation, the opinion was arrived at that one hand came in contact with the rail when the other was touching the drawhead, that the car must have been entirely insulated from the rail by snow and ice and that his body formed a circuit between the car and the ground.

Brantford Municipal Railway Report.

The Brantford, Ont., Municipal Ry. Commissioners, C. H. Hartman, F. J. Colbeck and W. R. Turnbull, have presented a report for the six months ended Dec. 31, 1915, from which the following are extracts:—

EARNINGS.	
Passenger earnings, city lines	\$25,839.29
Passenger earnings, Grand Valley line	24,492.10
Freight earnings	1,704.91
Miscellaneous earnings	1,356.67
	\$53,392.97
EXPENDITURE.	
Power	\$ 8,943.53
Maintenance	14,735.22
Operating wages and expenses and miscellaneous expenses	16,893.33
	40,482.08
Gross surplus	12,910.89
Bond and debenture interest	\$ 8,658.00
Sinking fund	2,600.00
	11,258.00
Net surplus	\$ 1,652.89
The deficit for the 6 months to June 30, 1915, was \$3,202.45, leaving a net deficit for the year of \$1,549.56.	
ASSETS.	
Original property and betterments	\$453,206.29
Cash, stores, etc.	31,200.17
	\$484,406.46
LIABILITIES.	
Capital and bonds	\$395,000.00
City current account	39,121.27
City deferred account	32,397.47
Mortgage	1,500.00
Contingent	9,752.65
Presently payable	8,184.93
	\$485,956.32
Deficit for year ended Dec. 31, 1915	\$ 1,549.56

In Dec., 1915, there was a net surplus of \$1,039.19, and in Jan., 1916, of \$1,695.23, so that the 1915 deficit was wiped out by the Jan., 1916, surplus. The commissioners say: "The statements for January and February show clearly that the property is now on a sound basis, earnings having reached a much more satisfactory level and operating expenses having been very materially reduced. We are now in a position to say with perfect confidence that the days of operation of the property at a loss are past and from this time forward the junior member of the public utilities of the city will take its place among the others as a profitable and wise investment on the part of the citizens." The operating ratios were as follows: August, 89.1%; September, 91.1%; October, 86.3%; November, 86.3%; December, 68.3%; January, 59.9%. Following are particulars of passenger traffic:—

	City lines.	Grand Valley.
Car mileage	161,242.01	86,609.5
Passengers carried	554,927	128,598
Passenger earnings	\$26,176.79	\$24,482.20
Passenger earnings per car mile	16.2c.	28.3c.

L. G. Ireland is manager.

The Winnipeg City Council has consolidated the jitney traffic bylaw, making it more concise. No change has been made in the license fee of \$20.

Electric Railway Finance, Meetings, Etc.

Brantford Municipal Ry.—Earnings for three months ended Mar. 31, \$25,716.59; operating expenses, \$17,356.87; net revenue, \$8,359.72. Fixed charges were \$6,141 for the three months, leaving a balance of \$2,218.72. In accordance with the arrangement with the city council, there is \$1,500 available for application on the 1916 instalment of city deferred account, and \$718.72 for the reduction of city current account.

British Columbia Electric Ry., and allied companies:—

	Jan. 1916	Jan. 1915	Jan. 1914	Jan. 1913
Gross earnings	\$591,949	\$640,495	\$3,832,095	\$4,639,394
Expenses	477,927	497,150	3,363,249	3,571,739
Net earnings	114,022	143,325	468,846	1,067,655

	Feb. 1916	Feb. 1915	Feb. 1914	Feb. 1913
Gross	\$572,565	\$558,512	\$4,105,030	\$5,197,906
Expenses	476,413	469,187	3,839,742	4,440,327
Net	99,522	89,325	565,288	1,156,981

Calgary Municipal Ry.—The audit of the city accounts for the year 1915 is announced as showing that the municipal railway made a profit of \$391 instead of the deficit which it was anticipated would have been shown.

Lethbridge Municipal Ry.—Earnings for March, \$4,429.05, against \$3,494.37 for Mar., 1915.

Moncton Tramways, Electricity & Gas Co.—The annual meeting was held at Moncton, N.B., April 12, E. B. Reesor, Vice President, Pittsburg, Pa., in the chair. The following were elected directors for the current year: T. N. Barnsdall, R. Law, Jr., E. B. Reesor, T. O. Sullivan, F. W. Sumner, J. A. L. Henderson and E. O. Bartlett.

Port Arthur Civic Ry.—Passengers carried in March, 164,483, against 142,982 in February and 152,754 in January.

Saskatoon Municipal Ry.—Total revenue for February, \$16,215.26; operating expenses, \$10,337.06; balance, \$5,878.20; capital charges, \$4,575; net profit, \$1,303.20; total miles run, 61,004; total passengers, 314,660; receipts per car mile, 26.581c; operating expenses per car mile, 16.945c; capital charges per car mile, 7.500c; total k.w.h., 157,090; k.w.h. per car mile, 2.575; average passengers per car mile, 5.158.

Saskatoon Municipal Ry.—Total revenue for March, \$17,690.02; operating expenses, \$11,396.46; balance, \$6,293.56; capital charges, \$3,781.09; net profit, \$2,512.47; miles run, 62,085; passengers carried, 344,953; traffic receipts per car mile, 28.493c; operating expenses per car mile, 18.356c; capital charges per car mile, 6.090c; total k.w.h. 169,090; k.w.h. per car mile, 2.723; average passengers per car mile, 5.556.

Sherbrooke Ry. & Power Co.—A press report states that negotiations are being carried on for the sale to the City of Sherbrooke of the railway part of the company's undertaking.

St. Thomas Electric Ry.—A proposal was submitted to the St. Thomas, Ont., City Council, April 12, by the London & Lake Erie Ry. & Transportation Co., for the operation of the lines within the city now being operated by a committee of the council. The suggestion is to make a contract for one year, its continuance to depend upon the results obtained. The matter is under consideration.

Toronto Ry.—

	City	City	City	City
	1916	1915	1914	1913
Jan.	\$173,784	\$68,847	\$41,496	\$50,488

Net	108,250	120,093	216,725	256,569

Manitoba Taxation of Electric Railways.

The act amending the Corporations Taxation Act, passed by the Manitoba Legislature recently, increases the taxation to be levied upon electric railways. The act provided in sec. 3, par. 1., that "Every street railway company in Manitoba and every company working or operating a railway or part thereof entirely or partly by electricity in the province for the carrying of passengers, shall pay a tax of \$500" a year for 20 miles or less and \$10 a mile for every mile in excess, single track, one mile of double track to count as two miles; switches, sidings, tracks into car sheds, Y's and portions of track not in general use to be exempt.

The new act repeals the foregoing paragraph and substitutes the following: "Every street railway company in Manitoba, and every person or corporation other than a municipality working or operating a railway or part thereof, entirely or partly by electricity, in the Province of Manitoba, for carrying passengers shall pay a tax of: \$30 per mile, if the mileage does not exceed 15 miles; \$40 per mile, if the mileage exceeds 15 miles but does not exceed 30 miles; \$50 per mile, if the mileage exceeds 30 miles but does not exceed 50 miles; \$60 per mile, if the mileage exceeds 50 miles. In all cases the mileage shall be computed on the single track, each mile of double track being counted as two miles of single track; switches or sidings, tracks into car sheds, Y's and portions of track not in general use shall be excluded from the computation of mileage."

It was stated by the Provincial Treasurer when the measure was before the Legislature, that the new tax is on the same level as that levied on similar companies in Saskatchewan and Alberta, and he also intimated that there would likely be a further increase after the war. It was stated in the discussion that the Winnipeg Electric Ry., which is the only railway in the province that will be affected, will have to pay an increased tax of \$6,737.13 a year.

Tax on Railway Tickets in England.—The British Government has withdrawn the tax on railway tickets. It was stated in the House of Commons recently that the expense and trouble required to collect the tax so depleted the £3,000,000 which it was expected to gain, that it had been decided not to persist in the collection.

W. Menard, a telegraph operator at Richmond, Que., has been held to be criminally responsible for the death of W. Gagnon, locomotive fireman, in a train wreck on the G.T.R., near Richmond, Feb. 28.

Electric Railway Projects, Construction, Betterments Etc.

Brantford Municipal Ry.—The Dominion Parliament has authorized the City of Brantford to maintain and manage the Grand Valley Ry. as fully and effectually as the G.V.R. Co. might do, and to extend the existing railway from Brantford to Cainsville, Ont. The city council is to be subject to any bylaws made between the company and any municipality, and shall pay taxes in such municipalities to the same extent as the company would have been liable for. As far as the Parliament's power extends, the control of the railway is vested in the Brantford Municipal Railway Commission.

The Calgary Municipal Ry. contemplates building two miles of temporary track to the Sarcee Military Camp. Materials are on hand. Track will be laid to within 440 yards of the camp. The estimated cost is \$6,000 to \$6,800, which it is proposed to pay out of revenue, and the material, so far as it is available, will be used elsewhere when the camp is removed. (Sept. 1915, pg. 359.)

Hamilton & Brantford Ry.—A new shelter has been erected at the Murray St. crossing, Brantford, Ont.

We are officially advised that the question of physical connection with the Lake Erie & Northern Ry. in Brantford, and the construction of a joint station there is being arranged for. (See Lake Erie & Northern Ry.)

Lake Erie & Northern Ry.—A press report states that it is expected that the section of this railway between Brantford and Port Dover, Ont., will be opened for traffic, May 15. This will give a through line operated by electricity, Galt to Port Dover, 50.3 miles.

A contract has been let to Schultz Bros. Co. for the erection of a station building at the south end of Lorne Bridge, Brantford, which will be used jointly with the Hamilton & Brantford Ry. The estimated cost is about \$40,000. The agreement for the building and use of this station has not yet been formally approved by the H. & B. Ry., the Brantford City Council and the Board of Railway Commissioners. (April, pg. 156.)

Morrisburg & Ottawa Electric Ry.—J. A. Kilt, President, informed the Ontario Legislature's Railway Committee, Mar. 31, that it is proposed to spend \$30,000 on surveys and other work connected with the railway during this year, and he asked for an assurance that the bonding power would be increased to \$40,000 a mile. The committee did not feel that it was justified in acceding to this request, and the matter stood over for consideration by the Legislature. (April, pg. 115.)

Nelson Street Railway.—A press report states that H. P. Thomas has been retained by the Nelson, B.C., City Council to prepare plans and estimate cost of extending the municipal railway along Baker St. from Josephine to Cedar Sts. and on Vernon St. from Cedar to Josephine Sts. F. C. Ingram is Superintendent and Chief Engineer.

Niagara, St. Catharines & Toronto Ry.—The station at Standard, Ont., was destroyed by fire April 2. A press report states that a larger and up to date station is to be built at once in its place. (Jan., pg. 30.)

Ottawa Electric Ry.—We are officially advised that the City Council has decided

to lay a new asphalt pavement on Rideau St., between Sussex and Waller Sts. The company has on hand the 108 and 115 lb. T rails required, and expects to proceed with track laying some time in May. (Oct., 1915, pg. 318.)

Port Arthur Civic Ry. will renew about half a mile of track from Argyle St. to Arthur St. this year.

St. John Ry.—Residents of the parish of Simonds are asking the New Brunswick Legislature to compel the company to carry out an agreement made in 1914 for the extension of the company's railway into that area. An agreement between the parties is expected to be reached as to when the work will be undertaken. (April, pg. 156.)

Winnipeg Electric Ry.—The question of the extension of the Academy St. line, to the Midland Ry. of Manitoba, and of the Talbot Ave. line from Roland to Cameron Sts., is under discussion. Both matters are being considered by committees of the Winnipeg City Council. (April, pg. 156.)

Nipissing Central Railway Report.

The Nipissing Central Ry., 12.64 miles, is owned by the Province of Ontario, and is operated by the Timiskaming & Northern Ontario Ry. Commission. The report for the year ended Oct. 31, 1915, gives the following statistics:—

Revenue from transportation	\$105,458.49
Other revenue	1,252.13
Total operating revenue	\$106,710.62
Maintenance of way and structures	\$12,809.80
Maintenance of equipment	6,840.72
Traffic expenses	474.39
Transportation expenses	45,689.44
General and miscellaneous	8,737.11
Total operating expenses	74,551.46
Net operating revenue	\$ 32,159.16
Other income	268.00
Total income	\$ 32,377.16
Rent for lease of road	\$ 7,254.98
Taxes	27.19
	7,282.17
Net result	\$125,094.99
PROFIT AND LOSS ACCOUNT.	
Balance from 1913-14	\$ 27,397.97
Net revenue from operation	25,492.96
	\$ 52,492.96
Townsite balance	\$ 2,382.03
Interest on advance from T. & N.O.R.	23,233.90
Paid Treasurer of Ontario	25,000.00
	50,615.93
Balance carried forward	\$ 1,877.03
ASSETS.	
Cost of road	\$298,815.70
Cost of equipment	74,290.98
Townsite property	244,197.75
Working assets	62,591.23
Deferred debit items	48.20
Franchise	141,388.32
	\$821,327.18
LIABILITIES.	
Capital stock	\$530,000.00
Advance from T. & N.O.Ry.	229,194.16
Working liabilities	60,255.99
Profit and loss balance	1,877.03
	\$821,327.18

The statistics of operation for the year are as follows:—

Passenger car hours	27,326
Passenger car miles	280,157
Passengers carried	1,367,902
Average daily receipts	\$288.92
Average receipts per car hour	\$3.38
Average receipts per car mile	38c.
Freight car hours	470
Freight car miles, loaded	2,077
Freight car miles, empty	1,861
Average receipts per freight car hour	\$14.37
Average receipts per freight car mile	\$1.25

Electric Railway Notes.

The Windsor, Essex & Lake Shore Rapid Ry. is going to do some paving in Leamington and Windsor, Ont.

The London St. Ry. is considering the question of double tracking about 2,000 ft. beyond the Exhibition Ground on Dundas Street East.

The Windsor, Essex & Lake Shore Rapid Ry. is in the market for some 80 lb. steel T rails, angle bars, tie plates, track bolts, and cedar and oak ties.

The Winnipeg Electric Ry. has agreed to put on a service of two cars across the Arlington St. bridge, as required by the Manitoba Public Utilities Commission.

The Brandon, Man., Municipal Ry. started operating cars on its electric railway April 12, after having been out of operation, owing to snow and ice, since Jan. 25.

The Port Arthur Civic Ry. has altered one of its cars so as to be operated by one man, and it is proposed to put two such cars in operation on the north belt and one on the south belt line.

The St. Thomas Ont., City Council has raised the wages of the conductors and motormen on the municipal railway from 22 to 25c an hour after six months service. New men are to be started at 22c.

A new traffic bylaw went into force in Vancouver, B.C., April 3, the principal feature of which is that pedestrians are forbidden to cross the streets within certain bounds, in the centre of the city, except at intersections.

The Toronto Civic Ry. employees decided Apr. 11, not to ask for an increase in wages for the present, as according to a resolution passed by them they realize that any increase would mean increased taxation on the ratepayers.

The Saskatoon, Sask., City Council is being asked by Roman Catholic residents to start the Sunday car service on the municipal railway half an hour earlier so as to enable them to use the cars to attend 9 o'clock mass. The question of the cost of the additional service is under consideration.

The Port Arthur, Ont., Public Utilities Commission has been considering a proposal to sell street railway tickets at 7 for 25 cents, and to collect 2 tickets for the run between Port Arthur and Fort William. The Fort William authorities decided April 1, that they would not agree to the proposition.

The Montreal City Council has sent on to the Department of Railways for transmission to the Board of Railway Commissioners, plans for the proposed subway under the Lachine Canal at Wellington St. The estimated cost of the work is \$1,250,000, part of which will be borne by the Montreal Tramways Co., and the Dominion Government.

The Board of Railway Commissioners has authorized the London & Lake Erie Ry. & Transportation Co. to sell through passenger tickets from points on its line to points on, or via, the Michigan Central Rd., and the latter is required to honor such tickets, subject to the condition that prompt accounting therefor be made by the issuing company.

The Sandwich, Windsor & Amherstburg Ry. has ordered 2 single truck, double end, p.a.y.e., city cars, from Preston Car & Coach Co. They will have bodies 21 ft. long, mounted on 21E trucks with 8 ft. wheel base, and will be equip-

ped with 2 Canadian Westinghouse motors, 2 trolleys, electric heating system, push buttons and leather upholstered seats.

The Brantford Municipal Ry. Commission approved April 5, a new wage schedule for conductors and motormen, to date from April 1, as follows: First month, 16c an hour; first year, 18½c an hour; second year, 20c; third year and thereafter, 21c, which gives a 5% increase all round. It was also decided to permit the use of stools for motormen if sanctioned by the Ontario Railway and Municipal Board.

The Quebec Ry., Light and Power Co. is building at its Ste. Anne de Beaupre shops, 4 double truck, p.a.y.e. city cars, similar to its class 600 cars now in use. Following are the chief details:—

Seating capacity	40
Bolster centres, length	18 ft.
Length over body	29 ft. 8 ins.
Length over all	40 ft.
Width over all	8 ft.
Body, material	wood and steel
Interior trim	Canadian red birch, stained mahogany
Headlining	Agasote
Roof	arch type

The Court of Review at Montreal, in dealing with a claim against the Hull Electric Co., recently, found that the company was guilty of negligence if it did not provide such guards for the front wheels of its cars as would prevent persons who fall on the track from being run over, and that the necessity of providing a "cow catcher" on its cars when operating in rural districts, did not relieve it from providing protection by means of a fender when the cars were being operated on city streets.

The Three Rivers Traction Co., Three Rivers, Que., has ordered three cars from the Ottawa Car Manufacturing Co., for delivery by July 1. Two of them will be single truck, single end, one man, near side, and one will be single end, double truck type, and generally similar to those previously supplied, which were described and illustrated in Canadian Railway and Marine World for Dec. 1915. The bodies will be mounted on radiax trucks and equipped with Westinghouse 101-B-2 motors, straight air brakes, life guards, scrapers, Coleman stationary fare boxes, ventilators, folding doors and steps, and heated with cross seat heaters, 10 per car. The dimensions will be:—

Length of body	21 ft.
Length of front vestibule	6 ft. 2 ins.
Length of rear vestibule	4 ft.
Length over all	32 ft. 2 ins.
Width over all	8 ft. 6 ins.

British Columbia Accident Case.—In Sept., 1914, some cars belonging to the British Columbia Electric Ry. were standing on a siding on Main St., Vancouver, ready for unloading, when they were liberated by some mischievous boys, with the result that two persons were killed and several injured. Actions were brought against the B.C.E.Ry., and the Dominion Creosoting Co., to which the cars were consigned to recover damages, and in two of the three cases decided, the juries found both companies liable. Other cases were held over pending an appeal. Judgment on the appeal case was delivered April 12, and placed the entire responsibility for the accident on the B.C.E.Ry. An appeal will be made to the Imperial Privy Council by the B.C.E.Ry., but the Court of Appeal declined to allow all the cases to be consolidated for the purposes of the appeal.

Regina Municipal Railway Earnings, Etc.

Following are statistics for February, compared with those for Feb., 1915.

	Feb. 1916.	Feb. 1915.
Total revenue	\$17,166.79	\$14,418.62
Expenses	17,216.17	14,346.13
Capital charges	6,963.80	9,137.58
Adjustment charges	49.38	72.49
Operating deficit	9,113.18	9,065.09
Total deficit		
Expenses per car mile without power	17.90c.	14.53c.
Expenses per car mile with power	24.01	19.42
Platform wages per car hour	19c.	72.56c.
Passengers carried	65	289,421
Expenses, less capital charges, percentage		100.29
Expenses with capital charges, percentage		152.51

British Columbia Hours of Labor.

British Columbia Electric Ry. employees have been asking the Provincial Government to pass an act to give them one day off work in every seven days. Several conferences have taken place between the company, the employees and the Government. A statement was made by the Premier in April, to the effect that the Government had come to the conclusion that the men, who number about 1,300 in the three cities, were entitled to one day in seven, or at least one day in eight, which some of the men suggested would satisfy them for the present. The government preferred not to bring down any drastic legislation on the subject, especially as the company had agreed to bring forward a new schedule which would provide for one day in seven or eight. The government would, however, bring in an amendment to the Railway Act giving the Lieutenant Governor in Council power to provide for such a regulation, but there was no intention to enforce it against the company if the latter carried out the compromise now arranged which is satisfactory to the men and which the company agrees to put into effect.

Port Arthur-Fort William Traffic.—In connection with the proposal to give 7 tickets for 25c, and using 2 tickets for the trip between Port Arthur and Fort William, Ont., a report prepared for consideration by the Port Arthur Public Utilities Commission respecting traffic for 1915, shows that 2,096,830 fares were paid, and 407,719 transfers issued. The traffic was distributed as follows: Main line, 66.25%; Arthur St. line, 11.95%; north belt line, 13.45%; south belt line, 8.35%. Of the traffic on the main line, 46.3% travelled on the interurban line. The proposed change would mean a reduction of revenue on the cars of the fast traffic, which would have to be made up by increased traffic, and the question is whether there would be such an increase mainly within the city, to justify the reduction.

Johnson St. Bridge, Victoria, B.C.—The Premier of British Columbia informed the Victoria city bridge committee, recently, that the government was prepared to give an additional \$25,000 towards the building of this proposed bridge, making its contribution \$200,000, and to secure from the British Columbia Electric Ry. either by negotiation or legislation, a contribution of \$50,000. The Canadian Northern Pacific Ry. is contributing \$25,000, but it is not said whether the Esquimalt and Nanaimo Ry. is making a contribution or not. The B. C. Electric Ry. says it will be time enough to discuss the amount of its contribution towards the cost of the bridge, when, if ever, it would be determined to use it, and that the cost of rearranging its tracks so as to run over the proposed bridge would be an expensive matter.

Marine Department

Icebreaking Steamship for the St. Lawrence River.

The Dominion Government icebreaking steamship, which will, it is expected, be launched at Maisonneuve, Montreal, shortly, was ordered early in 1914, from Canadian Vickers Ltd., the contract price being \$998,593, and delivery was required by the autumn of 1915. A considerable

i.h.p. 8,000; speed 15 to 16 knots an hour. She is of the twin screw type designed to work through the ordinary sheet ice formed in the river, from 12 to 30 ins. thick, and packed ice formed in certain parts of the river, particularly at Cap Rouge, will with the displacement and

in conjunction with the double bottom, which extends the full length of the vessel, a double skin extending from the engine and boiler room bulkhead right forward. Access from below to these watertight compartments is provided for by watertight doors. Large trimming

Icebreaking Steamship for St. Lawrence River.

amount of work was done on the hull during the following months of the year, but when war broke out in August, it was found necessary to suspend all outside work, in order to deal with more pressing requirements. Since work on the ice-breaker was resumed, very quick progress has been made.

power developed, be successfully coped with. She is of massive construction, built to Lloyd's requirements for class 100 A1. The stem a massive steel casting, is raked aft, and the stern, which is of the cruiser type, will allow of easy propulsion and steering when going astern amongst ice. The watertight sub-

tanks are placed forward and aft, connected with special pumping arrangements, so that the vessel may be trimmed quickly.

The framing amidships and approaching the ends forward and aft, is of heavy channel section 12 ins. deep, spaced 18 ins., and at the extreme ends of the ves-

Icebreaking Steamship. General Arrangement of Upper and Forecastle Decks.

The vessel was designed as an ice-breaker only, the intention being that she will lay up during the summer. The principal dimensions are: length over all 292 ft., breadth moulded 57½ ft., depth moulded 32 ft., draught mean 19¼ ft.; sheer forward 4½ ft., sheer aft 2 ft.;

division is very complete, there being seven main transverse watertight bulkheads extending to the upper deck. The side bunker walls are also watertight to the upper deck, and an inner skin is provided between the fore peak and the forward bunker, the bulkheads thus forming,

sel the spacing is reduced to 15 ins. The complete framing is bound in every way practicable in order to form a complete structure, in itself independent of the outer plating. At the icebreaking water line, and running fore and aft for the complete length of the vessel, a special

ice belt is fitted, 10 ft. deep, 1½ in. thick at the stem and 1 in. at the stern. Forward in the bows and from the bottom of the ice belt to the keel plate, the plating is for a considerable distance aft 1½ in. and 1 in. thick respectively.

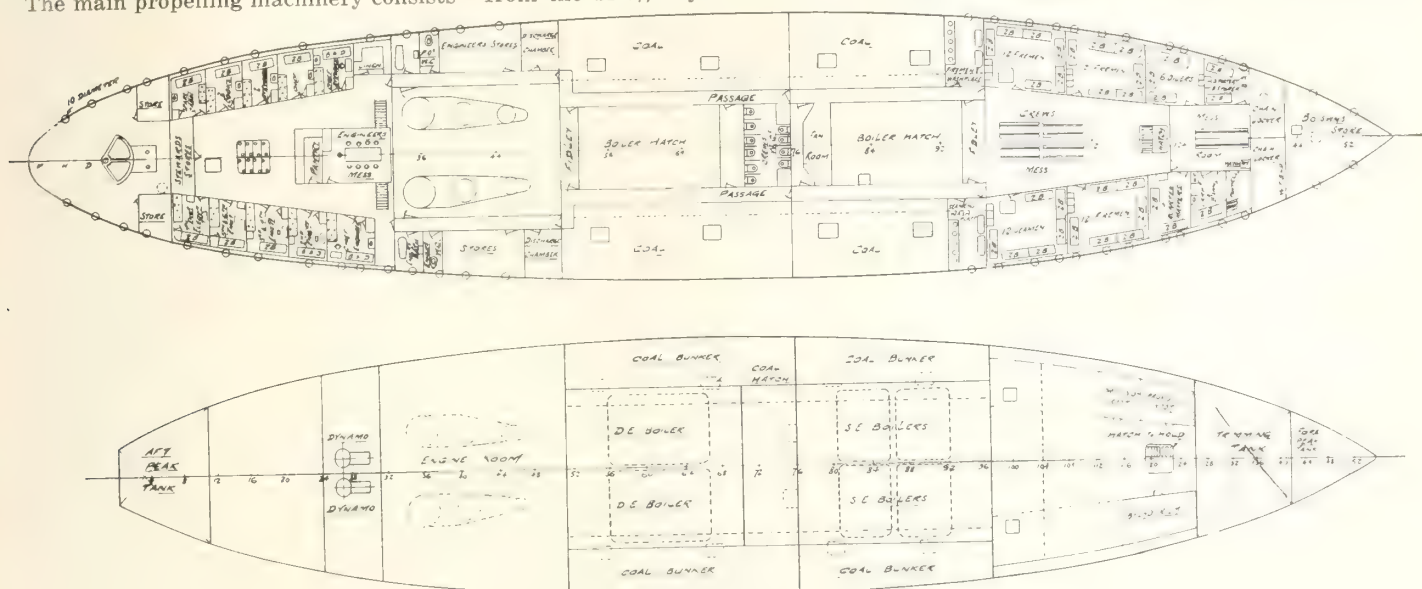

The main propelling machinery consists

The lifesaving appliances are in accordance with the latest rules of the Canadian Steamboat Inspection Act, and include four lifeboats and one cutter.

The deck machinery consists of powerful steam steering gear aft, controlled from the bridge by telemotor, and fitted

Loss of the s.s. Pilot Investigated.

An investigation was held at Quebec, recently, by Capt L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Koenig and L. R. Demers, as nautical assessors, into the causes of the loss of the

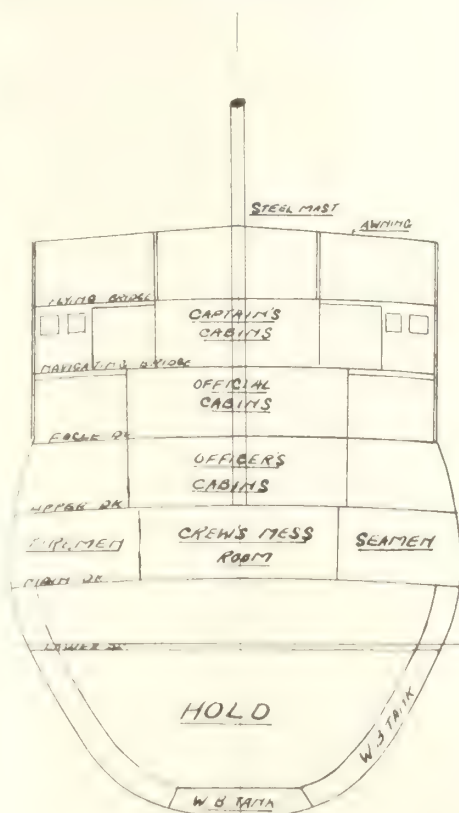

Icebreaking Steamship. Main and Lower Decks.

of twin screw, triple expansion, surface condensing engines, with cylinders 28, 46 and 75 in. diam., by 48 in. stroke, capable of developing 8,000 collective i.h.p., when running at 100 r.p.m. The shafting is made stronger than actual requirements, to withstand the shock, should the propellers strike solid ice, and the propellers themselves are especially strong, being of nickel steel. Independent air, feed and bilge pumps of extra large capacity are provided and the engine room auxiliary equipment is very complete. Steam is supplied to all machinery by two double ended and four single ended boilers of the return tubular type, having a grate area of about 560 sq. ft., and delivering steam at 180 lb. pressure, working under forced draught. All the boilers will supply steam to the main engines, and connections for the auxiliary steam main are also led from three of the single ended boilers. Ash ejectors and steam ash hoists are provided in the various stokeholds.

Accommodation on the main deck is provided for the engineers and stewards, etc., while forward on the same deck are the quarters for the crew and petty officers. On the upper deck at the forward end of the casing are the officers' quarters and mess room. The two galleys are located on this deck in the casing, and communicate with all messing quarters by dumb waiters. In the fore-castle are two houses for cold storage with cook's day stores alongside. The official accommodation is located on the fore-castle deck, and consists of two official cabins, pantry, bath and w.c., and combined dining saloon and chart room. The wireless telegraph cabin and operator's room are on the boat deck aft, and the captain's cabin and wheel house are on the navigating bridge. Complete hot and cold fresh water, sanitary and steam heating systems are fitted throughout the vessel, and also electric light. A searchlight of 25,000 candle power is also provided and fitted on the fore side of the foremast. Electric current is supplied by two direct current compound dynamos direct driven by high speed enclosed compound engines.

with hand gear at the engine, a windlass, two capstans and boat and coal hoists. Special arrangements have been made for coaling and mooring equipment.

Icebreaking Steamship. Section in Way of Deck Houses, Frame III, looking forward.

Universal Transportation Co., Ltd., has been incorporated under the Dominion Companies Act with \$100,000 authorized capital and office at Toronto, to own and operate steam and other vessels, docks, wharves and other transportation facilities, and to carry on a general transportation business for passengers and merchandise.

Quebec & Levis Ferry Co.'s s.s. Pilot, Jan. 18, on Red Island in the River St. Lawrence, when en route from Riviere du Loup to Saguenay. The master, A. Deschenes, gave evidence that his log was lost and that he encountered much ice, but that the weather was clear. After steering a tortuous course to avoid ice floes, he met with a large field of ice extending some 200 to 300 ft. on his port side, and he chose what appeared to be the narrowest part to enter with the idea of breaking a passage. The ice appeared to be about an inch above the surface, thus indicating a depth of about 11 ins. He entered at full speed to two-thirds of the vessel's length when she stopped. He then tried to work out of the ice, but without success, the vessel being wedged in. In the meantime the tide was ebbing at about 6 miles an hour, and he realized that the vessel was being brought on to Red Island, and when she grounded there, a boat was lowered and all hands landed, as nothing could be done to save the vessel after she grounded.

The court finds that the master showed lack of judgment in entering the ice floe where he did and failing to take into consideration the strength of the ebb and his distance from Red Island, and it cannot conceive why the vessel could not extricate herself from the ice if the conditions were as stated. While the court only charges the master with an error of judgment, it deprecates the system whereby a man holding a minor inland water certificate only, is entrusted with such a responsible position to navigate the St. Lawrence during the winter, a post which requires knowledge acquired by experience only, and it claims that his experience was not sufficient for the position and had there been loss of life, its remarks would have been more severe. The master cannot be held at fault if the owner chooses to engage him, but the master, A. Deschenes, was reprimanded and cautioned to exercise better judgment in future, and the court considers it would have been preferable for him to have waited a more fitting opportunity to enter the ice, and that the mate had not suffi-

cient experience to assist the master. The court also remarked that the qualifications of the master, in virtue of his certificate, may be sufficient for ordinary circumstances, but absolutely insufficient, owing to his lack of experience, in such a trade, and therefore, if the owner is anxious for the safety of his property, it behooves him to seek the best experienced man available, and this should be enforced, especially when vessels are engaged in carrying passengers, and it expressed surprise when it heard from the evidence that the Pilot was licensed to carry 390 passengers and had but one lifeboat and two canoes as life saving apparatus.

Canada Steamship Lines Appointments.

H. W. COWAN, heretofore Operating Superintendent, Freight Steamships, Toronto, has been appointed Operating Manager. Office, Montreal.

GILBERT JOHNSTON, heretofore Mechanical Superintendent, Montreal, has been appointed Consulting Engineer.

R. DUGUID, heretofore Superintending Engineer, Toronto, has been appointed Mechanical Superintendent, vice G. Johnston. Office, Montreal.

JOHN F. PIERCE, heretofore General Passenger Agent and General Baggage Agent, has been appointed Assistant Passenger Traffic Manager. The position of General Passenger Agent has been temporarily abolished. Office, Montreal.

C. C. BONTER, heretofore Special Agent, Montreal, has been appointed General Baggage Agent. Office, Montreal.

W. J. KING has been appointed Division Freight Agent, Montreal, vice J. J. Nelligan, who has joined the Canadian Expeditionary Forces.

D. OLIVIER, heretofore ticket agent, Montreal, has been appointed City Passenger Agent, in charge of the ticket office and excursion business and about Montreal.

D. M. CRITES has been appointed Soliciting Freight Agent, Montreal.

JOHN V. FOY, heretofore General Agent, Buffalo, N.Y., has been appointed Assistant General Passenger Agent. Office, Toronto.

F. J. GRAHAM, who has been in the service for some time in different capacities, including purser and dock ticket agent, has been appointed City Passenger Agent, Toronto, in charge of city and dock offices.

A. A. AULD has been appointed Superintendent of Terminals, with jurisdiction over Toronto, Niagara on the Lake, Queenston, Lewiston and Charlotte terminals, for both passenger and freight steamships. He will have charge of the physical operation of the docks and steamships at these points, and agents will work under his jurisdiction in respect of the handling of freight to and from the steamships, and also any changes in passenger schedule. Captains and engineers will report immediately on arrival any necessary repairs to their vessels to him, and he will consult with the Mechanical Department. He will also be responsible through the Passenger Department for the sailing time of vessels, change of schedule and all orders to captains and engineers affecting this. Office, Toronto.

C. E. CROFT, heretofore General Agent, Toronto, has been appointed Chief of Commissary Department. Office, Toronto.

A. E. RANKIN, heretofore Soliciting Freight Agent, Toronto, has been ap-

pointed Soliciting Freight Agent, Hamilton, Ont., succeeding W. J. Robinson, promoted.

S. J. MURPHY has been appointed Travelling Passenger Agent, Niagara Falls, N.Y., the same position as he had

last navigation season.

W. J. ROBINSON, heretofore Soliciting Agent, Hamilton, Ont., has been appointed District Freight Agent, Windsor, Ont.

BROCK BATTEN has been appointed Westbound Freight Agent, Fort William.

Absorption of St. Lawrence and Chicago Steam Navigation Co., Ltd.

After the declaration of a dividend of 10% for 1915, and a bonus of 2%, both of which were paid on Jan. 2, 1916, the St. L. & C. S. N. Co.'s shares, which had risen to 125 in Dec., 1915, sold ex dividend down to 115, but within the following two months a strong demand arose and it soon became evident that some interests were trying to obtain control. Towards the end of March a brokerage firm approached the directors with a view to purchasing the shares, or at least a controlling interest, but the directors did not think the price suggested represented the property's value and issued a circular to shareholders to that effect. The offer is said to have been made on behalf of the Canada Steamship Lines, Ltd., and another offer at an advanced price is said to have been made a little later by the same interests. Then, it is said, Jas. Playfair, of Midland, Ont., and associates made a higher offer, which was followed by a still higher one of \$185 a share by the Canada Steamship Lines interests, which a majority of the directors decided to accept for their individual holdings, stipulating that the purchasers pay the same price to every shareholder depositing stock before May 31, and they issued a circular to shareholders on April 14 recommending their acceptance of the offer.

The vessels involved in the transfer are The Iroquois, built at Toronto in 1902, 1,452 register tons; W. D. Matthews, built at Collingwood, Ont., in 1908, 2,450 register tons; E. B. Osler, built at Bridgeburg, Ont., in 1908, 4,361 register tons, and J. H. G. Hagarty, built at Collingwood, Ont., in 1914, 5,704 register tons.

The report for 1915 showed that after paying a dividend of 10% and a bonus of 2% on the paid up capital stock, amounting to \$115,968, a balance of \$162,522.33 was carried forward to this year, making a balance to the credit of profit and loss of \$393,791.88. The four vessels named were valued at \$1,120,000, and the paid

up capital stock is \$966,400 (nominal \$1,000,000). For some time past the company largely carried its own insurance risk, the insurance fund showing a credit balance at Dec. 31, 1916, of \$135,689.67. The steamship earnings for the year were \$301,690.25.

The company was incorporated in 1890 by S. Crangle, Sir Casimir Gzowski, G. Hagarty, J. H. G. Hagarty, F. W. King-

ston, W. D. Matthews and E. B. Osler, with a capital of \$100,000, and the s.s. Rosedale, which was built at Sunderland, Eng., in 1888, was acquired, and lengthened to full canal size. She was later sold to R. O. & A. B. Mackay, Hamilton, Ont., and subsequently taken over by Inland Lines, Ltd., and afterward by Canada Steamship Lines, Ltd. The s.s. Algonquin, built at Yoker, Scotland, in 1888, was bought from T. Marks & Co., Port Arthur, Ont., in 1893, and lengthened to the same size as the Rosedale. She was sold to the Port Colborne & St. Lawrence Navigation Co. in 1913, and has again been sold recently to A. B. Mackay, Hamilton, Ont. The capital stock of the company was increased in 1893 to \$200,000. The company was particularly free from marine casualties, but suffered the loss of the s.s. James Carruthers, with officers and crew, in the great storm on the lakes in Nov., 1913. This vessel was for a time the largest carrier on the Great Lakes, and was built at Collingwood in 1913, with a register tonnage of 5,606.

The shareholders in the company number 230, which for the capital involved shows a very fair distribution of the stock. Some of the shares are held in Great Britain. The directors are: W. D. Matthews, President; J. H. G. Hagarty, Vice President; A. A. Wright, Managing Director; Sir Edmund B. Osler, C. S. Gzowski, G. R. Crowe, Jas. Carruthers, S. Crangle.

At \$185 a share for the stock the buyers are paying \$1,787,840 for the St. Lawrence property, which, taking into account cash and other assets, amounts to something like \$47 a ton for the four boats. It was stated some time ago that the Canada Steamship Lines had collected insurance under its war risks at the rate of \$68 a ton for every boat lost, and that the sales of boats had been at equally remunerative rates.

The following table shows the company's record from 1901:

	Stock.	Earnings.	Charges.	Balance.	Per cent. on Stock.	Dividend.	Surplus.
1901	\$200,000	\$ 53,654	\$12,380	\$ 41,274	20.63	15	\$ 62,753
1902	350,000	55,312	14,152	41,160	11.76	26 2-3	18,913
1903	563,300	78,888	20,234	58,654	11.05	10	24,640
1904	563,300	81,613	31,945	49,668	8.81	8	29,235
1905	563,300	134,891	27,749	107,142	19.02	10	80,057
1906	563,300	125,050	32,780	92,270	16.38	10	115,996
1907	751,000	113,928	30,770	83,770	11.15	10	101,968
1908	855,700	116,549	56,234	60,315	7.04	7	102,383
1909	860,000	112,930	13,507	99,423	11.56	8	132,007
1910	860,000	42,830	13,994	136,042	15.81	3	136,042
1911	860,000	62,677	14,233	48,443	5.63	5	141,476
1912	860,000	134,031	35,000	99,031	11.51	8	158,645
1913	900,875	150,161	19,357	130,804	14.52	8	222,150
1914	966,400	54,639	20,768	33,871	3.5	3	231,169
1915	966,400	301,690	23,099	278,600	28.82	12	393,791

up capital stock is \$966,400 (nominal \$1,000,000). For some time past the company largely carried its own insurance risk, the insurance fund showing a credit balance at Dec. 31, 1916, of \$135,689.67. The steamship earnings for the year were \$301,690.25.

The company was incorporated in 1890 by S. Crangle, Sir Casimir Gzowski, G. Hagarty, J. H. G. Hagarty, F. W. King-

Yarrows Ltd., Esquimalt, have an order for the construction of a steel, shallow draught river steamboat for India. The contract was originally placed with the parent concern in Scotland, and transferred to Esquimalt, owing to rush of business. The machinery will be supplied from Glasgow, and the whole will be knocked down and shipped to India, where it will be reconstructed.

Steamship Service Between Prince Edward Island and the Mainland.

The Charlottetown Steam Navigation Co. Ltd. advises us that it has decided not to resume its service between Prince Edward Island and the mainland in the spring, and that it will close out its business. For a great many years it has operated steamships between Summerside, P.E.I. and Pointe du Chene, N.B., and between Charlottetown, P.E.I. and Pictou, N.S. During recent years it has run the s.s. Empress between Summerside and Pointe du Chene, and the s.s. Northumberland between Charlottetown and Pictou as long as weather permitted each year, the winter service having been performed by Dominion Government icebreaking steamships between Pictou and Charlottetown when possible and at other times between Pictou and Georgetown, P.E.I. when Charlottetown harbor became blocked. During the past winter this service was given by the s.s. Prince Edward Island and the s.s. Stanley. When ice conditions have prevented the winter boats running, the mails and any passengers compelled to make the journey were conveyed in open boats between Cape Tormentine, N.B. and Cape Traverse, P.E.I., a distance of about 9 miles across Northumberland Strait, and which was the only route available until icebreaking vessels were provided.

In 1864 the Prince Edward Island Steam Navigation Co. was formed to operate between Charlottetown, P.E.I., and Pictou, N.S.; between Summerside and Georgetown, P.E.I., and Port Hawkesbury, N.S.; and between Summerside and Pointe du Chene and Chatham, N.B. The services were performed by the s.s. St. Lawrence and s.s. Princess of Wales. In 1891 the Charlottetown Steam Navigation Co., Ltd., was incorporated under the Dominion law and took over the old company's affairs, the change being one of name only. In 1891 the s.s. Princess of Wales was broken up, the steel s.s. Northumberland taking her place. The St. Lawrence was sold in 1896. The steel s.s. Princess took her place. The latter vessel was sold in 1906 to the Marine and Fisheries Department, her place being taken by the steel s.s. Empress. The present directors of the Charlottetown S. N. Co. are: W. W. Owen, President, A. E. Ings and John Richards.

The Charlottetown Steam Navigation Co. has sold its s.s. Northumberland to the Dominion Trade and Commerce Department, and has about completed arrangements for selling the s.s. Empress, but the name of the latter's purchaser is not yet available. It is said to be the Trade and Commerce Department's intention to run the Northumberland this year between Summerside and Pointe du Chene and to carry on the service between Charlottetown and Pictou with the C.G.S. Stanley, owned by the Marine and Fisheries Department, but a later report says the Stanley is not suitable for the service, having been specially built for icebreaking. The s.s. Princess, which was formerly run by the Charlottetown Steam Navigation Co. on that route, and which was sold to the Marine and Fisheries Department in 1906, is stated in another report as likely to be put on the Charlottetown-Pictou run again this year. It is not expected that the car ferry terminals at Carleton Point and Cape Tormentine will be ready in time to permit of their use by the s.s. Prince Edward Island until early in December next.

On July 31, 1914, the Dominion Government acquired the New Brunswick and Prince Edward Island Ry., from Sackville to Cape Tormentine, and had the car ferry s.s. Prince Edward Island built to run between Cape Tormentine and Carleton Point, P.E.I., near the old open boat landing place at Cape Traverse. A spur line has been built from Carleton Point to the P.E.I.Ry's Emerald Branch and as soon as the steamship terminals are completed at Cape Tormentine and Carleton Point the s.s. Prince Edward Island will commence running between those points. The intention is to widen the P.E.I.Ry. gauge from 3½ ft. to 4 ft. 8½ in. so that there will be no transshipment of freight to and from the Island, as is now necessary owing to the different railway gauges.

There are conflicting reports from Charlottetown as to the management of the steamships to be operated by the Government between Prince Edward Island and the mainland this year. One report stated that G. W. Wakeford, who has been Manager of the Charlottetown Steam Navigation Co. for several years, would manage them, while a later report says he has declined to do so on account of the non suitability of some of the vessels proposed to be employed.

Great Lakes Transit Co. Organized.

The Great Lakes Transit Corporation, organized with a capital of \$20,000,000 by W. J. Connors, of Buffalo, N.Y., has taken possession of the vessels purchased from the New York Central, Pennsylvania, Erie, Rutland and other railways. Among the vessels, which have been engaged in lake traffic, are three passenger steamers, which are said to have cost \$1,000,000 each. The combined capacity of the entire fleet is more than 150,000 tons. The officers elected by the company are: W. J. Connors, Chairman of Board; J. C. Evans, President; M. M. Marcus, First Vice President; H. S. Noble, Second Vice President; W. J. Connors, Jr., Third Vice President; Levi Mayer, General Counsel; R. M. Russell, Secretary-Treasurer. Mr. Connors says the company will begin business at once.

Caution at Rifle Ranges on Lake Ontario.—Owing to the resumption of rifle practice in connection with military training at Long Branch and Niagara on the Lake, the areas likely to be struck by spent or ricochet bullets have been marked as follows:—At Long Branch, 6 miles westerly from the lighthouse at the Toronto west entrance, seven spar buoys have been placed extending southward from the shore for 2,500 yds. from the stop butts. They are painted white and surmounted by a red sign with the words Danger, Rifle Ranges, painted thereon, and mark the extreme limits of the danger zone. At Niagara on the Lake, the danger zone comprises a strip of water at the south shore of Lake Ontario, extending westward for 1½ miles from Fort Massasauga, and 1½ miles northward from the shore. No attempt should be made to cross that area as long as the red flag is hoisted on the rifle ranges at Massasauga and Chatauqua. Any vessel having to pass close to the danger area is cautioned to blow her whistle when at least three miles out so that firing can be stopped until she has passed out of the danger area.

An order in council has been issued approving the regulations and rates to be charged on the ferry between Brockville and Morristown.

Atlantic and Pacific Ocean Marine.

The Donaldson Line s.s. Kastalia, at one time well known in the Canadian trade, has been sold to an English firm for approximately \$90,000.

The Cunard Steamship Co. has declared a dividend of 10% less income tax, on its ordinary capital stock, for 1915, and a bonus of 10% free of income tax.

The Norwegian s.s. Thomas Krag, bound from South Shields, Eng. for Baltimore, Md., was towed to Halifax, Mar. 31, with a broken crank shaft.

Manchester Liners s.s. Manchester Engineer, which was reported sunk by a German submarine, was well known in Montreal, which was her Canadian port during the St. Lawrence season. She was built in 1902.

The Norwegian ship Svaland was towed into Halifax harbor, Apr. 1, by the U.S. revenue cutter Seneca, having been dismasted during a severe storm south of Sable Island. She sailed from Liverpool, Eng., Feb. 29, for New York.

Canada Steamship Lines s.s. Turret Court, when en route to Manchester Eng. at the end of March, put in at St. John's, Nfld., owing to some damage having been sustained to her machinery. The repairs were carried out there, and she proceeded on her voyage.

The British s.s. Potomac, which stranded near the entrance to Halifax harbor recently, was libelled in the Halifax Admiralty Court, Apr. 3, by the Halifax Dry Dock Co. for \$22,000 for temporary repairs made before she sailed for New York.

Reports from Liverpool, Eng., to the effect that the C.P.R. is building three steamships at Hong Kong, China, are denied by the company's officials, who state that they have no knowledge of facilities at that port for shipbuilding on a large scale. It is surmised that the report has arisen from the fact that C.P.R. vessels have been repaired there recently.

Maritime Provinces and Newfoundland.

The West Coast Trading and Steamship Co., St. Georges, Nfld., is reported to have purchased the steam yacht Narwhal, of New London, Conn., for \$25,000, for mail service on St. Georges Bay.

Two Government wharves have been built in Shediac Harbor, N.B., one, 700 ft. long, extending out to low water mark, from the northwest extreme of Shediac Island, and the other at Grandigue, 410 ft. long, towards the north tangent of Shediac Island.

The schooner N. W. White, which wintered in Montreal, and was purchased recently by Eastern Canada Fisheries, Ltd., is reported to have been chartered for a cargo of lumber for Great Britain, at 360s. a standard. The rate before the war was 33s. 6d. a standard.

A. B. Mackay of Hamilton, formerly of R. O. & A. B. Mackay, steamship owners, and who has latterly been dealing in steam and other vessels, has placed an order in Digby, N.S., for the construction of a four masted wooden sailing vessel for the South American trade.

The Shepody Navigation Co., Ltd., Moncton, N.B., is offering its s.s. Wilfred C. for sale. She has been engaged for the last few years in passenger and

freight towage service on the Petitcodiac River. She was built at Yarmouth, N.S., in 1897, and is screw driven by engine of 16 n.h.p. Her dimensions are, length 80 ft., breadth 18.5 ft., depth 8 ft.; tonnage 99 gross, 48 register.

The Marine Department announces that lightship 15, stationed at the Sambro outer bank, at the entrance to Halifax Harbor, will be removed from her station about June 1, for necessary repairs. During her absence, the station will be marked by a combined gas and whistling buoy, painted black, showing an occulting white light, and a submarine bell buoy, painted black, moored 300 yds. northward of the gas and whistling buoy.

The Marine Department advises the old wooden light ship no. 1, at Barrington Bay, on the southwest coast of Nova Scotia, has been replaced by lightship no. 17. The vessel is a wooden schooner with two masts, the hull painted red, and with a red ball on the main mast. The illuminating apparatus is dioptric, consisting of two lights on the fore mast, a white light 35 ft. above water level, and red light 20 ft. below the white light, visible 11 and 6 miles respectively from all points of approach.

The Public Works Department received tenders to Apr. 26, for the purchase of the s.s. Mulgrave and a barge, formerly utilized in transferring passengers and freight at the Strait of Canso, between Mulgrave and Point Tupper, N.S. The Mulgrave was built at New Glasgow, N.S., in 1893, and is of steel, and is screw driven by engine of 75 n.h.p. Her dimensions are, length 114.8 ft., breadth 31 ft., depth 16.4 ft.; tonnage, 485 gross, 330 register. The barge is 140 ft. long, 31 ft. broad and the hold is 6 ft. deep, and about 195 tons.

Province of Quebec Marine.

The s.s. Westmount, formerly owned by the Montreal Transportation Co., has had her name changed to Wethersfield.

Canada Steamship Lines s.s. Laurentian sailed from Quebec, Apr. 15, for Natashquan and Anticosti, being the first steamship to sail out of Quebec this year.

The Public Works Department has completed the dredging of a basin on the east side of the Government wharf at Murray Bay, to 15 ft. below low water level.

The Quebec Harbor Commissioners received tenders to Apr. 15, for the construction of a freight shed and grain loading galleries on the northern extension of the Princess Louise embankment.

The Montreal Board of Control has recommended that the contract for the operation of a ferry service between Montreal and St. Helens Island, be awarded to Canada Steamship Lines, Ltd., for one year for \$22,180, and if the council possesses the necessary power, to extend the contract to five years at \$19,950 a year.

The operation of the ferry between Riviere Ouelle and Ste. Irene and Murray Bay, came before the Senate recently, when Senator Lougheed stated that the cost of the service from July 1, 1913, to Mar. 1, 1916, was \$143,836.08, and that several complaints as to the service during the winter had been received. In the winter of 1913-14, the vessel was withdrawn from service Dec. 27, resuming Mar. 20; in 1914-15, she missed 30 regular trips, and in 1915-16, she missed 47 regular trips.

Steamer Howard W., Ltd., Steamer Stuart W., Ltd., and Steamer Richard W., Ltd., have been incorporated under the Quebec Companies Act, each with authorized capital of \$10,000, and offices at Quebec, Que., to own and operate steam and other vessels, docks, wharves and other facilities, to dock and repair vessels, operate salvage and wrecking plants, act as stevedores and general merchants. L. C. Webster, H. Aird, Montreal, and W. Q. Stobo, H. C. Thorn and C. St. J. Griffis, Quebec, are the incorporators in each case.

Ontario and the Great Lakes.

The Welland Canal was officially opened for traffic, Apr. 22, at 8 a.m.

The Public Works Department will receive tenders to May 2, for dredging to be done at Port Hope.

The Western Navigation Co.'s s.s. Kaministiquia, reported sold recently, has had her name changed to Westoil.

Canada Steamship Lines' s.s. Rosedale has been generally rebuilt for ocean service, at Port Arthur, at a cost of approximately \$50,000.

Hamilton press reports state that Canada Steamship Lines is making arrangements for taking over the Hamilton Ferry Co's business.

The C.P.R. opened its service on the Great Lakes, Apr. 24, and will give five sailings each week during the summer from Port McNicoll.

The s.s. Quinte Queen, which was offered for sale by auction at Ottawa, Mar. 28, as mentioned in our last issue, was not sold, owing to lack of bids.

The Farrar Transportation Co.'s s.s. Collingwood ran aground above Whitefish Point, Apr. 24, in ice, during a fog, and was released by dredging, Apr. 25.

The Reid Wrecking Co., Sarnia, is reported to have sold the s.s. Magnetic to Cleveland, Ohio, parties, and to be negotiating for the sale of the s.s. Wyoming.

The Great Lakes Transportation Co.'s s.s. Glenlyon was the first steamship to pass through the Sault Canals, down-bound, locking during the afternoon of Apr. 23.

Work in connection with the raising of the Cadillac Steamship Co.'s s.s. Western Star, which foundered near Sarnia, last autumn, has been suspended for a time owing to the collapse of the cofferdam which had been built around it. The loss is estimated at \$32,000.

Canada Steamship Lines s.s. Rochester, which last year was chartered to a company operating out of Chicago, will this year be operated by the Northern Navigation Co., which is subsidiary to Canada Steamship Lines Ltd., in place of the s.s. Majestic, destroyed by fire recently.

The Buffalo Creek Rd., a switching road of 34.95 miles, in Buffalo, N.Y., is reported to have awarded a contract to the Great Lakes Dredge and Dock Co., there, for a new dock to be built on the canal, to be of reinforced concrete on pile foundation, about 800 ft. long and 30 ft. wide.

The Interstate Commerce Commission decided, Apr. 6, to reconsider its demand of the G.T.R. application under the Panama Canal Act, to retain control of the Canada Atlantic Transit Co., operating steamships between Georgian Bay ports in Canada, and Chicago, Ill., and Milwaukee, Wis.

A press report from Cleveland, Ohio, states that 26 steamships have been ordered there for delivery during 1916 and 1917. Of these, 9 are intended for the lake trade and the remainder for ocean service. The 17 ocean vessels, it is stated, will be delivered this year, with 6 of the lake vessels.

The Niagara, St. Catharines and Toronto Navigation Co's s.s. Dalhousie City was the first steamship to enter Toronto harbor from an outside port this year, arriving there Apr. 1. Capt. Maddick was presented with a silk hat by the harbor master. This is the third successive year that the Dalhousie City has opened the season at Toronto.

The United States Lake Survey reports the levels of the Great Lakes in feet above tidewater for March as follows:—Superior, 602.17; Michigan and Huron, 579.48; Erie, 571.74; Ontario, 245.46. Compared with the average March levels for the past ten years, Superior was 0.60 ft. above; Michigan and Huron, 0.57 ft. below; Erie, 0.07 ft. above, and Ontario, 0.43 ft. below.

The Public Works Department has dredged a channel 150 ft. wide leading to the Government wharf at Bruce Mines, to a depth of 16 ft. below zero of the gauge, which is 580 ft. above mean sea level at New York. At the wharf, a turning basin has been dredged to the same depth, for 150 ft. east and 200 ft. west of the middle of the wharf, and for 190 ft. behind the outer point of the wharf.

Canada Steamship Lines, Ltd., has deposited with the Minister of Public Works, the plans of a proposed wharf to be built in the St. Lawrence River at the foot of Wolfe Island. As announced in our last issue, it is the company's intention to build a wharf at Port Metcalfe, at the foot of Wolfe Island, for the transfer of passengers for Clayton and other Thousand Island points from the steamships Toronto and Kingston.

The s.s. Cabotia, formerly owned by the Cabotia Steamship Co., Montreal was offered for sale at Toronto, by public auction recently. She was built at Gibraltar, Mich., in 1880, and was formerly known as Hiawatha. She is of wood with diagonal strapping on frames, with steel boiler house, and equipped with fore and aft compound engines with cylinders 21 and 50 ins. diam., by 46 ins. stroke, 700 i.h.p. at 85 r.p.m., and supplied with steam by a Scotch boiler 12 x 12½ ft. at 125 lbs. Her dimensions are: length 234 ft., breadth 36 ft., depth 30 ft.; tonnage 1,530 gross, 932 register.

An examination of the dredged channel at Owen Sound, by the Public Works Department recently, shows that there is a least depth of 20 ft. in the channel from the outside bay to a point 200 ft. inside the back range lighthouse, with the exception of an area 100 ft. wide on the east side extending from 550 ft. outside to 350 ft. inside the front range lighthouse, where depths of 19 ft. and less are found. From a point 200 ft. inside the back range lighthouse to the outer end of the new Government wharf there are several spots with a less depth than 20 ft. and a least depth of 17.7 ft.

Two steel freight steamships are under construction by the Western Dry Dock & Ship Building Co., at Port Arthur, for delivery during the current year. Their dimensions are, length over all, 261 ft., length between perpendiculars 251 ft., beam 43½ ft., depth 28 ft. 2 ins. Each vessel will be equipped with triple expansion engines with cylinders 20, 33 and 54 ins. diam. by 40 ins. stroke, supplied with

steam by two Scotch boilers 14½ ft. diam. by 11 ft. long at 190 lbs. They are being built to Lloyd's inspection for ocean service, and will each have a carrying capacity of 3,000 gross tons.

The s.s. Frontier, formerly Argyle, and at one time owned by the People's Steamboat Co., Toronto, is to be sold unless claims against her for repairs, etc., are met, according to the decision of the Admiralty Court, held at Chatham, Ont. Among the numerous claims is one of the Customs Department for duty on repairs made to her last year at Detroit, Mich. The vessel has had an unsuccessful and varied career. She was built at Picton, Ont., in 1876, and rebuilt in 1899. The hull is of oak, and her dimensions are: length 185 ft. 1 in., breadth 26 ft., depth 9 ft. 7 ins.; tonnage, 700 gross, 374 register.

A Montreal press dispatch stated recently that in anticipation of a shortage of vessels in the lake trade this year, Canada Steamship Lines, Ltd., was reported to have bought up every freighter it was possible to acquire suitable for lake service, and that several vessels hitherto plying out of Ogdensburg had been taken over together with several vessels which were not in service last year. We are officially advised that Canada Steamship Lines, Ltd., has purchased the s.s. Moreland, which was wrecked on Lake Superior two or three years ago, and which is now being repaired at Superior, Wis.

The Toronto Harbor Commission contemplates continuing reclamation work along the waterfront, between the Humber River and Bathurst St., and on Toronto Island. The harbor head walls are also under contemplation, from Bathurst St. east, for which work tenders are being asked. In addition to this, reclamation work will be proceeded with in the industrial district and inner harbor, and the Cherry St. bridge. The total cost of the work west of Bathurst St. and at Toronto Island, which it is expected will be commenced this year, approximates \$500,000, while the other work mentioned will be about \$700,000.

The George Hall Coal Co., Ogdensburg, N.Y., has sold its s.s. Henry B. Hall to A. H. Lonov, Montreal. She was built at Detroit, Mich. in 1881, and is of oak construction with diagonal strapping on frames, with bow sheathed for ice, and was practically rebuilt in 1906, when she received her present name, having formerly been known as Iron Duke. She is equipped with compound engines with cylinders 23½ and 48 ins. diam., by 36 ins. stroke, 415 i.h.p. at 82 r.p.m., and supplied with steam by a Scotch boiler 13 ft. 4 ins. diam. by 11 ft. 7 ins. long, at 150 lbs. Her dimensions are, length 213 ft., breadth 35 ft., depth 19 ft.; tonnage, 1,151 gross, 962 register.

The s.s. T. J. Waffle, formerly owned by T. J. and W. J. Waffle, Kingston, Ont., was offered for sale, by auction, Apr. 12, at Kingston, by order of the Exchequer Court of Canada, Toronto Admiralty District. She is of oak construction and was built at Westport, Ont. in 1914. She is equipped with a high pressure engine with cylinder 12 ins. diam. by 14 ins. stroke, built at Kingston in 1879 and remodelled in 1914, and supplied with steam by a boiler of the firebox type, 4 ft. 8 ins. diam. by 8 ft. long, at 150 lbs. Her dimensions are, length 105 ft., breadth 22 ft. 5 ins., depth 8 ft.; tonnage, 202 gross, 104 register. The vessel was purchased by Capt. A. Foster, Smiths Falls, Ont., for \$8,500.

The Great Lakes Transit Co. has been organized in New York, with a capital of \$20,000,000, to control 85% of the passenger, packet freight and grain steamships operating on the Great Lakes under the U.S. flag. The fleet will comprise 35 steamships with a freight capacity of 150,000 tons, these being the vessels of 6 railway companies compelled to relinquish their connection with the operation of steamships under a section of the Panama Canal act. The vessels include those controlled by the Pennsylvania, New York Central, Erie, Delaware & Lackawanna and Rutland Rds. J. C. Evans, heretofore Vice President and General Manager, Anchor Line, has been appointed President of the new Company, with office at Buffalo, N.Y.

The s.s. Sarnor, latterly owned by H. M. Norris, Montreal, and which has been the arrow signal which was used last year with claims aggregating \$21,000 against her, was sold by order of the Admiralty Court, Apr. 1, to A. B. Mackay, Hamilton, and P. C. Bonham, Toronto, for \$6,700, the completion of the sale being subject to the consent of the Admiralty Court. The Sarnor was built at West Bay City, Mich., in 1888, and rebuilt in 1901, and was formerly known as Britannic. The hull is of oak with diagonal strapping on the frames, and with the bow sheathed for ice, steel arches and steel boiler house. The propelling machinery consists of fore and aft compound engines with cylinders 24 and 48 ins. diam. by 40 ins. stroke, 495 i.h.p. at 82 r.p.m., and is supplied with steam by a boiler of the firebox type, 10½ by 15½ ft. at 115 lbs. Her dimensions are: length 219 ft., breadth 36 ft., depth 20 ft.; tonnage 1,319 gross, 1,152 register. She was used in the coal trade between Lake Erie ports and Montreal.

The officer in charge of the operation of the canals and locks at Sault Ste. Marie, Mich., announces that to replace the arrow signal which was used last year to designate the lock to be taken by upbound vessels in passing through the Sault Canals, there has been installed on the top of the watchman's shelter near the end of the centre pier, a signal composed of two inclined arms which diverge upward in the form of a broad V. The arms each carry four white lights, spaced in line equidistantly, and are lighted either on the arm to the north or the south to signal that the lock on the side so indicated is to be taken by an upbound vessel. In order that downbound vessels may know before coming within calling distance of the west centre pier whether there is sufficient water to enable them to take the Poe lock, the draft of the Poe lock will be displayed at the watch station at the west end of the west centre pier, in a manner similar to that at Brush Point, and will be properly lighted so that it may be read at night.

British Columbia and Pacific Coast.

The British Columbia Express Co., will not, we are advised, operate any steamboats during this year.

The Public Works Department received tenders recently for the construction of a wooden freight shed on the Government wharf at Vancouver.

The West Vancouver ferries' total receipts for March were \$1,573.10, and the deficit \$197.01. They are being taken over by the council for operation on May 1.

The C.P.R. s.s. Princess Victoria was taken out of service early in April for her

annual overhaul, being replaced on the Seattle run by the Princess Alice, and on the Vancouver run by the Princess Adelaide.

The Marine Department has given notice that the change in the color of gas beacon lights and gas buoy lights, from occulting red to occulting white, in British Columbia waters, will be made as occasion offers, about May 1.

The Marine Department has discontinued the use of dolphins to mark the channel at the entrance to the north arm of the Fraser River, as the building of a jetty on the south side has made them unnecessary.

The C.P.R. sailings to Alaska will commence with the s.s. Princess Alice, June 9, and she will make eight trips during the summer. The s.s. Princess Charlotte will make three trips in July, and the s.s. Princess Sophia, two in each month, June, July and August.

The West Vancouver Ferry Co. will probably increase its ferry service May 1, operating three vessels, the Doncella, Sonrisa and West Vancouver No. 5. The last mentioned has been operating under charter on a passenger service between Vancouver and Port Moody.

The British Columbia Premier stated in the Legislature, Apr. 3, that the Agent General of the Province in London, Eng., was doing excellent work in connection with the releasing of interned German vessels, with the view of utilizing them in the Pacific coast lumber trade.

The wharf at Blubber Bay, Texada Island, has been extended to 260 ft. long, and has an elevated car track on it near to its eastern extremity. A berth has been dredged giving depths from 25 to 20 ft. along the north face, and from 20 to 15 ft. along the northwest face.

The Dominion Government lighthouse and buoy tender Quadra, which was sunk at Gallows Point, near Nanaimo, Feb. 26, in collision with the C.P.R. s.s. Charmer, is reported sold as she lies, partially submerged at low tide, to Capt. A. R. Bissett, Vancouver. It is stated that she will be raised and repaired if possible.

The C.P.R. commenced its summer service to the west coast of Vancouver Island, Apr. 1, when the s.s. Tees sailed from Victoria for Clayoquot and way ports. The summer schedule provides for similar trips on the 1st and 15th of each month, and to Holberg and way ports on the 7th and 20th of each month, making four trips each month.

Repairs on the Union Steamship Co's s.s. Camosun were expected to be completed by the end of April. The contract was placed with Yarrows Ltd., Esquimalt, the price being stated as \$18,669. The contract covered the renewal of 19 plates, 8 plates to be taken out and faired, repairing 3 tank top plates, repairing the stokehold bulkhead, renewing the keel for about 60 ft., new propeller and tail shaft and overhauling the engines. The Camosun stranded on a reef off Digby Island, Mar. 7, and was released about 10 days later.

The Grand Trunk Pacific Coast Steamship Co.'s summer schedule goes into effect, from Seattle, Wash., June 12, and from Prince Rupert, June 17. The steamships Prince George and Chelohsin, the latter owned by the Union Steamship Co. of British Columbia, will be operated between Seattle, Victoria, Vancouver and Prince Rupert, and the s.s. Prince Rupert from Seattle to Skagway, Alaska, calling at principal ports each way. The first vessel for the season left Prince Rupert

for Skagway, Mar. 30, and will continue until Sept. 25 from Seattle and Sept. 27 from Prince Rupert.

Port Moody, B.C., ratepayers, on Apr. 8, by a vote of 115 to 15, endorsed the agreement between the city and Boyds, Limited, which has been formed to carry on a general shipbuilding and repairing business. It was announced that construction would be proceeded with immediately, and by about the middle of July, it is expected that the plant will be sufficiently advanced to enable the first keel to be laid, and four months thereafter, it is anticipated that the first launch will take place. The site of the plant is on

the water front between Kyle and Queen Sts., about 400 by 1,100 ft. Foundations are to be laid for three launching slips, and vessels of approximately 2,000 tons will be built, each with capacity for 1,500,000 ft. of lumber. The slips will be built so as to provide for the building of steel vessels up to 10,000 tons. Two marine railways are also to be included in the plant, one of 1,000 tons capacity and the other of 3,000 tons. The active management is in the hands of Capt. H. Mowatt, formerly Marine Superintendent, C.P.R., Liverpool, England, who has superintended the construction of several of the largest of the C.P.R. steamships.

1911, to Mar., 1916, Assistant Traffic Manager, same road, St. Paul, Minn.

P. D. Sutherland, whose appointment as General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Hong Kong, China, was announced in a previous issue, was born at Toronto, Nov. 2, 1879, and entered C.P.R. service in the General Freight Department, under his father, J. N. Sutherland, subsequently transferring to the Passenger Department at St. John, N.B., where he spent four years in the City Ticket Office, and the West. St. John Atlantic Terminal, and was then transferred to Toronto as chief clerk in City Passenger and Ticket Agent's office, and in 1906 was transferred to Hong Kong as Passenger Agent, C.P.R. Pacific Ocean Service. His territory now covers Hong Kong, South China, Philippine Islands, Straits Settlements and India.

C. E. Croft, whose appointment as Chief of the Commissary Department, Canada Steamship Lines, Ltd., Toronto, was announced in our last issue, was born at Cobourg, Ont., Aug. 26, 1904, and entered steamship service in Apr. 1904, since when he has been, to 1907, stenographer, Passenger Department, Richelieu & Ontario Navigation Co., Montreal; 1907 to 1911, secretary to Traffic Manager, same company, Montreal; 1911 to 1913, chief clerk, Traffic Department, Montreal; 1913 to 1914, chief clerk to Manager, Eastern Lines, same company, Montreal; 1914 to 1915, chief clerk to Operating Superintendent, Canada Steamship Lines, Ltd., Montreal; 1915 to March 1916, General Agent, same company, Toronto.

Requisitioning of Vessels by the Admiralty.—The Minister of Trade and Commerce has issued a circular stating that there is a general impression that vessels carrying Canadian grain from Canadian ports are more likely to be requisitioned by the Admiralty than are those carrying Canadian grain from U.S. ports. He points out that British vessels sailing from U.S. ports are in exactly the same position regarding their requisition as those sailing from Canadian ports. He also states that so far as can be seen at present, no necessity will arise during the current season for the Dominion Government to commandeer grain for war purposes, as the desired reserve for immediate use was secured by its action last November.

Enemy Subjects on Vessels at Canadian Lake Ports.—On a report emanating from Cleveland, Ohio, to the effect that the Dominion Government had decided to remove sailors of enemy nations from all vessels touching at Canadian lake ports, it was announced in Ottawa, Apr. 21, that the Government did not contemplate examining vessels touching at Canadian lake ports, and removing sailors of beligerent nations.

The Dominion Government Dredge, Port Nelson, which was built at Polson Iron Works, Toronto, and taken to Port Nelson, Hudson Bay, in 1913, has, according to a statement in the House of Commons, by the acting Minister of Railways and Canals, cost to date, \$363,518. Since being sent north, the dredge was working for nine weeks during the summer of 1915.

North American Shipping Co. Ltd. has been incorporated under the Dominion Companies Act, with \$48,000 authorized capital and office at Winnipeg, to own and operate steam and other vessels, docks, wharves and other shipping facilities, and to act as general carriers.

Mainly About Marine People.

J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., has been elected a director of Canadian Vickers, Ltd., Montreal.

John Hannan, head of the Ogdensburg Coal & Towing Co., and President, St. Lawrence Realty Co., Montreal, died at Ogdensburg, N.Y., Apr. 9, after a long illness.

Lt.-Col. G. P. Murphy, of the Canadian Army Service Corps, and Vice President, Ottawa Transportation Co., who has been in England for some time is on the staff of Major General Carson, C.B., the Minister of Militia's representative in London.

Gilbert Johnston, who has been appointed Consulting Engineer, Canada Steamship Lines, Ltd., Montreal, was appointed Mechanical Superintendent, Richelieu & Ontario Navigation Co., in Sept. 1894, and continued in that capacity under the various changes made in the company, until his present appointment.

Capt. J. Freeman, who died at Victoria, B.C., Apr. 2, aged 81, had been master of various vessels on the Atlantic and Pacific Oceans for many years, having received his first command in 1856. For the past 15 years he was port captain for R. Duns-muir & Sons, but owing to failing health, his duties had been purely nominal for the last three years.

Capt. McNeill, of the Canadian Pacific Ocean Services s.s. Lake Manitoba, committed suicide at Plymouth, England, by shooting, Apr. 7. He had been in C.P.R. service from the time when the company took over the Beaver Line, prior to which he was with Elder, Dempster & Co., who controlled the Beaver Line. He was about 45 years old.

Lieutenant J. M. Hazen, son of Hon. J. D. Hazen, Minister of Marine, has died of wounds received in action. He graduated from the Royal Military College, Kingston, Ont., since the commencement of the war, and received a commission as Lieutenant in the 25th Artillery of Artillery, C.F.A.

Claude Cameron Bonter, who has been appointed General Baggage Agent, Canada Steamship Lines, Ltd., Montreal, was born at Toronto, Nov. 13, 1884, and entered navigation service in 1905, since when he has been, to 1910, baggage agent, Richelieu & Ontario Navigation Co., Toronto; 1911 to 1912, Assistant Baggage and Claims Agent, same company, Montreal; 1913 to 1915, Special Agent, Passenger Traffic Department, Canada Steamship Lines, Ltd., Montreal.

A. Ray Lawrence, who has been appointed District Passenger Agent, Northern Navigation Co., Cleveland, Ohio, is a member of the firm of Akers, Folkman & Lawrence, General Steamship and Pas-

senger Agents, and has been connected with the transportation business since 1902. He began as messenger, Cleveland, Cincinnati, Chicago & St. Louis Ry., Cleveland, remaining in that company's service until 1905, when he was appointed assistant ticket agent, New York, Chicago & St. Louis Rd., and later joined Akers & Folkman, general transportation agents, becoming a partner in 1914.

Engineer-Commander J. Carmichael, R.N.R., who was personally decorated by the King, with the D.S.O., recently, for special services in mine laying operations, was in C.P.R. service from 1911, when he went from Liverpool to Vancouver, to occupy a shore position in the British Columbia Coast Service. At the outbreak of war he was in Scotland superintending the construction of two vessels for the C.P.R., the Princess Irene and Princess Margaret, both of which were requisitioned by the Admiralty as soon as completed. He was on the Princess Irene for some time and was transferred to the Princess Margaret just prior to the sinking of the former.

Capt. W. F. Butler, who was drowned following the torpedoing of the s.s. Port Dalhousie in British waters, as announced in our last issue, lived in Halifax, N.S., and was connected with deep sea navigation for many years. He was for some time serving with Pickford and Black, and was chief officer of the s.s. Beta, and later, master of the s.s. Fastnet, sailing her from Halifax to British Columbia via the Straits of Magellan. On returning to Halifax, he was appointed master of the s.s. Oruro, and on leaving Pickford and Black's service, had command of the Arctic schooner Burleigh, the schooner Adventure, the s.s. Sable I, and later took the s.s. Wasie to England where she was sold.

H. A. Jackson, who has been appointed General Traffic Manager, Great Northern Pacific Steamship Co., San Francisco, Ca., was born at Toronto, Jan. 6, 1869, and educated at Upper Canada College. He entered railway service in 1894 as Travelling Freight Agent, G.N.R., Duluth, Minn., and was from July 12 to Dec. 1, 1896, Contracting Freight Agent, same road, Spokane, Wash.; Dec. 1, 1896, to Aug. 21, 1898, Travelling Freight Agent, same road, Spokane, Wash.; Aug. 21, 1898, to June 13, 1899, General Agent, same road, Spokane, Wash.; June 13, 1899, to Oct. 1, 1905, Commercial Agent, same road, and General Freight and Passenger Agent, Spokane Falls & Northern Ry., Spokane, Wash.; Oct. 1, 1905, to Aug., 1909, Assistant General Freight and Passenger Agent, G.N.R., St. Helena, Mont.; Aug., 1909, to Apr., 1911, in a similar position, Portland, Ore.; Apr.,

Stranding of the s.s. Potomac.

An investigation was held, recently, at Halifax, N.S., into the causes of the stranding of the Anglo-American Oil Co's s.s. Potomac, near Holy Stone rock, south of Sandwich Point, at the entrance to Halifax harbor, Feb. 19. Capt. L. A. Demers, Dominion Wreck Commissioner, conducted the enquiry, assisted by Capt. John Fleming and D. C. Stuart, as nautical assessors. The Potomac is 3,868 tons gross, 2,471 tons register. She sailed from Middlesbrough, Eng., Jan. 29, for Galveston, via Norfolk. On the voyage out, boisterous weather with head wind was encountered, and there was considerable fog in the neighborhood of Halifax harbor, where she grounded, remaining fast until Feb. 23.

Following is a summary of the judgment: The court cannot come to any other conclusion than that the master allowed but one thought to occupy his mind, viz., that of bringing his vessel to port as quickly as possible, owing to shortage of fuel, and ignoring prudence, by proceeding without a pilot, on the distance obtained from Chebucto by sound only, and by being too positive of the correctness of a compass which had scarcely been checked during the outward voyage. Being a stranger in the vicinity, he showed lack of judgment in attempting to make a strange port under such adverse conditions as existed. The fact that, through stress of weather, his coal ran short, causes the court to deal leniently with him, by severely censuring him for his temerity and lack of prudence and judgment.

The court's attention was called to the system of having sailing vessels instead of steamboats to convey pilots to and from vessels, and while admitting that criticism is justified, points out that in cases where a vessel chooses to keep going instead of laying to, the adoption of steamboats would be of little use. The evidence does not show that the vessel's officers failed in their duties, and they are exonerated. The logs and deviation book were all kept with a degree of care and precision. The court deprecates the placing of boys, with practically no sea experience, on the lookout, as they are incapable of realizing the importance of their duties, but understanding the difficulties of masters in finding crews, owing to war conditions, refrains from further criticism of the master's actions on this head.

Certificated Officers on Motor Vessels.

The bill before the House of Commons regarding the necessity of certificated officers for the navigation of vessels driven by internal combustion engines, of which mention was made in our last issue, amends sec. 629 of the Canada Shipping Act, and a new section, 640a is added regarding certificates and classification of engines on such vessels. Sec. 629 provides that no person shall act in the double capacity of engineer and master on any steamboat, and no person shall, except when the boiler is fired from the engine room, act as engineer and fireman on any steamboat having an engine of over 7 n.h.p. and required by law to carry a certificated engineer. This is amended by the addition of a sub-section reading as follows: "Subject to such regulations as may be made by the Minister this section shall not apply to any passenger ship not exceeding 65 ft. reg-

istered length propelled by an internal combustion engine or by a steam engine with a flash boiler, or by electricity."

Sec. 640a, which is added, is as follows: "The Minister may issue certificates authorizing persons found qualified by the Chairman of the Board of Steamboat Inspection to take charge of the machinery of vessels propelled by internal combustion engines only, and may prescribe by regulations, a classification for such certificates, the qualifications necessary for obtaining the several classes respectively, the limits and authority of the power conferred by the several classes of certificates and the fees payable for such certificates, and may also provide for the examination of those desiring to obtain certificates. 2, The provisions of sec. 628 shall apply to the certificates granted under this section."

Sec. 628 provides for the suspension and cancellation of certificates.

The Quadra-Charmer Collision.

Following is a summary of the judgment on the causes of the collision between the Dominion Government s.s. Quadra and the C.P.R. s.s. Charmer, near the entrance to Nanaimo harbor, B.C., Feb. 26, when the former was sunk. The enquiry was held by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. Ridley and Gardner as nautical assessors. The court decided that the whole blame for the collision was due to E. LeBlanc, master of the Quadra, the mishap taking place in broad daylight with a smooth sea and fine clear weather. The Quadra had the Charmer broad on her own starboard and was therefore the giving way ship, but no action was taken until too attempting to cross the Charmer's bow, late. The master disobeyed article 22 by with the inevitable result. Further, article 25 requires all vessels in narrow channels to keep on their own starboard side of the channel, but the Quadra was so far on the port side that the evidence of her own crew placed her about 40 ft. off the black buoy which marks the port side of the entrance to Nanaimo harbor. Much evidence, most of which was unreliable and conflicting, was given to the effect that the Quadra gave two short blasts of her whistle on seeing the Charmer. Granted that such whistles were given, such a signal was in violation of article 28 which indicates other signals. The one mentioned if given indicated that the Quadra was directing her course to port, which she never did, and had she done so the court's opinion was that such a movement was neither authorized nor required by the regulations under the circumstances existing.

The court decided not to deal with the master's certificate, but severely reprimanded him, being influenced by the facts that there was no loss of life, that although the collision was caused by the most flagrant breaches of the regulations, it was, in the court's opinion, not due to ignorance nor to carelessness, but rather to the stupid assumption which is far too prevalent in British Columbia, that by being the first to blow a signal whistle gives that vessel the right to choose on which side she will pass an approaching vessel; and that the loss of his vessel as affecting his previous excellent record is in itself a severe punishment. In reprimanding him, the court warned him as well as others handling vessels in British Columbia waters, that until any duly authorized rules appear, the present international rules must be implicitly

obeyed and that in future any breach of them will be severely dealt with. No blame was attached to any other members of the Quadra's crew. Regarding the Charmer, the court found it difficult to see how any blame could be imputed to its officers or crew. It was the duty of the Charmer's master to carry out the one rule which applied to him under the conditions then existing, viz., to keep her course and speed. This he undoubtedly did, and furthermore when he found that a collision was unavoidable, he took the best action possible to avert it. The master of the Charmer, C. Campbell, and the officers and crew were therefore absolved from all blame for the casualty. Capt. Gardner dissented from the judgment as given, giving as his reasons that the Charmer had left her berth on the outward trip at full speed, which is dangerous and should be condemned; that there was some excitement on board the Charmer, caused by nearly swamping a motor launch in passing her in contravention of the regulations governing such cases, this excitement causing a lack of proper vigilance and causing the approach and the signals of the Quadra to be overlooked; that the signals of the Quadra were properly given, and while they are not international signals are the outcome of a custom and long usage and recognized by local masters. He also stated that the master of the Quadra could not be absolved for being on the wrong side of the channel, by being there he was contributing to the initial cause of the accident and merited the censure which a departure from the rules deserves. It was announced after the judgment had been delivered, that the master of the Quadra would appeal to the Minister of Marine against the judgment, as in his counsel's opinion the finding was opposed to the trend of the evidence.

Licensing of Canadian Vessels for Foreign Business.

Following on the British regulations of Nov. 10, 1915, prohibiting British vessels of 500 tons and upward from engaging on voyages to foreign ports without licenses, the Dominion Government has issued instructions on similar lines, as follows: All Canadian registered vessels whose gross tonnage exceeds 500 tons, are from Apr. 1, prohibited from proceeding on any voyages, excepting those from a port in Canada to another port in Canada, or from a port in Canada to a port in the United States, and vice versa, unless a license to do so has been granted to, or in favor of, the owners or charterers of such steamships. The Minister of Marine is authorized to appoint a committee with power to grant the licenses required, which may be general in reference to classes of ships or their voyages, or special. The Minister is authorized from time to time, to add to the committee and to substitute as members, others, to replace such as may die, resign or become incapable of acting. It is also ordered that all steamships failing or refusing to obtain a license as provided, shall be subject to forfeiture.

Tonnage on Canadian Register.—The Minister of Marine in replying to a question in the House of Commons recently, stated that the tonnage on the Canadian register for the decennial periods from 1875, was as follows: 1875, 1,205,565; 1885, 1,231,856; 1895, 825,776; 1905, 669,825; 1915, 929,891.

Investigation of the Fire on the s.s. Matatua.

An enquiry was held at St. John, N.B., concluding Apr. 4, into the origin of a fire aboard the s.s. Matatua, Mar. 12 and 13, while lying at her dock there, whereby the master, Capt. Gilman, lost his life. Capt. L. A. Demers, Dominion Wreck Commissioner, presided, assisted by Capt. A. J. Mulcahy and D. Kenny, as nautical assessors. The vessel is owned by Shaw, Savill & Albion Co., London, Eng., and was loading miscellaneous cargo for Australia and New Zealand, including 3,000 to 4,000 drums of calcium carbide, which was stowed in every hold.

The first officer stated that an alarm of fire was conveyed to him at 12.10 a.m. on Mar. 12, and immediate instructions were given to combat it. The ship's hose was not used, as the water service pipe on deck was under repair, but the crew helped the crew of the Sin Mac, the tug and fireboat, which was fast alongside the Matatua, and hose was playing on the fire by the time the local brigade arrived. He caused the hatches to be battened down and directed the use of carbon dioxide into hold 3. Notices prohibiting smoking were exhibited at various points and were visible to all, and there were two watchmen, one at the gangway and the other the ship's watchman, who were instructed to perform the usual duties and also to see that no one smoked in the hold. He stated that though he was not familiar with local climatic conditions, precautions were taken to prevent the service pipe from freezing, but without avail, and it was being repaired for the second time. Regarding the explosions, he stated that a few minutes after the first one he spoke to the captain as to the dangers, and had hardly left the bridge when the second one took place, causing a general outburst of flame and eventually causing the captain's death.

D. Gallagher, an employee of the Marine Department, gave evidence on the effects and dangers of calcium carbide, and on precautions in handling it, and termed the gas generated as very penetrating and that it would explode of its own heat. A representative of the Canadian Carbide Co. also spoke as to the method of packing and handling carbide, and stated that he considered carbide was not an explosive.

After considering the evidence, and after having visited the vessel, the court criticized the second officer for not being on deck at 12 midnight, when his watch commenced, instead of being in his room, and also on the manner and matter of his evidence, but it was informed later that at the time he was not in his ordinary senses, but was in an abnormal condition, and had this been known at the outset, the taking of any evidence from him would have been deferred. The court failed to find that anyone had been smoking in hold 2, specially mentioned. Regarding the origin of the fire, the court found that there were several possibilities, but no certainty, and therefore declared that the origin was unknown and remains a mystery. In referring to the second explosion, the evidence showed that apparently the fire had been put out late on the first day, and the second explosion occurred early on the second day, enveloping the vessel in flame and cutting off the captain's quarters with remarkable suddenness. The opinion of the court as to the second outbreak is that the explosion was caused through the accumulation of acetylene in a restricted space, generated by the immersion of the carbide in

water, and that the igniting of the gas took the merest fraction of a second, as it cannot conceive that any fire remained from the first outbreak after the immersion of the hold. The court criticizes the lack of foresight in the stowing of such a cargo, quoted a British Board of Trade regulation respecting the carriage of carbide, and stated that in face of such a regulation it cannot for a moment condone the method adopted on the Matatua. The court was however unanimous in exonerating the officers of the vessel from any blame for the casualty, but advised a stricter supervision at all times, while cargoes are being taken in, and more especially during war times. It also recommended that if the service pipe be out of repair, means be immediately adopted to replace temporarily the defective service, as at no time should a vessel be left without proper fire equipment. In reiterating that the origin of the fire is unknown, the court stated that it may have been caused by spontaneous combustion, the dropping of a cigarette stub or the hot ashes of a pipe, either accidentally, carelessly or maliciously, but there are no signs visible, nor is there any evidence even to suspect the employment of chemicals or bombs. The death of the master was accidental and no blame was attached to anyone for the loss of life.

The Longshoremen's Agreement at Montreal.

The longshoremen attached to the port of Montreal have entered into an agreement with the shipowners trading to the port, for two years from Mar. 15, providing for an increase of 5c an hour day and night on general cargo, and 5c an hour increase to coal shovellers on general cargo vessels. The rates heretofore in force were 35c an hour for day and 40c an hour for night work on general cargo, and 40c an hour for coal shovellers day and night. All other conditions remain as heretofore. This is the first time the longshoremen at Montreal have had increases since 1908.

During the negotiations, the most friendly spirit existed between all parties, and it was through this good will that a speedy and satisfactory arrangement was concluded. The steamship lines which are parties to the agreement are:—Allan Line, Black Diamond Line, Cairn Line, Canadian Northern Steamships, Ltd., Canadian Pacific Ocean Services, Ltd., Crown Line, Cunard Line, Direct Line, Donaldson Line, Furness Line, Head Line, Leyland Line, Manchester Liners, Ltd., New Zealand Shipping Co., Ltd., South African Line, Thomson Line and White Star-Dominion Line.

Vessel Losses during the War.

Merchant vessel losses from the commencement of the war to Mar. 23, are reported as totalling 726 with an aggregate tonnage of 1,987,375. Of these, 627 vessels of 1,914,375 tons are steamships, and 99 vessels of 73,000 tons are sailing ships. The losses of the allied powers were 481 steamships of 1,621,000 tons, and 57 sailing vessels of 47,000 tons; while neutral nations lost 146 steamships of 293,375 tons, and 42 sailing vessels of 26,000 tons. The chief losses were naturally British, these comprising 379 steamships of 1,320,000 tons, and 31 sailing vessels of 19,000 tons. In addition to the foregoing, the allies lost 776 trawlers, and neutral powers 196. The British loss is under 4% in numbers and slightly over 6% in tonnage, of the total register.

Coast, Lake and River Steamship Officers for 1916.

The following appointments made by navigation companies engaged in Canadian navigation for their various steamships and tugs, have been reported to Canadian Railway and Marine World, in addition to those published in our last issue. The names in the first column are those of the vessels; those in the second column, of the captains, and those in the third column, of the chief engineers.

Quebec Pilots and Apprentices.—A bill has been introduced in the House of Commons, amending the Canada Shipping Act as regards pilots and pilot apprentices in the Quebec Pilotage District, and providing that the number of pilots for that district shall not exceed 125, and that when the apprenticeship period of a pilot has been interrupted by sickness or other legitimate cause, he may be allowed to serve an additional period equal to the time lost, and if found otherwise qualified and entitled to a license, he may be granted such license after he has completed a full service period of seven years including the additional period.

Stranding of the s.s. Sarah Radcliffe.

An investigation into the stranding of the s.s. Sarah Radcliffe, owned by Evans-Thomas Radcliffe Co., Cardiff, Wales, and under charter to the Admiralty, on Georges Island, in Halifax Harbor, Mar. 23, was held at Halifax, Apr. 1, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. John Fleming and D. C. Stuart as nautical assessors. Following is a summary of the judgment: The court finds that the master and officers of the vessel are not to blame for the predicament in which the vessel was placed owing to dragging at her anchor, and attributes the stranding to an act of God. All directions given by the pilot were followed when first the vessel anchored, and again under the same pilot's direction, when the vessel was ordered to shift her berth, and at that time there were no indications of a change of weather. When the vessel began to drift, the essential duties of the master and officers were carried out. The vessel came off without much delay and with but little damage. The attention of the first and second officers was called to the fact that they had not taken bearings of objects which were then visible, to fix the exact position of their anchoring ground, and cautioning them that entries should have been made in the scrap log, and log of bearings, soundings, etc., and also of the precautionary measures taken for the safety of the vessel.

The Dominion Marine Association and the United States Seaman's Act.

In the U.S. Seamen's Act, now in force on the Great Lakes, a number of new regulations are provided, some of which affect Canadian vessels trading with U.S. ports. The sections of the act which affect Canadian vessel owners, are 4, 11, 13 and 16. The first amends a previous section and provides for the payment of seamen, on demand, of half of the wages earned, at any port where cargoes are taken on and delivered, the demand not to be made for five days after the commencement of a trip nor oftener than once in five days. This section is particularly made applicable to seamen on foreign vessels in U.S. harbors, and U.S. courts are to be open for its enforcement. Sec. 11 amends sections respecting advances of wages to seamen, and allotments of pay to dependents.

Sec. 13 provides, among other things, that no vessel of 100 tons or upwards shall depart from any U.S. port, unless she has on board a crew not less than 75% of which, in each department, are able to understand any order given by officers of the vessel, nor unless certain proportions of the crew, exclusive of licensed officers and apprentices, are of a rating not less than able seaman; and also provides for the issue of certificates by U.S. authorities. The Dominion Marine Association has taken this matter up with the U.S. Government, Francis King, M.A., Counsel for the Association, visiting Washington early in March, and it has been arranged that certificates of competent authorities in Canada will be accepted in the U.S. as proof that the holders comply with the provisions of sec. 13. The Dominion Department of Marine has prepared forms of certificate as required, and these are now in the hands of all collectors of customs. It has also issued a circular of instructions to col-

lectors, owners and masters, indicating exactly what is required.

Section 14 refers to steamboat inspection and particularly to life saving appliances, and does not affect Canadian vessels, as the reciprocal arrangement between the Dominion and the U.S. with regard to the inspection of steamboats, instead of being in the form of a treaty capable of abrogation by the President of the U.S., is embodied in an Act of Congress, which has not been repealed.

Masters of lake vessels having occasion to enter U.S. ports are now providing their deck crews with proper certificates, as far as possible. This requirement extends, for this year, to 40% of the deck crew, excluding the certificated officers. On an ordinary lake freighter, this means 40% of the deck hands, watchmen and wheelsman, and sometimes the second mate, as he does not require to be certificated. This means that about four men must be qualified under the statute, and arrangements are being made accordingly.

New Books, Etc.

Any of the books mentioned may be obtained through Canadian Railway and Marine World at the published price.

CANADA IN FLANDERS, by Sir Max Aitken, M.P. Cloth, 5 x 7½, 247 pages, with maps. Hodder & Stoughton, Toronto, 25c.

This is vol. 1 of the Official Story of the Canadian Expeditionary Force. Its 10 chapters deal with mobilization, warfare, Neuve Chapelle, Ypres, a wave of battle, Festubert, Givenchy, Princess Patricia's Light Infantry, the Prime Minister, the Canadian Corps. The six appendices contain the King's message to the Canadians, Canadians in dispatches, the Prime Minister and the war, Lieut.-Gen. Alderson, commanding the Canadian Corps, honors and rewards granted, statement of casualties.

COAL, ITS ECONOMICAL AND SMOKELESS COMBUSTION, by J. F. Cosgrove. Cloth, 5½ x 8½ ins., 273 pages, 32 tables, 33 illustrations. Technical Book Publishing Co., Philadelphia, Pa. \$3.

The 21 chapters deal with the following subjects: Classification of coals; characteristics of coal; coal classed according to use; composition of coal; effect of size of coal; clinkering of coal ash; prevention of clinker; geological history of coal; the coal fields of America; analysis of coal; the purchasing of coal; theory of combustion; combustion of coal; temperature of combustion; determining heat value of coal; burning bituminous coal; smoke and its prevention; burning coal smokelessly; draught regulation; hand fired furnaces; stoker furnaces.

STUDIES IN THE COST OF URBAN TRANSPORTATION SERVICE, by F. D. Doolittle, Director, Bureau of Fare Research, American Electric Railway Association. Cloth, 6 x 9 ins., 467 pages, 58 plans and charts. American Electric Railway Association, 8 West 40th Street, New York, N.Y.

This work, which includes among other things the results of a number of special investigations made by the Bureau, consists of 29 chapters dealing with the following subjects: Creating the street railway; the street railway as a going concern; elements of cost; the anatomy of the five cent fare; tendency of operating costs; utility capital and its replacement; actual returns in the traction business;

units of comparison; elements of service; traffic characteristics, the traffic survey; traffic observations; the application of traffic data; prescribed standards of service; psychological aspects of street railway service; special problems; the paying haul; cost of extending fare limits and lines; cost of service and the zone system of fares; cost of complying with standards of service; cost of extending the transfer privilege; cost of competing forms of transportation; effect of rate of fare on riding habit; the problem of rapid transit; regulation and the cost of service; the Cleveland experiments; events preceding the Taylor ordinance; the Taylor ordinance and defects in its operation as disclosed at arbitration; efforts since arbitration to reduce cost of operation to permit continuance of low fares; service rendered under ordinance regulation; actual cost of service under ordinance regulation; the Milwaukee experiment; events preceding the Railroad Commission of Wisconsin decisions of Aug. 23, 1912; the decision of Aug. 23, 1912 and its rescission, Jan 30, 1915; cost of service and decisions on line extensions; zone system transfers and service requirements; appeal of Nov. 6, 1915.

Board of Railway Commissioners' Judgment re Telegraph Tolls.

The Board of Railway Commissioners issued general order 163, Mar. 31, re applications of the telegraph companies for approval of their tariffs of tolls within the territory west of Sudbury, Ont., and between points east thereof and west thereof in both directions, and of the applications of the Winnipeg Board of Trade and the Winnipeg Grain Exchange, that the tolls into and out of Winnipeg be not approved. Upon hearing the matter at various sittings in the presence of representatives of the various telegraph companies, the Dominion Government, the Winnipeg Grain Exchange, the Boards of Trade of Winnipeg, Brandon, Regina, Vancouver, Victoria, Nelson, Saskatoon, Edmonton, Toronto and Montreal, the Associated Board of Trade of Western Canada and the Canadian Manufacturers Association, judgment was delivered, Mar. 28, by Commissioner McLean and concurred in by the other commissioners, and this judgment is made a part of the order and the tariff changes therein directed to be made are to become effective by July 1.

For the purposes of operation, the C.P.R. has divided the territory between the Atlantic and Pacific Oceans, which it covers, into districts as follows: (a) New Brunswick and Nova Scotia. 1—Quebec and Ontario, east of and including Windsor and Sudbury; 2—Ontario, west of Sudbury to and including Nipigon; 3—Sault Ste Marie Branch; 4—Ontario, west of Nipigon; 5—Manitoba; 6—Saskatchewan east; 7—Saskatchewan west; 8—Alberta, main line and branches south; 9—British Columbia, main line east of and including Kamloops and Okanagan branch; 10—British Columbia, all lines and west of Kamloops; 11—Alberta, north of main line; 12—Manitoba, for United States rates only; 13—British Columbia, Kootenay east of and including Kootenay Landing; 14—British Columbia, Kootenay west of Kootenay Landing.

In a portion of the territory east of the Great Lakes in which the Great North Western Telegraph Co.'s lines are located, there is an identity of districts. In the territory from the head of the Great

Telegraph, Telephone and Cable Matters.

A press report states that a telephone company is being organized locally, to be controlled by citizens of New Glasgow, Westville, Stellarton and Trenton, N.S.

N. S. McDonald, heretofore at Fort William, Ont., has been appointed local manager, Great North Western Telegraph Co., Saskatoon, Sask., vice J. W. Middlemas, resigned.

The Great North Western Telegraph Co.'s officials held their annual meeting at Toronto, Apr. 11, when various matters relating to the business were discussed, and suggestions considered for the continued improvement of the service.

The Great North Western Telegraph Co. has reopened its summer office at Little Metis Lighthouse, Que., and has closed its offices at St. Jean l'Evangeliste, Que., and Kemptville, Ont. The name of its office at St. Stanislas station, Que., has been changed to Deux Rivières.

J. W. Middlemas, local manager, Great North Western Telegraph Co., Saskatoon, Sask., has resigned to go into private business in Saskatoon. He entered G.N. W. Telegraph Co.'s service about 28 years ago, and spent 23 of them in Toronto. On Oct. 12 he was presented with a travelling bag by the local staff.

Great Lakes Terminal Elevator Co. Ltd. has been incorporated under the Dominion Companies Act, with \$800,000 authorized capital stock and office at Winnipeg, to carry on a general elevator, milling, shipping and mercantile navigation business.

Semaphore Signals in Livingstone Channel.—In order to assist vessel masters in obeying the rule which requires an interval of not less than 5 minutes, between downbound vessels navigating the Livingstone Channel, two semaphore signals have been installed by the U.S. Lighthouse Bureau, the upper one being at Mamajuda rear light on the end of the lighthouse clock, and the lower one at Livingstone Channel pier light 9, on the west side of the north end of the cofferdam section. At night the position of the semaphore arm is shown by two fixed white lights, one at the end of the arm swinging with it, and the other stationary at the pivotal point. At each station the semaphore arms will occupy one of the two positions, either vertical or horizontal. If vertical, the way is clear with the required 5 minutes interval, if horizontal it will mean that the 5 minutes interval has not elapsed since the passage of the last downbound vessel, and consequently the way is not clear. The arm of the Livingstone Channel semaphore will be lowered to the horizontal position when a vessel passes it and will ordinarily be held in that position for one minute.

Montreal Marine Insurance Agency Ltd. has been incorporated under the Dominion Companies Act, with \$5,000 authorized capital and office at Montreal, to conduct an underwriter agency business for marine and other insurance. A. J. O'Keefe, F. J. Lynch, E. J. Duncan, H. W. Ives and J. Bough, all of New York, are the incorporators.

Port Mann, B.C., is not to become a city at present, the Legislature having refused to incorporate it.

100% Weighing Efficiency

most nearly approached with the

Fairbanks Dial Indicator

where rapid, accurate weighing is necessary. The full capacity dial increases speed and accuracy. It arrives automatically at balance. Figures are read direct from the dial. *Automatic to full capacity*, 500 lbs. x 1/4 lbs. and other combinations to 40,000 lbs.

This indicator can be attached to almost any scale in good working order.

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE—INTERCOLONIAL RAILWAY

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished and are available only by reputable wholesale jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

Brake Shoe Scrap Reduced To The Absolute Minimum

The Reinforced Brake Shoes here pictured were all worn down practically to the steel back.

The average weight of 100 shoes taken at random from this pile was about $5\frac{1}{2}$ lbs.

The roads using these shoes received about twice as much brake shoe service as could have been gotten from ordinary unreinforced shoes. It paid them and it will pay your road to use Reinforced Brake Shoes.

Manufactured in Canada.

INSURANCE, ACCIDENT

Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

Here's what we do for you!!

Our Traffic Engineers know from actual experience the Hauling Problems of every business. This knowledge is worth money to you—if you will use it. We maintain a staff of trained Traffic Engineers who will tackle your problems of Haulage and Delivery in a business-like way, and give you a report that will present in facts and figures the most economical method that you can adopt to get the most efficiency in the delivery end of your business.

NATIONAL Motor Trucks are made in four models—1500 pounds, 2000 pounds, 4000 and 7000 pounds. Capacities that provide a Truck for every line of business.

If you are as thorough in your investigation of the different makes of Trucks as we are in the construction of the NATIONAL, you will own a NATIONAL Truck.

Conferring with us entails no obligation. Catalogue mailed upon request.

Westinghouse Coach Fans

The motors of these fans have no hum, and the unavoidable whir of a volume of air at high speed is reduced to a minimum.

The road adopting Westinghouse Electric Fans is not troubled with maintenance cost; oil the bearings of the fans once a season and they will last indefinitely.

Send for Catalogue 8—B, describing our full line of coach fans.

Put Yourself in His Place

Here is a man at a bench, filing.

The file is worn.

He makes three strokes where, with a sharp file, he need make but one.

It takes him three times as long to do the job.

When it is finished, he is not as well satisfied with it as he would have been if he had a proper file.

The foreman thinks the man is slow or lazy. The man's time sheet does not give him as good a record as the man who is working at the next bench with a sharp file. The man gets irritated. So does the foreman and the employer who pays the bills.

But, throw away that file the minute it reaches its "inefficient point" and what do you get?

The new file costs a few cents. The man does his work in one-third of the time. He is more satisfied with his job. The foreman is pleased with the man—and the employer has saved money on the time sheet.

See to it that the first condition of affairs described is not common in your factory. Instruct your foremen to educate their workmen to turn in files the moment they reach their "inefficient point." Your investment in new files will more than pay for itself.

The Tate Flexible Staybolt

is a reliable standard for locomotive fireboxes.

We have yet to learn of one instance where the TATE FLEXIBLE STAYBOLT has failed to give better service than any staybolt used in locomotive boiler staying.

Better service, not only from the standpoint of staybolt durability, but also contributing to the longer life of the firebox, by the provisions that the Tate Bolt affords for the freedom of sheet movement under expansion.

Rigid firebox construction belongs to the practices of the past, unnatural and unreliable. Flexible connections in the staying members is the simplest method for allowing the firebox to expand under the least restriction.

When you apply Tate Flexible Staybolts to cover the zone of greatest sheet expansion, you have conserved the material or service life of both staybolt and sheet accordingly.

USED ON MORE THAN 500 RAILROADS.

BROWNHOIST Locomotive Crane

is used from start to finish on track construction work — excavating, filling in, driving piles, unloading ties and rails, and placing the ballast. The crane is one man operated and does the work of 25 to 40 men. Its daily cost is only \$8 to \$10 including depreciation, 6% interest, and all operating costs.

The illustration shows the crane working with drop hammer and wooden leads for driving piling. A steam hammer can also be used, the steam being furnished from the boiler on the crane. And leads can be provided which permit driving batter piles.

*These many operations are shown in our
catalog I which will be sent upon request.*

**O-B Trolley Catcher**

Catcher or Retarder?

Do you use a Trolley Catcher that catches the pole or one that merely retards its flight?

In other words do you use an O-B Catcher or not?

An O-B Catcher quickly catches a wild pole and it stays caught.

The rebound is not sufficient to release its grip.

Its simple and rugged construction makes it trouble proof.

Berry Brothers' Railway Varnishes

Represent Nearly 60 Years of Varnish Making Experience

Berry Brothers' extensive line of Railway Varnishes makes it possible for you to purchase the right varnish for any demand.

Here are a few finishes you should know.

Locomotive Black

A fossil gum varnish of the highest grade—for the best attainable finish on locomotives, tenders and valuable rolling stock, combines excellence with durability—efficient because its use is true economy—a case of the best being the cheapest.

Front End Black

For the front end of locomotives. It covers well, makes a handsome jet black finish, and stands a high degree of heat without injury.

Smoke Stack Black

Made especially for use on smoke stacks, producing a jet black and brilliant lustre, and resisting heat of a high degree without injury.

Let us send you a copy of our Railway Varnish catalog, just issued

RESULTS COUNT

That's Why 465 Railroad Shops Are Using Thermit

Thermit offers the only sure and reliable repair for locomotive frames and other heavy sections.

The superheated liquid Thermit steel is produced in bulk and poured all at once into a mold surrounding a broken section, resulting in the perfect amalgamation of the Thermit steel with the parts with which it comes in contact. The fact that those parts are first preheated, makes the weld doubly sure.

The operation of welding locomotive frames is easily accomplished, without removing the frame from position, and with very little dismantling, no matter if the frame be broken in the splice, jaw, next to the cylinder saddle, or at any other point. The engine is returned to service in from ten to twelve hours.

Hundreds of thousands of pounds of Thermit are being used annually by railroad companies in the United States and Canada.

There is only one reason for this, and that is that Thermit produces results and we all know that "results count."

Our pamphlet No. 2144 will be of interest.

All Thermit and Thermit appliances are made in our Canadian shops.

Scientific Treatment of Boiler Waters

Dearborn Service to Railroads

Twenty-five years devoted to the subject of water chemistry, embracing the analysis and successful treatment of waters in all parts of America, and in many countries of the eastern continent as well, including supplies used in locomotive, stationary and marine boilers of every type and size, and operated under the varying conditions that obtain in different industries, gives us a background of experience which is of value in handling new problems, and an assurance to our customers that only expert, efficient service will be offered them.

Scores of Railroads are using Water Treating Preparations compounded by us to meet their requirements, with great benefit to the railroad companies, in the increased life of the boilers, reduced consumption of fuel and lubricating oil, ability to haul greater tonnage, increased mileage between boiler washings, and generally improved operating conditions.

We would be glad to analyze the waters on districts where you are having trouble, and advise with you regarding treatment.

Dearborn Chemical Company of Canada, Limited

Office and Works : 1220-1230 Dundas Street, Toronto, Canada

PREPAREDNESS—Many of our customers have been applying large numbers, and in some cases complete installations, of Tate Flexible Staybolts to their locomotive fireboxes, and thus are prepared to handle the heavy business during the present season.

THE TATE FLEXIBLE STAYBOLT has been used quite extensively since 1904 in the locomotive fire boxes, and its service records all go to prove that it has done more to improve conditions of staying and preserve the life of the firebox than any staybolt so far used.

WE RECOMMEND THIS BOLT to the railroads of Canada and to all users of the firebox type of boiler where staybolts are necessary, with the assurance that it will be found strong, serviceable, economic and most effective in reducing staybolt breakage and firebox repairs.

OVER 16,000,000 BOLTS IN SERVICE.

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

Canadian Baldwin Electric Trucks

Interurban Service

Canadian Baldwin Trucks, Class 84-30-AA, built for Lake Erie and Northern Railway, Ontario.

The truck illustrated is designed for high speed on electric railways, and has a rated carrying capacity of 30,000 pounds on the centre plate.

It has frictional side bearings and is of the equalized pedestal type.

Canadian Baldwin trucks, solve the problem of minimum weight, economical maintenance, simple construction, noiseless operation and easy riding.

There is comfort in riding on roads where Canadian Baldwin Trucks are used.

How Many Hides
Has A Cow?

Two Sides to Every Hide

Like every question, every hide has two sides. If you know leather, and know the difference between No. 1 leather and split leather, you will specify the upper side; for that's the part of the hide that supplies the soft, pliable leather. The under side,—the flesh side,—furnishes the "splits." These splits, coated, embossed and colored often masquerade as No. 1 leather.

Fabrikoid is one material of different weights and colors, nevertheless it is basically the same; composed of a strong cotton cloth of different widths coated with a tough, flexible waterproof material; will not peel, crack, nor split and twice as strong as the average coated split.

For car upholstery, Fabrikoid is far superior to coated splits and costs less. Master Car Builders throughout the United States and Canada are specifying Du Pont Fabrikoid. Write for samples and convince yourself.

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE—INTERCOLONIAL RAILWAY

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

The Culvert Most Railways Prefer and Use

for most purposes, must be an unusually satisfactory culvert and such is

PEDLAR'S **"PERFECT"** **TONCAN** **METAL** **CULVERTS**

Most railways, municipalities and engineers prefer it for its strength, its defiance of decay, its saving in time and cost of erection. Made from **TONCAN** that cannot crack or rust or corrode. Supplied in all sizes from 8 in. to 84 in. in diameter and shipped assembled up to 40 feet.

Don't have any doubts in your mind as to the most serviceable and economical culvert. Write for the Culvert Reference Book No. 4 R.M., and decide the matter right now. The book is free. Shall we send it?

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

The Light of Day on the Right of Way

Headlights

Commercial Acetylene furnishes a strong, penetrating light without being blinding. Nothing to get out of order. Economical to maintain. Small gas cylinder supplies several weeks' lighting.

Car Lighting

Commercial Acetylene furnishes an ideal system for all kinds of passenger cars. It combines efficiency with economy. Standard cylinder supplies from one to two months' lighting of the average car.

Signals

Commercial Acetylene furnishes an absolutely reliable light. Failures eliminated and cost of maintenance reduced. Cylinder placed at foot of pole supplies several months' lighting without attention.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

The Outside Frictionless Rail for Curves.

By W. P. Chapman, M.Can.Soc.C.E., Bridge Engineer, Eastern Lines, Canadian Northern Railway.

The wheels of a locomotive or car mounted on rigid axles, when rounding a curve tend to travel on a tangent to that curve, but are prevented from doing so by the flange of the foremost wheel coming in contact with the gauge side of the outer rail. This obstruction retards the progress of the outer wheel and momentarily allows the inside wheel to gain in distance until the back flange of the inner wheel is forced against the gauge line of the inner rail; then develops the maximum resistance in friction on curves. The inner flange in traversing the inside rail meets with no resistance to its progress from that rail except of a secondary character, the friction being first developed and transmitted from the forward edge of the front wheel traversing the outer rail. This at first permits the inner wheel to get slightly ahead of the outer wheel, until the inner flange is forced against the inner rail. It should be noted here, that the flange of the outer wheel first meets obstruction several feet in advance of the back flange of the inner wheel of truck, but the inner flange meets with no obstruction to its progress until after the former has been transmitted to it in a secondary way. The inner wheel having the lesser distance to travel, it is obvious it should be slightly retarded rather than relieved of friction. If we keep the two wheels directly opposite each other continually, and the axle at right angles to tangent of curve, the friction due to curvature is practically eliminated, provided the proper superelevation is given to overcome centrifugal force. To illustrate, we will take a 4 degree curve about 1,400 ft. long. The exact distance the outer wheel will travel is 1,409 ft., that of the inner wheel 1,404 ft. Now it is clear that if these wheels are on a rigid axle the inner wheel must either slip and lose, or the outer must jump and gain, 5 ft. in distance. It is this compensating movement on rails of same area which causes most of the friction on curves over that of the tangent.

The width of head of a standard 80 lb. rail is 2 9/16 in. With two such rails laid to standard gauge on a tangent the adhesive resistance of each should be practically the same. For our present purpose we will assume that with equal surfaces the adhesive resistance will be the same for curves. It follows that some compensating action must take place to enable the outer wheel to keep pace with the inner wheel. This is accomplished either by a slipping movement of the inner wheel, or a jumping forward of the

outer wheel. Investigations have been made, the results of which make it quite feasible to practically eliminate this most difficult feature of friction due to curvature. The solution is known as the frictionless rail. This frictionless rail is a section of same weight as the standard sections, designed to meet the exigencies of the case, covering all sections, and being quite equal to the physical requirements of the companion rail, the main features being a narrower head, giving less surface to tread of wheel; a flat, rounded gauge line, and angular side to reduce the contact surface against the flange of outer wheel. It is slightly higher than the standard section, to permit of the use of the standard or usual fishing plate or bar. At points where it joins the standard rail a slight modification of the fishing bar may be necessary.

The advantages of the frictionless rail

on the rail, meets with just a little more resistance to its revolution, tending to retard its progress. This retarding, or slip, of the inner wheel, is sufficiently uniform and effective to keep the wheels opposite each other, with the axle on a line at right angles to tangent of curve, provided of course the superelevation is not neglected. These two influences working in conjunction effect a balance or compensating action upon each pair of wheels, the result of which is that each axle will under ordinary conditions tend to traverse a curve on radii lines.

From the foregoing it is clear that the outer frictionless rail, to develop the desired results, must have, as a companion or inner rail, one with a greater area for wheel contact; in other words two rails of similar section will not permit that compensating action which gives the desired results. Further, rails on tangent or the

inside of curves, with track conditions good, wear horizontally, and do not show a great percentage of wear on the upper corner of head, nor at the gauge side, but they they do invariably show that much of the upper corner of rail-head is worn off the outer rail on curves. This is done by the forward edge of flange and not by the collar of wheel. The design of the outside frictionless rail for curves, in addition to reducing the horizontal contact surface, also reduces the projecting angle of head,

will be to eliminate friction due to curvature on train loads, also on locomotives, thereby greatly increasing the hauling capacity of the latter on sharp curves, and further reducing the number of rail breakages, as returns show conclusively that the number of rail failures is nearly 100% higher on curves than tangents. It will also reduce to some material extent, compensation for grades on curves—thereby reducing the cost of construction of railway.

This frictionless rail is laid outside the curve to the customary gauge with its companion rail of the standard section. As previously described, the outer wheel in traversing a 4 degree curve revolves or jumps over 5 ft. greater distance than the inner wheel. It is clear then that the object should be to remove every obstacle in the way of friction that would in any way retard the movement of this wheel. This is accomplished by decreasing the contact area of the top of outer rail, allowing the outside wheel to perform its ordinary revolutions with less friction, and gain slightly over its companion wheel on the same axle. The inner wheel, having a greater grip or contact surface

which in the standard rail offers the greatest obstruction to the revolution of the outer wheel. Briefly, this frictionless rail is a new design—applied to a new purpose, to accomplish new and much desired economic results.

It is not necessary to go with minute details into calculations to show the exact theoretical friction or adhesion to overcome, as no two trucks are exactly the same, neither are the speeds uniform; and with other varying conditions of weather etc., it would be impossible to work out theoretical formulae to meet all conditions. Suffice it to say that the fundamental principles, if followed as outlined, will, it is confidently expected, overcome in a great measure and in an economical way one of the greatest difficulties railway companies have so long had to contend with, in that most obstinate feature, friction on curves.

The accompanying sketch shows a section of 80 lb. frictionless rail, the other sections being designed in accordance.

The writer has not considered it necessary to recognize the effect of coning on wheels, as investigations show this to be an uncertain factor and only temporary.

Ticket Salesmanship.

By A. G. Richardson, District Passenger Agent, C. P. R., Winnipeg.

Successful salesmanship is based upon an intimate knowledge of human nature. The main thing for a salesman to know is how to get along with people. As a general rule, a great deal depends upon the amount of interest you show in each transaction; especially in planning long-distance trips.

Selling railway tickets is as important as selling boots and shoes, or any other commodity. You never heard of a salesman selling one boot or one shoe—that's what you do when you fail to sell a round trip ticket, if the purchaser intends to return. Selling round trip tickets not only protects your company's revenue, but saves soliciting at the other end. In the ticket business, efficiency means securing the greatest amount of revenue possible from each transaction.

The best way to organize your office staff is to hold schools or council meetings regularly. Hold them evenings. Exchange ideas. Make the meetings informal and discuss different subjects, for instance: "Salesmanship," having one member of your staff act as salesman and another as purchaser. Other subjects, "Organization," "Filing System," "Tariffs," "Routes" and "Fares." In the larger cities, invite your rate clerk to attend and discuss questions pertaining to his department.

Greet every customer as soon as he comes in; call him by name, if you can. Many customers are lost by not being politely accosted when entering an office. Often a customer comes to the counter to secure a folder or to ask the time of a certain train and you can wait upon him at once without offending the first customer. If you have shown the right interest he will not object to the interruption. If you find it will take some time to wait upon the second customer, you can say, "In a moment," and go back to the first customer.

A dissatisfied customer may divert revenue amounting to many times your salary. In dealing with a patron of the company, one discourteous word from any employee will throw out of gear the entire machinery for securing his future business.

Honesty in all your dealings goes without saying—but that's not enough. Add energy, courtesy and common sense. Common sense is the keynote of good salesmanship.

Customers like to be waited on by well-appearing, clean clerks. Clean faces, clean hands and finger nails, well-kept hair, clean linen and boots, have as much to do with good appearance as good clothes.

Take care of your health. Energy is the salesman's greatest asset. You can't be energetic without having good health. Outdoor walking is one of the best means of preserving your health.

Every railway company has its own advantages. Get from the engineering, operating, or publicity department some interesting facts and talk them up. Railways spend millions of dollars on improvements, equipment, taxes, etc., and the public hear little about it. Over \$108,000,000 has been invested in block signal systems in Canada and the United States. The railways of Canada and the United States spent over \$10,000,000 in newspaper advertising last year. The railways pay over \$140,000,000 in taxes every year. There are approx-

imately 1,900,000 railway employees in Canada and the United States.

All employees of the same company must pull together. Wherever there is friction there is loss. Every employee of the company has some good ideas and cooperation will bring them out. Even the office boy has his point of view. Cooperate with employees of other departments. Ask them to advise you when they hear of anyone making a trip, and solicit the business.

Without loyalty all the other qualifications are worthless.

Keep a record of your clients' names and addresses and their favorite summer and winter trips. When you have suitable literature or circulars use this record as a mailing list. In the larger cities these names can be separated under different headings, such as: "Society," "School Teachers," "Atlantic Coast," "Pacific Coast," "Southern Destinations," etc.

Conditions of travel are continually changing—new rail and steamship lines are opened up; new train services are inaugurated—and the public expect you to be up to date.

You should be an important factor in your community and help to ensure a friendly feeling between your company and the public. This feeling must exist, both for your own benefit and for the benefit of the company you represent.

Before long ticket "clerks" will be out of fashion and railway companies will employ only ticket "salesmen."

The foregoing is copyrighted and is reproduced by Mr. Richardson's permission.

Advice to New Trainmen on the Grand Trunk.

The following leaflet, headed, "To the new man," has been issued over the signature of Howard G. Kelley, Vice President, G.T.R.:

Your success in the service you are about to enter will depend upon the care you exercise in the discharge of your duties. The best record you can make, both for yourself and for the company, is the record of a considerate and careful man. There are engineers, conductors and others who have worked for the Grand Trunk from 20 to 30 years without receiving injury themselves or causing injury to a single one of their fellow employees. Everybody respects the man who can make that kind of record. If you are the right kind of man—and we believe you are—you desire to become one of these honor men. One fact we want to impress thoroughly upon your mind at the beginning is this: The Grand Trunk Railway does not want anyone in its service to take an unnecessary chance in the performance of his duties for the sake of saving time, or for any other reason. We say this because experience has shown that taking chances is the worst kind of bad business both for the employee and for the company. Mutual protection, therefore, makes necessary compliance at all times with the following safety precautions: Never go between moving cars for any purpose. If the coupling apparatus should fail to work, thus making it necessary to go between, stop the cars before doing so. Never attempt to adjust drawbar with

foot, or, in other words, don't kick a drawbar to make coupling. If they don't make the first time, pull ahead and try again.

Never get upon an approaching engine or car from a position between the rails.

Don't ride on pilot of an engine except when absolutely necessary in the performance of your duties, and then be sure to keep a firm hold to prevent falling.

Where permissible in the performance of your work, ride on footboard at the following, instead of the advancing, end of engine.

When necessary to open knuckle in order to make coupling, open knuckle on the standing car, instead of the moving car where permissible, and do so when the moving car is a safe distance away—at least one car length.

When necessary to open knuckle on moving car, do not step between rails to do so, and do not attempt it except when the car is moving at slow speed.

Never go under engine or train, or get in a position whereby injury would be caused by movement of equipment, without first being sure that the other members of the crew, especially the engineer, know where you are and what you are doing.

In riding on the side of a car, place the foot in stirrup, or on grab iron, and keep the body erect and close to side of car. Do not ride with foot on brake beam or oil box.

Look out for cars before crossing any track, and especially when about to step upon a track after going behind cars or other near by obstructions.

When sent out to flag, remember that others are entrusting their lives with you. Be sure to go back far enough, and never sit down while on duty as a flagman. Be sure that you are provided with all equipment required for flagging, and that the same is in position and condition for immediate use.

Make it a practice to read and understand all train orders received by your engineer or conductor.

Report to the proper person every unsafe condition or method which may come to your notice in order that correction may be made before, instead of after, someone has been injured.

Conditions may arise in connection with your duties concerning which you, as a new man, may require information and explanation. When you find such to be the case, do not hesitate to ask. Many a beginner has got into trouble by trying to conceal his lack of knowledge. You will find the older men in the service quite willing to help you.

Make yourself thoroughly familiar with the Book of Rules. It represents the best methods of railway operation which we have yet been able to devise as a result of years of study and experience by the most competent men in the various branches of the service. Remember that every rule in the book exists because experience first showed such rule to be necessary, and that you will be expected to comply with the rules—all of them—and not just those you may think you ought to comply with. You should find a study of the history, reason for and construction of the rules a most interesting, as well as profitable, study.

Australian Made Rails.—Steel rails, which it is stated compare favorably in workmanship, composition and tests, with those of other countries, are being made in Australia, the first supply having been made for the Victorian Railway Commission.

Railway Mechanical Methods and Devices.

Drip Pans for Drill Presses in Grand Trunk Shops.

Where cutting compound is used on drill presses, the surrounding floor area is usually very soggy from the escaping liquid flowing over the floor. This is not only disagreeable from the aesthetic standpoint, but is also most wasteful of the cutting compound, which under these cir-

Drip Pans for Catching Drilling Compound Under Drill Presses.

cumstances can only be used once, barring what is often saved in small pans placed directly under the work, and which must be emptied from time to time. This latter process is not usually very economical.

The G.T.R. shops at Stratford, Ont., have in use a complete system in the drill press section for catching this compound and reclaiming it, which is so simple in character as to appeal to practical shop men. A typical installation is shown in the accompanying illustration. On the bed of each drill press there is a small cast iron pan, let into the face of which is a sheet iron grating. On this latter all the cuttings, and liquid from the table drop, the cuttings draining the compound through the grating to the pan below. This drainage also carries through small cuttings and dirt, and in consequence, in order to make the latter a settling basin as well as a catch, an outlet pipe is let into the side as shown, about 1½ ins. above the bottom. Through this pipe, the clarified liquid, after the settling, drains off to a catch basin under the floor, several such pans draining to the one basin. From this central basin, the liquid is pumped up again to the main system for further use, only a very small amount being wasted, such as that which is carried off on the work and by evaporation.

The Railway Signal Association held its regular meetings at New York, May 24 and 25, when the general committee reports were dealt with, and also the report of a special committee on the harmonization of specifications for electrical requirements. A preliminary report on standard marking or numbering of relay posts was also considered, on presentation by a special committee on electrical testing.

Japanese laborers and minor mechanics from the Pacific Division have been moved east by the C.P.R., to work in shops and locomotive houses, owing to the scarcity of men.

Straddle Milling Tender Axle Boxes in Grand Trunk Shops.

The sides and faces of tender axle boxes are straddle milled at one pass in the G.T.R. shops at Stratford, Ont., the jig in which this is performed being shown in the accompanying illustration. The jig consists of a cast iron base, with projecting tapered blocks on the upper

Jig for Straddle Milling Tender Axle Boxes.

A very useful device for separating drawbars and thimbles from tailstraps is used by the Canadian Northern Ry. and consists primarily of a stirrup frame with anvil block and air cylinders connected through multiplying levers to the shears as shown by the accompanying illustration.

surface, machined to the outside shape of the axle boxes. The under face of the jig is ribbed to fit the milling machine table, to which it is attached by two bolts. Each jig will take two boxes, these being held in place by clamp strips. A

tion. Two main cylinders one 16 in. and the other 18 in. in diameter operate the shear levers and develop an approximate force of 36,000 lbs. at the point of contact with the levers, and 110,000 lbs. at the shears, this with an extreme travel of 4

Drawbar Rivet Shearing Machine.

combination milling cutter is used on the horizontal milling machine.

Railway Lands Patented. — Letters patent were issued during March in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Aeres.
Calgary & Edmonton Ry.	2,080.00
Canadian Northern Ry.	9,692.26
Grand Trunk Pacific Ry.	505.30
Grand Trunk Pacific Branch Lines Co. . .	59.97
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	3,204.00
Total	15,541.53

ins. The air pressure is regulated by a locomotive feed valve at 80 lbs. pressure per square in. On top of the frame is placed an 8 in. cylinder forming a lifting medium for use in placing drawbars. A solid cast iron base block is used and all drawbars are securely fastened in place for the shearing operation. The operating cylinders are cushioned when passing on the up stroke, so that there may be no possibility of pistons striking the heads violently. This is accomplished by drilling a row of 7/16 in. diameter holes 3½ ins. from the non pressure head, so as to rapidly release the air when the piston

passes this point, diminishing the operating pressure in the cylinder.

The operation of the machine is controlled from an engineman's brake valve, which is so placed as to force the shears down slowly on the drawbar rivet when the handle is in running position. In full release position the shearing effect is a maximum and to release the handle is placed in emergency position. It has been found possible to handle 60 drawbars a day by two men. We are indebted to T. Clegg, Air Brake Foreman C.N.R., for the above information.

Ring Centering Jig on Grand Trunk Pacific.

The device shown in the accompanying illustration is employed by the Grand

Ring Centering Jig.

Trunk Pacific Ry. in its shop at Wainwright, Alta. Its chief use is that of holding various styles of small joint rings, used for valve stems and glands, as well as those for front end steam pipes, dry pipes and headers, which require grinding to finish. Its range is from small rings of valve stem gland packing to those of front end steam joint rings. It will hold rings either from the inside or outside. It is centered and true as soon as the feet grip the ring. By turning the leg carrier up and down on the spindle the feet are spread or contracted.

It was developed by W. W. Yeager, now Locomotive Foreman at Biggar, Sask., when he held a similar position at Wainwright, Alta.

Scotch Railway Rates Increased.—The Caledonian and North British Railways have raised their rates from all their stations to other stations in Scotland, to the maximum, less 10%, where the maximum rates are not already in force.

Birthdays of Transportation Men in June.

Many happy returns of the day to:—
Jas. Anderson, Manager, Sandwich, Windsor & Amherstburg Ry., Windsor, Ont., born at Ayr, Ont., June 20, 1851.

F. F. Backus, Assistant to President, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Rochester, N.Y., June 4, 1860.

W. C. Bowles, General Freight Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, June 3, 1875.

J. H. Boyle, Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que., born at Waterloo, Que., June 26, 1869.

F. P. Brady, General Superintendent, National Transcontinental Ry., Quebec to Winnipeg, and Lake Superior Branch, G. T. Pacific Ry., Cochrane, Ont., born at

tinental Ry., Quebec, born at Montreal, June 9, 1860.

E. W. DuVal, Superintendent, District 3, Saskatchewan Division, C.P.R., Saskatoon, born at Toledo, Ohio, June 5, 1885.

Knowlson Elliott, City Freight Agent, C.P.R., Calgary, Alta., born at Gorrie, Ont., June 26, 1884.

J. M. R. Fairbairn, M.Can.Soc.C.E., Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal, born at Peterborough, Ont., June 30, 1873.

W. E. Foster, Solicitor for Ontario, G.T.R., Montreal, born at Belleville, Ont., June 27, 1866.

A. A. Goodchild, General Storekeeper, Eastern Lines, C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

H. W. Harding, Local Secretary, Canadian Northern Ry., London, Eng., born there, June 6, 1869.

Hon. J. D. Hazen, M.P., Minister of Marine, Ottawa, born at Oromocto, N.B., June 6, 1860.

L. K. Jones, I.S.O., Assistant Deputy Minister, Department of Railways and Canals, Ottawa, born at Port Hope, Ont., June 9, 1849.

A. C. Lytle, Assistant Superintendent of Construction, Montreal Tramways Co., Montreal, born at Hemmingford, Que., June 6, 1854.

R. S. McCormick, M.Am.Soc.C.E., Chief Engineer, Algoma Central & Hudson Bay Ry. and Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

Duncan McDonald, ex-General Manager, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., June 17, 1859.

S. J. McLean, Dominion Railway Commissioner, Ottawa, born at Quebec, June 14, 1871.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1861.

W. R. MacInnes, Freight Traffic Manager, C.P.R., Montreal, born at Hamilton, Ont., June 7, 1867.

G. Manson, Assistant to the Vice President, C.P.R., Montreal, born at Thurso, Scotland, June 8, 1863.

H. N. Merriam, ex-Division Engineer, Pacific Great Eastern Ry., Golden, B.C., born at Waupun, Wis., June 19, 1874.

J. D. Morton, Assistant Comptroller, Canadian Northern Ry., Toronto, born at London, Ont., June 15, 1857.

L. Mulkern, Division Freight Agent, C.P.R., Atlantic Division, St. John, N.B., born at London, Ont., June 18, 1871.

J. E. Pinault, General Superintendent, Canada & Gulf Terminal Ry., Mont Joli, Que., born at Rimouski, Que., June 24, 1884.

F. R. Porter, Assistant General Freight Agent, Grand Trunk Pacific Ry., Winnipeg, born at Stratford, Ont., June 13, 1875.

F. Price, Superintendent of Car Service, G.T.R., Montreal, born there, June 11, 1864.

Allan Purvis, General Superintendent, Eastern Division, C.P.R., Montreal, born at Batavia, Java, June 29, 1878.

J. L. Reyecraft, Solicitor, Manitoba and Saskatchewan Divisions, C.P.R., Winnipeg, born in Orford Tp., Kent County, Ont., June 20, 1868.

L. G. Rogers, Assistant Superintendent, District 1, Ontario Division, C.P.R., Trenton, Ont., born at Richford, Vt., June 18, 1874.

N. Van Wyck, Freight Claims Agent,

Haverhill, N.H., June 22, 1853.

A. H. N. Bruce, M.Can.Soc.C.E., Ottawa, born at Ballyscullion, Ireland, June 18, 1854.

H. W. Brodie, General Passenger Agent, Lines West of Revelstoke, C.P.R., Vancouver, B.C., born at Fredericton, N.B., June 8, 1874.

G. W. Coburn, Resident Engineer, C.P.R., Brandon, Man., born at Upper Melbourne, Que., June 24, 1877.

E. P. Coleman, General Manager, Dominion Power & Transmission Co., Ltd., Hamilton, Ont., and Vice President, Canadian Electric Railway Association, born at Taunton, Mass., June 14, 1867.

W. S. Cookson, General Passenger Agent, G.T.R., Montreal, born at Port Jervis, N.Y., June 12, 1871.

E. L. Cousins, Chief Engineer, Toronto Harbor Commission, Toronto, born there, June 11, 1883.

A. Craig, City Passenger Agent, C.P.R., Hamilton, Ont., born there, June 5, 1884.

A. E. Doucet, M.Can.Soc.C.E., Quebec, ex-District Engineer, National Transcon-

Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., June 29, 1883.
V. G. R. Vickers, Manager, Foreign De-

partment, and Superintendent, Atlantic Division, Dominion Express Co., Montreal, born at Toronto, June 1, 1866.

Walter White, Trainmaster, G.T.R., Palmerston, Ont., born at Toronto, June 4, 1866.

The Use of Rubber Goods in Railway Service.

By J. M. S. Carroll, Manager, Quebec Division, Canadian Consolidated Rubber Co., Ltd.

Railways are amongst the largest users of rubber goods of various kinds, and a general summary of some of the most important lines regularly purchased may be of interest:

Air brake and air signal hose, made to standard M.C.B. specifications. All railways have in recent years improved the general treatment accorded train hose, and complaints on bad quality are now practically unheard of. A large proportion of train hose formerly was destroyed by careless treatment in service, but watchfulness and care on part of railway officials have effected a wonderful improvement in this connection. Brakemen would occasionally give the locomotive man a signal to go ahead, after cutting off certain cars, and omit to disconnect couplings of hose, resulting in undue strain on end of hose; and often a fractured end.

Normal air pressure in 1½ in. train hose is 90 lbs. Wear in Canadian service is not due so much to working pressure

	Length.	I.D.	Enlarged ends
Canadian Pacific...	25 in.	1½ in.	1 3-4 in.
Grand Trunk.....	24 in.	1½ in.	1 13-16 in.
Intercolonial	24 in.	1½ in.	1 5-8 in.
Michigan Central..	24 in.	1½ in.	1 11-16 in.

Up to the present, various roads appear to lack cohesion in seeking to establish standard length and other measurements, applying to steam heater hose. Their nipple equipment varies, and each road no doubt has a disinclination to change its practice and adopt the other's standard. This variation in railway shop practice creates difficulty for the rubber manufacturers, by compelling use of differently equipped mandrils for each railway's requirements.

Steam pressure carried in car heating line varies somewhat, but will average around 60 lbs. Next to the locomotive pressure often reaches 90 lbs. The hard service this line has to undergo makes it important to use only best quality materials and workmanship. An accident to a steam heat line will very quickly be followed by a cold car in zero weather. Gaskets used in steam heater hose are made from a special compound to resist continuous action of steam.

Corrugated steam tender hose is connected from locomotive to tender. The line regularly in use by C.P.R. is 54 x 2½ ins. x 5 ply. Hose acts as a conductor of water from reserve supply in tender to locomotive boiler. Surplus steam is sometimes forced through hose to the tender to superheat the water, thereby saving proportion of cost normally required to heat cold water. This hose in service retains a curved shape.

In railway shops, a large quantity of ½ and ¾ in. air hose is used on riveters, chippers, etc. Service conditions are hard and this hose is subjected to lots of unusually severe treatment. The cover is often cut by contact with sharp metal ends and corners, and as hose undergoes expansion under air pressure, a sharp substance will often puncture it, causing air leak and subsequent destruction. Pressure in this class of hose runs from 75 to 100 lbs., with an average of about 90 lbs. The best hose is none too good for air tool service.

Suction hose, as used by Canadian railways, is usually of roughbore type, 3 ins. i.d. On steam shovel work this class of hose is largely used for replenishing water in boiler. Hose is thrown around a good deal and cheap quality should never be sold. Construction work is often being carried on in remote places. Cheap hose will quickly disintegrate and the cost of delivering inferior hose to site of work is just as great as charges on A-1 material that can be depended upon to deliver lengthy service.

Vacuum hose is used at terminals to clean passenger cars and should be of special quality, the writer has known cases where vacuum cleaners have been put out of business by pieces of inferior tube blocking the parts. Badly cleaned cars bring a strong reprimand from the superintendent, and a general soreness develops against use of cheap hose. Vacuum hose, when in use, is dragged through windows and ends of car, and must be well cushioned by good rubber stock, in order to allow needed resiliency to twist around seats, etc.

Fire hose, both linen and cotton rubber lined is extensively used. Linen hose is also found to be an economical agent to use for wetting down coal piles.

Steam and water hose.—Large quantities of various sizes and plies, in 50 ft. lengths, are regularly used by all railways. This material is usually supplied without couplings.

Hydraulic hose must be of strong construction and preferably protected on cover by wire or heavy duck. This line is used by machine shops in connection with hammers and rams and must withstand considerable pressure.

White corrugated tubing 3-32 in. i.d. x 1-16 in. wall is extensively used in car shops to make deck sashes weatherproof.

Red rubber tubing is used as outside covering on wire berth cables in sleeper and tourist cars. The rubber cover prevents the wire from scratching varnish of cars.

Rubber boots with leather soles, are largely used by mechanical departments of railways. In the operation of washing out locomotive or stationary boilers, this

Fig. 1. M.C.B. Standard Air Brake Hose Gasket.

as to climatic extremes met with. Zero weather is troublesome and excessive cold sometimes tends to put the air hose temporarily out of service. Cases have been known on Canadian roads where the hose, in excessively cold weather, became so stiff as to uncouple the ends and thus destroy the brake connection with engine.

Train air signal hose connects between cars the standard signal equipment from the locomotive engineer's cab to end of train. In emergency cases conductor can signal locomotive man or vice versa.

Air brake gaskets play an important part in brake operation. Though small, they are perhaps the most important detail in the air brake hose connection. Experience has demonstrated that gaskets, to be fully effective, must be a specially close fit when seated in position and stock must be of a tough, resilient character. The standard M.C.B. gasket is shaped as shown in Fig. 1, which also shows detail of hose coupling where gasket is seated.

For some years past, the C.P.R. has used air brake gaskets conforming to general measurements of M.C.B. standard, but made with an extra flange, as shown in Fig. 2. This particular shape of gasket is standard with the Westinghouse Co. The Grand Trunk, Grand Trunk Pacific and Canadian Northern are also using the Westinghouse type of air brake gasket. Steam heater hose used on Canadian roads is not of uniform inside diameter, or length. Some of the measurements are as follows:

Fig. 2. C.P.R. Standard Air Brake Hose Gasket.

class of boot is especially serviceable.

C.B.S. packing 1-32 in. is used as a protective covering on diaphragms between coaches, to prevent cotton material in diaphragms rotting from continuous exposure to the weather.

C.I. packing 1-16, 1-8 and 1-4 in. is purchased in large quantities throughout the year. This class of packing is used for a variety of purposes, principally however for making gaskets of varying sizes, for both water and steam (low pressure) pipe joints, etc. Red sheet packing is used on high pressure steam lines, being cut into washers and all sizes of gaskets.

Truck tires are used on platform baggage trucks. As cement floors have almost entirely displaced wood the use of rubber tires ensures practically noiseless operation of small trucks, etc.

Pebbled (or dot) rubber is used on steps and platforms of tourist and second class passenger cars.

Inlaid rubber tiling is largely used. The Canadian Pacific, Canadian Northern, Grand Trunk, Grand Trunk Pacific and Intercolonial have hundreds of sleeping, dining and observation cars equipped with it. The rubber floor is noiseless, attractive in appearance, very enduring, and easy to clean.

Head light gaskets are used on large locomotive head lights to prevent undue vibration. Rubber stock used in this line is tough and has lots of resiliency.

The foregoing comprise the leading lines of rubber goods used in the operation of railways on this continent. A multitude of moulded rubber articles are also used in shop practice. Without rubber, railways would have great difficulty in operating.

Steam Railway Statistics for Year Ended June 30, 1915.

In the following table the column headed gross earnings includes passenger and freight earnings, as well as miscellaneous earnings; the latter not being shown separately; the next four columns give the operating expenses classified under their various headings, while the last gives the net earnings, which are arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus (—) mark before figures in the net columns shows that there was a deficit in the operations of the line to the extent of the figures given. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items.

Notes to Steam Railway Statistics.

The total mileage of 35,582.44 given in the foregoing table is the actual length of the railways being operated at June 30, 1915, but the total mileage reported by the different companies as being operated was 36,520.54, a difference of 938.10 miles. This is accounted for by the fact that 22 companies have trackage rights over other companies' lines to the extent named, the most noticeable of these being the Wabash, which operates over 245.40 miles of the Grand Trunk, without owning any line in Canada; and the Pere Marquette, which operates over 335.59 miles, of which 198.81 is owned, and 136.78 is operated under trackage rights. The total mileage given in the table includes the Nosbonsing & Nipissing, 5.50 miles, the track of which was taken up in 1913. The total mileage reported at June 30, 1914, was 30,794.54, so that the increase for the year was 4,787.90 miles. The Canadian Northern figures include the following companies, which reported separately in 1913-14: Canadian Northern, Canadian Northern Ontario, Canadian Northern Quebec, Brockville, Westport & Northwestern, Halifax & South Western, Irondale, Bancroft & Ottawa, Central Ontario, and Quebec & Lake St. John. The Grand Trunk figures include those of the Canada Atlantic.

The traffic statistics for the New Brunswick and Prince Edward Island cover 11 months from Aug. 1, 1914; and those for the St. John & Quebec six months from Jan. 1, 1915.

Russian Railway Extensions.—It has been officially announced that the railway between Petrograd and Kola will be completed by the end of this year, and communication established with the port of Alexandrovsk, which is free of ice all the year round. A number of other lines have been connected near Moscow, and a project to connect the Yaroslav and Nijni lines is under way.

Women as Car and Locomotive Cleaners.—Owing to enlistment of men for war purposes, most of the railway companies in Great Britain have engaged women for cleaning passenger cars, and some of them have introduced females into the locomotive sheds to assist in cleaning locomotives. When engaged in their work, the women wear overalls similar to those worn by the men similarly employed.

The export of pig iron, and of steel of various kinds used by railways and shipbuilders, has been absolutely forbidden by the British Government.

Dominion Government Railway to Hudson Bay.

Referring to the building of this railway from Pas, Man., to Port Nelson, the acting Minister of Railways said in the House of Commons recently, that there were possibly many who doubted the advisability of the construction of this railway. While he had had grave doubts as to the feasibility of the undertaking, he had come to the conclusion, after seeing the reports in the Department, and discussing the matter with those who are at work in connection with the railway, that the road will be of value to the country in time to come. It will serve a useful purpose in opening up a large area of agricultural land for settlement; there is also a large area believed to contain mineral resources, and there will be the fisheries in Hudson Bay, which it is expected will rank with those that have made the Newfoundland waters famous. Further, there was no doubt in his mind as to the navigability of Hudson Bay and Straits for several months of the year. This had been demonstrated to his satisfaction since the Railways Department, for its own purpose purchased three vessels for use in its Hudson Bay service, as well as chartering several others, and so far as these vessels are concerned, they have navigated this route without meeting with any accident of importance. It is true that during the first season two vessels were cast away right at Nelson under circumstances which have never been satisfactorily explained and which have absolutely no bearing upon the practicability of the Nelson route. The vessels that were purchased were not built purposely for this route, and other vessels would perhaps be found safer.

As to the railway, it was not expected that there would be any great rush of traffic during the first few years after it was opened, but the time would come when it would be of immense value to Western Canada. He believed also that in years to come the line would have a military value. Its total length to Port Nelson is 424 miles. Grading has been completed to mile 378; steel has been laid, including sidings, to mile 242, at which point the erection of the Mountain Rapids bridge over the Nelson River is being proceeded with. The work was expected to be completed in April and track laying will be resumed. The track is surfaced to mile 242, and a final lift of ballast has been given to mile 150. The telegraph line keeps pace with the steel, and has been laid to mile 242. The work is divided into three sections, and all three contracts were given to J. D. McArthur

& Co. On section 1, \$3,229,994 has been expended; on section 2, \$1,602,300, and on section 3, \$1,865,795, a total of \$6,698,089. The total value of the work under contract is estimated at \$9,629,605. During the coming summer the track will be carried forward to the second crossing of the Nelson River at Kettle Rapids, at mile 332. Here a large bridge is to be constructed and it is not expected that track work can proceed beyond this point until the spring of 1917, but, when resumed, it will be carried through to Port Nelson without further delay.

At Port Nelson good progress has been made on the permanent work of harbor development. Previously the work done at that point has been of a preliminary character, consisting of the establishment of the camp, construction of plant, shops for repair of plant, temporary wharves, drydock, etc., necessary for the prosecution of the work. The substructure for the bridge approach to the main dock has been carried out half a mile from shore, and the whole of the bridge superstructure will be completed this coming season. The suction dredge was employed excavating the approach channel with satisfactory results, the remaining dredges, tugs and scows being chiefly occupied in procuring stone filling for cribs and riprap.

The total expenditure upon the H.B.R. and terminals to Dec. 31, 1915, was as follows:

General expenses, engineering, etc.....	\$ 721,974
Pas bridge and terminals.....	388,172
Pas to Thicket Portage:	
On contract account.....	\$3,229,994
Rails, bridges, etc.....	2,680,896
	5,910,890
Thicket Portage to Split Lake Jct.	1,661,291
Split Lake Jct. to Port Nelson.....	1,815,869
Port Nelson terminal.....	4,977,208
	\$15,465,304

Delaware, Lackawanna & Western Rd. Connection.—In the discussion on the extension of the charters for railways in the Niagara Peninsula of Ontario, controlled by Canadian Northern interests, the rumor has been revived that when the C.N.R. builds to the Niagara frontier it will connect with the D.L. & W. and thus secure direct connection with New York. The D.L. & W. mileage from Buffalo to New York is 411 miles.

Trackmen's Wages on Government Railways.—The management has voluntarily increased trackmen's wages to \$1.75 a day on country sections and \$1.85 in cities, and coal shovellers and ash pit men's wages to \$1.70 a day.

The Pacific Great Eastern Ry. has resumed traffic on its Squamish-Clinton section, which had been closed since 'e severe snowstorms of January.

Grand Trunk Railway Report and Meeting.

The report for the year ended Dec. 31, 1915, presented at the annual meeting in London, Eng., recently, shows the revenue account as follows:—

Gross receipts	\$8,292,688-1-1
Working expenses, 78.52 p.c.	6,511,257-4-7
	\$1,781,430-16-6
Income from rentals and hire of equipment	373,222-6-2
Total net revenue	\$2,154,653-2-8
Amount received from International Bridge Co.	31,968-2-6
Interest on Central Vermont Ry. bonds	13,013-8-6
Interest on securities controlled companies and St. Clair Tunnel bonds acquired by issue of G.T.R. 4 per cent. debenture stock	245,195-14-9
Balance of general interest account	95,870-15-5
Net revenue receipts	\$2,540,701-3-10
The gross earnings for 1914 were	\$8,-

596,767; working expenses, \$6,841,919; net traffic receipts, \$1,754,848; income from rentals and hire of equipment, \$327,044; total net revenue, \$2,081,892; income from securities, \$274,362; balance of general interest account \$81,438; making net revenue receipts for the year ended 1914, \$2,437,592.

The net revenue charges for 1915 were \$2,030,017-5-10, against \$2,012,477, leaving a surplus for 1915, of \$510,683-18-0, against a surplus of \$425,115 for the previous year.

Adding the balance of \$4,323-7-9 at the credit of net revenue account on Dec. 31, 1914, the amount available for dividend at Dec. 31, 1915, was \$515,007-5-9, from which an interim dividend of 1½% on the 4% guaranteed stock, amounting to \$187,500, was paid Nov. 9, 1915, leaving a balance of \$327,507-5-9, from which it was decided to pay a further dividend of 2½% on the same stock, making the total divi-

dend for the year. This absorbed \$312,500, the balance of \$15,007-5-9 being carried to the current year's accounts.

Vacancies on the board caused by the death of Lord Welby, and the resignation of G. von Chauvin, were filled during the year by the election of Sir H. A. Yorke and S. Baldwin, M.P. The remaining directors were re-elected.

The Association of Railway Claim Agents held its annual convention at Atlantic City, N.J., May 17 to 19. Addresses were given, or papers read, on the following subjects: The Federal Employers' Liability Act; prevention of accidents; handling of claims of railway postal clerks; the Ardmore explosion; claim economics; close co-operation of claim and operating departments in the investigation and settlement of claims; and how to cope with the ambulance chasing lawyer and the damage suit doctor.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates of orders, immediately following the numbers, are those on which they were drawn.

General order 164, Apr. 25.—Suspending, pending further hearing by Board, tariffs of railway companies showing charges for sale and ice in refrigerator cars.

24893. Apr. 12.—Approving G.T.R. form of release and power of attorney 151 to be signed by persons who desire, for special reasons, to travel in cars which are not intended to carry passengers.

24894. Apr. 18.—Amending order no. 14956, Oct. 9, 1911, re operation of Canadian Northern Ry. between Delisle and Macrorie, Sask.

24895. Apr. 15.—Authorizing London & Port Stanley Ry. and Michigan Central Rd. to connect their tracks, in St. Thomas, Ont., and to cross streets shown on plan filed with the Board, except second crossing of Talbot St., and crossover track on Moore St., new plan to be filed by L. & P. S. R. in accordance with these requirements.

24896. Apr. 13.—Authorizing Canadian Northern Ry. to build spur to gravel pit and to cross Government road allowance between Secs. 19 and 30, Tp. 25, R. 17, w.3.m., Sask.

24897. Apr. 14.—Ordering Canadian Northern Ry. within 60 days to install bell at crossing of Desormeaux St., Tetreaultville, Que., 20 per cent. of cost to be paid out of railway grade crossing fund, balance by City of Montreal.

24898. Apr. 13.—Authorizing Canadian Northern Ry. to build across Russell Road with its proposed connection with G.T.R., in Lot 11, Gloucester Tp., Ont., reserving question of diversion or protection of the highway.

24899. Apr. 18.—Amending order 20657, Oct. 24, 1913, re operation of Canadian Northern Ry. between Macrorie and Elrose, Sask.

24900. Apr. 17.—Authorizing Canadian Northern Ry. to remove station agent at Ruel, Ont.

24901. Apr. 17.—Authorizing C.P.R. to build at grade, its Swift Current Northwesterly Branch, between main untravelled highways, between mileages 15.4 and 25.10, Sask.

24902. Apr. 17.—Authorizing C.P.R. to divert Government trail in n.w.¼ Sec. 23-38-12, w.4.m., Alta., and to build, at grade, its Swift Current Northwesterly Branch, at mileage 14.90 across same and to close diverted portion within limits of the right of way.

24903. Apr. 17.—Authorizing C.P.R. to divert Government road allowance between Secs. 11 and 14-38-12, w.4.m., Alta., and to build, at grade, its Swift Current Northwesterly Branch across same.

24904. Apr. 17.—Dismissing application of M. Griffin, Whitby, Ont., for order directing Toronto Eastern Ry. to pay damages for alleged injury to Lots 243 to 246, Mary St., Whitby.

24905. Apr. 17.—Ordering London St. Ry. to lay double track across G.T.R. at Richmond St., London, Ont., and to rearrange interlocking plant to take care of additional track, and before proceeding, to file plan showing proposed changes, for approval of Board's Engineer; City of London to insert necessary diamond in track at the crossing; I.S.R. to pay cost of laying the double track to G.T.R. and connecting with the diamond, and to pay to the City, equivalent to 7 per cent. on expense that city is put to, for such time as L.S.R. operates over G.T.R.

24906. Apr. 18.—Authorizing Canadian Northern Quebec Ry. to build bridge across Rouge River, Lots 25 and 32, R. 1, Arundel Tp.

24907. Apr. 3.—Authorizing C.P.R. to build spur for Canadian Oil Companies, Ltd., at Weyburn, Sask.

24908. Apr. 18.—Ordering G.T.R. to build farm crossing at or near line between Lots 37 and 38, Con. 2, Sidney Tp., Ont.

24909. Apr. 18.—Authorizing London & Lake Erie Ry. & Transportation Co. to sell through passenger tickets from points on its line to points on or via Michigan Central Rd., the latter to honor same subject to prompt accounting therefore by L. & L. E. R. & T. Co.

24910. Apr. 19.—Rescinding order 23418, March 16, 1915, re protection at cross of G.T.R. spur at Rockland, Ont.

24911. Apr. 17.—Authorizing St. Placide and St. Benoit parishes, Que., to build shelter and platform on Canadian Northern Ontario Ry. at Cote Double, and rescinding order 24613, Dec. 29, 1915.

24912. Apr. 18.—Ordering C.P.R. to operate trains 529 and 530 to Monitor, Alta., and to continue present mixed service with trains 611 and 612; effective May 1.

24913. Apr. 19.—Authorizing Michigan Central Rd. to build extension of siding and additional tracks for Electro Metals Co., Welland, Ont.

24914. Apr. 20.—Authorizing Montreal & Southern Counties Ry. to use bridge over creek on Lot 747, Con. 8, Granby Parish, Que.

24915. Apr. 22.—Suspending, pending hearing on date to be fixed by Board, following tariffs:—C.P.R., C.R.C. no. E-3129; G.T.R. C.R.C. no. E-3345; and C.N.R. Supplement 9 to C.R.C. 584, re rates on wood pulp and sulphite pulp from stations in Canada to points in the United States.

24916. Apr. 22.—Extending to July 1, time within which C.P.R. shall rebuild crossing on its Reston-Wolsley Branch between Secs. 4 and 9-11-33, W.I.M., Sask., to conform with Board's Standard Regulations.

24917. Apr. 22.—Approving G.T.R. Form of Release and Power of Attorney 151, to be signed by persons who desire, for special reasons, to travel in cars which are not intended to carry passengers.

24918. Apr. 25.—Approving C.P.R. location of station at Admiral, Sask.

24919. Apr. 22.—Authorizing Montreal & Southern Counties Ry. to open for traffic its line from Abotsford to Granby, Que., 8.60 miles.

24920. Apr. 25.—Ordering C.P.R. to build farm crossing for and at expense of W. & J. Gracey, Shelburne, Ont., to be completed by June 1.

24921. Apr. 20.—Ordering New York Central & Hudson River Rd. and C.P.R. to stop certain trains at Highlands, Que., until a change is authorized by Board.

24922. Apr. 26.—Approving agreement between Bell Telephone Co. and Dawn Tp., Ont., Apr. 13.

24923. Apr. 25.—Approving plan A-101, of City of Toronto, No. 8, 1913, as revised.

24924. Apr. 26.—Authorizing Canadian Northern Ontario Ry. to build spur for Marshay Lumber Co., in Marshay Tp., Ont.

24925. Apr. 26.—Authorizing Saskatchewan Highway Commissioners to build highway over C.P.R. Pheasant Hills Branch in s.e. ¼ sec. 32-36-9, w.3.m.

24926. Apr. 18.—Authorizing C.P.R. to divert road allowance between Cons. 3 and 4, South Sherbrooke Tp., Ont.; to close diverted portion within limits of right of way, and to take certain lands for diversion.

24927. Apr. 28.—Amending order 24907, Apr. 3, re C.P.R. spur at Weyburn, Sask.

24928. Apr. 27.—Approving plans 4301B-1-A, B, C and D, of Quinlan & Robertson, Ltd., show-

ing false work to support Bloor St. viaduct, Toronto, during construction. If G.T.R. and C.N.R. find it necessary to appoint inspector or watchman to ensure safety of trains, wages of such shall be paid by applicants.

24929. Apr. 27.—Extending for three months from Mar. 31, subject to order 24270, Oct. 5, 1915, time within which C.P.R. may carry traffic over its Stirling East Branch, mileage 49.2 to 74.5, Alta.

24930. Apr. 28.—Authorizing Canadian Northern Ry. to build spur to serve Block B, plan B, Prince Albert, Sask., to cross River St. and Second Ave. West, for 10 years as consented to by city, unless otherwise ordered by Board.

24931. Apr. 27.—Authorizing Peck Rolling Mills, Ltd., to build railway across Mill St. and Montreal & Southern Counties Ry. at grade, in Montreal.

24932. Apr. 28.—Authorizing G.T.R. to build siding for W. S. Cook & Son, Belleville, Ont.

24933. May 1.—Authorizing G.T.R. to carry McGill University mining students destined to Sydney, N.S., at half one way first class fare from Montreal to Sherbrooke, Que., and return; any other parties desiring to travel for same purpose between Montreal and Sherbrooke, Que., to be granted equally favorable terms, until otherwise ordered.

24934. April 29.—Ordering Canadian Northern Ry. to appoint station agent at Lavoy, Alta.

24935. April 29.—Approving interlocking plant controlling crossings at Essex Terminal Ry. with Windsor, Essex & Lake Shore Rapid Ry. and C.P.R. in Sandwich West Tp., Ont.

24936. May 2.—Authorizing C.P.R. to build reinforced concrete trestle at mileage 29.81, Bredenburg Subdivision, near Strathclair, Man.

24937. May 1.—Dismissing application of Town of St. Lambert, Que., for order directing Montreal & Southern Counties Ry. to place track upon permanent foundations, reserving to applicant right to make further application later; ordering M. & S. C. Ry. to change grade on Elm, Desaulniers and Bird Sts., St. Lambert, to conform to highway level, cost to be paid by applicants, and authorizing applicant to build permanent roadway between rails and for 2 ft. on each side on said streets; company to be relieved of maintaining gravel there, but to contribute such portion of cost as will fairly represent its present liability in this regard.

24938. April 25.—Amending order 19570, June 13, 1913, re furnishing slats for floors of refrigerator cars by adding: "2. That where shippers furnish slats for the said cars, an allowance of 500 lbs. in weight per car be made."

24939. May 1.—Ordering G.T.R., within 90 days, to install improved automatic bell at crossing of public road near Lyn, Ont.; dip in grade on north approach to be levelled to give clear view over low ridge to west; 20 per cent. of cost of bell, and 20 per cent. of cost levelling approach to be paid out of railway grade crossing fund.

24940. May 3.—Ordering C.P.R. to appoint station agent at Beresford, Man., by Sept. 1.

24941. May 4.—Amending order 24911, Apr. 17, by changing figures of previous order referred to from 26413 to 24613. (This was noticed in our summary and corrected there.)

24942. May 3.—Authorizing G.T.R. to build siding across Brant St., Burlington, Ont.

24943. May 4.—Ordering C.P.R. to extend commercial track at Domain, Man., for 400 ft., and to appoint station agent there; and to move station platform back to clear road allowance; to be done by Sept. 1.

24944. May 3.—Authorizing G.T.R. to build spur for Colonial Hide Co., Wellington St., Montreal.

24945. May 5.—Suspending, until further order, items on page 3, Supplement 10 to C.P.R. tariff C.R.C. no. W-2061, Esquimalt & Nanaimo Ry. tariff C.R.C. 302, and Kettle Valley Ry. tariff C.R.C. 52, covering minimum carload weights on forest products.

24946. May 4.—Amending order 24799, Mar. 14, re C.P.R. road diversion at mileage 45.54 of its Weyburn-Lethbridge Branch, Sask.

24947. May 8.—Authorizing C.P.R. to build spur for J. M. Stones at mileage 36.6, Trenton Subdivision, crossing unopened road allowance between Bedford and Oso Tps., Ont.

24948. May 6.—Approving agreement between Bell Telephone Co. and Kemble-Sarawak Telephone Co., Apr. 26.

24949. May 5.—Relieving G.T.R. from providing further protection at Canifon Road, Belleville, Ont.

24950. May 9.—Authorizing London & Port Stanley Ry. to build spur from Bathurst St., north-westerly across G.T.R. property and Clarence St., immediately to south of G.T.R. yard, London, Ont.

24951. May 9.—Authorizing C.P.R. to build spur for J. A. Barrett, at mileage 0.70, Prescott Subdivision, Ont.

24952. May 6.—Authorizing C.P.R. to bridge a Y at grade across Canadian Northern Ontario Ry. and Russell Road, Gloucester Tp., track connecting St. Lawrence & Ottawa Ry. and Montreal & Ottawa Ry.

24953. May 8.—Authorizing Canadian Northern Ry. to open for traffic its Oakland Branch from mileage 42 to 54; speed of trains limited to 15 miles an hour.

24954. May 8.—Authorizing Canadian Northern Quebec Ry. to build transfer track with Pointe aux Trembles Ry. at mileage 170.28 from Quebec.

24955. May 8.—Authorizing Michigan Central Rd. to build siding for Canadian Aloxite Co. near Montrose Jct., Ont.

24956. May 8.—Authorizing C.P.R. to rebuild bridge 35.8, Brandon Subdivision, Man.

24957. May 8.—Authorizing G.T.R. to build additional tracks, and to alter existing tracks, for Canadian Explosives, Ltd., in Bevel Parish, Que.

24958. May 9.—Authorizing C.P.R. to build spur for Rock Springs Coal & Brick Co. in legal subdivision 14, n.w. ¼ sec. 3-10-17, w.4.m., Alta.

24959. May 8.—Approving G.T.R. clearances at crating shed and unloading platform of Ford Motor Co. of Canada, Ford City, Ont.

24960. May 9.—Ordering C.P.R. to install improved type of automatic bell at Rankin St., Campbelltown, Ont., by Sept. 1; 20 per cent. of cost to be paid out of railway grade crossing fund, and until Sept. 1, relieving it from providing further protection at said crossing.

24961. May 10.—Authorizing G.T.R. to build temporary siding, and to change existing sidings, for Dominion Flour Mills, Ltd., adjacent to Lachine Canal Reserve, Montreal Parish, Que.

24962. May 10.—Authorizing C.P.R. to build spur for Godson Contracting Co., mileage 0.60 on McTier Subdivision, Ont.

24963. May 11.—Authorizing C.P.R. to build siding for Canada Nitro Products, Ltd., Yorkton Tp.

24964. May 10.—Authorizing Canadian Northern Ry. to construct four spurs to serve Block 10, Parkview, Calgary, Alta., and to cross Spruce Ave.

24965. May 10.—Dismissing C.P.R. application for order directing Montreal Light, Heat & Power Co. to assume cost of changes in power line crossing incidental to building of Decary Ave. subway, Montreal.

24966, 24967. May 12.—Amending orders 19245, May 12, 1913, and 21873, May 26, 1914, re Lake Erie & Northern Ry. crossings of G.T.R. at station 1074+72.9 near Paris, and station 1281+58, Simcoe, Ont., respectively.

24968. May 6.—Suspending, pending hearing by Board, item 20A on page 2 of supplement 13 to C.P.R. C.R.C. no. W-2110, showing rates on pig lead, spelter and antimony.

24969. May 10.—Authorizing C.P.R. to rebuild bridge 1.9, Prescott Subdivision, near Ottawa, Ont.

24970. May 10.—Authorizing Michigan Central Rd. to rebuild bridge over Bear Creek, mileage 1.25, Petrolia Branch, Ont.

24971. May 11.—Authorizing Canadian Northern Ry. to close road allowance, within right of way fences, between Secs. 2 and 3-31-20, and to divert through s.w.¼ Sec. 2-31-20, w.4.m., Alta.

24972. May 10.—Approving Vancouver, Victoria and Eastern Ry. & Navigation Co.'s by-laws 8 and 9, Apr. 20.

24973. May 20.—Certifying and allowing corrections in C.P.R. plan of location through n.e.¼ Sec. 18-15-13 and s.e. Sec. 19-15-13, w.3.m., as shown on plan marked A on the 10th Board.

24974. May 11.—Amending order 24781, Mar. 3, re Grand Trunk Pacific Ry. spurs for Imperial Oil Co. in w.¼ Sec. 32-17-19, w.2.m.

24975. May 15.—Authorizing C.P.R. to make a road crossing of its line on a bridge, any of Sec. 27-34-23, w.3.m., Sask., and close road allowance within limits of right of way and to build a bridge over the same.

24976. May 15.—Ordering Canadian Express Co. and G.T.R. to arrange for through shipments of fruit from Jordan, Vineland and other Niagara points, from July 1 to Aug. 31 inclusive; when conditions allow shippers to do with reduced rates.

ingly.

24977. May 15.—Approving agreement between Bell Telephone Co. and Palace Road Mutual Telephone Association, Apr. 26, 1915.

24978. May 16.—Amending order 24895, Apr. 15, re London & Port Stanley Ry. and Michigan Central Rd. connection at St. Thomas, Ont.

24979. May 15.—Authorizing Canadian Northern Ry. to build spur in s.e.¼ Sec. 10 and s.w.¼ Sec. 11-24-1, w.5.m., Alta.

24980-24981. May 6.—Recommending to Governor in Council for approval, Brantford & Hamilton Electric Ry. and Hamilton Radial Electric Ry. bylaw, Apr. 26, regulating travel on cars.

24982. May 17.—Suspending, pending hearing by Board, tariffs C.P.R. C.R.C. no. W-2075; C.N.R. C.R.C. no. W-861, and G.T.P.R. C.R.C. no. 100, re increased charges for live stock shipments.

24983. May 15.—Authorizing Boston & Maine Rd. to operate locomotives used in international traffic and merely passing through Canadian territory, equipped with clear vision window in cabs; permission not to extend to locomotives operated from or entirely within Canadian territory.

24984. Apr. 13.—Amending order 17562, Sept. 25, 1912, authorizing Toronto, Hamilton & Buffalo Ry. to build spur, in Hamilton, for National Steel Car Co.

24985. May 12.—Amending orders 20643 and 24923, Oct. 23, 1913, and Apr. 25, 1916, respectively, re rebuilding of C.P.R. bridge at Strachan Ave., Toronto.

24986. May 17.—Ordering C.P.R., within 60 days from date to install bell at second line west, Chinguacousy Tp., Ont.; 20 per cent. to be paid out of railway grade crossing fund.

24987. May 17.—Extending for three months from date time within which G.T.R. shall complete highway over its line in Tay Tp., Ont.

24988. May 18.—Ordering C.P.R. by Sept. 1, 1917, to erect class A-2 station at Piapot, Sask.

24989 to 24991. May 18.—Ordering Canadian Northern Ry. to erect standard fourth class stations at Beaddle, D'Arcy, and Carmel, Sask., by Sept. 1.

24992. May 18.—Amending order 4391, Feb. 25, 1908, re G.T.R. spur crossing of C.P.R. at Lindsay, Ont.

24993. May 22.—Approving agreement between Bell Telephone Co. and Wotton Local Telephone Co., May 3.

24994. May 22.—Suspending, pending hearing by Board, railway tariffs showing charges for heated refrigerator cars.

General order 165, May 16.—Suspending, pending further hearing by Board, following tariffs, showing charges for ice and salt in refrigerator cars.—C.P.R. C.R.C. no. W-2149 and W-2150; C.N.R. C.R.C. no. W-927 and W-930; G.T.P.R. C.R.C. no. 155 and 156; Esquimalt & Nanaimo Ry. C.R.C. no. 324; and Kettle Valley Ry. C.R.C. no. 80.

Canadian Northern Railway's Interests in the Niagara Peninsula.

The two railway bills in which the Canadian Northern Ry. interests were concerned, which formed the subject of considerable controversy in the House of Commons, viz., the Niagara, St. Catharines & Toronto Ry., and the Toronto, Niagara & Western Ry., have been passed by the Dominion Parliament, having been given their third readings in the Senate, May 16 and 17 respectively. The opposition directed against the measures came from the Hydro Electric Power Commission of Ontario, the municipalities associated with it in the proposal to build an extensive system of radial railways, and the City of Toronto.

The Niagara, St. Catharines & Toronto Ry. Act extends for two years the time for starting construction, and for five years for completing the following lines, from Port Colborne to Fort Erie and from Fort Erie to the city of Niagara Falls, from Niagara Falls to the town of Niagara, and from Niagara to St. Catharines, from Welland to Brantford, and an extension of the St. Catharines & Niagara Central Ry. to the Niagara River at or near Fort Erie, and an extension to Toronto passing at or near Hamilton.

The Toronto, Niagara & Western Act grants similar extensions of time for building the following lines: From in or near Toronto into or near Hamilton, but not along any portion of Burlington Beach, in Wentworth County, without the Burlington Beach Commission's consent,

or along any portion of the Beach in Halton County without the Nelson Township's consent; from in or near Hamilton, to or near Grand Island in the Town of Niagara Falls, and with the consent of the proper authorities, beyond the limits of Ontario to a point in New York State, a branch of the railway authorized to St. Catharines through or near Thorold, and also to Port Colborne, and from a point in or near Hamilton, or in Halton County, through or near Brantford, Woodstock, London and Chatham to or near Windsor. A clause was added that the line entering Toronto shall be built upon or within the location for the Canadian Northern Ontario Ry., extending westerly and north-westerly from the joint section to be used by the C.N.O.R. and the C.P.R. at North Toronto, or such variation therefrom as the Board may direct on the application of the C.N.O.R. or the City of Toronto. One of the company's previous Acts authorized it to sell electric power with the consent of the municipalities. The company agreed to this provision being repealed.

The discussion in the Commons brought about an understanding that route plans for new railways should be subject to the sanction of the Board of Railway Commissioners, instead of to that of the Minister of Railways, as formerly. A Government bill was passed in the House to amend the Railway Act in this regard, but the Senate, after considerable discussion in committee, directed the redrafting of the bill May 12. The bill was left on the minutes of the Senate Railway Committee to be taken up at the call of the chair. The Committee did not meet before Parliament prorogued and the bill therefore died.

Scientific Research Work for Canada.

—The C.P.R. management has arranged with Arthur D. Little, Inc., chemists and chemical engineers, Boston, Mass., who are establishing a Canadian Research Bureau in Montreal, to mobilize scientific and chemical men throughout Canada, to make a complete investigation of the mineral, metal, hydro electric and chemical resources, in order to secure the practical application to industry of many minerals heretofore neglected or exported to other countries for manufacture, of by products in existing industries, and of other natural resources which are neglected or insufficiently exploited. Among other things investigated will be the waste of straw, in the wheat fields, of flax fibre, of lumber, a large proportion of which is wasted in the forest or at the mill. The opportunities for investment of capital in tungsten, molybdenite, graphite, oil shale, manganese, magnetite, talc, feldspar and other minerals will be investigated. The results obtained for the C.P.R.'s special information will be disseminated from time to time in bulletin form.

The Port Arthur Ont., Public Utilities Commission has taken over the management of the city waterworks, which makes the total value of public utilities under one management about \$4,000,000. Since its establishment about a year ago the commission has made reductions of about \$30,000 a year in salaries and other operating expenses. The commissioners are: W. P. Cooke, Chairman; G. H. Rapsey, who is at present also acting as Secretary Treasurer; I. L. Matthews, and A. E. Wideman, with the mayor as ex officio. As the commissioners are devoting a large amount of time to the work, a suggestion to allow them some compensation is under consideration.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Canadian Pacific Ry.—We are officially advised that fair progress has been made with the erection of the new passenger station at Quebec. It is expected that it will be completed about the middle of July.

We are officially advised that the company has decided to do a considerable amount of broken stone ballasting. The programme for this year includes from Place Viger, Montreal, to Ste. Therese, Que., double track, 19.9 miles; as much as possible between Windsor Street, Montreal, and Smiths Falls, Ont., double track, 128.5 miles, and from North Bay to Verner, Ont., 33.9 miles. The stone will be obtained from Terrebonne on the Quebec Subdivision, the Canadian Northern Ry.'s Mount Royal Tunnel at Montreal, Staynerville and Cap St. Martin on the Ottawa Subdivision, Smiths Falls, Ont., and from Worthington on the Lake Superior Division.

Tenders are under consideration for the purchase and removal of the old C.P.R. North Toronto station building. The new station on Yonge St. is rapidly approaching completion.

We are officially advised that the company has no present intention of erecting an addition to the roundhouse at Weyburn, Sask., as stated in recent press reports.

We are advised that ballasting on the section of the Weyburn-Lethbridge line from Foremost to Pakowki, Alta., 25 miles, is being gone on with, and it is expected to be ready for traffic early in June. Nothing has been done as yet in the way of construction to connect up the line running east, now ending at Pakowki, with the line running west, ending at Attaman, and we are officially advised that the company has not decided to extend the line farther east.

At the company's Lake Louis Hotel, Alberta, a kitchen addition is being built at the back of the concrete wing and the former ballroom is being converted into a dining room.

About 140 ft. of Shed No. 4, at the C.P.R. docks at Vancouver, have been taken down to make room for the new 50 ton crane to be erected. A contract for the concrete foundation for the crane, is reported let to the Cotton Co. (Ltd.), Vancouver. It is expected that the new crane will be erected by the end of June. It will be electrically operated and will be an addition to the dock equipment, the present 15 ton crane being retained.

D. C. Coleman, Assistant General Manager, Western Lines, stated when in Vancouver recently, that the management had appointed a committee, consisting of himself as chairman; F. W. Peters, General Superintendent, British Columbia Division; F. C. Clendenning, Division Freight Agent; J. W. Troup, Manager, B.C. Coast Service; and F. K. Lee, to draft a comprehensive scheme for handling the increased business at the port; that it would be prepared for a series of units, and that as business developed the units would be taken up one by one.

Canmore Ry.—The Alberta Legislature has incorporated a company with this title to build a railway from the C.P.R. to No. 2 mine, Canmore, with branches to the Georgetown Colliery and No. 1 mine, Canmore, in tps. 24 and 25, ranges 10 and 11 west of the 5th meridian. (Mar., pg. 106.)

Central Vermont Ry.—Southern New England Ry.—Application has been made

to the Massachusetts Legislature by the Central Vermont Ry. for power to acquire the Southern New England Ry. The latter company was organized under C.V.R. auspices to build a railway from a point on the C.V.R. to Boston, and to Providence, R.I. A considerable amount of construction was done on the latter line, in face of the New York, New Haven & Hartford Ry.'s opposition, but construction was suspended about three years ago. Some matters in connection with the line were made the subject of a judicial investigation by a United States court, and the present application is said to be in connection with the settlement of the situation.

Dominion Government Ry. to Hudson Bay.—The Dominion Parliament has voted a further sum of \$3,000,000 on capital account towards the construction of terminal facilities and elevators for this railway, running from Pas to Port Nelson, Man. In connection with this vote, the acting Minister of Railways informed the House of Commons, May 3, that the total expenditure on the railway up to Feb. 29, was \$10,404,182.26, and on the terminal facilities at Port Nelson, \$4,861,071.69, a total of \$15,265,960.95. The estimated cost of the line complete is \$16,000,000, and the estimated cost of the terminals \$10,000,000, a total of \$26,000,000. The line will have a total length of 425 miles. There will be some dredging necessary at the entrance to the harbor. The channel is from half a mile to 15 miles wide, 19 or 2 ft. deep at low water, with a 16 ft. rise at spring tides. This will give a depth of water sufficient for all navigation purposes. The last report on construction sent into the department gave the following details: Miles of steel laid, 241; miles of steel laid in sidings, 24; miles of steel laid on temporary track, 33; grading completed (with exception of a few depressed grades), 378 miles; track surfaced, 225 miles. (April, pg. 106.)

Essex Terminal Ry.—The Ontario Legislature has ratified a bylaw of the city of Windsor granting a right-of-way and other rights to the company. (Feb., pg. 138.)

Gananoque and Arnprior Ry.—The Ontario Legislature has extended the time which the company may build its projected railway from Gananoque to Arnprior, with branches from Moreton to Lyndhurst, and from an unnamed point to Ottawa. The company has power to use electricity or other motive power, as well as steam for operation. (Mar., pg. 106.)

Grand Trunk Ry.—The installation of automatic signals from Bonaventure station, Montreal, to Coteau Junction, Que. and also between Toronto and Hamilton, Ont., is said to be under consideration. (Mar., pg. 182.)

The company is building a spur from its Georgetown-Allandale line into the site of Camp Borden, the military training camp which is being established on the Angus pine plains near Barrie, Ont.

Great Northern Ry.—The Vancouver City Council issued a permit, May 28, for the foundation work, at the new G. N.R. station at False Creek, at an estimated cost of \$30,000. The contractors are Grant Smith and Co. and McDonnell Ltd., and the work is being done under the supervision of the company's architect, F. L. Townley. A. H. Hogeland, Chief Engineer, is reported to have said

in a recent interview that every effort will be made to complete the station by June, 1917, the date specified in the Board of Railway Commissioners' order.

In a recent interview A. H. Hogeland, Chief Engineer, is reported to have said construction work is under way on the extension of the Abbottsford line which will afford connections at Sumas Landing with the Canadian Northern Pacific Ry. and the other link at Hope. It is expected this piece of line will be ready for operation in July.

The G.N.R. is at present operating northward from Spokane into British Columbia as far as Princeton. The extension of service to the coast will be effected by the joint section between Coquihalla Summit and Hope, built by the Kettle Valley Ry., a C.P.R. division over which it will have running rights. The branch from Spokane runs north to Marcus and thence to Grand Forks, Midway, Oroville, Keremeos, Princeton and Coalmont. The extension of the line to the coast over the Hope Mountains will bring the Boundary, Similkameen and other districts of the interior into much closer communications with Vancouver.

High River and Hudson Bay Ry.—The Alberta Legislature has extended the time within which the company may build its projected railway east and west from High River. (April, pg. 138.)

The Kettle Valley Ry. extension from Otter Summit to Hope, B.C., near which place connection is made with the C.P.R. main line, is expected to be opened for traffic at an early date. The stations on the line, with their distances from Penticton, are:—Brodie, mileage 113.9; Joliet, mileage 119.8; Coquihaltan, mileage 127.6; Romer, mileage 134.1; Iago, mileage 139.6; Portia, mileage 144.4; Jessica, mileage 149.9; Lear, mileage 155.0; Othello, mileage 158.9; Hope, mileage 164.3. The mileage from Penticton to the actual connection with the C.P.R. is 166.7 miles. The opening of this line will give the C.P.R., which leases the K.V. lines, a new through line from Winnipeg to Vancouver, via Dunmore, Nelson, Midway, Penticton and Hope. The distance will be 1,625 miles, the distance between the same points, via the main Transcontinental line being 1,484 miles.

Lockport Ry.—The Nova Scotia Legislature has incorporated a company with this title to build a railway from Lockport, N.S., to a junction with the Halifax & South Western Ry. main line, four miles. It is provided that the town of Lockport may acquire the railway at the actual cost of the undertaking. The project is promoted by residents of the town.

The Legislature refused to incorporate a company with the title of the Lockport Transportation Co., which, among other things, asked power to build a railway from Lockport to a junction with the Halifax & South Western Ry. The proposed capital of the company was \$800,000, and the estimated cost of the railway was \$100,000. The Premier, in criticizing the bill, said permission was being asked "to do about everything under the sun," and it was not advisable to tie up the interests of the whole town with a railway that would be dependent for its success or non-success on the other business interests of the company.

Michigan Central Rd.—We are officially advised that the plans for the erection of buildings at Montrose, Ont., include a 20 stall locomotive house, with machine

shop, and elevator, oil house, fuel oil house, sand house and office building. The engine house will be of brick and mill construction on a concrete foundation; the oil house of concrete, fireproof construction; while the office building and machine shop will be of brick. The locomotive house will have a depth of 97 ft at one end, and where it connects with the machine shop a depth of 114 ft. 8 in. The machine shop will be 123 ft. 10 in. x 37 ft. 3 in., the coal house adjoining being 15 x 30 ft.; the oil house 42 x 22 ft.; the fuel oil house 37 x 13 ft.; and the office building 51 x 23 ft.; and 85 ft. turntable with the necessary tracks will be provided. We are advised that the contract for these buildings has been let to the Wallbridge Aldinger Company, Detroit, Mich., and that work has been started and will probably be completed this year.

Sarnia, Ont. people want to induce the company to locate terminal buildings there. To do this the existing line from St. Thomas to Courtright would have to be extended to Sarnia, or a line built from Petrolia. (May, pg. 182.)

Minneapolis, St. Paul and Sault Ste Marie Ry.—A press report states that a contract has been let to the Foley Bros. Construction Co., Minneapolis, Minn., for building an ore dock at Ashland, Wis., of steel and concrete. It is estimated to cost \$1,000,000.

Montreal Central Terminal Co.—According to local reports, the company, which is represented by C. N. Armstrong, proposes to lay its plans for a central terminal station before the Montreal Board of Control at an early date. The proposal is to build a large station in a central location, into which all the railway lines entering the city would run their trains, with a tunnel under the St. Lawrence River to connect the north and south shores. It is claimed that if the proposal were carried out all level crossings would be eliminated, and the city would be saved a very large sum, while some of the present terminal stations could be given over exclusively for freight traffic purposes. It is proposed to use electric traction exclusively in the terminal and connecting lines. The cost of the terminal proposal alone is put at between \$30,000,000 and \$40,000,000. (Sept., 1914, pg. 403.)

Prince Edward Island Ry.—Tenders were received by the Railway Department, Ottawa, up to May 31 for constructing a station, water tank, locomotive house, transfer platform, standpipe pit, ashpit and turntable foundation for the Carleton Point car ferry terminal.

Quebec Bridge.—The Dominion Parliament has voted \$3,450,000 on account of the construction of the bridge across the St. Lawrence River near Quebec. The total expenditure to Oct. 31, 1915, was \$13,257,621.85, of which \$10,473,346.38 was on account of the bridge now under construction. The Chief Engineer has advised the Department that it is expected to have the final spike driven in the superstructure during next autumn. The acting Minister promised to arrange, if possible, for members of Parliament to be present on the occasion of the floating into position of the span which will connect up the central cantilevers. This span is the largest ever attempted to be floated into position, in the history of bridge construction, and it will require the utmost delicacy and skill, much more so than if the work was being done in non-tidal waters. (Mar., pg. 106.)

Big River to Lac La Rouge, Sask.—In connection with the development of

the fishing industry in Northern Saskatchewan, C. R. Rouse, was in Regina, May 15, discussing the prospects for building a narrow gauge railway from Big River, at the present terminus of the Canadian Northern Ry. Prince Albert-Shellbrook Branch, to Isle a la Cross, Lac La Rouge and Lac la Plouge, 200 miles. The fisheries are being developed and the catch is carried by teams to Big River and dispatched to the markets by train. The country is being settled by men of the fishermen-farmer type, and Mr. Rouse says he has secured the right of way for the railway, and has control of sufficient rolling stock to operate the section from Big River to Isle a la Cross, if he could get money to provide and lay the rails. The grading would be done largely by the settlers.

Taber Transit Co.—The Alberta Legislature has extended the time within which the company may build the various lines authorized, reaching from Taber, and connecting with others in the vicinity, the C.P.R. Suffield Branch, and with Bow City. (April, pg. 139.)

Toronto, Hamilton & Buffalo Ry.—We are officially advised that construction has been started on the extension of the recently opened line from Smithville to Dunnville, from the latter point to Port Mackland, about five miles. The contractors for grading are Fitch & Douglas, Dunnville, Ont., and the tracklaying and other work will be done by the company's own staff. There are no engineering features of any importance on the line, which is expected to be completed and ready for operation about July 15. (April, pg. 139.)

Freight and Passenger Traffic Notes.

Representatives of the Canadian Freight Association will hold a conference with shippers at Regina, Sask., June 5, to discuss the checking of freight on private sidings.

The Canadian Government Railways will put in operation on June 16, for the summer, the St. Lawrence special, running from Montreal to points along the St. Lawrence River on the Intercolonial Ry.

The Burlington, Ont., municipal council is asking the Hamilton Radial Ry., and the G.T.R., to reduce fares between that place and Hamilton. A large number of Burlington residents go to Hamilton daily for business purposes, and desire to have commutation tickets issued.

The Victoria and Island Development Association is undertaking an extensive plan of advertising Vancouver Island as a tourist resort, and is in communication with 200 tourist agencies in the United States with a view of securing tourists' travel.

A Nova Scotia press report states that the C.P.R. is arranging to operate a train ferry service from St. John, N.B., to Digby, N.S., which will enable it to operate its trains directly over the Dominion Atlantic to Windsor Jct., and thence over the Intercolonial into Halifax.

The Grand Trunk Ry. is arranging to establish a suburban train service from Collingwood to Pine Station, Ont., in connection with the opening of the Camp Borden there. Local press reports state that it is proposed to put on five additional trains a day.

An arrangement has been made with the Grand Trunk Pacific Ry. by which shippers to points on the Edmonton, Dunvegan & British Columbia Ry., Alberta & Great Waterways Ry., and the Central Ry. of Canada, will be able to use the

G.T.P.R. sheds at Edmonton, Alta., without extra charge.

The C.P.R. put in operation, May 20, a regulation increasing from 10 to 30 days, the stop over privilege on through tickets to Vancouver, on the following points:—Banff and Lake Louise, Alta.; Field, Glacier, Revelstoke, Secamons and Balfour, B.C.

The Pacific Great Eastern Ry. resumed on April 25 its train service from Squamish to Clinton, B.C., which had been abandoned since the severe snowstorms at the end of January and early in February. A train service is being given on alternate days. On the completed section of the line from North Vancouver towards Squamish, an hourly service in either direction was inaugurated May 4, as far as Whytecliffe, the present end of track.

The C.P.R. new North Toronto station will probably be opened for traffic between the middle and end of June. Train 24 for Montreal, and train 23 from Montreal, both with Ottawa sleeping cars, will continue to use the station, as will also the following trains: the Rideau from Toronto to Ottawa, and the York from Ottawa to Toronto, which now use Toronto Union Station; train 707 from Toronto to Owen Sound, train 708 from Owen Sound to Toronto; train 713 from Toronto to Teeswater, and train 714 from Teeswater to Toronto. A new train leaving Lindsay in the morning, and returning in the afternoon, will also use the new station.

Toronto, Hamilton and Buffalo Ry. Employees Wages.

The award of the board of conciliation in the arbitration proceedings affecting Toronto Hamilton and Buffalo Ry. employees was issued May 6. The arbitrators were Judge Snider, Chairman; G. S. Kerr, K.C., representing the company, and J. Simpson, Toronto, representing the men. The matters coming before the board affected the machinists, blacksmiths, boilermakers and railway carmen. Following is a summary of the findings:

The men of the four trades mentioned get a nine hour working day, and a Saturday half holiday in these departments, except the locomotive house, where a 10 hour day is recognized all over the Dominion. Time and a half will be paid for all overtime. Recognition of a committee appointed by the men to settle all disputes was agreed upon. The rates per hour established are as follows: Machinists, 36c.; machinists' helpers, 20 to 22c.; boilermakers, 36c.; boilermakers' helpers, 20 to 22c.; blacksmiths, 31 to 36c.; blacksmiths' helpers, 22c.; tinnerns, 28 to 30c.; tinnerns' helpers, 25c.; pipe fitters, 25 to 34½c.; pipe fitters' helpers, 22c.; car carpenters, 26 to 30c.; car repairers, 20 to 22c.; a month; car inspectors' helpers, 20c.; car cleaners, 20c.; car inspectors, 70 to 75c. a month. The new schedule is dated back to March 1, including overtime, which will have to be paid to the employees for all hours worked over the regular day's work as specified in the board's decision.

The award was not favorably received either by the company or the employees. The company announced May 1, that certain increases would be made in the wage scale, ignoring the award and refusing to recognize the men collectively. Although efforts were made to bring the parties together, the carmen, blacksmiths, boilermakers and machinists at the company's shops in Hamilton, numbering about 120, struck work May 20.

Further Dominion Government Aid to Canadian Northern and Grand Trunk Pacific Railways.

The items in the supplementary estimates submitted to the House of Commons May 7, providing for loans of \$15,000,000 to the Canadian Northern Ry. and \$8,000,000 to the Grand Trunk Pacific Ry., were passed by both Houses of Parliament.

The loan to the Canadian Northern is repayable on demand, with interest, payable half yearly, at 6%. The loan is to be used for expenditure made, or to meet indebtedness incurred in paying interest upon the securities of the companies included in the C.N.R. system, having priority over the guaranteed securities guaranteed by the statutes of 1914, chap. 20, and instalments of principal of equipment securities and upon construction; the loan to be secured by mortgage upon the C.N.R. undertakings, and so much of the loan as may be applied for the benefit of any company included in the C.N.R. system, to be secured in addition by mortgage upon the undertaking of such company; the mortgages to contain such terms and conditions as the Governor in Council may approve. The disposition of the loan is subject to the direction of the Governor in Council.

The loan to the Grand Trunk Pacific is also repayable on demand with interest, payable half yearly, at 6%. The loan is to be used in paying securities of the company, to meet the deficit in operation, and for the purchase of rolling stock; the loan to be secured by mortgage upon the company's undertakings, containing such conditions and terms as the Governor in Council may approve; the disposition of the loan is subject to the direction of the Governor in Council.

The Finance Minister's Statement.

The Minister of Finance made a statement to the House of Commons, May 8, in connection with the matter on the motion to go into committee of supply. He stated that the loans were, in the Government's view, necessitated from consideration of public interest by reason of the critical position of the financial affairs of the two companies. In 1914, it was the view that the proceeds of the securities for \$45,000,000 guaranteed for the Canadian Northern, and of the \$16,000,000 guaranteed for the Grand Trunk Pacific would have been sufficient for the purposes then in view. Closely following upon the execution of the trust deeds, war broke out, which resulted in the practical closing of the markets of the world to securities other than those of the various governments for the prosecution of the war. In order to carry out the intention of Parliament, the Dominion Government made loans in Dominion notes to the Canadian Northern for \$10,000,000, and to the Grand Trunk Pacific for \$6,000,000, security being taken in guaranteed stocks, the transaction subsequently being ratified by Parliament. Owing to the continuance of the war, the two companies have had to place the guaranteed securities upon the market at lower prices than would otherwise have been the case. In addition to this \$45,000,000 of guaranteed securities, the Canadian Northern had \$55,000,000 of marketable securities, and has not been able to realize upon them within \$10,500,000 of the amount it was calculated would have been the case; the G.T.P.R. being in proportionately the same position. This resulted in the delay of a year in the completion of the C.N.R., the transcontinental line which was only

linked up in Dec., 1915. The country's interests were so intimately bound up with those of the two companies that it was necessary for the country to give them some relief, the policy of the Government since the outbreak of the war having been to maintain stability and to promote confidence in the financial and economic situation of Canada.

There were three courses open to the Government, one to withhold and to permit the two companies to go into the hands of receivers, the second to permit default and take physical possession of the two systems, that is, to foreclose the mortgages to the Dominion; and the third to grant aid by way of loan. After giving these alternatives the most careful and lengthy consideration, the Government decided upon the last mentioned, as a temporary expedient to meet the situation until such time as the whole problem, involved in the suggestion of taking over the lines, or of granting permanent aid in other directions have been considered and solved. In conclusion, he said: "The House will observe that the loans which we propose, of \$15,000,000 and \$8,000,000 respectively, are repayable upon demand, so that, in a sense, we have a control of the situation through those demand loans. We are charging 6% interest, the Dominion Government being able to borrow at slightly less than that figure. We realize that the security upon which we are making these loans to both of the railway systems in question is rather slender, and therefore we have a vital interest in the administration of the affairs of these two railways. It is our intention, in order that we may be kept fully informed, pending our investigation by experts, which I have announced, as to the condition and administration of these companies, to appoint three directors of the C.N.R. and three directors of the G.T.P.R."

The Canadian Northern's Position.

The Minister stated that the C.N.R. net earnings for the year ended June 30, 1915, were \$6,000,000, and it is estimated that the net earnings for the year to end June 30, 1916, will be \$9,000,000. The fixed charges upon the system, including the constituent and subsidiary companies, aggregate \$15,000,000. Since the passing of the act of 1914, the net earnings of the company have been applied to the payment of fixed charges, and payments upon construction account. The terms of the legislation of 1911 and 1914, under which the Dominion Government might be called upon to pay interest for three years (the amount so paid to be added to the mortgage indebtedness), upon \$35,000,000 of the C. N. Ontario Ry. securities, issued in respect of the Montreal-Ottawa-Port Arthur line, and of the \$45,000,000 of securities issued under the Act of 1914, would be called into effect this year, so that from July 1 next the C.N.R. will call upon the Dominion Government to provide \$4,500,000 a year in respect to these securities. A similar provision has been inserted in the Act respecting the bonds guaranteed by British Columbia, and that Government will have to provide, from July 1, for the interest of the bonds so guaranteed. Therefore, for the next financial year the fixed charges, so far as they have a bearing upon the financing of the company, will be reduced to about \$11,000,000 a year. The public credit of the Dominion and the provinces is pledged

to the extent of \$211,000,000 of the \$383,000,000 of the company's securities issued. In addition to these securities, there are \$17,000,000 of equipment bonds, and \$92,000,000 of temporary loans and current obligations. The reason why there are so many temporary loans and current obligation is that in the earlier stages of the war short term obligations only could be sold, and the method of financing adopted has been the pledging of securities against short date notes. The company assumes it will be able to extend existing notes, or to place new notes to retire them. In regard to current obligations, unless aid was given by the Government, the company would not be able to carry through the year. The estimate was that the minimum assistance upon which the company would be able to make arrangements to finance during the coming year was \$15,000,000. This amount is to be used as follows:—For expenditures made or indebtedness incurred to meet interest payments maturing due upon securities in priority to the securities of \$45,000,000 guaranteed by the Dominion Government under the legislation of 1914; to meet instalments of equipment bonds and on construction account.

The Grand Trunk Pacific's Position.

The G.T.P.R., the Minister said, was completed from Winnipeg to Prince Rupert. The company had issued securities guaranteed by the Dominion for \$78,000,000, and in addition the Dominion had loaned the company \$25,000,000. The provinces of Saskatchewan and Alberta had guaranteed the bonds of a subsidiary company for building branch lines for \$13,000,000, so that, in addition to the loans, the public credit of the Dominion and of the two provinces named was pledged to the extent of \$115,000,000, while the G.T.R. Co. has guaranteed additional securities of the G.T.P.Ry. and of its subsidiaries for \$97,000,000. The G.T.R. also held notes of the G.T.P.R. and its subsidiaries for \$25,000,000 for advances. The G.T.R. now finds itself unable to extend any further aid to the G.T.P.R. and is further confronted with the necessity of providing for betterments, improvements and terminal facilities upon its own system, involving the expenditure of large sums. This condition of affairs led to the writing of a letter to the Government by A. W. Smithers, Chairman of the G.T.R. Board, in Dec., 1915, which is referred to further on. The G.T.P.R. is now out of the construction stage. The fixed charges for this year are \$7,200,000, while there has been a deficit upon operating and maintenance account and for exceptional repairs, of \$2,000,000, and the company is in arrears in the payment of interest to the Dominion Government on the \$25,000,000 of loans, the amount of such arrears on April 1, being \$1,350,000. The Dominion Government will be called upon to pay this year, without recourse, the interest on the Mountain Division bonds. For the interest charges the Government is responsible for \$2,400,000 a year, and the G.T.R. is responsible for \$4,000,000 a year. The amount to be provided for to meet the fixed charges, deficit in operation, and repairs will aggregate \$9,000,000 a year. In considering the future of the line, it must be borne in mind that in addition there must be taken into consideration improvements, betterments

and rolling stock, which will be required, estimated by the Railways Department at anything from \$3,000,000 to \$5,000,000 after a year or two. The minimum amount upon which it was estimated the company would be able to continue as a solvent concern was \$8,000,000.

Returns to Parliament.

A number of returns and financial statements respecting the affairs of the two companies were laid before Parliament. They set forth in considerable detail the information given about the companies by the Finance Minister in the speech quoted above.

Canadian Northern.—The statement of the financial position of the company to April 15, showed a total amount of stock outstanding of \$358,770,798.68, distributed as follows: Guaranteed by Dominion Government, \$104,613,247.77 out of \$104,746,586.72 authorized; guaranteed by Province of Ontario, \$7,859,997.50, out of \$7,860,000 authorized; guaranteed by Province of Manitoba, \$25,501,865.81, out of \$25,665,339.99 authorized; guaranteed by Province of Saskatchewan, \$14,762,546.64, out of \$18,600,000 authorized; guaranteed by Province of Alberta, \$18,950,361.99, out of \$21,744,250 authorized; guaranteed by Province of British Columbia, \$39,953,123.85, out of \$47,975,000 authorized; unguaranteed securities, \$103,944,920.39, out of \$109,000,525.48 authorized; land grant securities, \$21,416,539.99 authorized and issued. The equipment securities outstanding amount to \$17,302,500; and there is also outstanding \$25,000,000 of 5% convertible debenture stock, which brings the total outstanding liabilities up to \$401,073,298.

Total securities issued... \$383,770,798

Imperial Rolling Stock Co.

bonds	17,302,500	
Less issued outside of mileage and equipment:		\$401,073,298
Issued on terminals, elevators, express, telegraph and subsidiary companies...	\$40,338,224	99
Issued on land grant, etc.	21,416,539	99
5 per cent. income convertible D.S.	25,000,000	00
		\$ 86,754,764
Total issued on mileage and equipment		\$314,318,534
Mileage (including 394 miles leased)		
lines	9,993	
Total issue per mile exclusive leased lines		\$ 32,744
Total issue per mile including 5 per cent. income stock		35,348
Total fixed charges exclusive of subsidiary companies and land securities	12,989,059	
Fixed charges per mile	1,299	

The Dominion and British Columbia Governments have undertaken to pay interest on securities for 2 and 3 years after lines are in operation to extent of \$4,514,501, which temporarily reduces total fixed charges on mileage to \$8,474,552 and to \$848. per mile.

The issue of \$45,000,000 of bonds authorized by the Dominion Act of 1914, realized \$36,759,265.10 when pledged or sold, with \$133,333.33 unissued. It was estimated that the issue would produce \$41,052,999, so that owing to the war conditions the company realized \$4,293,734 less than was anticipated. The proceeds of the issue were applied in accordance with the terms of the Act.

The company's liabilities at April 15, were \$92,450,883, made up as follows: London loans on securities, \$29,411,964; Dominion Government and sundry loans, \$16,214,066; one and two year notes, \$14,000,000; bills payable, \$7,300,000; net amount of temporary loans, \$16,395,418; due contractors, \$5,912,497; audited vouchers and pay rolls, etc., less cash on hand, \$3,206,940.

Grand Trunk Pacific.—The first and most important document on the return

relating to the G.T.P.R. is the letter from A. W. Smithers, Chairman of the Board of Directors, G.T.R., dated Dec. 10, 1915, in which he referred to an offer he had made to the Government, which offer he repeated with the G.T.R. directors' approval. This was "that the Government should take over the G.T.P.R. as from Jan., 1916, with all its branch lines, together with its development company, and other subsidiary companies, with all the assets, the G.T.R. to surrender to the Government the whole of the common stock of the G.T.P.R. on condition of the Government relieving the G.T.R. of all liabilities in respect of the G.T.P.R., its branch lines, its development company, and other subsidiary companies, and repaying to the G.T.R. any money advanced by the G.T.R. to the G.T.P.R., or its branch lines, and development company, and other subsidiary companies." After summarizing the financial position, Mr. Smithers went on to say: "We have done our utmost to meet the heavy financing which has been necessary, and the difficulty of which has been immensely increased by the disastrous war conditions. We are now 'at the end of our tether' with regard to G.T.P. financing. . . . I beg you to remember that the G.T.P.R. has been built through a most difficult country, at a cost which is moderate considering the high character of the work, and the satisfactory low grade maintained in crossing the mountains, and it must be also remembered that all the work has been done under the supervision of the Government engineer, and all expenditure has been audited by the Government auditors."

An accompanying statement shows that the par value of bonds issued and outstanding is \$193,251,104.86, out of a total authorized issue of \$221,015,496, the amount realized being \$184,698,507.69. The amount of the interest payable on the bond issue for 1916 is \$7,206,844.20, the guarantees for the same having been given by the Dominion Government in respect of \$2,678,833.82; by the G.T.R., \$3,989,250.22; by the Province of Saskatchewan, \$395,176.32. and by the Province of Alberta, \$143,583.84. The interest payment includes interest on \$55,170,720 Mountain Division bonds assumed by the Dominion Government. To the interest payment there is added the estimated loss in operation on the Mountain Division for one year, \$1,200,000; exceptional expenditure on Mountain Division for maintenance and providing necessary facilities for the operation of the line for one year, \$720,000; loss in operation of branch lines for one year, \$300,000; miscellaneous current expenditure, \$950,000; to provide 50 refrigerator cars at \$4,000 each, \$200,000; making a total with the interest of \$10,576,844.20.

The total expenditure upon the construction and interest payments to Feb. 20, was \$197,129,391.82 in respect of the main line and branches, and there was realized from bond issues \$184,698,507.69; the difference being \$12,430,884.13.

The total amount due to the G.T.R., including the difference between bond issue and cost, amounts to \$14,385,821.37, of which \$801,783.54 is due by the G.T.P.R.; \$13,369,537.83 is due by the G.T.P. Branch Lines Ry., and \$214,500 by the G.T.P. Saskatchewan Ry. The advances to the G.T.P. Development Co. amount to \$11,793,907.46, making the total sum due to the G.T.R. \$26,179,728.83, against which the G.T.R. holds notes of the G.T.P. Branch Lines, the G.T.P. Saskatchewan Co., and the G.T.P. Development Co., for the amounts due by them,

and is also entitled to \$3,868,100 of bonds guaranteed by the Provinces of Saskatchewan and Alberta, representing expenditures made on branch lines and terminals when the amount has been finally agreed upon.

Under the G.T.P.R. Guarantee Act of 1914, the company was authorized to issue \$15,962,666.66 of bonds (in sterling, £3,280,000). It was estimated that these would have realized 91½%, but owing to war conditions they only realized, when pledged or sold, 79.6%, making a difference between the estimated and actual proceeds of \$1,874,734. The other papers on the returns had reference to the expending of the proceeds of these bonds.

Discussion in House of Commons.

When the estimates came up in committee of supply in the House of Commons, May 9, the Minister of Finance, in reply to questions said the G.T.P.R., according to the report of Sir Collingwood Schreiber, the General Consulting Engineer to the Government, was not up to the standard set, viz., the G.T.R. between Montreal and Toronto. It was not likely to be brought up to that standard for some years to come. It was estimated that it would take from \$4,000,000 to \$5,000,000 to bring the line measureably to the standard set. The item was finally passed by the House of Commons, May 12.

In regard to the C.N.R. prospects, the Minister submitted an estimate of the company's earnings up to 1920, supplied by D. B. Hanna, Third Vice President. The total net earnings for the year ended June 30, 1915, were \$6,623,000; for 1916, the estimate was \$9,770,000; for 1917, \$11,500,000; for 1918, \$15,120,000, and for 1919 and 1920, \$17,700,000. The Duluth, Winnipeg & Pacific Ry., the bonds of which are guaranteed by the C.N.R., is one of the most profitable, if not the most profitable, of the company's lines. There is at credit, \$1,300,000 of the proceeds of the Montreal-Port Arthur loan, and about \$4,300,000 of the \$45,000,000 loan, so that with the funds to be provided by this present loan, the contractors will be provided for.

When the vote came up for further consideration, May 13, Hon. W. Pugsley moved to add the following: "Before making such loan, the Governor in Council shall require the company to give to His Majesty the King an option to acquire at any time within five years from the date thereof the railways and other property of the company and of all other railways and property included in the Canadian Northern Ry. system at such price as to the Governor in Council may seem reasonable under existing circumstances." On the resuming of the discussion, May 15, the chairman of committee ruled the amendment out of order, and the discussion proceeded on the main question, the item being passed.

The Dominion Parliament also, in the further supplementary estimates, voted \$10,000 to provide for a continuous audit on behalf of the Dominion, commencing May 1, of the revenues and expenditures of the two companies to which the loans have been granted.

Daylight Saving in Winnipeg.—In connection with the working of the daylight saving bylaw put in force in Winnipeg recently, the C.P.R. put the clock forward an hour, as required, at its shops, and then asked the men to vote on whether the changed time be retained, or a return made to standard time. Of the 1,800 or so employees, over 1,200 voted in favor of standard time.

Railway Rolling Stock Notes.

The C.P.R. has built a portable rail saw at its Angus shops, Montreal.

Canadian Government Railways have ordered 500 steel frame box cars, 50 tons capacity, from Canadian Car & Foundry Co., and 500 similar cars from Eastern Car Co.

Canadian Government Railways are reported to have ordered 20 second hand sleeping cars, 10 second hand tourist cars and 1 second hand dining car from Pullman Co.

The C.P.R. has ordered 21 steel ore cars from Hart-Otis Car Co., two scale testing cars from Canadian Fairbanks-Morse Co., and two ditching machines from American Hoist & Derrick Co.

The Asbestos and Asbestic Co. has received one 6 wheel saddle tank locomotive, with cylinders 13 by 16 ins., and drivers 33 ins. diam., and weighing 59,800 lbs., in working order, from Canadian Locomotive Co.

The Canadian Northern Ry., between Apr. 11 and May 15, received 1 first class passenger car from National Steel Car Co., and 4 compartment observation cars and 3 dining cars from Canadian Car & Foundry Co.

The acting Minister of Railways stated in the House of Commons May 8 that within the next three or four weeks thereafter he would award contracts for from \$3,000,000 to \$4,000,000 worth of cars for Canadian Government Railways.

The Canadian Locomotive Co. has delivered 9 decaped locomotives to the Russian Government, completing the contract for 50 for the Russian Imperial Railways. They were fully described and illustrated in Canadian Railway and Marine World for January.

Canadian Government Railways, since Apr. 14, have received 1 steel sleeping car for Intercolonial Division, from National Steel Car Co., and 22 stock cars, for Transcontinental Division, from Canadian Car & Foundry Co. A description of the latter cars, with an illustration, is given on another page in this issue.

Canadian Government Railways have purchased from Hotchkiss, Blue & Co., Chicago, 2 first class passenger cars, 65 ft. long inside, with wide vestibules; 1 first class passenger car, 60 ft. long inside with wide vestibule, and 2 dummy end baggage cars, 65 ft. long, all with steel underframes and steel sheathed. The passenger cars are mahogany finish, olive green plush upholstery, mantle gas lights, and have smoking rooms.

The Algoma Eastern Ry. has ordered 125 Otis general service cars from Hart-Otis Car Co. They are being built at the Canadian Car & Foundry Co.'s Dominion works. Following are the chief dimensions:

Length over end sills	24 ft. 4½ ins.
Length inside	22 ft. 5 ins.
Width over all	9 ft. 11¼ ins.
Width inside	9 ft. 6 ins.
Height	5 ft.
Height from rail	9 ft. 4 13/16 ins.
Doors on each side	4
Capacity	100,000 lbs.

Canadian Government Railways have ordered 30 Mikado (2-8-2) locomotives, with superheaters, from Canadian Locomotive Co., for delivery in November. Following are the chief details:—

Weight in working order on drivers	213,500 lbs.
Weight in working order, total	283,000 lbs.
Wheel base, rigid	16 ft. 3 ins.
Wheel base, total	35 ft. 1 in.
Wheel base, engine and tender	68 ft.
Heating surface, firebox	242 sq. ft.
Heating surface, tubes	3,398 sq. ft.
Heating surface, total	3,640 sq. ft.
Grate area	56.6 sq. ft.

Driving wheels, diam.	63 ins.
Driving wheel centres	Cast steel
Driving journals	Main, 11 x 20 ins.; others 10 x 12 ins.
Cylinders, diar. and stroke	27 by 30 ins.
Boiler, type	Extended wagon top, radial stay
Boiler pressure	180 lbs.
Tubes, no. and diar.	240 2 ins.; 32 5½ ins.
Tubes, length	20 ft.
Brakes	Westinghouse American
Superheater	Locomotive Superheater Co., Type A
Rear frame	Cradle type
Trailing truck	Radial type with side bearings
Cab	Steel with vestibule
Weight of tender loaded	166,000 lbs.
Tank capacity	9,000 U.S. gals.
Tank, type	Water bottom with vestibule connection
Coal capacity	12 tons
Truck, type	Pedestal, equalized
Truck wheels, diar.	34 ins.
Wheel, type	Steel tired, retaining ring, cast steel centres
Journals	M.C.B. 6 by 11 ins.
Brake beam	High speed with M.C.B. heads

Death of Lieutenant-Colonel Greenwood.

A cable from London, Eng., May 15, announced the death of Lieut.-Col. Henry Smith Greenwood, M.Can.Soc.C.E., who had been suffering from an internal growth for some time, and was for a while in a sanitarium in the south of France. He was born near Kingston, Ont., Apr. 27, 1861, and graduated from the Royal Military College of Canada, with special mention in civil engineering, in June, 1882. He entered railway service in Aug., 1882, and was, to December in the same year, rodman on construction, Canada Atlantic Ry.; from 1883 to 1888 he was in the service of the Department of Railways and Canals, his work being as follows: Jan. to May, 1883, running transit and in charge of survey party traversing inland lakes and small rivers and taking soundings of same; May to Nov., 1883, with survey party making changes in location and establishing permanent bench marks, Nov., 1883, to Jan., 1884, on staff of the construction of locks at Fenelon Falls, Ont., May to Aug., 1884, with survey party running instruments on trial lines; Aug., 1884, to May, 1885, superintending construction of dam across the Otonabee River, Lakefield, Ont.; May, 1885, to Sept., 1886, superintending construction of lock and three small dams near Burleigh Falls, Ont.; Sept., 1886, to Jan., 1887, in office making up estimates; Sept., 1887, to Jan., 1888, on leave in England visiting engineering works; Jan. to Apr., 1888, office work; May, 1889 to Apr., 1892, Assistant Engineer, Cornwall Canal enlargement, with supervision of two sections; Apr., 1892, to June, 1894, Resident Assistant Engineer, Cornwall Canal enlargement, with supervision of three sections, the work consisting of three locks, three weirs, culverts, bridge, deepening and widening of canal and new banks where necessary; in June, 1894, he was transferred from the Cornwall Canal to the Peterborough and Lakefield Division of the Trent Canal, to take charge of surveys and prepare plans for the letting of contracts for the work, consisting of 6 locks, 5 bridges, 5 dams and several smaller works connected with canal construction.

He held a Royal School of Infantry first class certificate and the long service decoration. In 1886 he was captain and adjutant in the 4th Hussars; in 1889, Lieutenant-Colonel of the 3rd Dragoons, and went on the reserve of officers in 1907. He served in the South African war with the 1st Regiment Canadian Mounted Rifles in 1900, and in the native rebellion in Natal in 1906. In the South African war he served through Lord Roberts' campaign in the Orange Free

State, and after the entry of the British into Johannesburg he was appointed to reorganize the railways in the Transvaal. Later, on the removal of Major Waghorn, R.E., who was in charge of the military railways under Sir Percy Girouard, to another point, in control of the engineering of all the Transvaal lines, he was placed in charge, under Major Waghorn, of the lines in western Transvaal, that is, all lines west of Pretoria, and remained in that position until the conclusion of the war, when he was appointed Resident Engineer in charge of the lines in western Transvaal and northern Orange River Colony, and remained in that capacity until his return to Canada in 1909. On the conclusion of the war he organized and commanded a railway regiment from amongst the officials and employees of the Central South African Railways, which included all arms, was well equipped and disciplined and held a high reputation. During the Zulu rebellion drafts from this regiment took part, but he was unable to obtain the necessary leave to join them, as there was a great deal of reconstruction and new work going on on the railways at that time. In June, 1910, he was appointed Assistant Chief Engineer of Construction, Eastern Lines, Canadian Northern Ry., resigning in April, 1914, on going to live in England. He was elected a member of the Canadian Society of Civil Engineers in Dec., 1906, and a member of the Institute of Civil Engineers in Mar., 1904. Since the commencement of the present war, and until a short time before his last illness, he was engaged at the War Office in London.

A. F. Stewart, M.Can.Soc.C.E., Chief Engineer, Eastern Lines, Canadian Northern Ry., Toronto, who was associated with him in railway work in South Africa, as well as later in Canada, wrote us recently in reference to him, as follows:—"He was an able engineer, very thorough and practical in all his work. His modesty and reticence prevented him from being very well known except to his intimate friends, but these knew him to be a man of marked ability and the highest character, entirely to be relied upon both in work and in friendship."

Canadian Overseas Railway Construction Corps.—The C.P.R. has sold two 65-ton steam shovels and two self propelling extension track pile drivers to be used by the Canadian Overseas Railway Construction Corps, which is commanded by Lt.-Col. C. W. P. Ramsey, formerly Engineer of Construction, C.P.R. The Corps has built a considerable mileage of track at strategic points and is all the time making surveys for further construction. The work has often to be done under fire, but fortunately there have been no serious casualties, though there have been many narrow escapes. Lt.-Col. Ramsey and Major C. L. Hervey have been mentioned in dispatches, and 18 of the non commissioned officers and sappers who enlisted when the corps was established have received commissions in the Royal Engineers.

The International Railway Fuel Association held its annual convention at Chicago, Ill., May 15 to 18, when papers dealing with the following subjects were read and discussed,—care of locomotives and boilers with regard to fuel economy, psychology of the firemen, interpretation of coal analysis with special reference to non-combustibles, the transportation department and fuel economy, the functions of a railway fuel inspector, method of illustrating the components of coal, and fuel distributing record system.

Three Quebec Railways to be Acquired by Dominion Government.

The Dominion Parliament has passed an Act authorizing the Governor in Council to acquire, under the provisions of the statutes of 1915, chap. 16, upon such terms as may be approved, the following lines of railway, together such equipment and properties as may be deemed necessary for the operation thereof:—(1) The line commonly known as the Quebec, Montmorency & Charlevoix Ry., extending from St. Paul St., Quebec, to St. Joachim, 43.2 miles; (2) the Quebec & Saguenay Ry., extending from a junction with the last named line at St. Joachim, to Nairn Falls, Charlevoix County, Que., 62.8 miles; (3) the Lotbiniere & Megantic Ry., extending from Lyster to St. Jean des Chaillons, Lotbiniere County, Que., 30 miles. The consideration to be paid for these lines, and for the "equipment and appurtenances" is to be the value thereof as determined by the Exchequer Court of Canada.

The Act of 1915, under which the purchase of these lines is to be effected, provides that the Minister of Railways, subject to the authority of the Governor in Council, may "construct, purchase or lease, either with or without an agreement to purchase, in whole or in part, any line or lines of railway . . . in Quebec, New Brunswick, Nova Scotia or Prince Edward Island . . . which in his opinion can more conveniently and usefully be operated as part of the Government Railways System, or which may be deemed necessary or desirable for the more efficient operation of the said system. A copy of the lease or contract shall be laid before Parliament; that no line shall be leased or otherwise acquired exceeding 200 miles in length, and that no contract for the construction of a line exceeding 25 miles long shall be entered into or the purchase price of any railway paid without a vote of Parliament. No line can be purchased unless it directly connects with some part of the then existing Government Railway system.

The acting Minister of Railways, in introducing the measure. May 15, explained that the capital expenditure on the Quebec, Montreal & Charlevoix Ry. was reported to be, to Mar. 31, \$2,992,209.89; the capital cost of the Lotbiniere & Megantic Ry. was \$349,208.85; and the cash expenditure on the Quebec & Saguenay Ry. was claimed to be \$4,872,315.42, while there was due for right of way, etc., \$461,000, a total of \$5,333,315.42. The latter company had received \$248,000 in subsidies, of which \$116,000 was still in the hands of a branch company, and the Quebec provincial subsidies had not been paid over. The estimated cost of completing the line is \$700,000. The Lotbiniere & Megantic Ry. was to be taken over at \$330,000, and the Quebec, Montmorency & Charlevoix Ry. was to be taken over for the bond issue of \$2,500,000. An amendment was adopted, on the motion of the acting Minister of Railways, to the section providing for the fixing of the value of the line as follows: "Said value to be the actual cost of said railway, but not to exceed \$4,465,000, exclusive of bonded indebtedness which is to be assumed by the Government, but not to exceed in all \$2,500,000." In other words, the Government assumes \$2,500,000 of bonds of the Q.M. & C.R., pays \$330,000 for the Lotbiniere & Megantic Ry., and will pay the actual cost of the Quebec & Saguenay Ry., not to exceed,

however, \$4,135,000. A motion to read the bill a third time six months hence was defeated, May 10, and the measure went to the Senate, where it was passed the following day.

The Quebec, Montmorency & Charlevoix Ry. was originally built as a steam railway, extending, according to the Dominion Railway statistics for the year ended June 30, 1915, from Quebec to Cap Tourmente, 27.50 miles, and having 3.32 miles of branch lines. The line subsequently passed into the hands of the Quebec Ry., Light and Power Co., and is known in the electric railway field as the Q.R.L. & P. Co., Montmorency Division. The statistics of electric railway mileage issued by the Dominion show the following mileage:—Length of first main track, 28.60 miles; length of second main track, 9.80 miles; sidings and turn-outs, 3.00 miles; total mileage of track, 41.40 miles. We are officially advised by the Quebec Ry., Light and Power Co., that the Montmorency Division main line extends to Cap Tourmente, 30 miles. From Quebec to Montmorency, approximately 7 miles, the line is double tracked, and in addition there are some six odd miles of sidings, crossing points, etc., making a total of 43.20 miles. These figures do not include either the Beaufort line, or the upper level line to Montmorency Falls. The difference existing between the returns given to the Department of Railways is largely owing to the fact that the line is not electrified beyond St. Joachim station, and certain of the crossing sidings are also not electrified. The company operates both a steam and an electric railway service over the line, the financial results of the operation of which for the year ended June 30, 1915, will be found in the tables in other parts of this issue. The company had at June 30, 1915, in its steam service, eight freight locomotives; 4 first and 2 second class passenger cars; 2 baggage express and postal cars, and 12 other cars in passenger service; 38 box, 78 flat, one stock, 13 coal, and 44 other cars in freight service, and three cars in the company's service. For the electric service there were on the Montmorency division, 15 closed passenger cars and two sweepers. The line does a very large pilgrimage business in summer between Quebec and the shrine of Ste. Anne de Beaupre.

The Quebec & Saguenay Ry. Co. was incorporated to build a railway from Quebec, or near thereto, to Tadousac, via Murray Bay. For a number of years the project hung fire, but after the charter had been acquired by Sir Rodolphe Forget, things began to move, and the project became linked up with the Q. Ry., L. & P. Co. In March, 1911, a contract was let to O'Brien & Doheny to build a line from Cap Tourmente to Murray Bay wharf, 56 miles. About the same time a contract was let to the Bishop Construction Co. to build 7.50 miles of railway from Murray Bay wharf to a pulp mill at Pointe a Pic. The site of this mill is approximately at Nairn Falls. Track on this line was laid in 1911 and this represents all the track laid in connection with the company's project. O'Brien & Doheny started construction in June, at St. Joachim, mileage 25, on the Q.M. & C. Ry., and continued grading until Aug., 1912, when work ceased. At that time work had been completed to subgrade on about 95% of the 54.54 miles under the

firm's contract. No track had been laid except for construction purposes, but steel for 10 miles of track was reported to be on hand.

The Lotbiniere & Megantic Ry. was built under a Quebec charter, and extends from Lyster on the G.T.R. to St. Jean des Chaillons, 30 miles. The results of its operations for the year ended June 30, 1915, will be found in the railway statistics table in another part of this issue. The company was reported to have owned at that date 4 freight locomotives, 2 first and 2 second class passenger cars, 1 box, 24 flat and 1 other car in freight service, and one caboose. The company received subsidies from the Dominion amounting to \$96,000; and from Quebec, \$126,994. In 1907, the Quebec Legislature incorporated the Quebec Eastern Ry. to build a railway from Sherbrooke to the site of the Quebec Bridge, with power to arrange for the operation of the line into Quebec; a branch line to Lyster, with power to acquire the Lotbiniere & Megantic Ry.; a branch to Lime Ridge, and unnamed branch lines. Extensions of time for the building of the lines were granted from time to time, but nothing was ever done. It was subsequently said that the Q.E. Ry. charter was acquired by the Forget interests, and that the control of the L. & M. Ry. was held by friendly interests, in that it was operated as part of the Quebec Ry., Light, Heat & Power Co.'s system, under that company's General Manager, H. G. Matthews.

The Dominion Parliament has voted in further supplementary estimates, \$4,000,000 to provide the amount required to be paid for the Quebec, Montreal & Charlevoix Ry., the Quebec & Saguenay Ry. and the Lotbiniere & Megantic Ry., and for the equipment, appurtenances and properties used in connection with such railways, as acquired under the statute, and to provide for the cost of completing, equipping and operating the railways—the operating expenses to be chargeable to revenue account. The Minister of Finance, in explaining the vote, stated that the amount involved in the acquiring of the Lotbiniere & Megantic Ry., was \$330,000. There had been expended about \$5,000,000 on the Quebec & Saguenay Ry., which started at St. Joachim on the Quebec, Montmorency & Charlevoix Ry., and both these railways were being acquired in the public interest. If it was necessary that the Q. & S. Ry. should be acquired in order that a large amount of capital should not go to waste, it was necessary that the Q.M. & C. Ry. should be acquired in connection with it, in order that there might be a continuous railway from Quebec to Nairn Falls. So far as the Q., M. & C. Ry. is concerned, the Government assumes the obligation of \$2,500,000 of 5% bonds, and so far as the Q. & S. Ry. is concerned, the Government acquires it on a basis of actual cost, not to exceed some \$4,000,000, which is said to be less than the actual cost.

C.N.R. Honor Roll.—The Canadian Northern Ry. has had prepared an honor roll containing the names of all the officials and employees who have enlisted for overseas service, the roll containing about 1,000 names. It is very handsomely designed, the border containing the arms of all the provinces.

Charges Against G.T.R. Conductor Dismissed.—The cases against William Neil of Niagara Falls, Ont., for alleged theft of money received for fares, were dismissed by the Hamilton magistrate, May 10. The conductor had been in G.T.R. service for 44 years, and is 63 years old.

Mainly About Railway People Throughout Canada.

G. A. Walton, General Passenger Agent, Western Lines, C.P.R., has removed his family from Chicago to Winnipeg.

W. McWood, ex-Superintendent Car Department, Grand Trunk Ry., Montreal, who is 86 years of age, is reported to be very ill.

J. E. M. Firby, who died at Winnipeg, May 1, aged 65, was formerly Foreman of Bridges and Buildings, Canadian Northern Ry. there.

Hon. Frank Cochrane, M.P., Minister of Railways and Canals, returned to Canada early in May, after being absent for several weeks through ill health.

F. H. Phippen, K.C., General Counsel, Canadian Northern Ry., and Mrs. Phippen, left Toronto, May 15, for New York, whence they sailed for England.

W. H. Miller, General Paymaster, Wabash Ry., died suddenly from appendicitis at St. Louis, Mo., Apr. 30, the day prior to that fixed for his wedding.

J. A. Whyte, of Toronto, formerly of Ottawa, who founded the Whyte Railway Signal Co., has enlisted as a sergeant major in the Beavers Battalion, which is being organized in Toronto.

James Adie, local agent, C.P.R. Telegraphs, St. Catharines, Ont., received notice May 3, that his eldest son, Flight Lieutenant H. M. E. Adie, had died from injuries received in action.

G. A. Suckling, son of **H. E. Suckling**, Treasurer, C.P.R., Montreal, was married at Toronto, May 9, to Miss **A. M. Angstrom**, daughter of **A. Angstrom**, Naval Architect, Canadian Northern Ry., Toronto.

V. J. Melsted, A.M.Can.Soc.C.E., heretofore Engineer of Water Service, C.P.R., Winnipeg, has been appointed by the Manitoba Board of Health, to conduct analyses of all public water supplies in the province.

Stephen L. Henderson, who was on the C.P.R. engineering staff in Vancouver, and who enlisted in the Canadian Expeditionary Forces, and was at the front as a lance corporal, is reported missing. He is a son of **Elmes Henderson**, Toronto.

W. G. Connolly, City Passenger and Ticket Agent, Grand Trunk Pacific Ry., Vancouver, B.C., was referred to in our last issue, under the heading of Birthdays of Transportation Men in May, as representing the C.P.R. instead of the Grand Trunk Pacific Ry.

Geo. W. Stevens, President, Chesapeake and Ohio Ry., Richmond, Va., who was the guest in Montreal of Sir Frederick Williams-Taylor, General Manager, Bank of Montreal, was entertained at luncheon at the Mount Royal Club, May 5.

Capt. George McNair, killed in action in France, recently, was at one time chief clerk in the Freight Department, G.T.R., Hamilton, Ont., and at the outbreak of war was in Grand Trunk Pacific Ry. service in the west.

William A. Gardner, President, Chicago and North Western Ry., Chicago, Ill., died at Barnstable, Mass., May 11. He had been in ill health for some time, and went to his summer home, where he died, towards the end of April.

F. C. Salter, European Traffic Manager, G.T.R., London, England, who underwent two rather serious operations for abdominal trouble recently, was re-

ported early in May to have recovered sufficiently to enable him to take up his work again.

Douglas Charles O'Keefe, whose appointment as City Passenger Agent, C.P.R., Tacoma, Wash., was announced in our last issue, was born at Grand Forks, N.D., Sept. 29, 1887, and was from June, 1907, to Apr., 1916, in the Passenger Department, C.P.R., there.

Lieutenant O. P. Hertzberg, son of **A. L. Hertzberg**, M.Can.Soc.C.E., Division Engineer, Ontario Division, C.P.R., Toronto, was married there, recently, to Miss **J. C. Morris**. Lieutenant Hertzberg, who was wounded while on active service, is home on leave to recuperate.

George Moberly, who died at the General and Marine Hospital, Collingwood, Ont., Apr. 27, aged 86, was a member of

C. A. Cotterell,
Superintendent, District 2, British Columbia
Division, Canadian Pacific Railway.

the Royal Commission appointed in 1886 to enquire into and report as to the advisability of instituting a board of railway commissioners.

James McGown, Jr., whose appointment as Locomotive Foreman, C.P.R., Rogers Pass, B.C., was announced in our last issue, was born at Vancouver, B.C., Feb. 19, 1893, and entered C.P.R. service in August, 1909, since when he served an apprenticeship and served as machinist.

Jno. M. Egan, who was the first General Superintendent of the Western Division, C.P.R., at Winnipeg, from Jan. 1882 to Sept. 1, 1886, has resigned the presidency of the Kansas City Railway & Lighting Co., Kansas City, Missouri, and is living at Amboy, Ill., near which he has a large farm.

H. W. Wheatley, elder son of **A. W. Wheatley**, President, Lima Locomotive Corporation, Lima, Ohio, and until recently Vice President, Canadian Locomotive Co., Kingston, Ont., is taking an aviation course at Hammondsport, N.Y., and when qualified will report at Ottawa for overseas service.

Major T. C. Irving, Jr., of Toronto, Vice President of Robert W. Hunt & Co., Ltd., consulting and inspecting engineers, etc., who has been at the front almost since the beginning of war, and is now officer commanding no. 2 Field Co., Canadian Engineers, First Canadian Division, is to be married in England in June to Miss **Jessie Murray** of Toronto.

Capt. Ian M. W. Sinclair, of the 13th Battalion, son of **Angus Sinclair**, railway contractor, Toronto, was slightly wounded in the shoulder while in action recently, but has returned to duty. He was previously wounded in the knee at the Orchard battle. His younger brother, **Lt. Angus Sinclair**, is in a hospital in France suffering from shrapnel wounds.

G. J. Weidman, whose appointment as City Passenger Agent, C.P.R., Cleveland, Ohio, was announced in our last issue, was born at New York, N.Y., Apr. 20, 1889, and entered C.P.R. service June 11, 1911, since when he has been, to Oct. 1912, stenographer, New York; Oct. 1912 to Nov. 1913, assistant ticket agent, New York; Nov. 1913 to Jan. 1916, City Passenger Agent, Washington, D.C.

William Cotter, until recently President and General Manager, Pere Marquette Rd., Detroit, Mich., who has been appointed President and General Manager, Manufacturers' Ry. and St. Louis and O'Fallon Ry., St. Louis, Mo., was from 1896 to 1899, Superintendent, Eastern Division, G.T.R., Montreal; 1899 to July 1, 1901, Superintendent, Western Division, same road, Detroit, Mich.

F. W. Peters, General Superintendent, British Columbia Division, C.P.R., Vancouver, is suing the Dominion Shipbuilding, Engineering & Dry Dock Co., Ltd., North Vancouver, regarding the purchase by him of 100 shares in the company. He asks for a declaration that the subscription was obtained by fraud and that he is not a shareholder, or in the alternative for a declaration that the shares are fully paid up.

Miss Katherine Hughes, who came out from England shortly after Sir William Van Horne's death to write his biography, after spending some time in Montreal left early in April and occupied some weeks in visiting various places in the United States, particularly his birthplace at Joliet, Ill., and also Toronto and other Canadian points. She has returned to Montreal with a large amount of valuable information to be used in her book.

C. R. Moore, who has been appointed Assistant to Vice President, Construction, Maintenance and Operation, G.T.R. (**H. G. Kelley**), entered G.T.R. service at Hamilton, Ont., in 1883, and has served in the Mechanical Accountant's office, and the Motive Power, Car, and Transportation departments. In 1911, when chief clerk to the Superintendent, at Toronto, he was appointed chief clerk to Vice President Kelley, and has remained in that position until his present appointment.

William P. Hutchinson, who has been appointed Resident Manager, The Macdonald, Grand Trunk Pacific Ry., Edmonton, Alta., was born at Penzance, England, Aug. 31, 1884, and after spending about two years with the American Audit Co., New York, was on July 2, 1913, appointed auditor, Chateau Laurier, G.T.R., Ottawa, remaining in that position until Aug. 1913, when he was appointed auditor, The Fort Garry, G.T.P.R., Winnipeg,

continuing as such until May 1, the date of his present appointment.

W. B. Bamford, who has been appointed District Freight Agent, C.P.R., Toronto, was born at Belleville, Ont., Sept. 10, 1863. Prior to his present appointment he was Division Freight Agent, Atlantic Division, St. John, N.B., which position he held from Apr., 1911, when his former title of General Freight Agent, Atlantic Division, held from June, 1910, was abolished. Before the last mentioned date he was District Freight Agent, London, Ont. He was entertained to luncheon at the Union Club, St. John, N.B., May 8, before leaving for Toronto.

Charles R. Moore, who has been appointed Assistant to Vice President, Construction, Operation and Maintenance, G.T.R., Montreal, was born at Hamilton, Ont., Oct. 12, 1867, and entered G.T.R. service in 1883, since when he has served successively, as junior clerk, Mechanical Accountant's office, Hamilton, Ont.; and in the Motive Power, Car, Maintenance of Way, and Transportation Departments at Montreal, and at various terminals on the system. In 1911, being then chief clerk to Superintendent, Toronto, he was appointed chief clerk to Vice President Kelley, and remained as such until his present appointment.

Thomas E. Sands, who has been appointed Freight Traffic Manager, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn., was born at Albany, N.Y., Jan. 4, 1869, and entered railway service in June, 1886, since when he has been, to 1888, clerk, Chicago, St. Paul, Minneapolis & Omaha Ry.; 1888 to 1909, successively, contracting freight agent, travelling freight agent, chief clerk, Freight Traffic Department, and Assistant General Freight Agent, Minneapolis, St. Paul & Sault Ste. Marie Ry.; Apr., 1909, to the date of his present appointment, General Freight Agent, same road, Minneapolis, Minn.

John D. McAuley, whose appointment as Travelling Freight and Passenger Agent, Grand Trunk Pacific Ry., Juneau, Alaska, was announced in our last issue, was born in Plantagenet, Ont., June 11, 1884, and entered railway service Oct. 1904, since when he has been, to Dec. 1908, in Local Freight Department, G.T.R., Montreal; Dec. 1908 to June 1911, in Freight Claims Department, G.T.R., Montreal; June 1911 to Sept. 1913, in Foreign Freight Department, G.T.R., Montreal; Sept. 1913 to Sept. 1914, City Freight Agent, Grand Trunk Pacific Ry., Vancouver, B.C.; Sept. 1914 to Mar. 1, 1916, City Freight Agent, G.T.P.R., Regina, Sask.

William Gordon Powell, whose appointment as Freight and Passenger Agent, Grand Trunk Pacific Ry., Skagway, Alaska, was announced in our last issue, was born at Galt, Ont., June 27, 1891, and entered railway service Oct. 1908, since when he has been, to Nov. 1909, clerk, C.P.R., Brandon, Man.; Nov. 1909 to Nov. 1910, excursion clerk, C.P.R., Brandon, Man.; Nov. 1910 to Nov. 1911, chief clerk, District Passenger Agent's office, Grand Trunk Pacific Ry., Winnipeg; Nov. 1911 to Feb. 1912, Assistant City Passenger Agent, G.T.P.R., Winnipeg; Feb. to Dec. 1912, City Passenger Agent, G.T.P.R., Winnipeg; Dec. 1912 to June 1913, Travelling Passenger Agent, G.T.R. and G.T.P.R., Winnipeg; June 1913 to Feb. 1916, City Passenger and Ticket Agent, G.T.P.R., Regina, Sask.

Flight Lieutenant Trafford Jones, who was killed somewhere in France or Flanders recently, while on patrol duty, by

being shot through the head, was born at Toronto, Oct. 19, 1887, and was educated at Upper Canada College and the Faculty of Applied Science, Toronto University, graduating from the latter in 1908. He was engaged for some time in the Canadian Northern Ry. Mechanical Department offices, Toronto, leaving in 1911 to promote Canadian Brakeshows, Ltd. He joined the Army Service Corps in Feb., 1915, going to England in May, 1915. Early this year he was transferred to the Royal Flying Corps and was on active service at the front for four months. He leaves a widow, a daughter of Alfred W. Smith, Toronto, and one child.

L. Mulkern, who has been appointed Division Freight Agent, Atlantic Division, C.P.R., St. John, N.B., was born at London, Ont., June 18, 1871, and entered C.P.R. service in Mar., 1890, since when he has been, to 1897, operator, Freight Department, Toronto; 1897 to 1901, inward freight clerk, London, Ont.; June 1, 1901, to June, 1903, clerk in General Freight Agent's office, Toronto; June, 1903, to Apr., 1908, canvassing freight agent, chief clerk to General Freight Agent, and Travelling Freight Agent, Toronto, consecutively; Apr., 1908, to June, 1910, chief clerk to General Freight Agent, Through Traffic, Toronto; June, 1910, to Jan., 1914, District Freight Agent, London, Ont.; Jan., 1914, to May 15, 1916, District Freight Agent, Toronto.

Thomas Francis Rahilly, whose appointment as acting Trainmaster, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., was announced in our last issue, was born at Diorite, Mich., Oct. 6, 1892, and entered railway service June 22, 1908, since when he has been, to July 20, 1908, section hand, Chicago & North Western Ry., Michigamme, Mich.; July 23, 1908, to May 11, 1913, freight clerk, Duluth, South Shore & Atlantic Ry., St. Ignace, Mich.; May 12 to Aug. 27, 1913, clerk in Audit Office, same road, Marquette, Mich.; Aug. 28 to Nov. 2, 1913, chief clerk to Yardmaster, Sault Terminals, same road, Sault Ste. Marie, Ont.; Nov. 3, 1913, to Nov. 30, 1914, clerk in Comptroller's Office, Algoma Central & Hudson Bay Ry. and Algoma Eastern Ry., Sault Ste. Marie, Ont.; Dec. 1, 1914, to Apr. 15, 1916, Travelling Auditor, same companies.

H. D. Cameron, whose appointment as Mechanical Engineer, Canadian Northern Ry., Toronto, was announced in our last issue, was born there Sept. 23, 1879, and was educated at the Montreal public and high schools, and graduated from McGill University with the degree of B.Sc. (Mechanical Engineer) in 1901. He entered railway service in the summer of 1899 as mechanical apprentice, G.T.R. shops, Montreal, and continued there during vacations and after graduation until 1902, since when he has been, to 1903, in drawing office, Mechanical Department, Canada Atlantic Ry., Ottawa; 1903 to 1905, Assistant Engineer, Montreal Water and Power Co., Montreal; 1905 to 1906, on engineering staff of Gulf, Colorado and Santa Fe Ry., Cleburne, Tex.; 1906 to Apr. 1, 1916, in drawing office, latterly as chief draughtsman, Mechanical Department, Canadian Northern Ry., Winnipeg.

T. Collins, who has been appointed Superintendent, District 2, Ontario Division, C.P.R., London, entered C.P.R. service, Sept. 2, 1885, since when he has been, to Mar. 7, 1887, brakeman, West Toronto, Ont.; Mar. 7, 1887, to Aug. 1, 1896, conductor, West Toronto, Ont.; Aug. 1, 1896, to Sept. 1, 1899, construction

trainmaster, Guelph and Goderich Branch; Sept. 1 to Oct. 15, 1897, Trainmaster, London, Ont.; Oct. 15, 1897, to Jan. 1, 1908, construction trainmaster, double tracking, Montreal to Smiths Falls, Ont.; Jan. 1 to Apr. 15, 1908, Trainmaster, Smiths Falls, Ont.; Apr. 15, 1908, to June 1, 1909, construction trainmaster, double tracking, Montreal to Smiths Falls, Ont.; June 1, 1909, to June 1, 1912, Assistant Superintendent, Smiths Falls, Ont.; June 1 to Dec. 1912, Superintendent, District 2, Lake Superior Division, Chapleau, Ont.; Dec., 1912, to May 1, 1913, Superintendent, District 4, Ontario Division, Toronto.

Jules E. Morazain, who has been appointed Superintendent, District 1, National Transcontinental Ry., Quebec, Que., was born at Wheatland, Que., July 31, 1875, and entered C.P.R. service May 3, 1890, since when he has been, to May 24, 1890, clerk, Drummondville, Que.; Aug. 1, 1890, to Jan. 8, 1891, operator, Foster, Que.; Jan. 9 to Aug. 12, 1891, operator, Richfort, Vt.; Aug. 12, 1891, to Aug. 15, 1892, undertook a commercial course; Aug. 15 to Sept. 26, 1892, operator, C.P.R., Sutton, Que.; Sept. 26, 1892, to Feb. 8, 1894, operator, Highlands, Que.; Feb. 9, to July, 1894, operator, Richfort, Vt.; July to Oct., 1894, relieving operator at various points; Oct., 1894, to May 27, 1895, operator, Highlands, Que.; May 27, 1895, to Sept. 24, 1901, agent, Highlands, Que.; Sept. 24, 1901, to Nov. 3, 1908, agent, Mile End, Que.; Nov. 3, 1908, to Jan. 31, 1913, General Agent, Operating Department, Quebec, Que.; Feb. 1 to Dec. 6, 1913, Assistant Superintendent, District 3, Eastern Division, Quebec, Que.; Dec. 6, 1913, to May, 1916, Assistant Superintendent, Montreal Terminals, C.P.R.

James M. MacArthur, whose appointment as Superintendent, District 1, Manitoba Division, C.P.R., Kenora, Ont., was announced in our last issue, was born at Toronto, Dec. 8, 1885, and entered C.P.R. service July 16, 1902, since when he has been, to Oct. 1, 1902, clerk to Division Engineer, Toronto; Oct. 1, 1902, to Mar. 1, 1903, clerk to Chief Dispatcher, Toronto; Mar. 1 to July 1, 1903, clerk to Superintendent, Moose Jaw, Sask.; July 1, 1903, to Aug. 10, 1907, chief clerk to Terminal Superintendent, Toronto; Aug. 10, 1907, to Aug. 5, 1909, assistant chief clerk to General Superintendent, Ontario Division, Toronto; Aug. 5, 1909, to Aug. 9, 1910, assistant chief clerk to Second Vice President, Winnipeg; Aug. 9, 1910, to Feb. 21, 1912, chief clerk to Second Vice President, Winnipeg; Feb. 21, 1912, to Oct. 3, 1913, chief clerk to General Superintendent, Manitoba Division, Winnipeg; Oct. 3, 1913, to Aug. 1, 1914, Trainmaster, Medicine Hat, Alta.; Aug. 1, 1914, to Feb. 24, 1915, Terminal Trainmaster, Calgary, Alta.; Feb. 24, to Mar. 23, 1915, acting Superintendent, Cranbrook, B.C.; Mar. 23 to Oct. 31, 1915, Terminal Trainmaster, Calgary, Alta.; Oct. 31 to Dec. 1, 1915, acting Superintendent, Nelson, B.C.; Dec. 1, 1915, to Mar. 31, 1916, acting Superintendent, Lethbridge, Alta.

Geo. O. Somers, who has been Secretary of the Canada Bond Corporation, Ltd., Toronto, for the last three or four years, and who was appointed member of the Traffic Rates Bureau for western railways, Chicago, Ill., recently, was born at Barrie, Ont., July 10, 1860. He entered railway service in 1875, since when he was consecutively to 1879, telegraph operator, Northern Ry. of Canada, assistant agent, relief agent, station agent and superintendent's clerk, same road; 1880 to 1882, engaged in other business at Chicago; 1883 to 1885, successively clerk,

general freight office, acting general baggage agent and chief clerk, general passenger and ticket department, Canadian Pacific Ry., at Winnipeg, Man.; 1886, chief clerk, general passenger and ticket department, Michigan Central Rd., at Chicago; 1887, travelling passenger agent, Duluth, South Shore & Atlantic Ry., at Marquette, Mich.; to Sept., 1894, successively chief clerk, general passenger and ticket department, chief clerk, general traffic department, and Assistant General Freight Agent, Great Northern Ry.; Sept., 1894, he was appointed General Freight Agent, same road, and later transferred to a similar position on the Chicago Great Western Rd., which he resigned in June, 1912, to take up the position in Toronto which he has just relinquished.

Allan Purvis, who has been appointed General Superintendent, Eastern Division, C.P.R., Montreal, was born at Batavia, Java, June 29, 1878, and was educated at the Merchant Taylor's School, Liverpool, Eng. He entered C.P.R. service in Vancouver, B.C., at an early age, and was

from Aug. 1890 to Feb. 1891, messenger, Stores Department; Feb. to Nov. 1891, storesman; Nov. 1891 to Sept. 1892, junior clerk, Vancouver, B.C.; Sept. 1892 to Aug. 1893, timekeeper, Donald, B.C.; Aug. 1893 to Oct. 1894, clerk, Vancouver, B.C.; Oct. 1894 to Mar. 1895, assistant storekeeper, North Bend and Kamloops, B.C.; Mar. 1895 to Sept. 1896, clerk and operator, Car Service and Fuel Department, Vancouver, B.C.; Sept., 1896 to Jan. 1899, Chief Clerk, Fuel Department, Vancouver, B.C.; Jan. 1899 to Feb. 1908, chief clerk to General Superintendent, Pacific Division, Vancouver, B.C.; Feb. to Nov. 1908, Superintendent, District 4, Central Division, Souris, Man.; Nov. 1908 to Oct. 1909, Superintendent, District 3, Pacific Division, Nelson, B.C.; Oct. 1909 to Oct. 1911, Local Manager, Fraser Valley Branch, British Columbia Electric Ry., Vancouver, B.C.; May 1912 to Feb. 1915, Manager of Interurban Lines, same company, New Westminster, B.C.; May 1915 to May 1, 1916, Superintendent, District 2, Ontario Division, C.P.R., London, Ont.

a debt, at the end of this war, of \$1,000,000,000. In time of peace it would not be a light undertaking to bring about the nationalization of all the railways of Canada; it would certainly not be a light undertaking to do so in time of war. But this situation must be faced; there must be an end of this annual coming to the Government by these two railway companies for relief. The policy which we have adopted has been stated to be no policy. I say it is the true policy in the situation in which we find ourselves. We are not in a position to say what should be the permanent solution of Canada's railway problem. We are in this position, that we do not want these railway companies to collapse. The policy which has been before this committee, and I know it has met with approval in this House, is the true policy at this time, and it is not the less the true policy because it provides temporarily for the situation. It bridges time, it enables these roads to continue—these roads which are so vital, so essential for the welfare of this country—until such time as, upon the best advice that we can get, we shall be able to suggest some permanent solution, which I believe will probably involve the taking over by this Government of one or more of the existing railway systems, and which, as I stated, may involve later on the nationalization of all the railway systems of Canada."

Royal Commission to Enquire into the Railway Situation.

The Dominion Parliament has voted \$150,000 to provide for an inquiry and a report upon the railway situation in Canada. In explaining the vote in the House of Commons, May 15, the Minister of Finance said the terms of the commission had not been settled. In general terms, the purpose the Government has in view, is that a full report shall be made upon the physical and financial conditions of the railways in Canada and upon the general railway situation, in order that it might be in a position to adopt a policy which would prevent recurring visits for temporary aid, and settle the railway situation in permanent fashion. The powers which will be given to the commission will have to receive careful consideration by the Government in order that the end in view may be accomplished. The commission will furnish the Government with information respecting the physical and financial conditions relating to the railway companies of Canada, and also, it is hoped, will give suggestions and advice as to what distribution or rearrangement, or linking up of lines and systems would give the best economic results for the enormous amount of capital which has been expended. The Government has in mind a commission clothed with wide powers which will bring in a comprehensive report, as a result of which it will be known what policy, at least upon the Government's view, should be adopted to settle the railway situation with which the country is confronted. The problem cannot be sidestepped. The loans given at the present session are a measure of temporary assistance, and there is every reason to believe that if steps are not taken to provide a permanent solution, the same situation will recur. The personnel of the commission has not been settled by the Government. It is not an easy task to settle upon men of ability. Such men might be found in Canada,—others suggest they are to be found only in the United States,—but the problem of finding them the Government must address itself to. The commissioners will be asked to advise generally as to the railway situation, and to report as to what arrangement, distribution, or linking up of the lines or systems will

give the best economic results. The Government cannot make any commission a dictator; they cannot abdicate the functions of the Government or of Parliament in favor of any commission. But it is hoped the commission will give the Government the benefit of expert knowledge to enable them to find a permanent solution of the railway situation.

In the course of the discussion on the Canadian Northern and Grand Trunk Pacific loans, May 15, the Minister of Finance said: "We are confronted with a railway situation which it is our duty to solve, and which we propose to solve by taking the best expert advice that we can get, looking to a permanent settlement of these difficulties which annually confront the Government. My own view is that the solution of that railway problem may involve, and probably will involve, the Government of Canada taking over one or more of the railway systems of Canada. As I stated in my speech when introducing these loans to the House, it is possible that it may lead to the nationalization of the railways of Canada. But I stated at the same time, and I state now, that whether a war is on or not, it is not a light undertaking to take over all the railways of the Dominion. We should have to consider many things; as, for example, the effect upon our credit of taking them all over at once. The member for South York seemed to suggest that it was a very easy thing to take them all over. Well, it is not an easy thing to take over all the railways of Canada and assume all the activities now being carried on by them, activities connected with immigration; activities connected with transportation upon the Atlantic and upon the Pacific; the operation of all those roads; the financing of their needs. That would not be a light undertaking at any time, even if we had no war. But I desire, in conclusion, to say that we are in this war; we are confronted with heavier responsibilities by far than have ever fallen to the lot of the people of Canada before; that the end of this war is not in sight; that we are increasing our national debt at the rate of \$20,000,000 or \$25,000,000 a month; that we shall probably be confronted with

Small Claims Against Government Railways.

In an Act passed in 1911, setting out the procedure to be followed in respect to small claims against the Canadian Government Railways, under which the General Manager may be sued directly, provision was only made for claims against the Intercolonial Ry. A recent case brought out the fact that although the Prince Edward Island Ry. is a Canadian Government railway, a small claim against it could not be tried in the local courts owing to the fact that it was not specifically mentioned in the Act. An Act has now been passed making the Act of 1911 apply to the P.E.I.R., as well as to the I.C.R. In the House of Commons, amendments were introduced to make this provision retroactive, and to make the provisions of the Act apply in future to all railways operated by the Canadian Government. Both were defeated. The Senate added a clause making the measure retroactive so far as the P.E.I.R. is concerned, but the Commons refused to accept it, and the Senate decided May 16, not to press it. The measure therefore became law in the form it left the Commons.

The American Railway Tool Foremen's Association will hold its annual convention at Chicago, Ill., Aug. 24 to 26. Among the committee reports to be dealt with will be the heat treatment of steel, special tools for steel car repairs, devices for reclaiming material, special tools and devices for the forge shop, emery wheels as applied to locomotive repairs, and jigs and devices for locomotive houses.

The American Railroad Master Tinsmiths, Copper Smiths and Pipefitters Association held its annual convention at Chicago, Ill., May 22 to 24, when a number of papers were read and discussed.

The old Western Hotel premises, Second Ave., Saskatoon, Sask., are being thoroughly rearranged for an office building for the Canadian Northern Ry.

Intercolonial Railway Betterments, Etc.

About three years ago a new locomotive house and power station were built at Port Tupper, N.S., on a foundation of creosote piling, the enclosed space being filled in with miscellaneous debris. During the past winter this mass of material was discovered to be on fire, originating either from hot ashes from the locomotives or from spontaneous combustion. When the enclosed area was partially uncovered it was found that some of the creosote piling had been burned off, and the whole building was in danger of collapse. The situation is now reported to be thoroughly under control, and the building in a safe condition, although some cracks have developed.

The Dominion Parliament has voted \$978,000 on capital account towards the building of a branch line from Sunny Brae to Mulgrave, N.S. It was explained that this line will be 93.18 miles long, with a 0.6 gradient east and west. It is intended to open up the central portion of Guysboro County, and to provide a more economical route for the iron, steel and coal traffic from Sydney and Newfoundland than the present one. The vote in 1915 was \$1,000,000, out of which \$22,000 were expended upon surveys, which are now completed, and the present \$978,000 is a revote. It is the Government's intention to proceed with the construction of the line just as soon as financial conditions warrant.

At a conference between the Halifax city authorities and the Dominion Government officials in charge of the construction of the new railway terminal facilities recently, it was agreed that the bridge across Young Ave. be made 80 ft. wide, instead of 65 ft., as originally planned, at an additional cost of \$10,000.

The acting Minister of Railways stated in the House of Commons, May 3, that it was not the Government's present intention to change the location of the line, or to build a new line between Truro, N.S., and Moncton, N.B., for the purpose of avoiding existing heavy gradients over the Cobequid Mountains. Some surveys had been made, at a cost of over \$37,000, for a new route between the two points named.

The Dominion Parliament has voted \$129,600 to bring the New Brunswick & Prince Edward Island Ry., running from Sackville to Cape Tormentine, up to Intercolonial Ry. standard. It is proposed to replace five of the existing bridge structures with pile trestles, three with wood stringers, and the bridge at Baie Verte with steel spans on concrete piers and abutments at a cost of \$56,500. The 56 lb. steel rails will be replaced with 80 lb. at a cost of \$69,000; additional ballasting will cost \$3,100, and a telegraph line \$1,000.

The acting Minister of Railways stated in the House of Commons recently that the total cost of the Main St. subway at Moncton, N.B., was \$132,673.21. Nothing was paid for right of way; but there were certain claims outstanding for abutment damages. When financial conditions improve, the Department will complete the elimination of level crossings in Moncton in accordance with the arrangements made between the management and the City Council. Plans are being made for the building of a subway under the railway tracks at Central St., Campbellton, N.B.

The Dominion Parliament has voted \$111,000 towards the construction of a spur line to Courtenay Bay, St. John, N.

B., this being a revote. The construction of this spur will permit the abandonment of 0.68 of a mile of the present line, which contains a number of objectionable street crossings in the city. The proposed line will be free of all street crossings, and will give the railway control of the water front at that point. The \$111,000 will cover the cost of the purchase of the right of way, all expenses in connection therewith, and the preparation of plans, but will not provide any money for construction. (May, pg. 183.)

Railway Finance, Meetings, Etc.

Maritime Coal Ry. and Power Co.—The annual meeting was held in Montreal, May 1. The report for the year ended Feb. 29 showed net profits of \$136,192, an increase of \$24,981 over the preceding year. After paying \$97,407 interest on bonds, providing for sinking, depreciation and other funds \$11,701, was added to profit and loss account which now stands at \$65,355. The total assets are valued at \$3,940,154. The accounts of the railway portion of the company's undertaking are not reported separately. The directors for the current year are:—W. Hanson, President; A. E. Dymont, Vice President; Hon. N. Curry, G. R. Holme, A. MacLaurin, W. L. Magden, Hon. W. Mitchell, W. H. Tottle.

New Brunswick and Prince Edward Island Ry.—The acting Minister of Railways stated in the House of Commons recently, that the amount paid on the purchase price of the New Brunswick and Prince Edward Island Ry. was \$180,000. The amount unpaid was \$90,000, on which there had been paid in interest to Aug. 1, 1915, \$10,186.50.

St. John and Quebec Ry.—The acting Minister of Railways stated in the House of Commons recently, that since the Government made a tentative agreement for leasing the St. John Valley Ry. (the New Brunswick section of this projected railway), it had expended \$6,925.52 in operation and maintenance. The receipts from the operation were \$5,245.98.

Temiscouata Ry.—Net earnings for February were \$58. Aggregate earnings for eight months ended Feb. 29, \$24,141.

White Pass and Yukon Route.—Gross earnings for Feb. \$17,664, against \$12,543 for Feb. 1915. Aggregate earnings for two months ended Feb. 29, \$26,884, against \$18,818 for same period 1915.

The Master Boiler Makers' Association held its annual convention at Cleveland, Ohio, May 23 to 26. The subjects dealt with in committee reports, covered cleaning and maintaining superheater tubes, removing and replacing wide fireboxes, basic or acid steel for fireboxes, cleaning boilers with tubes removed, cracking of barrel sheets, bulging of front tube sheets, advantage of cutting off stay ends with oxy-acetylene, rules for arriving at maximum heating surface, fusible plugs in crown sheets, standard thickness of copper ferrules for good and bad water districts, do long tubes vibrate in service, oxy-acetylene and its advantages in boiler repairs, electric welding, prevention of cracking in side sheets.

Canadian Society of Civil Engineers, Edmonton Branch. At the annual meeting recently, the following officers were elected for the current year: L. B. Elliott, Chairman; J. Chalmers, Vice Chairman; C. A. Robb, Secretary-Treasurer; A. T. Fraser, J. L. Cote, D. J. Carter and D. Donaldson forming the executive committee.

Timiskaming and Northern Ontario Railway Report.

The Province of Ontario owns the Timiskaming and Northern Ontario Ry., a steam road, and the Nipissing Central Ry., an electric line, which are operated by the Timiskaming and Northern Ontario Ry. Commission. The commissioners' report for the year ended Oct. 31, 1915, issued recently gives the following information:

Revenue from transportation.....	\$1,485,080.02
Revenue other than transportation....	66,471.75

Total operating revenue	\$1,551,551.77
Maintenance of way and structures	\$325,865.86
Maintenance of equipment	262,654.51
Traffic expenses	18,135.13
Transportation expenses ..	625,911.92
General expenses	95,929.49

Total operating expenses	\$1,328,496.91
--------------------------------	----------------

Net operating revenue	223,054.86
Ore royalties	26,268.74
Rent from joint facilities	13,815.26
Rent from lease of road	16,601.37
Miscellaneous income	2,857.98

Total income	\$ 282,598.21
Deductions from income	72,059.58

Total earnings	\$ 210,538.63
----------------------	---------------

Compared with the year ended Oct. 31, 1914, the total operating revenue shows a decrease of \$119,347.10; the total operating expenses a decrease of \$140,077.32; and the net operating revenue an increase of \$20,230.22. The income from ore royalties in 1913-14 decreased, \$29,605.77, while three new items amounting to \$33,274.61, bring the total income up to \$282,598.21, an increase of \$24,399.12. The deductions from income show an increase of \$29,221.86, and the total earnings a decrease of \$18,439.60. From the profit and loss account \$225,000 was paid to the Treasurer of Ontario, leaving a credit balance of \$415,664.24.

ASSETS.

Cost of road	\$17,913,700.48
Cost of equipment	2,243,124.88
Nipissing Central Ry.	464,677.97
Empire Lumber Co., Latchford ..	7,176.50
Working assets	879,750.04
Deferred debit items	9,770.55

\$21,518,200.42

LIABILITIES.

Provincial loan account	\$20,483,415.77
Working liabilities	619,100.41
Balance profit and loss.....	415,664.24

\$21,518,200.42

TRAFFIC STATISTICS.

Revenue passengers	480,995
Passengers carried one mile	21,446,747
Passengers carried one mile per one mile of road	65.287
Average distance carried (miles)	44.59
Average amount received	\$1.00
Average receipts per passenger per mile..	2.25 cts.
Passenger service train revenue per train mile	\$1.15
Revenue freight carried (tons) ..	675,998
Tons carried one mile	94,939,616
Carried one mile per mile of road	289,018
Average distance of haul of one ton (miles)	140.25
Average revenue per ton	\$1.47
Average amount received per ton per mile of road	\$0.98
Freight revenue per train mile	\$1.15
Freight originating on the line (tons) ..	487,173
Received from Canadian lines (tons) ..	151,762
Received from U. S. lines (tons)	38,003
Total (tons)	676,938
Mileage of revenue passenger trains	417,290
Mileage of revenue mixed trains	66,019
Mileage of revenue freight trains	350,489
Total revenue train mileage	833,798

British Rail Exports. The export of steel rails from Great Britain for February was 3,905 tons against 14,877 tons in Feb. 1915, and 35,484 tons for Feb. 1914. The total export for January and February was 4,617 tons, of which 4,169 tons went to India, 317 to Australia and 131 to South Africa.

Increase in Prices of Railway Materials and Supplies.

E. J. Chamberlin, President Grand Trunk and Grand Trunk Pacific Railways, has had the following statement prepared showing the increase in market prices of a large number of materials and supplies used by railway, as compared with the prices in 1914 before the outbreak of war:—

INCREASES RANGING FROM 5 TO 80 PER CENT.		
	Canada.	U.S.
Acids.....	56	—

Canadian Lines Leased by New York Central Railroad.

The New York Central Rd. Co.'s report for the year 1915 contains the following paragraph: "By lease dated Sept. 27, 1915, which became effective Jan. 1, 1916, this company leased the railway and property of the St. Lawrence & Adirondack Ry. Co. and assumed its lease of a portion of the Grand Trunk Ry. extending from Valleyfield to Beauharnois and its track-

age rights over the Canadian Pacific Ry. from Adirondack Jct. into the city of Montreal. The lease is for 21 years at an annual rental of a sum equal to the interest payable on bonds of the lessor, which may at any time be outstanding, payable direct to the holders of such bonds. On the same date a lease of the railway and property of the Ottawa & New York Ry. Co. was executed to become effective Jan. 1, 1916, and to continue for 21 years at an annual rental of a sum equal to the interest payable on bonds of the lessor, which may be outstanding, payable direct to the holders of such bonds. The Ottawa & New York Ry. extends from the International Boundary in the St. Lawrence River, near Nyando, to the city of Ottawa, in Ontario, and connects directly with the Ottawa Branch of the New York Central Rd. These two leases were made under the authorization and approval of the Public Service Commission of the State of New York, Second District, and of the Canadian Parliament."

The Central Railway of Canada Fiasco.

There was deposited with the Exchequer Court of Canada, May 3, copy of a scheme of arrangement with the Central Ry. of Canada's creditors as provided for by the Railway Act, Revised Statutes of Canada, Sec. 365. The Central Ry. of Canada, proposed to build a railway from Montreal to Georgian Bay. The original incorporation of a company to build such a line dates back to pre Confederation days, and a big land grant was set apart to aid construction. Lines built under the charter were sold to the C.P.R., but certain interests held that the old charter was still good, and the Dominion Parliament within recent years granted the company extensions of powers. Bonds were placed on the market in England; a general contract was entered into for construction, and a considerable amount of grading was done. Wills & Co., the contractors, according to the company, failed to prosecute the work with sufficient dispatch, and they claimed that the company had failed to provide the funds according to contract. Legal proceedings were instituted on both sides, which did not clear the situation, and with the declaration of the governments interested that the land grant voted half a century or more ago, was no longer available, the company ceased to be a construction factor in the railway situation. The settlement of its affairs was the only course open. J. D. Wells, Montreal, is secretary.

New C.P.R. Station Names.—The junction of the Kettle Valley Ry. with the C.P.R., near Hope, B.C., on the north side of the Fraser River, has been named Petain, after the French general in command at Verdun. The junction point of the Kettle Valley Ry. and the C.P.R. near Otter Summit, where the C.P.R. Spence's Bridge branch ends, has been named Brodie, after H. W. Brodie, General Passenger Agent, C.P.R., Vancouver.

A warrant has been issued for the arrest of S. Busby, cashier, Freight Department, Canadian Northern Ry., Saskatoon, Sask. It is reported that defalcations to the extent of over \$6,000 have been discovered. A letter was received from him confessing that he had been engaging in wheat speculation with disastrous results, and that he was enlisting for overseas service.

The Canadian Pacific Railway's Roll of Honor.

C. H. Buell, Staff Registrar and Secretary, Pension Department, C.P.R., has issued list 9, which is prefixed as follows:—"Several thousand officers and employees of this company enlisted for active military duty with the Canadian Expeditionary Forces, and the majority of them are now in Europe, bravely battling for Canada and the Empire. As particulars of army reservists are not available, these lists of those who have given up their lives for their country or been wounded in action are necessarily incomplete, and do not therefore indicate fully the extent to which the Company's officers and employes have participated in the great struggle."

Authorized by the Postmaster General for Canada,
for transmission as second class matter.

Entered as second class matter, July 25, 1913, at the
Postoffice at Buffalo, N.Y., under the Act of Congress
of March 3, 1879.

SUBSCRIPTION PRICE, including postage any-
where, \$2 a year.

SINGLE COPIES, 20 cents each, including postage.

The best and safest way to remit is by express money
order. Where one cannot be obtained, a post office
money order, or bank draft, payable at par in Toronto,
may be sent. Cheques or drafts not payable at par in
Toronto cannot be accepted. Remittances should be
made payable to Canadian Railway and Marine World.

NOTICE TO ADVERTISERS.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers by
the 10th of the month preceding the date of publication.

Canadian Government Railways Officials' Salaries, Etc.

In the House of Commons recently, the acting Minister of Railways gave the names and salaries of 23 officials who have been engaged from other railways between Jan. 1, 1912, and Dec. 31, 1915, as follows:—

Engineering Department—C. B. Brown, \$500 a month; A. T. McDonald, \$110; F. S. Wilkins, \$100; G. C. Lightner, \$165; L. H. Robinson, \$150; A. D. W. Cuthbert, \$90; Jas. Pullar, \$90; H. T. Ruhl, \$200; L. Brousseau, \$140; T. L. Landers, \$125; G. C. Perkins, \$85; A. H. Jones, \$125; J. E. Long, \$225; T. F. King, \$100.

Operating Department—J. K. McNeillie, \$500; A. C. Barker, \$215; W. C. Roberts, \$125; W. S. Byrne, \$50.

Traffic Department—C. A. Hayes, \$833.33; E. Legasse, \$105; T. Cree, \$95; H. Russiere, \$90.

Mechanical Department—G. E. Smart, \$300.

Canadian Railway Club Annual Meeting.

The report for the past year was dealt with at the annual meeting at Montreal, May 16. It was announced that 23 members of the club were in active service, two of whom had been killed. During the year, the President, L. C. Ord, joined the Canadian Expeditionary Force, his place, as President, being taken by R. M. Hannaford, Vice President. The officers elected for the current year are: President, R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co.; First Vice President, G. E. Smart, Master Car Builder, Canadian Government Railways, Moncton, N.B.; Second Vice President, Prof. Keay, Professor of Railway Transportation, McGill University; Executive Committee, J. Hendry, Master Car Builder, G.T.R., Montreal; T. C. Hudson, Master Mechanic, Quebec Division, Canadian Northern Ry., Joliette; E. E. Lloyd, Auditor of Stores and Mechanical Accounts, C.P.R., Montreal; C. Manning, secretary to Superintendent of Motive Power, G.T.R., Montreal; C. W. Van Buren, General Master Car Builder, C.P.R., Montreal; W. H. Winterrowd, Assistant to Chief Mechanical Engineer, C.P.R., Montreal; Secretary, Jas. Powell, Chief Draughtsman, Motive Power Department, G.T.R., Montreal; Treasurer, W. H. Stewart, Assistant Superintendent, C.P.R., Montreal, at present serving temporarily with the Imperial Munitions Board at Ottawa.

Grain Inspection at Western Points.

The following figures compiled by the Department of Trade and Commerce, show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division for April, and for eight months ended Apr. 30, with a comparison of the number of cars inspected for eight months ended Apr. 30, 1915.

	April	Eight months to Apr. 30, 1916	Eight months to Apr. 30, 1915
C.P.R. Calgary	9,754	135,068	82,115
C.N.R.	719	5,604	5,870
C. & N. W. P. R.	188	1,486	1,486
G.T.P.R.	1,299	32,990	13,838
Totals	17,774	250,208	109,032

The C.P.R. Chateau Frontenac Hotel, Quebec, was damaged by fire May 16, the fire being confined to the kitchen portion of the building.

C.P.R. Scholarships at McGill University.

George Bury, Vice President, C.P.R., issued the following circular recently:—
“Two free scholarships, covering 4 years tuition in the Faculty of Applied Science of McGill University, are offered, subject to competitive examination, to apprentices and other employees enrolled on the company's permanent staff, and under 21 years of age, and to minor sons of employees. The examination, which will be the regular entrance matriculation examination provided for in the University's Annual Calendar, will be held at the University, Montreal, and at other centres throughout Canada, in June. The candidates making the highest average and complying with the requirements of admission will be awarded the scholarships and have the option of taking a course in any department of the Faculty of Applied Science. Scholarship will be renewed from year to year, to cover a period not exceeding four years, if, at the close of each session, the holder thereof is entitled, under the rules, to full standing in the next higher year. In case a scholarship holder finds it necessary to interrupt his course for a year or more, notice must be given at the close of the session to the C.P.R. Co. and to the head of the University's Railway Department, in order that the scholarship may be open to other applicants. In order to establish prior claim to the next available scholarship, notice of the student's intended return must be given to the C.P.R. and to the head of the Railway Department not later than Jan. 1, preceding the opening of the session in which such scholarship will be available. Applications for certificates entitling eligible persons to enter the competition should be addressed to C. H. Buell, Staff Registrar and Secretary, Pension Department, Montreal. Copies of the annual calendar containing the conditions of admission and announcement of courses may be obtained upon application to J. A. Nicholson, Registrar, McGill University, Montreal.

Canadian Society of Civil Engineers' Reorganization Committee.

The Canadian Society of Civil Engineers, at its last annual meeting, decided to appoint a committee to study and report upon a policy for increasing the society's prestige and influence, and to consider the organization and bylaws. A letter vote of the members taken in April resulted in the election of the following as the committee:—

District 1—W. J. Francis, Phelps Johnson, R. S. Lea, H. H. Vaughan, W. F. Tye, A. Boyer.

District 2—D. H. McDougall, W. A. Duff, L. H. Wheaton.

District 3—A. E. Doucet, A. Amos, A. R. Decary.

District 4—John Murphy, R. deB. Coriveau, G. B. Dodge.

District 5—H. E. T. Haultain, R. W. Leonard, E. W. Oliver.

District 6—H. B. Hucklestone, W. L. Mackenzie, A. J. McPherson.

District 7—R. F. Hayward, D. C. Lewis, E. A. Cleveland.

Steel Rails Ordered.—The C.P.R. has ordered from the Algoma Steel Corporation 30,000 tons of steel rails, special C.P.R. section, 85 lbs. to the yard, for delivery at Sault Ste. Marie, Ont., from May to Sept., 1917.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines, Ltd. — R. DUGUID, Mechanical Superintendent, having been given leave of absence owing to ill health, Gilbert Johnston, Consulting Engineer, is discharging his duties during his absence.

A. C. SHERIDAN, heretofore Passenger Agent, Buffalo, N.Y., has been appointed District Passenger Agent, there, vice J. V. Foy, General Agent, Passenger Department, whose appointment as Assistant General Passenger Agent, Toronto, was announced in our last issue.

J. M. SHEA, heretofore Travelling Passenger Agent, G.T.R., Boston, Mass., has been appointed New England Passenger Agent, Canada Steamship Lines, Ltd., vice J. F. Dolan, General Agent, Passenger Department, resigned to enter private business. Office, Boston, Mass.

Canadian Northern Ry. — G. ABBOTT, heretofore Car Foreman, Edmonton, Alta., has been appointed Car Foreman, Port Arthur, Ont., vice C. Wheaton, transferred.

C. L. ALLEN has been appointed chief draughtsman, Mechanical Department, Winnipeg, vice H. D. Cameron, whose appointment as Mechanical Engineer, Toronto, was announced in our last issue.

R. CURLEY has been appointed City Passenger Agent, Winnipeg.

A. L. JOHNSON, has been appointed Travelling Passenger Agent, Winnipeg.

C. WHEATON, heretofore Car Foreman, Port Arthur, Ont., has been appointed Assistant Car Foreman, Winnipeg, vice J. Rudd, promoted.

A. I. DANIEL, heretofore City Ticket Agent, Regina, Sask., has been appointed Ticket Agent, Brandon, Man.

E. R. CUNNINGHAM, heretofore Passenger Agent, Prince Albert, Sask., has been appointed City Ticket Agent, Regina, Sask., vice A. I. Daniel transferred.

J. RUDD, heretofore Assistant Car Foreman, Winnipeg, has been appointed Car Foreman, Kamsack, Sask., vice W. Millman, transferred.

N. McLEAN, heretofore Locomotive Foreman, Hanna, Alta., has been appointed Locomotive Foreman, Humboldt, Sask., vice A. T. Hannah, transferred.

E. BOWER has been appointed Travelling Passenger Agent, Saskatoon, Sask.

W. MILLMAN, heretofore Car Foreman, Kamsack, Sask., has been appointed Car Foreman, Saskatoon, Sask., vice J. Grant, transferred.

E. G. WICKERSON, heretofore Passenger Agent, Brandon, Man., has been appointed Passenger Agent, Prince Albert, Sask., vice E. R. Cunningham, transferred.

J. GRANT, heretofore Car Foreman, Saskatoon, Sask., has been appointed Car Foreman, Edmonton, Alta., vice C. Abbott, transferred.

A. T. HANNAH, heretofore Locomotive Foreman, Humboldt, Sask., has been appointed Locomotive Foreman, Hanna, Alta., vice N. McLean, transferred.

S. VINCENT, heretofore Locomotive Foreman, Kamloops Jct., B.C., has been appointed Locomotive Foreman, Toller-ton, Alta., vice M. A. Cardell, transferred.

GREEN & BURDICK have been appointed ticket agents at Victoria, B.C.

Canadian Pacific Ry. — F. G. J. COMEAU, General Freight Agent, Dominion Atlantic Ry., Halifax, N.S., has also been appointed District Freight Agent, C.P.R., in charge of traffic to and from the Dominion Atlantic Ry. and the Halifax & South Western Ry., as well as for Halifax, reporting to the Division Freight Agent, Atlantic Division, St. John, N.B., Office, Halifax, N.S.

L. MULKERN, heretofore District Freight Agent, Toronto, has been appointed Division Freight Agent, Atlantic Division, vice W. B. Bamford, transferred. Office, St. John, N.B.

H. JARVIS has been appointed Agent, Sleeping, Dining and Parlor Cars and News Service, St. John, N.B., vice F. Jeffs.

Allan Purvis,
General Superintendent, Eastern Division, Canadian Pacific Railway.

ALLAN PURVIS, heretofore Superintendent, District 2, Ontario Division, London, has been appointed General Superintendent, Eastern Division, vice A. E. Stevens, transferred. Office, Montreal.

C. E. SARNEY, heretofore Locomotive Foreman, Megantic, Que., has been appointed Locomotive Foreman, Farnham, Que., vice H. Frawley, not now in the company's service.

C. SENAY, heretofore General Agent, Quebec, Que., has been appointed Assistant Superintendent, District 3, Eastern Division, vice J. E. Morazain, resigned to enter National Transcontinental Ry. service. Office, Montreal.

T. COLLINS, heretofore Superintendent, District 4, Ontario Division, Toronto, has been appointed Superintendent, District 2, Ontario Division, vice Allan Purvis, promoted. Office, Toronto.

C. J. KAVANAGH, formerly in railway service in the United States, has been appointed Superintendent, District 4, Ontario Division, vice T. Collins, transferred. Office, Toronto.

W. B. BAMFORD, heretofore Division Freight Agent, Atlantic Division, St.

John, N.B., has been appointed District Freight Agent, Toronto, vice L. Mulkern, transferred.

C. GRIBBIN, heretofore Locomotive Foreman, Toronto, has been appointed District Master Mechanic, District 4, Ontario Division, Toronto. This is a new position.

W. WRIGHT, heretofore Assistant Locomotive Foreman, London, Ont., has been appointed Locomotive Foreman, Toronto, vice C. Gribbin, promoted.

A. EDWARDS, heretofore fitter, has been appointed Assistant Locomotive Foreman, London, Ont., vice W. Wright, promoted.

H. HICKS, heretofore Night General Yardmaster, Winnipeg, has been appointed General Yardmaster, Fort William, Ont., vice G. J. Fox, promoted.

D. CONDELL, heretofore Car Foreman, Nelson, B.C., has been appointed Car Foreman, Ignace, Ont., vice D. McKay, transferred.

G. J. FOX, heretofore General Yardmaster, Fort William, Ont., has been appointed Trainmaster, District 2, Manitoba Division, vice D. England. Office, Winnipeg.

A. E. STEVENS, heretofore General Superintendent, Eastern Division, Montreal, has been appointed General Superintendent, Saskatchewan Division, vice J. G. Taylor, who has retired on account of ill health. Office, Moose Jaw.

W. J. RENIX, heretofore District Master Mechanic, District 1, British Columbia Division, Revelstoke, has been appointed Master Mechanic, Saskatchewan Division, Moose Jaw, and not District Master Mechanic, Moose Jaw, as stated in our last issue.

E. W. DUVAL, who has been acting General Superintendent, Saskatchewan Division, Moose Jaw, for some weeks during the absence through ill health of J. G. Taylor, General Superintendent, has resumed his position as Superintendent, District 3, Saskatchewan Division, Saskatoon.

J. H. SCOTT, who has been acting Superintendent, District 3, Saskatchewan Division, Saskatoon, during the absence of E. W. DuVal at Moose Jaw, has resumed his position at Chief Dispatcher, Saskatoon.

D. MCKAY, heretofore Car Foreman, Ignace, Ont., has been appointed Car Foreman, Field, B.C., vice C. J. Crozier, transferred.

F. W. SADLIER, heretofore Shop Foreman, Revelstoke, B.C., has been appointed Locomotive Foreman, Fort William, Ont., vice G. Twist, and not District Master Mechanic, as stated in our last issue.

H. J. REED, heretofore Locomotive Foreman, Souris, Man., has been appointed Locomotive Foreman, Cranbrook, B.C. The name was wrongly given in our last issue, as J. A. Reid.

C. J. CROZIER, heretofore Car Foreman, Field, B.C., has been appointed Car Foreman, Nelson, B.C., vice D. Condell, transferred.

M. A. CARDELL, heretofore Locomotive Foreman, Toller-ton, Alta., has been appointed Locomotive Foreman, Kamloops Jct., B.C., vice S. Vincent, transferred.

W. H. DEACON, heretofore City Passenger Agent, Spokane, Wash., has been appointed Travelling Passenger Agent, Vancouver, B.C.

H. M. BEYERS, heretofore City Passenger Agent, Tacoma, Wash., has been

appointed City Passenger Agent, Spokane, Wash., vice W. H. Deacon, promoted.

D. C. O'KEEFE, heretofore clerk in Passenger Department, Tacoma, Wash., has been appointed City Passenger Agent there, vice H. M. Beyers, transferred.

Canadian Pacific Ocean Services, Ltd.—E. T. STEBBING has been appointed General Agent, Passenger Department, Trans-Pacific and Trans-Atlantic Lines, New York, dealing with all matters pertaining to passenger traffic for the ocean services, but until further advised, agents continue to report and remit for ticket sales, as at present. Office, 1231, Broadway.

Dominion Atlantic Ry.—D. J. MURPHY, Jr., Superintendent of Transportation, having been granted extended leave of absence on enlistment for active service, R. B. BROWN, heretofore Chief Dispatcher, has been appointed Trainmaster and Chief Dispatcher. Office, Kentville, N.S.

Grand Trunk Ry.—C. R. MOORE, heretofore chief clerk, has been appointed Assistant to Vice President, Construction, Maintenance and Operation (H. G. Kelley). Office, Montreal.

H. A. CLARK, heretofore with Mussels Limited, Montreal, has been appointed storekeeper, G.T.R., Richmond, Que., vice M. E. Martin, enlisted for active service with the 9th Field Ambulance Corps.

W. J. MOFFAULT, heretofore City Passenger and Ticket Agent, has been appointed City Passenger Agent, Toronto.

C. E. TENNEY, heretofore Passenger and Ticket Agent, Portland, Me., has been appointed City Ticket Agent, Toronto.

G. A. HARRISON, heretofore City Passenger and Ticket Agent, Sherbrooke, Que., has been appointed Passenger and Ticket Agent, Portland, Me., vice C. E. Tenney, transferred.

G. L. BRYSON has been appointed Travelling Passenger Agent, Kansas City, Mo., vice C. N. Wilson, resigned.

H. G. SMITH, heretofore Assistant City Passenger and Ticket Agent, Grand Rapids, Mich., has been appointed City Passenger and Ticket Agent, Mount Clemens, Mich., vice Casper Cizek, resigned.

Grand Trunk Pacific Ry.—W. T. HUTCHISON has been appointed Manager, Macdonald Hotel, Edmonton, Alta., vice Louis Low.

Great Northern Ry.—G. H. HESS, Jr., has been appointed Assistant Comptroller, vice F. H. Parker, whose appointment as Assistant General Freight Agent, was mentioned in our last issue. Office, St. Paul, Minn.

Michigan Central Rd.—A press report stating that T. Hickey, Roadmaster, St. Thomas, Ont., had been appointed Superintendent of Tracks at Detroit, Mich., is incorrect. We are officially advised that the company has not had a Superintendent of Tracks for a number of years and that there is no intention of creating such an office at present.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—T. E. SANDS, heretofore General Freight Agent, has been appointed Freight Traffic Manager. Office, Minneapolis, Minn.

National Transcontinental Ry.—J. E. MORAZAIN, heretofore Assistant Superintendent, District 3, Eastern Division, C.P.R., Montreal, has been appointed Superintendent, District 1, N.T.R., vice A. J. Gorrie, resigned. Office, Quebec, Que.

Prince Edward Island Ry.—ALEXANDER SCOTT has been appointed Resident Engineer, Charlottetown, P.E.I.

Construction Battalion for Overseas Service.

The Minister of Militia has authorized the formation of No. 1 Construction Battalion, to be raised by Blair Ripley, M.Can.Soc.C.E., heretofore Engineer of Grade Separation, C.P.R., Toronto, and who has been appointed Lieutenant-Colonel and officer commanding. The class of men being recruited is of a somewhat varied nature, and Lt.-Col. Ripley is aiming to get bridge and building men, railway sectionmen, railway construction men, general construction men and laborers, as well as artisans of various trades, and it is hoped that the battalion will be composed of officers and men who will be able to undertake construction work of almost any nature. The object of the battalion, which will consist of 1,038 officers and men, is somewhat indefinite. It will, of course, operate on lines of communication, and generally speaking its work will be to make good or replace works destroyed by the enemy, and to build works necessary in connection with the effective combating of the enemy. It is likely that the unit will be attached to the Royal Engineers, and it is very probable that a large amount of its work will be roadmaking, etc. The battalion, of course, will do what it is called upon to do, and the men will be chosen with this in view. No one will be taken on who cannot do skilled or unskilled labor of some sort. It is expected that the battalion will be dispatched overseas almost as soon as it is recruited up to strength. The officers chosen up to date are as follows:—

Lieut.-Col. and officer commanding—Blair Ripley, M.Can.Soc.C.E., was born at Oxford, N.S., Aug. 29, 1880, and was from 1901 to 1903, Assistant Engineer, Canadian Northwest Irrigation Co., Great Falls & Canada Co., Alberta Ry. & Coal Co., and St. Marys River Ry. in Alberta and Montana respectively; 1903 to 1905, Chief Engineer of Construction, St. Marys River Ry. in Alberta, and from 1904 to 1905, also Chief Engineer of Construction, Alberta Ry. & Irrigation Co.; 1905 to 1907, Resident Engineer on Construction, Grand Trunk Pacific Ry. in Manitoba and Saskatchewan, and Assistant Engineer on harbor work, G.T.P.R., Prince Rupert, B.C.; 1907 to May 1, 1916, Resident Engineer on grade revision, C.P.R., Maple Creek to Medicine Hat, Alta.; Resident Engineer on field work, Lethbridge viaduct, C.P.R.; Assistant Engineer in charge, Old Man River viaduct, C.P.R., Macleod, Alta.; Assistant Engineer in Charge, Outlook viaduct, C.P.R., Outlook, Sask. On the completion of these works he was sent by the C.P.R. to Nova Scotia to report on betterments and improvements in connection with the Dominion Atlantic Ry., and to organize and prepare for the replacement of some large and difficult bridges on the waters of the Bay of Fundy. In 1912 he was appointed Engineer in Charge of the grade separation, C.P.R., North Toronto, which work is now almost completed.

Capt. and Adjutant—T. R. Loudon, B.A.Sc., A.M.Can.Soc.C.E., was for some time assistant professor of ferro-metalurgy at Toronto University and of late a member of the engineering firm of James, Loudon & Hertzberg. He has been instructing at militia headquarters at Toronto recently.

Capt. J. H. Byrne, S.Can.Soc.C.E., graduate of Royal Military College and McGill University. He was on the National Transcontinental Ry. as District and Government Inspecting Engineer and

has had considerable experience on construction, chiefly of railways.

Capt. R. R. Holland has been actively connected with construction of railways and other engineering works for 15 years, having filled positions as Resident Engineer, Assistant Engineer and Division Engineer on both the Canadian Northern and National Transcontinental Railways.

Capt. A. R. Ketterson, A.M.Can.Soc.C.E., Associate of Glasgow Technical College, until this appointment Assistant Bridge Engineer, C.P.R., Montreal. Has previously represented the Bridge Engineer on Western Lines, C.P.R., and has had varied experience in engineering and construction both in Canada and Scotland.

Paymaster H. G. Henson, graduate of McGill University in architecture. Served in Paymaster General's office, Militia Department, Ottawa, for a year.

Capt. Quartermaster Victor G. Davis, formerly of Canadian Pacific and Canadian Northern Railways purchasing department. He has qualified as a lieutenant.

Lieut. J. B. Heron, of Toronto; experience chiefly in construction. He was in the Boer War, and has for some time been in the Canadian Engineers, both at Niagara and Toronto camps.

Lieut. Fred G. Cross, A.M.Can.Soc.C.E., for nine years with the C.P.R. in Western Canada and in the Natural Resources Department, C.P.R.

Lieut. H. R. McQueen, A.M.Can.Soc.C.E., graduate Royal Military College. Experience in mining, railway and general construction works. Latterly Mining Engineer, O.I.M. Co., Chisholm, Minn.

Lieut. O. P. Hertzberg, connected for several years with Engineering Department, C.P.R., two of which were with Lt.-Col. Ripley on grade separation in Toronto. He was in several engagements in the present war and is now recuperating at home, having been wounded some three months ago. He has two brothers at the front in the Canadian Engineers.

Lieut. H. L. Gilmour, of Ottawa, graduate of McGill University. Is connected with the lumber industry in the Ottawa Valley.

Lieut. Geo. S. Grant, of Ottawa, contractor and construction man, son of late Hugh Grant, contractor, who was connected with the building of the Intercolonial Ry. in Cape Breton.

Lieut. G. O. Fleming, S.Can.Soc.C.E., graduate S.P.S., Toronto. Experience chiefly on construction, Toronto Ry. Co., and with the engineers at the militia headquarters, Toronto.

Lieut. V. A. E. Steele has had experience in general construction in both Canada and the United States, and has been for some time connected with the Dominion Railways and Canals Department.

All Rail Wheat Transportation.—Senator Loughheed informed the Senate, May 8, that since the 6c a bushel rate had been in operation, 675,000 bush. of wheat had been hauled from Armstrong to Quebec on the National Transcontinental Ry. On shipments of wheat originating at Winnipeg, the through rate to Quebec is 12c a bushel.

Iron Substituted for Copper and Brass on German Locomotives.—Owing to the heavy demands of ordnance manufacturers, and the general scarcity of copper in Germany, firebox sheets and staybolts are being made of iron, and seamless or welded iron tubing is being used instead of brass branch and oil pipes.

Fire Protection on Railways.

The Board of Railway Commissioners' Fire Inspection Department issued orders recently, under general order 107, directing the C.P.R., the Canadian Northern Ry., and the Grand Trunk Pacific Ry. to maintain a sufficient force of fire rangers for efficient patrol and fire fighting duty on their lines, between April 1, and Nov. 1, except in so far as they may be relieved from so doing by an order in writing from an authorized officer of the Board. The directions of the order are specific in each case, and the areas within which the patrols are to be maintained are fully set out. The directions to the C.P.R. cover mileages on the Manitoba, Alberta and British Columbia Divisions; to the Canadian Northern Ry., mileages on the Central Division, and to the G. T. Pacific Ry., mileages on the Mountain Division. For the supervision of the work, the Board has appointed inspectors, located as follows: E. J. Zavitz, Toronto; Thos. McNaughton, Prince Albert, Sask.; P. C. B. Hervey, Edmonton, Alta.; E. H. Finlayson, Calgary, Alta.; D. R. Cameron, Kamloops, B.C.; M. A. Grainger, Victoria, B.C.; H. S. Irwin, Prince Rupert, B.C.; R. E. Allen, Hazelton, B.C.; H. G. Marvin, South Fort George, B.C., and P. S. Bonney, Tete Jaune, B.C. The object sought to be obtained is the prevention of fires along railways, and to avoid as far as possible the imposition of unnecessary expenditure upon the companies for that purpose. An efficient system of fire patrol can be established at a minimum expenditure, and as the conditions vary from time to time and from place to place, the fire inspectors appointed by the Board have authority to waive the requirements wholly or in part from time to time as practicable. The order in each case calls for the minimum of adequate protection.

Provision of Cars Under Canada Grain Act.—An act has been passed by the Dominion Parliament adding a new subsection 2, to section 207 of the Canada Grain Act, 1912, chap. 27, as follows: "Whenever after due examination the Board considers it necessary and advisable in order to facilitate the dispatch of grain which is insufficiently housed and liable to become damp or injured." The section provides that the Board constituted under the provisions of the Canada Grain Act, "may in its discretion order cars to be supplied contrary to the provisions of this part," under certain circumstances, and the new subsection gives the Board power to direct cars to certain districts under conditions which appear to prevail at present and which are not otherwise provided for.

Dynamiter Horn.—The U. S. Federal Circuit Court of Appeals sitting at Boston, Mass., recently, finally denied Werner Horn's application for a writ of habeas corpus, holding that his commission as an officer of the German army was no evidence of authority to commit any act as a belligerent within the United States, and that his action in attempting to blow up the C.P.R. bridge near Vanceboro, Me., was a personal act. Horn's trial for the illegal transportation of dynamite was postponed at Boston, May 3, to enable him to appeal in the habeas corpus proceedings to the U. S. Supreme Court.

Old Steel Rails for trench work, roofs of depots, etc., are being supplied in considerable quantities by the C.P.R. to the British Government.

Union Station Proposed for Montreal.

During the discussion of the Railways and Canals Department's estimates in the House of Commons, May 3, the matter of union station for Montreal was raised, Hon. G. P. Graham and C. Marcel, M.P., suggesting that the time was opportune for considering it, seeing that the G.T.R. Bonaventure Station had been burned, and the question of its rebuilding was being taken up. He said that if the G. T.R. built an expensive new station at Bonaventure St., there would be no possibility of a union station being built for many years to come.

The acting Minister of Railways stated that there is no possibility of anything being done in the way of rebuilding the Bonaventure station for months to come. Meanwhile the commission that is about to be appointed to enquire into the whole railway situation of the country will report on just such matters as the provision of union stations at important centers in the Dominion.

The suggestion was made that all passenger traffic should be arranged to run into the C.P.R. Windsor St. station, which could be developed into a union station.

Toronto Civic Ry. Cars Ordered.—The City Council has ordered materials for 13 double truck, double end cars, the parts being assembled in the council's car barns. The contracts have been awarded as follows: Bodies, \$4,907 each, the city supplying the step and door mechanism, Preston Car & Coach Co.; trucks, \$828.50 a set, Dawson & Co.; electrical equipment, \$1,866 a set, Canadian Westinghouse Co.; the city supplying gears and pinions; wire and cable, \$123.17 a car, Eugene F. Phillips Co.; fare boxes, \$51.10 each, Coleman Fare Box Co. A contract has also been awarded to R. Chalkley & Son, Ltd., for an extension to the St. Clair Ave. car barn, for \$24,435.

Damage Suit Against C.P.R.—An important action was begun May 10 before Mr. Justice Clute at Goderich, Ont., in which O. E. Fleming, Windsor, Ont., is the plaintiff and the C.P.R. is the defendant. The action arose out of the building of the Guelph & Goderich Ry., in the construction of which a bridge had to be built over a river running through the Attrill estate, Goderich, which the plaintiff had purchased to develop the gravel beds on it. He claims that as a result of the building of the bridge the current of the river has been so diverted as to wash away thousands of loads of gravel, for which he claims \$30,000 damages. The further hearing of the case was adjourned to Toronto.

The Railway Signal Association held its regular meetings at New York, May 24 and 25, when the general committee reports were dealt with, and also the report of a special committee on the harmonization of specifications for electrical requirements. A preliminary report on standard marking or numbering of relay posts was also considered, on presentation by a special committee on electrical testing.

The employees of the various express companies operating in Winnipeg, have formed a "good cheer club" in the interests of employees who have enlisted for active service. Presentations are made to those enlisting, field comforts are provided for those at the front, pamphlets are issued quoting letters from men on service, and communication is kept up with those now in Europe.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, for Western Lines, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$281,000	\$285,100	x\$145,400
Aug.	1,192,800	954,000	238,800	x5,900
Sept.	2,014,500	1,358,000	661,600	1,900
	\$4,413,600	\$3,227,000	\$1,186,600	x\$79,300
Decr.	\$658,300	\$579,000	\$79,300

x Decrease.
Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with October, the figures show the earnings of the entire system, both eastern and western lines.

	Gross Earnings	Expenses	Net Earnings	Increase
Oct.	\$3,678,500	\$2,421,500	\$1,257,000	\$537,800
Nov.	3,535,200	2,323,800	1,211,400	618,400
Dec.	3,435,600	2,233,500	1,202,100	768,900
Jan.	2,086,800	1,831,400	255,400	88,100
Feb.	2,089,200	1,959,800	129,400	x193,500
Mar.	2,607,000	2,240,600	366,400	x134,800
	\$17,432,300	\$13,010,600	\$4,421,700	\$1,706,800
Inc.	\$5,897,800	\$4,191,000	\$1,706,800

x Decrease.
Decrease in net earnings in March compared with last year, was due to snow blockades and other interruptions to traffic which increased operating expenses abnormally.

Approximate earnings for April, \$2,819,300, against \$1,938,900 for April, 1915, and for two weeks ended May 14, \$1,425,700, against \$784,400 for same period 1915.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$7,895,375.47	\$5,094,972.35	\$2,800,403.12	\$978,042.71
Aug.	8,801,451.52	5,359,136.80	3,442,314.72	79,157.02
Sept.	10,273,165.45	5,527,864.81	4,745,300.64	378,252.25
Oct.	13,433,206.88	6,863,780.29	6,569,426.59	3,258,105.79
Nov.	13,351,283.51	6,996,870.48	6,354,413.03	3,710,340.86
Dec.	12,705,673.45	7,003,351.97	5,702,321.48	3,502,797.67
Jan.	8,588,826.04	6,498,417.81	2,090,408.23	954,174.93
Feb.	8,795,830.30	6,501,487.56	2,294,342.74	315,328.12
Mar.	10,380,981.98	6,959,651.62	3,421,330.36	448,315.63

\$94,235,802.16 \$56,805,533.69 \$37,430,268.47 \$11,664,429.57
Inc. \$17,599,981.48 \$5,935,551.92 \$11,664,429.56

Approximate earnings for April, \$10,568,000, against \$7,164,000 for April, 1915, and for three weeks ended May 21, \$7,965,000, against \$4,773,000 for same period in 1915.

Grand Trunk Railway Earnings.

Following are the earnings and expenses for the G.T.R., including the Canada Atlantic Ry., the G.T.W.R. and D.G.H. & M.R., for March, compared with those for Mar., 1915:—

GRAND TRUNK RAILWAY.			
	1916.	1915.	
Earnings	\$3,550,850	\$3,242,450	
Expenses	2,664,600	2,419,800	
Net earnings	\$ 886,250	\$ 822,650	
GRAND TRUNK WESTERN RAILWAY.			
Earnings	\$ 710,400	\$ 582,750	
Expenses	561,100	573,800	
Net earnings	\$ 159,300	\$ 8,950	
DETROIT, GRAND HAVEN & MILWAUKEE RY.			
Earnings	\$ 248,000	\$ 189,000	
Expenses	243,900	213,000	
Net earnings	\$ 5,100	\$ x 24,000	

x Deficit.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to Apr. 30,—			
	1916	1915	Increase
G.T.R.	\$13,577,901	\$11,734,513	\$1,843,388
G.T.W.R.	2,914,947	2,274,071	640,876
D.G.H.&M.R.	1,003,012	787,348	215,664
	\$17,495,860	\$14,795,932	\$2,729,928

Approximate earnings for April, \$4,685,505, against \$3,205,778 for Apr., 1915, and for two weeks ended May 14, \$2,107,204, against \$1,755,301 for same period 1915.

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section, 916 miles, for April were \$166,132, against \$210,272 for Apr., 1915. Aggregate earnings for four months ended Apr. 30, \$1,519,201, against \$923,673 for same period 1915.

Traffic Orders by Board of Railway Commissioners.

Charges for Ice and Salt in Refrigerator Cars.

General order 164. April 26.—Re tariffs of railway companies showing charges for ice and salt in refrigerator cars. Upon hearing the application at Ottawa, Mar. 21, the Canadian Pacific and Canadian Northern Railways, the Canadian Manufacturers Association, and the Montreal and Toronto Boards of Trade being represented; tariffs showing the said charges having been filed with the Board as required at the hearing: It is ordered that the following tariffs be suspended, pending further hearing by the Board, viz.: Canadian Pacific, C.R.C. no. E-3138, C.R.C. no. E-3139; Grand Trunk, C.R.C. no. E-3356, C.R.C. no. E-3357; Canadian Northern, C.R.C. no. E-768, C.R.C. no. E-769; Michigan Central, C.R.C. no. 2524; Wabash, C.R.C. no. 936; Pere Marquette, C.R.C. no. 2015; Dominion Atlantic, C.R.C. no. 476; Quebec, Montreal & Southern, C.P.R., no. 568; Essex Terminal, C.R.C. no. 310; London & Port Stanley, C.R.C. no. 77; Toronto, Hamilton & Buffalo, C.R.C. no. 1092; Thousand Island, C.R.C. no. 1092; Hull Electric, C.R.C. no. F-56; Glengarry & Stormont, C.R.C. no. 41; Windsor, Essex & Lake Shore Rapid, C.R.C. no. 177; Algoma Central & Hudson Bay, C.R.C. no. 348, C.R.C. no. 349; Central Vermont, C.R.C. no. 1101; Boston & Maine, C.R.C. no. 1705; New York Central, C.R.C. no. 719, C.R.C. no. 720; Chatham, Wallaceburg & Lake Erie, C.R.C. no. 403.

Lumber and Shingles from Eburne, B.C.

24857. April 4.—Re complaint of Hunting-Merritt Lumber Co., Ltd., of Vancouver, against the refusal of the British Columbia Electric Ry. to handle cars destined to or for furtherance via Great Northern or Northern Pacific Railways; and the rate on lumber and shingles of 1c per 100 lbs. over Vancouver rates which the complainants have to pay on shipments from Eburne to points in Canada and the United States. Upon hearing the complaints at Vancouver, June 1, 1915, the complainants and the Canadian Pacific and British Columbia Electric Railway Companies being represented at the hearing, and upon reading the further submissions filed, and the report of the Chief Traffic Officer of the Board, it is ordered that the complaints be dismissed.

Interswitching Charges at Ottawa.

24861. April 5.—Re complaint of J. R. Booth of Ottawa that the Grand Trunk Ry. charges its local mileage rates on traffic from and to the interchange with the Canadian Northern Ry., authorized to be constructed under order 24416, Nov. 5, 1915, instead of the toll prescribed by order 4988, July 8, 1908, known as the General Interswitching Order. Upon its appearing that the G.T.R. charges other than the toll prescribed by order 4988 for interswitching the Canadian Northern Ry. traffic to and from the transfer track at Ottawa, constructed under order 24416, it is ordered that the G.T.R. forthwith desist from charging for the said service any toll or tolls other than that prescribed under order 4988.

Interswitching Charges at Chatham.

24868. April 5.—Re complaint of T. H. Taylor and the Canada Flour Mills Co. of Chatham, Ont., against the interswitching charge of 2c per 100 lbs. on grain, ex lakes, milled in transit at Chatham. Upon hearing the complaint at Toronto, Feb. 22, the complainants and

the C.P.R. being represented, and upon the report of the Chief Traffic Officer of the Board, it is ordered that the complaint be dismissed.

Rates on Wood and Sulphite Pulp.

24915. April 22.—Re complaint of Price Bros. & Co., Riordan Pulp & Paper Co., Brompton Pulp & Paper Co., J. R. Booth, and the Laurentide Co., against the proposed increase in the rates on wood pulp and sulphite pulp from stations in Canada to points in the United States, it is ordered that the following tariffs be suspended, pending hearing on a date to be fixed by the Board, viz.: Canadian Pacific, C.R.C. no. E-3129; Grand Trunk, C.R.C. no. E-3345; Canadian Northern, Supplement 9 to C.R.C. no. 584.

Allowance for Slatted Floors in Fruit Cars.

24938. April 25.—Re application of Ontario Fruit Growers' Association for an allowance of 1,000 lbs. in weight to cover slatted or false floors used in carloads of fruit. Upon hearing the application at Ottawa, April 18, the complainant and the Grand Trunk and Canadian Pacific Railway Companies being represented, it is ordered that order 19570, June 13, 1913, be amended by adding thereto the following paragraph, viz.: "2. That where shippers furnish slats for the said cars, an allowance of 500 lbs. in weight per car be made."

Rates on Forest Products.

24945. May 5.—Re application of Mountain Lumber Manufacturers' Association of Nelson, B.C., complaining of proposed increase in minimum carload weights of forest products, as set forth on pg. 3 of Supplement 10 to C.P.R. Co's C.R.C., no. W. 2061; Esquimalt & Nanaimo Ry., C.R.C. no. 302, and Kettle Valley Ry., C.R.C. no. 52; it is ordered that the items above mentioned covering minimum carload weights on forest products, be suspended until further order.

Rates on Pig Lead.

24962. May 6.—Re complaint of J. W. Warren against increase by C.P.R. of rate on pig lead from Smelter, B.C., to Eastern points: It is ordered that item 20A on pg. 2 of Supplement 13 to C.P.R. Tariff, C.R.C. no. W.2110, showing rates on pig lead, spelter, and antimony, be suspended pending a hearing by the Board.

Express Shipments of Fruit.

24976. May 15.—Re complaint of Jordan Co-operative Co., Ltd., against alleged unsatisfactory handling of fruit shipments by the Canadian Express Co., at Jordan, Vineland, and other points in the Niagara District: It is ordered that the Canadian Express Co. and the Grand Trunk Ry. arrange as follows: That shipments of fruit ready to go forward be handled by the fruit special, due to leave Jordan at 2.05 p.m.; and that the Canadian Express Co. accept by train 97 from Jordan and Vineland stations, shipments of fruit for Ottawa, daily, except Sunday; and that, when necessary, train 97 be held at Vineland for three minutes to permit of express matter being loaded; the shippers to furnish the necessary help to place the shipments in the express car. That a car be placed at Jordan, daily, except Saturday and Sunday; and that shipments for the following points be accepted and loaded into each car, viz., Port Hope, Cobourg, Trenton, Belleville, Napanee, Kingston, Gananoque, Brockville, Prescott, Morrisburg, Cornwall, Lancaster, and Montreal; the said car to

be picked up by train 97 and transferred to train 20 at Hamilton, and afterwards to train 18 at Toronto, and hauled through to Montreal. That, when necessary, train 18 be held five minutes at Toronto, or until 8.35 p.m., in the event of no. 20 being late, to enable the transfer of the said car to be made. And it is further ordered that the service herein required be furnished from July 1 to Aug. 31 next, inclusive; and in the event of any crop failure or other conditions which will allow the shippers to do with a reduced service, the shippers to notify the express company accordingly.

Rates on Live Stock.

24982. May 17.—Re application on behalf of Prairie Provinces Branch of Canadian Manufacturers' Association for suspension of proposed increase in charges in connection with live stock shipments as covered by certain joint tariffs: It is ordered that the following tariffs, viz.: Canadian Pacific Ry. C.R.C. no. W-2075, Canadian Northern Ry. C.R.C. no. W-861, and Grand Trunk Pacific Ry. C.R.C. no. 100, be suspended pending a hearing by the Board.

Charges for Ice, etc., on Refrigerator Cars.

General order 165. May 16.—Re tariffs in railway companies showing charges for ice and salt in refrigerator cars, and General Order 164, suspending them in eastern Canada and from eastern Canada and from eastern to western Canada: The companies having filed tariffs covering similar service in western Canada and from western to eastern Canada: It is ordered that the following tariffs be suspended, pending a hearing by the Board, viz.: Canadian Pacific, C.R.R. no. W-2149; C.R.C. no. W-2150; Canadian Northern, C.R.C. no. W-927, C.R.C. no. W-930; Grand Trunk Pacific, C.R.C. no. 155, C.R.C. no. 156; Esquimalt & Nanaimo, C.R.C. no. 324; Kettle Valley, C.R.C. no. 80.

The London & North Western Ry. of England discontinued the use of dining cars on its trains, May 1, and has adopted the system of supplying cold luncheon baskets when required. It is not stated whether the discontinuance is merely for wartime purposes, or permanently, but the main reasons which brought about the decision, are the shortage of male labor, and the heavy cost of hauling the heavy restaurant cars. It is anticipated that other railways will follow suit. There are 543 restaurant cars in Great Britain, the first one which was run on a British railway on Oct. 25, 1879, having been built at Detroit, Mich., and operated on the Great Northern Ry. by the Pullman Co.

Halibut Shipments to United States.

A bill was introduced in the U.S. Congress, May 20, requiring all halibut reaching the United States through foreign territories to be shipped in bond. The measure has been asked for by the people of Ketchikan, Alaska, which place has lost considerable trade by halibut fishers having transferred their headquarters from there to Prince Rupert, B.C., since the opening of the Grand Trunk Pacific Ry.

A locomotive crane with generator car trailers is a novel arrangement devised by necessity. Some time ago the Pennsylvania Rd. bought four 30-ton locomotive cranes. Recently it was desired to equip two of them with lifting magnets, but there was no room on the crane car for the necessary electric generator. Consequently a small flat trailer was built and a generator set installed on board. Both of these cranes are now in service.

Electric Railway Department

Electric Railway Statistics for Year Ended June 30, 1915.

The following abbreviations are used in the names of railways:—E, electric; E.R., electric railway; E.S.R., electric street railway; S.R., street railway. The minus mark (—) in the column for net income or deficit, shows that there was a deficit in the operation of the line to the extent of the figures given. The numbers following the names of the railways, refer to the notes following the table on this page.

	First Main Track Mileage	Gross earnings from Operation	Miscellaneous Earnings	Operating Expenses	Taxes Funded Debt, etc.	Net Income or Deficit	Total Car Mileage	Fare Passengers Carried

Notes to Electric Railway Statistics.

The figures in the foregoing table are compiled from the annual returns to the Railways Department, which however are

incomplete, no returns having been received from the Montreal Tramways Co., the Pictou County Electric Co. and the St. John Ry. in regard to which companies the Department has in some cases

used figures for some preceding years.
(1) The Edmonton Interurban Ry. was not in operation during the year ended June 30, 1915.

(2) The figures given for the Montreal

Tramways Co., for first main track mileage and for total car mileage, in some of the Department's tables, are stated to be for 1911, while in the table of earnings and expenses the figures are evidently taken from the company's annual report for the year ended June 30, 1915, and which were given in Canadian Railway and Marine World for September, 1915, page 355.

Portable Substation, Lake Erie & Northern Railway

(3) No figures are given by the Department for the Pictou County Electric Co. We have shown the first main track mileage as 9.1, the latest figures we have. Figures in regard to operation, etc., are not available.

(4) No figures are given by the Department for the St. John Ry. At Dec. 31, 1915, it had 18 miles of main track which we have included in our table. The gross earnings of its street railway for the year ended Dec. 31, 1915, were \$242,217.31 and the operating expenses \$250,714.34, a deficiency of \$8,497.03. The fare passengers carried were 5,541,417.

The total first main track mileage shown in the Department's report is 1590.29. Adding to this the Pictou County Electric Co., 9.1 miles, and the St. John Ry., 18 miles, as given in our table, makes a total of 1,617.39 miles.

Platforms for Interurban Railways.

At the Ontario Legislature's last session, G. H. Gooderham M.L.A. for South Toronto, introduced a bill to amend the Ontario Railway Act by adding a section as follows:

"106a.—(1) Electric railways operated on the side of a highway shall at all stopping places fixed by the bylaws or regulations of the company, or by order of the Board, construct on the side of the highway between the tracks and the line of the highway platforms for the use of passengers getting on or off any car of the company, and the company shall not allow any person to get on or off a car except from the side on which the platform is constructed.

"(2) Such platforms shall be constructed in accordance with plans and specifications approved of by the Board."

The bill was killed by the Legislature's Municipal Committee, to which it was referred.

Morrisburg & Ottawa Electric Ry.—A special general meeting of shareholders was called to be held at the company's office, Ottawa, on May 30 to forfeit all stock on which any arrears for calls or interest were due.

Portable Substation on Lake Erie and Northern Railway.

The Lake Erie & Northern Ry., which has been in operation for some little time between Galt and Brantford, Ont., and is now completed to Port Dover, has put in operation a portable substation for high voltage direct current generation, two

at the left of the photo.

The converter is 500 kw. capacity, 1,500 volts d.c. As it is a commutating pole rotary converter, the brushes are all raised during starting, with the exception of two narrow pilot brushes. There is, on the left of the frame of the rotary converter, a lever for raising and lowering the brushes, and a small semaphore at the top of the frame indicates the position of the brushes, so that the operator can tell at a glance whether the brushes are raised or down. The field break up switch is mounted, for convenience, as the bearing pedestal. The complete rotary converter is mounted on an adjustable base, which permits of ready adjustment for levelling in case the portable substation is standing on a grade.

The portable substation was built by Canadian General Electric Co. at Peterborough, Ont. When it was completed the railway company was not ready to take delivery and it was necessary to leave it standing outside during extremely cold weather. Although no attempt was made to supply excitation to the outdoor transformer during that period, it was found to be in excellent condition when instructions were received for shipment.

illustrations of which are given herewith. The substation is built on a standard steel, 42 ft. flat car, of 60,000 lbs. capacity. The 555 k-v-a, three phase transformer is of the outdoor type, self cooled, and is mounted in the open. The primary

Snow Removal in Montreal.—At the recent Good Roads Congress in Montreal recently, Chief Engineer Mercier of that city read a paper on "Snow Removal in Montreal." He said that the average snow fall for 41 years had been 119 in., and there was snow on 79 days in 1915, with rain on 28 of these days. Mr. Mercier described the methods by which the

Interior of Portable Substation, Lake Erie & Northern Railway

of the transformer is arranged for a supply of 25 cycle energy at 6,600, 13,200 or 26,400 volts. The secondary leads are carried in conduit. The interior view shows the main oil switch and oil switch operating panel, together with the series relays; the high tension a. c. portion of the apparatus being separated from the rest of the cab by a wire screen. The starting switch for the rotary converter is shown to the right of the illustration, and the rotary converter panel is shown

city and the Montreal Tramways co-operated to clear the streets, and referred to the organization under A. Gaboury, Superintendent of the railway, as "wonderful." The cost of cleaning sidewalks was 7½c. a running foot, and clearing the roads cost \$2,500 a mile.

The G.T.R. sued the Sarnia St. Ry., at Sarnia, Ont., May 16, for damages to a train which left the track at a crossing of the street railway. Judgment was reserved.

Union Electric Railway Station for Brantford.

The Lake Erie & Northern Ry., a subsidiary of the C.P.R., and the Brantford & Hamilton Ry., a subsidiary of the Dominion Power & Transmission Co., entered into an agreement recently to build a joint station in Brantford, Ont., and, as already stated in Canadian Railway and Marine World, the contract for its erection was let to Schultz Bros. Co., contingent on satisfactory arrangements being made with the city council and subject to the Board of Railway Commissioners' approval.

The plans as shown in the accompanying illustration provide for a one story building, located over the tracks at the southwest corner of Colburn and Water Streets, with 38 ft. frontage on Colburn St. and 76 ft. on Water St., and tracks to pass beneath the main floor of the

The Brantford City Council approved of the station plans, with a stipulation that the Lake Erie & Northern Ry. buy a strip of land opposite the station site. This the company refused to do, holding that it was not necessary, and the starting of work was deferred in order to bring the matter before the Board of Railway Commissioners.

One-Man Car Operation in Lethbridge.

The Lethbridge Municipal Ry. for the year 1913 showed a net loss on operating of \$4,147.75, and after providing for debenture and other interest and sinking fund there was a total deficit for the year of \$30,831.22. For the year 1914 the loss on operating was \$3,477.14, and after providing for debenture interest, sinking fund, taxes and fire insurance there was a total deficit for the year of \$37,202.33.

Increase of Toronto Railway Co's Capital.

A special general meeting of shareholders was held in Toronto, May 29, to sanction a proposed increase of capital stock by the creation of 30,000 new shares of \$100 each, making the aggregate capital stock \$15,000,000. The circular calling the meeting states that the increase is necessary to provide funds to meet the company's financial requirements and for financing the requirements of subsidiary companies for necessary extensions and betterments of their properties, in accordance with the company's statutory powers and for reasons more particularly indicated in accompanying memorandum. It is the directors' intention to have the new shares available for subscription pro rata by the shareholders, and if not subscribed, the same to be offered to the public.

Station for Lake Erie and Northern and Brantford & Hamilton Railways at Brantford, Ont.

building, with platforms, express and baggage accommodation at the lower level. The design is New England, Colonial style; red brick, with limestone trimmings and green slate roof. The main floor, at street level, with entrance from Colbourn Street, is to contain a main waiting room 35 x 50 ft., women's retiring room and lavatory, men's lavatory and ticket and telegraph offices. Two stairways will lead from the main floor to the track platforms. Baggage and express rooms and steam heating equipment will be located in a separate extension 14 x 76 ft. on the lower or track level. This extension will abut the retaining wall of Water St. and will be accessible for teams at the lower end of the street. The interior of the building will be finished in Canada ash; the walls and ceilings of main waiting room to be plastered and finished with plastered cornice. The floors will be concrete. The lavatories will have a marble wainscot 6 3/4 ft. high. Seats will extend the full length of the two outside walls in the waiting room, except in space occupied by the ticket and telegraph offices. The approximate cost is stated as \$25,000.

For the year 1915 there was a surplus from operating of \$3,677.64, and after providing for debenture interest, sinking fund, taxes and insurance, which totalled \$33,383.37, there was a net deficit of \$29,705.73 for the year.

Commissioner Freeman informs us that the change in operating results from a deficit to a surplus was undoubtedly owing to the one-man car operation which was started June 1, 1914. Financial conditions generally were worse in 1915 than in the previous year and had not the one-man car operation been started, the service would probably have had to be discontinued.

Peterborough Radial Ry. — As announced in Canadian Railway and Marine World for April, the Ontario Government bought the Electric Power Co., Ltd., properties in Eastern Ontario, including the Peterborough Radial Ry. By an order in council passed May 5, the control, administration and management of the properties has been vested in the Hydro Electric Power Commission of Ontario, which is to carry on the undertakings as a separate branch of its business.

The accompanying memorandum above referred to states that the Toronto Ry. Co. has express power by statute to acquire the shares and securities of the following companies and to lend its credit to them or guarantee their bonds or other securities or obligations, viz., Toronto & Mimico Ry. Co. (now Toronto Power Co., Ltd.), Toronto & Scarboro Electric Ry., Light & Power Co., Metropolitan Ry. Co., Schomberg & Aurora Ry. Co., Toronto & York Radial Ry. Co.

In reference to the various bonds issued the memorandum states that among other purposes part of their proceeds were used to purchase the Toronto & York Radial Ry.'s share capital, to build extensions and make betterments to its various divisions; also to purchase the Schomberg & Aurora Ry. Co.'s share capital and to build and equip the line.

The memorandum adds: "In addition to accomplishing the main object—i.e., assuring an adequate supply of power for the Toronto Ry.—steady progress has been made in the sale of power. In 1915 the gross sales of power were \$1,463,639, and in 1914 these are expected to reach a total of \$1,800,000. The gross revenue

from power sales in 1909—the first year of operation, and previous to the expenditures set forth were \$651,830.

"In acquiring the several properties now forming the Toronto & York Radial Ry. Co. and the Schomberg & Aurora Ry., the chief object of the directors was to foster the growth of suburban traffic, to feed the Toronto Ry. Co.'s city system. The resultant advantage to the shareholders of the Toronto Ry. Co. is that should the City of Toronto elect to purchase the Toronto Ry. system they will have left in 1921 a continuing enterprise, including a suburban electric railway system and an extensive and profitable plant for the production and distribution of electricity for light and power purposes."

Regulation of Vehicle Traffic for Protection of Electric Car Traffic.

Two important amendments to statutes were passed at the Ontario Legislature's last session, at the instigation of G. H. Gooderham, M.L.A. for South Toronto. The Motor Vehicles Act, Revised Statutes 1914, chap. 207, provided as follows:

"15. When a motor vehicle meets or overtakes a street car which is stationary for the purpose of taking on or discharging passengers, the motor vehicle shall not pass the car on the side on which passengers are getting on or off until such passengers have got on or off safely to the side of the street as the case may be."

In 1914 two persons were charged at Ingersoll, Ont., with driving an automobile past a Woodstock, Thames Valley & Ingersoll Electric Ry. car at Beachville. The magistrate dismissed the case, holding that the requirement that automobiles do not pass standing electric cars only applied to street railways in a city or town or within a mile and a half of urban limits, and not to interurban lines. The Canadian Electric Railway Association has ever since that decision urged that the act be amended, and at the Ontario Legislature's last session, Mr. Gooderham introduced a bill to carry the suggestion into effect. Its principle was approved of and with a slight amendment it was incorporated in a general bill to amend the Motor Vehicles Act, introduced by the Minister of Public Works, the section being passed as follows:

"8. Section 15 of The Motor Vehicles Act is amended by adding after the words 'street car' in the first line the words 'or a car of an electric railway which is operated in or near the centre of the travelled portion of the highway,' and by inserting after the word 'car' in the third line the words 'or approach nearer than 6 feet measured back or forward from the rear or front end, as the case may be, of the car.'"

Section 15 of the Act as amended therefore now reads as follows:

"When a motor vehicle meets or overtakes a street car, or a car of an electric railway which is operated in or near the centre of the traveller portion of the highway, which is stationary for the purpose of taking on or discharging passengers, the motor vehicle shall not pass the car or approach nearer than six feet, measured back or forward from the rear or front end as the case may be, of the car, on the side on which passengers are getting on or off, until such passengers have got on or got safely to the side of the street as the case may be."

The Highway Travel Act was amended by adding the following section:

"9a. Where a person travelling or being upon a highway in charge of a vehicle,

other than a motor vehicle, or on a bicycle or tricycle, or on horseback or leading a horse, meets or overtakes a street car or a car of an electric railway, operated in or near the centre of the travelled portion of the highway which is stationary for the purpose of taking on or discharging passengers, he shall not pass the car or approach nearer than 6 feet measured back or forward from the rear or front end, as the case may be, of the car on the side on which passengers are getting on or off until such passengers have got on or got safely to the side of the street, as the case may be."

Attempted Confiscation of Sandwich, Windsor and Amherstburg Ry. Rights.

Among several most unjustifiable bills introduced at the Ontario Legislature's last session was one promoted by the city of Windsor. The Sandwich, Windsor & Amherstburg Ry. Co. has a perpetual franchise to supply electric energy in the city for light, power and motive purposes. The city has installed a distribution system and takes power from the Hydro Electric Power Commission of Ontario. The bill referred to provided that the company's rights in regard to supplying power should cease on Dec. 31, 1922, on which date its franchise for the operation of a street railway in the city will expire. No provision was made in the bill for any compensation, and the company's rights were to be absolutely confiscated. When the bill came before the Private Bills Committee, Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, appeared in support of it, but it was unanimously thrown out, the committee considering that to pass it would be a gross violation of undoubted vested rights.

Then the city had another bill presented, providing that it should have the power to expropriate the Sandwich, Windsor & Amherstburg Ry. Co.'s electric light and power business, and that in default of agreement as to price, it be determined by the Hydro Electric Power Commission of Ontario. No provision was made for arbitration, the Commission being named as the sole judge as to the price. This arbitrary and utterly unjustifiable proposal was also rejected by the committee and the second bill was also unanimously thrown out.

The Legislature is to be congratulated on its action in preserving the inviolability of a contract and for preventing the passage of legislation which would absolutely destroy the rights of investors.

Jitney Traffic Notes.

Winnipeg city authorities are having trouble with some jitney men who put a sign "Anywhere" on their cars, and then charge any fare they please instead of 5c, which is the standard jitney charge.

An auto service was started May 2, by V. N. Lawrence, between Moncton and Hillsboro, N.B., on Tuesdays, Thursdays and Saturdays, leaving Moncton at 8 a.m., and Hillsboro at 10.30 a.m.

The jitney service in Toronto shows signs of increasing, now that the weather is brightening, and riding in open cars is not prejudicial to health. The jitney cars now all carry a label in front marked "Jitney No. —."

The Winnipeg City Board of Trade, on May 10, extended the area within which jitneys may not stop to pick up passengers by including both sides of Notre

Dame, from Portage Ave. to Albert St.

About 60 jitney cars were reported to be operating in Hamilton, Ont., Mar. 20, half of them running on King and Barton Streets. The Hamilton Jitney Association has assigned for the benefit of its creditors, and the jitney men are operating individually.

The Vancouver Jitney Protective Association has been formed in Vancouver, B.C., to look after jitney men's interests. The association is preparing a statement for submission to the city council, and proposes to act in conjunction with the Victoria Jitney men's Association in all matters where joint action can be taken.

The British Columbia Electric Ry. has complained to the authorities that jitney men are not obeying the regulations requiring them to come to a stop 10 ft. behind a street car. The complaint was made as a result of an accident to an employee of the company, who was knocked down by a jitney as he was stepping off a street car, and sustained a fractured skull.

Detroit United Ry. directors have declared a dividend of 1 1/4 % for the current quarter, payable June 1, to shareholders of record May 16. This is at the rate of 7 % a year, and is the largest dividend ever paid by the company, which also owns the Sandwich, Windsor and Amherstburg Ry. in Canada.

Grand Valley Ry.—In connection with the winding up of the affairs of this company, which included the Brantford Street Ry., the G.R.Ry. from Brantford to Galt, and the Woodstock, Thames Valley & Ingersoll Ry., an order was made by Justice Latchford, May 4, for the payment into court by the Receiver, of \$64,176. An application for the discharge of the Trusts and Guarantee Co., as trustee, and of E. R. Stockdale, as receiver, was not granted.

Toronto Civic Ry.—In the estimates prepared for the city council's consideration, the four isolated civic cars lines show an expected deficit for the year of slightly over \$250,000. The general maintenance account is placed at \$296,952, debt charges \$149,636; and claims for damages \$5,000. The estimated revenue is \$200,000.

Electric Railway Projects, Construction, Betterments Etc.

British Columbia Electric Ry.—A press report states that spur line is being built on the company's Fraser Valley line, between Mount Lehman and Gifford, to Cook's Mill, for logging purposes. The hauling will be done from the landing stage at Mount Lehman, over the main line and spur, at night. (April, pg. 156.)

The British Columbia Electric Ry. is completing the construction and equipment of an electrical receiving station near Horne-Payne station, on its Burnaby Lake line, the construction of which was temporarily discontinued about two years ago. (April, pg. 156.)

Buffalo, Fort Erie Ferry & Rd. Co.—The Ontario Legislature has passed an act incorporating this company. (April, pg. 156.)

Charlottetown Street Car Co.—The Prince Edward Island Legislature was asked recently to incorporate a company with this title to establish a line of street cars to be operated by gasoline and electric power or either and to be motor busses or passenger vans, with a carrying capacity of 15 passengers or upwards and to be operated in the streets of Charlottetown and Common, including Victoria Park Roadway, the roads of the Royalty of Charlottetown and such other roads in the province as might be from time to time available by law. Vehicles to be run every day in the week. It was also stated that the city of Charlottetown be empowered to exempt the company from civic taxation for 20 years and that the exclusive right to operate such vehicles or those of a like nature, be granted in the City and Royalty for 25 years. The provisional directors named were:—D. J. Riley, A. A. Alley, J. McKenna, B. Rogers and C. MacLure. After some discussion the bill was dropped May 3.

The Calgary Municipal Ry.'s temporary line of 2½ miles of single track to the Sarcee military camp is being completed rapidly and was expected to be opened on May 15. The Calgary Corporation had on hand 150 tons of rails and bought 100 tons 60 lb. 60 ft. rails which had been obtained from the receivers of the South East Calgary Corporation. (May, pg. 200.)

Lake Erie & Northern Ry.—A contract is reported to have been let to Schultz Brothers & Co., Ltd., Brantford, for the erection of a brick station on Colburn St., 36 x 76 ft., to be used jointly by the L. E. & N. R., and the Brantford & Hamilton Ry.

The electric installation on the section of the line from Brantford to Port Dover was expected to be completed as far as Simcoe by May 30, and the line to be ready for opening for traffic some time in June. (April, pg. 156.)

Montreal & Southern Counties Ry.—The extension from St. Cesaire to Granby, Que., was opened for traffic April 29. This gives the company a line of 46.63 miles, in addition to about 9 miles in St. Lambert, Montreal South and Longueuil. The first line built by the company extended from McGill St., Montreal, to St. Lambert, and was opened for traffic Nov. 1, 1909. Subsequently the Central Vermont Ry. Chambly Branch, was taken over and electrified, and the present extension from St. Cesaire to Granby has been built on an independent right of way. The principal points on the line

outside the Montreal South area are:—Chambly Basin, mileage 15.91 from McGill St.; Chambly Canton, mileage 17.27; Richelieu, mileage 18.14; Marieville, mileage 22.48; Rougemont, mileage 27.56; St. Cesaire, mileage 31.27; Abbottsford, 38.03; Granby, mileage 46.63. Sub power stations have been erected at St. Lambert, Chambly, Rougemont and Granby. It is proposed later on to extend the line to Sherbrooke, and to other points in the Eastern Townships. (April, pg. 156.)

Montreal Tramways Co.—The Board of Control has asked the company to extend its service from Park Ave. to the C.P.R. station at Mile End, over the tracks already laid but not utilized. (Feb., page 73.)

Nelson St. Ry.—Early in the year the Nelson, B.C., City Council instructed H. P. Thomas, City Electrical Engineer, who acts in a supervisory capacity in connection with the Street Railway Department, to prepare plans and estimate for extending the city car lines along Baker St. from Josephine to Cedar St., and on Vernon St. from Cedar to Josephine St., a total distance of about half a mile. We are officially advised that it has been decided not to go on with the proposed extension at present.

Niagara Falls Park & River Ry.—The work being done to ensure safety, which was undertaken in consequence of the serious accident at Queenston Heights, Ont., July 7, 1915, is reported to be largely completed. A. B. Ingram, Vice Chairman, Ontario Railway and Municipal Board, made a trip of inspection over the line, May 11, and is reported to have stated that the work so far was satisfactory, and that it would be fully completed before the summer traffic commenced. The Board will issue an order thoroughly covering the whole matter.

The Mount McKay & Kakabeka Falls Ry. has been granted permission by the Ontario Legislature to use steam as an alternative motive power to electricity on its railway, and has been given an extension of time to build the uncompleted portion. (April, p. 156.)

Ottawa Electric Ry.—We are officially advised that the laying of a new asphalt pavement on Rideau St., between Sussex and Waller streets, has been commenced by the city council. As a part of this work the company is relaying the section with T rails, 108 and 115 lbs. (May, pg. 200.)

Toronto Civic Ry.—The Toronto City Council has accepted the United States Steel Products Co.'s tender to supply a 3-track car barn special track work layout for St. Clair Ave. civic car barn extension at \$2,120. The City Council has also accepted J. J. Gartshore's tender for purchase of old rails and switches as follows: about 200 long tons of 30 lb. rail at \$21 a ton; 20 no. 5 30 lb. switches at \$6 each; 4 long tons of fish plates at \$28 a ton.

Toronto Civic Ry.—The Toronto City Council has given a contract to the General Railway Signal Co. of Canada, to install a signal system in connection with the operation of the Toronto Civic Ry's Lansdowne Ave. branch, at its crossings with the Toronto Suburban Ry's Davenport Road branch at Lansdowne Ave., for \$2,400.

We are officially advised that a new double track, 0.615 of a mile, is being

laid on Lansdowne Ave extension from St. Clair Ave to the C.P.R. tracks.

Winnipeg Electric Ry.—The West Kildonan, Man., Municipal Council was informed May 12, that the company would proceed immediately to lay a second track on its line from the city limits to Kildonan Park. (April, pg. 156.)

Brandon Municipal Railway Construction Costs.

The following figures show the cost of constructing 1.27 miles of track in 1915, using 60 lb. rail with gravel ballast, the work being done under the supervision of T. Boden, Superintendent:—

113.57 gross tons 60 A.S.C.E. rails....	\$ 5,337.80
Tamarac ties	1,938.00
Angle bars	172.20
10 in. rail bonds.....	176.00
62 in. rail bonds.....	16.00
Spikes.....	165.00
Bolts.....	28.00
Special work	2,995.00
Miscellaneous	25.00

Total cost of track material.....	\$10,853.00
Ballast, excavation, tracklaying, tamping and surfacing.....	3,034.00
Supervision	200.00

Total cost of track construction.....	\$14,087.00
Total cost of track material per mile, not including special work.....	\$ 6,680.00
Labor and construction.....	2,370.00

Total cost of track construction per mile	\$ 9,050.00
---	-------------

The following figures show the cost of overhead construction, including special work, for 1.34 miles:—

Material	\$ 1,343.00
Labor pay	497.00
Supervision	32.00

Total cost of overhead construction..	\$ 1,872.00
Total cost of track and overhead construction	\$15,959.00
Cost of electric line material per mile, not including special work and feeder	\$ 900.00
Labor and supervision.....	370.00

Total per mile.....	\$ 1,270.00
Cost of labor and supervision for electric line and track per mile.....	\$ 2,740.00
Total cost of electric line and track construction per mile, not including special work	10,320.00

At the end of 1913 the Brandon Municipal Ry. had 3.12 miles of track in concrete and 5.92 miles in gravel ballast, a total of 9.04 miles, the cost of labor and supervision to construct which was \$54,460. This does not include the cost of putting in concrete, which was done by contract. On the basis of cost of construction 1914 and 1915, which is the same as previous construction, the cost would have been as follows:—

LABOR AND SUPERVISION TO CONSTRUCT ELECTRIC LINE AND TRACK.

Concrete foundation, 3.12 miles.....	\$ 5,000.00
Gravel ballast, 5.92 miles.....	16,220.00
	\$21,220.00
Contingencies and extra labor on specials	5,000.00
	\$26,220.00

These figures are significant and show apparently that a large amount of money was wasted in the original construction.

W. H. Dinsmore, whose appointment as Traffic Superintendent, British Columbia Electric Ry., Vancouver, was mentioned in our last issue, entered the company's service Feb. 1, 1901, as a conductor; on Nov. 1, 1909, was appointed inspector, and on Nov. 1, 1915, Chief Inspector.

The Toronto Board of Control received tenders to May 23, for the supply of one single truck, double end city car, completely equipped; one car body, double end, single truck; equipment for two single truck cars, all for the Toronto Civic Ry.'s Bloor St. Division.

Answers to Questions on Electric Railway Topics.

The following replies have been received to questions asked, regarding electric railway operation, etc., through the American Electric Railway Association's question box.

Grinding Joints.—What is a fair estimate of the cost of grinding joints, on new track and on old track? Give investment in grinding machinery, number of grinders used, men employed per grinder, whether work is done at night or during daytime, and if at night, whether an increase of wages is paid.

W. F. Graves, Chief Engineer, Montreal Tramways Co.—Have not kept the costs of grinding joints on old and new track separate. However have arrived at an average figure of \$1.18 per joint on a total of 2,622 joints. This includes overhead, machinery repairs, depreciations, renewals, interest, insurance and taxes. Investment in grinding machinery, \$4,500; grinders used, two; men per grinder, three; practically all night work except on construction work where track is dead. Two cents an hour extra is paid to ordinary laborers and 5c. an hour to the men in charge of machines.

Repairing Cup Joints.—How are cup joints repaired and what is the approximate cost?

W. F. Graves, Chief Engineer, Montreal Tramways Co. for the past two years we have been making a practice of repairing cupped joints by pouring mild steel which has been melted with a machine similar to the welder put out by the Indianapolis Frog and Switch Co., with considerable success. In fitting 674 joints in this manner during the past three months we used 510 lbs. of this mild steel or approximately 0.76 lb. per joint.

Traffic Counts.—What are the methods used in making traffic counts, what direct and tangible results are secured from such counts, and what determines the frequency with which they are made?

F. L. Hubbard, Assistant to General Manager, Toronto Ry. Co.—We maintain a staff of traffic counters attached to the transportation department, and independent of divisional inspection forces. Our regular counting is done by routes, the men being stationed at the point of maximum traffic and a count taken of passengers in each car passing that point in both directions. The count is forwarded to transportation department and graphically charted. Special counts are made of transfer passengers at intersections and to secure statistics relating to the trend of traffic, running time of cars, cars laying in at the end of the line, etc. The counts enable the management and officials of transportation department to keep in touch with actual traffic conditions, independent of the reports of traffic inspectors. We use the information in a follow up system of the outside supervising forces by daily sending typewritten extracts of special features from such counts to divisional superintendents. Counts are invaluable to transportation department in checking up requisitions for new time tables sent in by divisional superintendents. The charts form a handy record of traffic and service in dealing with complaints from individuals or before traffic commissions. We keep the staff regularly employed on a circuit of the different lines. The special counts are made as required.

Elimination of Time Points.—Have any companies experience with elimination

of time points and what has been the results?

F. L. Hubbard, Assistant to General Manager, Toronto Ry., No, but we have our doubts of the system proving a success. Even if scheduled time points were abolished, it would seem to us that the individual motor man would divide the route into time sections to guide him in arriving at the terminal on time, and if this assumption be correct, it is better to have this division of time uniform and scheduled for all the men rather than that it should be left to the individual. The lack of time points would prove a handicap to inspectors in checking the running time of cars, and in straightening the line after a block.

In accident prevention work, in schools and among the public generally, have better results been obtained by a organization controlled by the railway itself, or by contributing to and working with safety organization outside of the company?

F. L. Hubbard, Assistant to General Manager, Toronto Ry. Co.—We have obtained better results by contributing to and working with an independent public safety league, composed of representatives from the Ontario Railway and Municipal Board, Government Factory Inspection Bureau, City Council, Police Department, Board of Education, Manufacturers' Association, Trades and Labor Council, Motor League and railway companies. The League being a representative public body has a much broader field to work in than it is possible for the company to cover. Its educational work is not confined to street railway accidents, but covers accidents of all kinds and this is carried on with an entire absence of prejudice or anti corporation feeling on the part of the public.

Equipment Maintenance Cost.—What should be the cost of equipment maintenance: 25% city service, average rate of speed 9 miles an hour, and 75% inter-urban service, average rate of speed 22 miles an hour?

G. Gordon Gale, General Manager, Hull Electric Co., Hull, Que.—The cost of equipment maintenance as specified should be 2½c a car mile.

Repairs after Collisions.—In case of collision and wagon accidents, is it, as a general proposition, more expensive to repair a steel car than a wooden one?

M. Power, Master Car Builder, Toronto Ry., Toronto.—The steel car is the more expensive to repair.

Inspection of Freight Trailers.—What is considered the most efficient way of inspecting freight trailer cars on a property operating 30 trail cars, and where they are not available for daily inspection, being distributed over a line of 150 miles?

M. Power, Master Car Builder, Toronto Ry., Toronto.—This is a question hard to answer without a knowledge of the conditions. It may be quite possible that a system of inspection could be arranged at different points of such a system.

Good Intentions.—A contemporary states, "The Montreal & Southern Counties Ry. has been intended as far as Granby, Que." We have heard that the road to a certain place is laid with intentions, but, as far as memory serves, that place is not Granby.

The Canadian Northern Ex. Co. has placed its service in effect between Inwood and Hodgson, Man., 50 miles.

Hydro Electric Power Commission of Ontario Legislation.

The Ontario Legislature at its recent session passed three acts affecting the water powers of the Province and the Hydro Electric Power Commission of Ontario's powers in respect thereto. The first is an act to regulate the use of provincial waters for power development purposes. It declares that it shall be the duty of the owner of a water power to ensure as far as possible the economical and efficient use of the water by him; and provides for the appointment of an inspector to examine into the manner in which the water power is being developed and used. Upon reports of the inspector, the Government may make order as to the power, and in the event of the owner feeling himself aggrieved, he may be granted compensation. Under this act it would appear that the Government may restrict and limit the development of water powers, and the distribution of electrical energy by private owners or by municipal corporations.

The second act deals with the development of water power in the vicinity of Niagara Falls, and authorizes the Hydro Electric Power Commission of Ontario to divert the Niagara River, Welland River and tributary waters, and convey them by aqueduct or canal or in any other manner from any point on the Welland River, or on the Niagara River above the Cataract and discharge their waters into the Niagara River, for the purpose of the production of electric energy, and for such purpose to use all the powers conferred by the Power Commission Act. The cost of such works is to be defrayed out of funds appropriated for that purpose by the Legislature, and to be designated the Niagara Power Development Works account. Until this power is developed the commission may secure such additional power as is necessary to meet the requirements of the municipalities over and above the 100,000 h.p. required under existing contracts, upon the best terms available, and the additional cost of such power to the municipalities shall be included in the price per horse power payable by municipal corporations under existing contracts.

The third act is an amendment of the Power Commission Act, in which the authority of the commission was specifically set out in regard to certain matters. Bylaws confirming agreements as to power between the commission and a number of municipalities, and other contracts, which are set out in the schedules are ratified and confirmed.

During the discussion upon these bills, it was stated on behalf of the Government that it is not proposed to encourage any expenditure upon radial electric railways under the Hydro Electric Ry. Act of 1914, during the continuance of the war. Preparations for the construction of such railways will, however, be continued.

The Toronto Ry. and Subway Construction.—The Supreme Court of Canada dismissed the Toronto Ry. Co.'s appeal, May 2, against an order of the Board of Railway Commissioners assessing the company with 10% of the cost of building a subway under the C.P.R. at Avenue Road. The chief grounds of the appeal were the question of the Board's power to assess a provincial railway in regard to a subway under a Dominion railway, and also the rights of the company to the use of city streets. The amount to be paid by the company is \$8,000.

Mainly About Electric Railway People.

Percy Lewis has been appointed Purchasing Agent, British Columbia Electric Ry., vice C. A. Lee, transferred to electrical engineering department.

J. P. McKenzie, heretofore Master Mechanic, has been appointed Assistant Superintendent, Saskatoon Municipal Ry., Saskatoon, Sask. This is a new position.

Capt. Guy Boyer, of the 22nd Battalion, C.E.F., and formerly a Montreal St. Ry. official, is reported as under eye treatment in England owing to lachrymose gas effects.

F. D. Burpee, Superintendent, Ottawa Electric Ry., who is on leave of absence for military service, has been promoted from captain to major in the 207th Battalion, now stationed at Ottawa.

F. S. Woodcock, Traffic Manager, Saskatoon Municipal Ry., Saskatoon, Sask., having resigned on enlistment for service with the Canadian Expeditionary Force, the position has been abolished.

D. L. Welch, heretofore General Freight Agent, Chatham, Wallaceburg & Lake Erie Ry., is reported to have been appointed Travelling Auditor, London & Port Stanley Ry., London, Ont.

L. G. Ireland, heretofore Manager, Brantford Municipal Ry., has been appointed Assistant Engineer, Hydro Electric Power Commission of Ontario, in charge of operation of distribution systems, Central Ontario Power System.

Nugent M. Clougher, who was in Ottawa some two years ago, attempting to promote the Ottawa Rideau Lakes & Kingston Ry., has been granted a temporary commission as lieutenant in the Royal Naval Volunteer Reserve, and has been appointed to the s.s. President, additional for Royal Naval Air Service.

Wilford Phillips has been appointed General Manager, Winnipeg Electric Ry. Co., instead of Manager as heretofore. He returned to Winnipeg recently, after four months leave of absence, which he spent in California, being a large part of the time in the open air and doing a great deal of motoring in the Los Angeles district, which improved his health very much.

J. M. Ahearn, heretofore Assistant Master Mechanic, Ottawa Electric Ry., has been appointed Assistant Superintendent in charge of equipment, with control of the repair shop and car barns, and of matters dealing with rolling stock. He has worked in street railway electrical departments for some 15 years and had considerable experience on the Pacific Coast.

W. G. Ferguson, Local Manager, Peterborough Radial Ry., which has been bought by the Ontario Government with other Electric Power Co. property, and transferred to the Hydro Electric Power Commission of Ontario for management, remains in the same position as heretofore, reporting to L. G. Ireland, who has been given charge of operation of distribution systems, Central Ontario Power System.

Major Norman C. Pilcher, General Manager, Sherbrooke Ry. & Power Co., Sherbrooke, Que., who went on active service a little more than a year ago, has been killed in action in France. He was appointed General Manager, Sherbrooke Ry. & Power Co., Sept. 1, 1910, and for some time prior to that had acted as Manager of the Fort William and Port Arthur Electric Railways, then being

operated jointly. He is survived by a widow and one son, both of whom are at present in England.

D. L. Welch, who is reported to have been appointed Travelling Auditor, London & Port Stanley Ry., London, Ont., was born at Clinton, Ont., Feb. 29, 1892, and entered railway service, Nov. 24, 1909, since when he has been, to June, 1911, relieving agent, Buffalo Division, Pere Marquette Rd.; June, 1911, to May, 1913, cashier, same road, Wallaceburg, Ont.; May, 1913, to Feb., 1916, local freight and passenger agent, Chatham, Wallaceburg & Lake Erie Ry., Chatham, Ont.; Feb. 20 to May 13, 1916, General Freight and Passenger Agent, same road, Chatham, Ont.

Electric Railway Notes.

The Winnipeg Electric Ry. is carrying all soldiers in uniform, during all hours of all days, on workingmen's tickets, 8 of which are sold for 25c.

The Dominion Power & Transmission Co., Hamilton, Ont., has had 120 employees enlist for overseas service with the Canadian Expeditionary Force.

The City of Calgary, Alta., has passed a daylight saving bylaw, and the Calgary Municipal Ry. has been operated under the new time since May 7.

The Manitoba Public Utilities Commission has heard considerable further argument as to the expediency of compelling the Winnipeg Electric Ry. to operate its cars across the Arlington bridge, and decided May 10, to take the whole matter again into consideration. The question hinges upon what are adequate safety appliances on the cars.

The Winnipeg City Council, on April 24, adopted the daylight saving plan, and passed a bylaw declaring it in operation. The Winnipeg Electric Ry. started operating its cars in accordance therewith April 26. The Winnipeg, Selkirk & Lake Winnipeg Ry. cars to Selkirk and Stonewall continued to be operated on standard time.

The British Columbia Electric Ry. put a new time table in force April 10, between New Westminster and Chilliwack, the principal features of which are the allowance of more trains at the terminal, the last trains leaving each end an hour later than formerly, and the running of one train a day in each direction through between Vancouver and Chilliwack.

The Ontario Legislature has authorized the city of Windsor, and the towns of Walkerville, Sandwich, Ford City and Ojibway, to join in the formation of one public utilities commission to supervise all public utilities within their boundaries. It is claimed that this will effect some saving of expense, and that the unity of policy over a large area, will be of very great benefit to the area involved.

The Quebec Appeal Court, gave judgment, May 29, affirming the decision imposing a penalty of \$1,000 on M. Martin, Mayor of Montreal, for ignoring an interlocutory injunction restraining him, and the Montreal Board of Control from dealing with any proposed contract between the city of Montreal Tramways Co. The proposal referred to was the Hebert contract, which was before the Board in June, 1915.

The hearing of the case of Moodie against the Cataract Power Co., was concluded before an Ontario Supreme Court judge at Hamilton, Ont., May 6, the action being dispensed with costs. The

plaintiff, John Moodie, sought to recover \$6,624 alleged unpaid dividends on shares held by him. The Cataract Power Co., is one of the constituent companies of the Dominion Power and Transmission Co. The judge held that the plaintiff had failed to justify his claim.

The British Columbia Electric Ry. is substituting clear for ground glass windows in the partition between the motor-men's vestibule and the passenger section of its cars. Some 20 cars had been altered up to May 8, and if the experiment is approved by the public, the remainder of the cars will be altered accordingly. The opaque glass was put in some years ago because of a government order, but W. G. Murrin, General Superintendent, says it has many disadvantages.

An arrangement is reported to have been made between the British Columbia Government and the British Columbia Electric Ry., under which the company's employees are to have one day off work in every eight days, the agreement to come into effect June 15. The men are, as far as possible, to have short days on Sundays, but the entire working force is to hold itself in readiness for work on all holidays in addition.

A joint committee representing the municipal councils of Windsor and Walkerville, Ont., met May 18, to discuss a proposal to run motor busses on the streets in opposition to the Sandwich, Windsor & Amherstburg Ry.'s electric cars. Council has advised that a motor bus line is not a railway within the meaning of the agreement between the councils and the railway company, and may be operated by them without violating the franchise.

Brantford Municipal Ry. employees have asked the Department of Labor for the appointment of a conciliation board to enquire into conditions of service. Among other things which the men desire are one week holiday with pay, seniority in runs, abolition of outside running board on open cars, bi-weekly inspection, increased pay, shorter hours after the war, free uniform after one year of service, and abolition of charge for first \$10 worth of tickets.

The Manitoba Court of Appeal reserved judgment recently in the Winnipeg Electric Ry.'s appeal against an order of the Manitoba Public Utilities Commission, granted on the application of Winnipeg City Council, requiring the company to prevent the escape of electric current into the city's water pipes. The grounds on which the appeal were based were that the Public Utilities Act is unconstitutional, the Commissioners having the powers of a Superior Court judge, which powers can only be exercised by an officer appointed by the Dominion Government; and further, provided the Act were constitutional, then that the Commissioner exceeded his powers in making the order, the company's railway having been built in accordance with plans approved by the city.

Sale of International Transit Co.—The Algoma Steel Corporation has sold to the Great Lakes Power Co. its power plant and also the International Transit Co.'s street car line and ferry franchise at Sault Ste. Marie, Ont., but not the Trans St. Marys Traction Co.'s street car line in Sault Ste. Marie, Mich. The latter is still being handled by the Lake Superior Corporation's interests. James Heyworth, Harvester Building, Chicago, is the principal person interested in the Great Lakes Power Co.

Marine Department

Launching of Icebreaking Steamship J. D. Hazen.

The Dominion Government icebreaking steamship, J. D. Hazen (named after the Minister of Marine), which was very fully described, with plans, in Canadian Railway and Marine World for May, was most successfully launched at Canadian Vickers, Ltd., works at Longue Pointe, Montreal, on May 15, at 2.30 p.m. The

two mechanical triggers, which were kept in position by an arrangement of levers and connected with two cords which led up to the launching platform. When Lady Borden cut the ribbons on the platform, this operated to release the two cords which held the triggers. The latter dropped, and the vessel started down the

Lewis referred to the fact that the building they were in had only a few years ago been a part of the St. Lawrence River's course, from which more than 36 acres had been reclaimed and filled in by dredging. He spoke of the work already accomplished in repairing a British cruiser and in building a number of submarines

Icebreaking Steamship J. D. Hazen.

christening was performed by Lady Borden, who was accompanied by the Prime Minister, Sir Robt. Borden, in the presence of a large company of invited guests. Lady Borden was presented by Canadian Vickers, Ltd., with a gold chain with a large diamond attached.

All the arrangements for the launching were carried out most successfully. At 7 a.m. the keel blocks on which the vessel was sitting were removed, so that she rested on her launch ways. On the arrival of the launching party, two bilge blocks on each side of the vessel were removed, and she was then held only by

ways. No hydraulic power was used. A novel checking arrangement was introduced. The vessel was checked, when off the ways, by chain drags fastened to one side of her only by flexible wire cables. This was arranged so that when the strain was taken on the ropes the vessel would not be deflected from her normal course.

After the launching the invited guests were entertained at luncheon in the moulding room, speeches being made by F. Orr Lewis, President of Canadian Vickers, Ltd., Sir Robt. Borden and Hon. C. J. Doherty, Minister of Justice. Mr.

for the British Navy.

Sir Robt. Borden referred, among other things, to the ancient pre-eminence of Canada in shipbuilding, more especially to what had been done in his native province of Nova Scotia. He saw no reason why Canada should not go forward to the undertaking of building steel ships, and why she should not rival in the future the record made by Nova Scotia in the past in building wooden vessels. He quoted a remark made to himself in Great Britain by the manager of one of the greatest shipbuilding companies there, that as the years roll by the cost of build-

ing steel ships in Canada will more and more approximate to the cost in the United Kingdom. He pointed out the great benefit to other industries which would result from the fact that a flourishing shipbuilding industry is nearly always associated with the products of iron and steel. The development here of a large shipbuilding industry would also be a great asset for Canada and the Empire should another great war occur.

P. L. Miller, General Manager, and H. Driver, Secretary-Treasurer, Canadian

Vickers, Ltd., who were in general charge of the arrangements for the launching, and for the entertaining of the guests, succeeded admirably, everything passing off most successfully and without a single hitch.

As stated in previous issues, the J. D. Hazen was intended for icebreaking work on the St. Lawrence River, particularly at Cap Rouge, but it is now said that she is to be transferred to the Russian Government. The vessel was designed by C. Duguid, Architect, Marine Department.

Canada Steamship Lines Ltd. Notes.

The s.s. Natironco, which was bought last year, has been thoroughly overhauled and had new boilers installed at the company's works at Sorel.

The s.s. Rosedale, which was given an extensive overhaul at Port Arthur recently, left Quebec May 16 for London with a cargo of deals.

The company is building a tug at Sorel for towing barges through the Welland Canal. She will be 65 ft. long, with 18 ft. beam, and will have fore and aft compound engines.

In consequence of the fire which occurred last autumn, a new electric power plant has been installed at the Manoir Richelieu, Murray Bay, and the entire hotel has been rewired.

The s.s. Syracuse, which will run this season between Quebec and Chicoutimi, on the Saguenay Division, has been fitted for salt water service at the company's works at Sorel by putting in surface condensers and fresh water tanks.

On account of the abnormally high price of fuel oil, owing largely to the

Dominion Canal Statistics for 1915.

The total traffic through Canadian canals during 1915, was 15,198,803 tons, a decrease of 21,824,434 tons from 1914.

The distribution among the various canals was:—

	Tons.	Increase Tons.	Decrease Tons.
Sault Ste. Marie..	7,750,957	19,848,227
Welland	3,061,012	799,957
St. Lawrence	3,409,467	982,026
Chambly	478,707	41,802
St. Peters	2,895	51,285
Murray	30,728	53,179
Ottawa	272,370	62,762
Rideau	120,781	30,958
Trent	49,904	17,811
St. Andrews	21,982	20,031

Total 15,198,803 41,802 21,866,236

The decrease at Sault Ste. Marie, which was equal to 91% of the whole, was 19,984,227 tons, and of this, 18,798,986 tons, or 94.9%, was U.S. traffic. The opening of a new lock on the U.S. side led to the diversion of a large amount of business which had in previous years taken the Canadian channel. This was particularly true during the autumn, when extreme pressure prevailed in the movement of Canadian wheat.

Following is a comparison of the freight movement, by months, in 1914 and 1915:—

	1914 Tons.	1915 Tons.
January	494
April	554,111	398,350
May	5,307,123	1,426,805
June	6,136,657	1,472,670
July	6,339,831	1,587,611
August	6,261,380	1,829,021
September	6,069,946	2,424,717
October	4,660,484	3,354,829
November	1,470,471	2,278,245
December	222,740	426,555

Total 37,023,237 15,198,803

The net tonnage in 1915, eliminating all duplication, was 12,334,779. Of this, 4,931,954 tons were Canadian, and 7,402,825 tons U.S. Having regard, however, to Canadian traffic which passed through the U.S. canal at Sault Ste. Marie, the actual net tonnage of Canadian commerce was 6,734,223.

Traffic in 1915 was distributed among the various classes of commodities as follows:—

	1914 Tons.	1915 Tons.
Products of agriculture..	8,522,327	5,182,525
Animal products	19,301	11,289
Products of the forest...	1,678,925	1,096,111
Products of the mine...	39,951,661	1,494,778
Manufacturers	1,881,699	7,414,100

Total 37,023,237 15,198,803

The tonnage of Canadian and U.S. traffic in 1914 and 1915 was:—

	1914 Tons.	1915 Tons.
Canadian	9,282,206	6,789,423
United States	27,641,031	8,409,380

The foregoing figures apply to traffic through Canadian canals. A considerable volume of Canadian commerce has always passed through the U.S. canal at Sault Ste. Marie. In 1915 it amounted to 1,802,269 tons, which, added to the 6,789,423 tons transported through Canadian canals, creates a final total of 8,591,-

692 tons. As a matter of fact, the net tonnage of Canadian traffic was 144,183 tons greater in 1915 than in 1914.

In 1914 Canadian traffic through Canadian canals was equal to 25.3%. In 1915 it was 44.7%.

The proportions of the Canadian and U.S. tonnage through the Canadian canals were:—

Canals.	Total Traffic	Canadian Tons.	Per Cent.	U.S. Tons.	Per Cent.
Sault Ste. Marie.....	7,750,957	2,561,734	33.0	5,189,223	67.0
Welland	3,061,012	1,426,256	46.6	1,634,756	53.4
St. Lawrence	3,409,467	2,024,755	59.3	1,384,712	40.7
Chambly	478,707	292,191	61.0	186,516	39.0
St. Peters	2,895	2,895	100.0
Murray	30,728	27,942	90.9	2,786	9.1

Cargoes of Canadian wheat moved eastward by water in 1915 totalled 170,117,861 bush., compared with 95,032,066 bush. in 1914. This passed the Sault canals as follows:—

	1914 Bush.	1915 Bush.
Through Canadian canal..	77,467,833	48,727,911
Through U. S. canal....	17,564,233	121,389,950

Total 95,032,066 170,117,861

There were also 9,967,941 bush. of Canadian wheat brought down in the form of flour making the final aggregate 180,085,802 bush.

The distribution of Canadian wheat in 1915 and 1914:—

	1914 Bush.	Per cent.	1915 Bush.	Per cent.
From Port Arthur, Fort William and Duluth.	10,283,166	10.8	4,025,010	2.4

Other Canadian Ports.....	25,533,734	26.8	107,709,239	63.3
Buffalo
Total	95,032,066	...	170,117,861	...

For 1915 and 1914, freight rates on Canadian waterborne wheat were:—

	1914.	1915.
To Montreal:
Per ton per mile.....	0.124c.	0.132c.
Per bushel	4.58 c.	4.99 c.
Per ton	\$1.52	\$1.66
To Georgian Bay ports:
Per ton per mile.....	0.095c.	0.282c.
Per bushel	1.46 c.	3.54 c.
Per ton	48.61 c.	\$1.18
To other Canadian ports:
Per ton per mile	0.065c.	0.123c.
Per bushel	1.48 c.	2.84 c.
Per ton	49.29 c.	94.80 c.
To Buffalo:
Per ton per mile.....	0.061c.	0.159c.
Per bushel	1.63 c.	3.97 c.
Per ton	53.72 c.	\$1.32

The New Brunswick Telephone Co. held its annual meeting at Fredericton, May 18, when the report showed that the business had been satisfactory for the year, although the general growth had not been up to the standard shown before the war. It was decided to continue the payment of the 8% dividend as hitherto.

demand from the munition factories, the company will use coal instead of oil on its St. Lawrence River steamships, Rapids King and Rapids Prince, this season.

The s.s. Acadian and the s.s. D. A. Gordon are being overhauled at Longue Pointe, Montreal, after 12 months charter on the Atlantic coast. They and the s.s. Glenellah, which have been carrying coal from New York to St. John's, Nfld., will load in Montreal with deals for London.

The company is fitting up a dock at Quebec for handling coal for its vessels, which, owing to the shortage of ocean going tonnage, will this year use Ohio

coal instead of being supplied from the Maritime Provinces. A Brown hoisting machine, heretofore in use at Sarnia, Ont., is being transferred to Quebec and a similar one will be installed at Sarnia.

Dominion Assistance for Shipbuilding.
An Ottawa press dispatch says that a subcommittee of the cabinet is to be appointed to deal with the question of the advisability and the means of federal assistance for the development of a shipbuilding industry in Canada. This question was discussed on several occasions during the recent session, principally on behalf of Canadian shippers, who have been encountering difficulties through the shortage of ocean tonnage. The appointment of a ministerial committee to deal with the question will be followed by a careful study of the problems surrounding the building up of a Canadian shipbuilding industry.

Sale of Canadian Northern Steamships to Cunard Steamship Co.

The Canadian Northern Steamships, Ltd., a subsidiary of the Canadian Northern Ry., has sold its interests to the Cunard Steamship Co., the arrangement having been negotiated by D. B. Hanna, Second Vice President, C. N. Steamships, and Sir Alfred Booth, Chairman of the Cunard Co., much of the work in connection with the negotiations having been carried out in England by the C.N.R.'s European Traffic Manager, W. Phillips, acting under Mr. Hanna's instructions. The following announcement was made by Mr. Hanna early in May:—

"An agreement of great importance to the development of trade and passenger traffic with Canada has been concluded between the Canadian Northern Ry. and the Cunard Steamship Co., which provides for a very close working arrangement between the two parties. The Cunard Co. will take over the steamships which were running before the war from Avonmouth and Rotterdam, and will maintain service between Canada and ports in the United Kingdom and on the European Continent. The C.N.R. throughout the vast territory covered by its railway lines from the Atlantic to the Pacific coast will direct its efforts in favor of the Cunard Line, while the Cunard Line will in the same way work in favor of the C.N.R. The various Canadian services of the Cunard Line and the C.N.R. will thus in effect become a single transportation unit between Europe and Canada. Steamship services on the Pacific Ocean are also in contemplation. The agreement becomes operative at once, but its full effect will not be seen until after the conclusion of the war. The C.N.R. will be on land, what the Cunard Steamship Co. is on water, in the formation of a complete system of freight and passenger transportation to and from the Dominion, and ports in the United Kingdom and the European continent."

Canadian Northern Steamships Ltd. was incorporated under the Dominion Companies Act in Oct., 1909, with an authorized capital of \$2,000,000, and office at Toronto, with the following provisional directors, all of whom are connected in various capacities with the Canadian Northern Ry. Co.: F. H. Phippen, K.C., G. G. Ruel, G. F. Macdonnell, R. H. M. Temple and A. J. Reid. Early in 1910, three steamships were acquired, the *Helipolis*, *Cairo* and *Volturno*. The first two named were built at Glasgow, Scotland, for the Egyptian Mail Steamship Co., and had been operated between Marseilles, France, and Alexandria, Egypt. They were sister vessels, of the following dimensions,—length over all 545 ft., breadth 60 ft. 3 ins., depth to shelter deck 33 ft., tonnage 11,000, i.h.p. 18,000. They were equipped luxuriously, and were each driven by three sets of Parsons' compound steam turbines, and after a thorough overhauling and some slight alterations to make them suitable for Atlantic travel, were renamed *Royal George* and *Royal Edward*, respectively, special permission having been granted for the use of the word *Royal*.

The *Volturno* was purchased from the Northwest Transport Line, a concern in which Sir William Mackenzie was interested. She was built at Glasgow, Scotland, in 1906, and was of steel. Her dimensions were, length 340 ft., breadth 43 ft., depth 20.7 ft. tonnage 3,581 gross. She had been operated under charter by

the Uranium Steamship Co., between Halifax, New York and Rotterdam.

The company's Atlantic steamship service was inaugurated between Canada and England, May 13, 1910, when the s.s. *Royal Edward* sailed from Avonmouth, which place had been selected as the British port, for Montreal. She arrived at Quebec early in the morning of May 19, and at Montreal during the evening of the same day. This service was continued regularly, with Montreal and Halifax, as the summer and winter ports respectively, until the outbreak of war, except during the winter of 1913-14, when St. John was the winter port.

The s.s. *Royal George*, when making her last trip up the St. Lawrence before the winter of 1912, ran aground about a mile east of Point St. Lawrence, Island of Orleans, Nov. 5, and was considerably damaged in the bows. This however was soon repaired and she was replaced in service. The s.s. *Volturno* was burned at sea Oct. 10, 1913, and a number of passengers and some of the crew lost their lives, the captain being very highly commended for bravery. In Dec., 1913, the s.s. *Principe di Piedmonte*, built at Sunderland, Eng., in 1907, with a tonnage of 6,365 gross and 4,044 register, was purchased, renamed *Principello* and leased to the Uranium Steamship Co. in place of the *Volturno*, and in May 1914, *Principello* Steamships Ltd., was incorporated under the Dominion Companies Act, with \$150,000 authorized capital, to own the s.s. *Principello*.

On the outbreak of war in Aug. 1914, the steamship business carried on by the Uranium Steamship Co., of which company the Mackenzie and Mann interests were practical proprietors, came to an end; the s.s. *Uranium* was chartered to Canadian Northern Steamships Ltd., and *Campanello* Steamships Ltd. was incorporated under the Dominion Companies Act with, \$100,000 authorized capital, to take over the s.s. *Campanello*. The *Royal Edward* and *Royal George* were requisitioned by the Admiralty, thus leaving the company with three steamships, *Campanello*, *Principello* and *Uranium* in its service. The s.s. *Royal Edward*, which was first utilized in the transportation of Canadian troops to Europe, was later used as a prison vessel for interned Germans, off the English coast, and later again served as a transport for troops between England and the Dardanelles, and while on her second voyage as such, was torpedoed and sunk in the Aegean Sea, Aug. 14, 1915, when about 1,000 lives were lost, including the captain, Lieutenant Wootton, R.N.R., who had been in command of her ever since her acquirement by Canadian Northern Steamships Ltd.

Canadian Lights and Fog Signals.—

The Marine Department has issued three books of lists of lights and fog signals along the Atlantic Coast, including the Gulf of St. Lawrence to the head of ocean navigation; on the inland waters of the Dominion between Montreal and British Columbia, and on the Pacific Coast and the rivers and lakes of British Columbia. The lists are corrected to Apr. 1, and are distributed free to mariners on application.

G. D. Curtis, heretofore Manager, Western Department, Adams Ex. Co., has been appointed Vice President and General Manager.

Stranding of s.s. *Camosun* Investigated.

An investigation into the stranding of the Union Steamship Co. of British Columbia's s.s. *Camosun*, near Lima Point, Digby Island, B.C., Mar. 7, was held at Victoria recently, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. R. Ridley and H. Parsons as nautical assessors. The court found that the stranding was entirely due to an abnormal current setting to the northward after a succession of southeast winds, and that in no sense can the master, E. A. Dickson, or any member of the crew, be blamed for the accident, and returned them their certificates with a considerable amount of satisfaction. The court also expressed its appreciation of the manner in which the Managing Director of the owning company spoke of the master of the *Camosun*, and stated that if those occupying the important and responsible position of steamship managers would take similar action, it might probably mean that accidents to steamships on British Columbia waters would be less frequent. The court also recommended that owing to this accident, a notice to mariners should be issued warning them that after a continuation of southeast or southerly winds, a set to northward must be expected along the shores of Digby Island. This, to the knowledge of the court, is a well known fact among the local fishermen in that district.

The s.s. *William C. Moreland*, which was formerly owned by the Interstate Steamship Co., Cleveland, Ohio, has been purchased by Canada Steamship Lines, Ltd., and is being repaired and overhauled at Superior, Wis. She was built there in 1910, and on her second trip, when downbound with iron ore, went ashore near Eagle River in Lake Superior, Oct. 18, 1910. The loss on the hull was \$420,000 and on the cargo \$40,000. At the time of the loss it was stated that she had been broken in two in two places, and that while wrecking operations might succeed in floating a portion of her, it was unlikely, the water being about 200 ft. deep within 30 ft. of where she stranded. She was abandoned to the underwriters, and later sold to the Reid Wrecking Co., Sarnia, salvaged and taken to Port Huron, where she was patched up sufficiently to allow of her being towed to Superior. Her dimensions were, length 580 ft., breadth 58 ft., depth 32 ft.; tonnage, 7,514 gross, 5,803 register. She was equipped with triple expansion engines with cylinders 24, 39 and 65 ins. diam. by 42 ins. stroke, supplied with steam by a single Scotch boiler 11½ by 16 ft.

The Dominion Government and Neutral Vessels.—The United States Secretary of State has officially announced that the Dominion regulations regarding the searching of neutral vessels are not intended by the Dominion Government to be applicable to vessels at river and lake ports, and any instructions that may have been issued in that behalf have been cancelled, but the rules will be enforced at all seaports.

The Dominion Government s.s. *Quadra*, which was sunk in collision with the C.P.R. s.s. *Charmer*, Feb. 26, off the entrance to Nanaimo harbor, has been raised by the Vancouver Dredging & Salvage Co., which bought the wreck. She was taken to Vancouver after raising, for examination.

Steel Shipbuilding and a Mercantile Marine for Canada.

In an address to the Canadian Manufacturers Association's Montreal Branch recently, Thos. Cantley, President and General Manager, Nova Scotia Steel & Coal Co., New Glasgow, N.S., dealt with the extraordinarily increased freight rates for ocean traffic, owing to the steadily decreasing tonnage available, and stated that so long as the war continued, no relief could be expected from outside sources. He pointed out that Canadian shipping only carried a small fraction of the lake freights, about one tenth of the whole of the produce sent from Canadian ports. He outlined the history of the up-building of the railways in the Dominion, and deplored the fact that the Government had not carried out a similar policy of assistance in regard to marine transportation. The canal system had cost over \$100,000,000 since confederation, but it was open to competitors, and over four-fifths of the traffic passing through the canals originated in the United States, while less than one-third of the vessels were Canadian. The Dominion had also spent \$150,000,000 on aids to navigation on the coast and inland waters, which were used by all in common, but the Government had done practically nothing towards building up the shipbuilding industry. There are a few Canadian ship yards equipped for the building of steel vessels, but they are all on the Great Lakes, and none on the Atlantic seaboard. He made comparisons in the output of wooden ships in the Maritime Provinces from 1874, when 190,756 tons were built in a year, and the tonnage on the register was 1,158,363, down to 1914, when the vessels built in the year were 43,436 tons, and the tonnage on the register was 932,422. He declared that he had no faith in any scheme for providing greater or more efficient transportation either through Government ownership, time charter or operation of a tramp steamer fleet, or by any other form of attempted control of ocean traffic by the Government, but considered that the Government would be justified in making a considerable expenditure by way of aiding in the development of shipbuilding at present. The iron and steel industry of Canada could never have reached the present output capacity save for the fostering influence of the combination of tariff protection and bounty. Steel shipbuilding on a comprehensive scale can be

developed if the Government is prepared to grapple with the matter in a broad and statesmanlike way. It is generally admitted that it requires from five to ten years to build up any good manufacturing organization, and this makes it necessary that any plan of assistance should be guaranteed for a period long enough for any new yards to get their organization established. Assistance might take the form of a rebate of duties paid on materials entering into the construction of a vessel, direct aid by way of bounty, or a combination of both. If vessels built outside Canada are to be admitted free to Canadian registry and trade, then at least an amount equal to the duty imposed on the material entering into the construction of Canadian built vessels should be returned to the builder. If the Government were to adopt the plan of ordering naval vessels and at the same time encourage mercantile construction, shipbuilding would expand rapidly, and Canada would the sooner be able to build naval tonnage at prices closely approaching those of other countries. Other matters dealt with were, marine insurance, inspection of machinery, re-casting of navigation laws, etc.

The question of aid to shipbuilding came up for discussion in the House of Commons, May 16, when immediate action by the Government was advocated in order to establish the building of steel vessels as a permanent industry. It was urged that the bonusing of steel vessel building was a natural corollary of bonusing the steel industry. The Prime Minister stated that the matter was being considered by the Government, but if a start were made now, either by way of subsidy or by Government ownership and construction, by the time manufacture was actually started the war might be over and the present premium on shipping be discounted by the return to normal conditions. He stated that from information he had received in England, he thought that in about 15 years vessels could be built as cheaply in Canada as in Great Britain. Several suggestions had been put forward by various companies interested in shipbuilding, but the Government did not feel justified in presenting any definite proposal to Parliament.

The name of the s.s. Onaping, no. 88,623, registered at Windsor, as owned by John Charlton, Lynedoch, Ont., has been changed to Lucknow. She was formerly a sailing vessel, and was built at Saginaw, Mich., in 1870.

Steamship Service Between Prince Edward Island and the Mainland.

Canadian Railway and Marine World for May gave very full particulars of the withdrawal from business and of the new Charlottetown Steam Navigation Co.'s arrangements for steamship service between Prince Edward Island and the mainland. Some further particulars are now available. As stated in our last issue, the s.s. Northumberland, which formerly ran between Summerside and Pointe du Chene, and latterly between Charlottetown and Pictou, has been sold by the C. S. N. Co. to the Dominion Trade and Commerce Department, which has transferred her to the Canadian Government Railways, under whose management she will run between Summerside and Pointe du Chene as long as that route can be navigated this year. She will be under command of Capt. A. Cameron, who was in command of the s.s. Empress last year, and prior to that vessel being built commanded the s.s. Northumberland, having been in the service for many years.

The service between Charlottetown and Pictou, N.S., heretofore performed by the s.s. Northumberland, will be performed by the Canadian Government Railways car ferry s.s. Prince Edward Island and the D.G.S. Stanley. The s.s. Prince Edward Island, as previously stated, has been built to run all the year round between Carleton Point, P.E.I., and Cape Tormentine, N.B., as soon as the terminals at those places are finished, which is expected to be before next winter.

The steamships Prince Edward Island, Stanley and Northumberland will be under the immediate charge of Capt. C. T. Knowlton, Superintendent of Ferries, Canadian Government Railways, Moncton, N.B., who reports to the General Superintendent there, J. K. McNeillie. The business handled by these vessels will be attended to by Canadian Government Railways departmental officials.

The s.s. Empress, heretofore on the Summerside-Point du Chene route, has been sold by the Charlottetown Steam Navigation Co. to the C.P.R., and was taken recently from Charlottetown to Halifax, N.S., where she was put in dry-dock. She will be run across the Bay of Fundy, between Digby, N.S., and St. John, N.B., replacing the s.s. Yarmouth and giving a faster service. Captain Walsh, Assistant Manager, Canadian Pacific Ocean Services, Ltd., Montreal, is in charge of the Bay of Fundy service.

Atlantic and Pacific Ocean Marine.

The New Zealand Shipping Co.'s s.s. *Matatua*, which was damaged by fire and explosion at St. John, N.B., recently, has been refloated and temporary repairs have been undertaken locally.

The British s.s. *Ennisbrook*, from Quebec outward bound, was caught in the ice near Glace Bay, N.S., May 16, and driven ashore. She was floated May 19 and proceeded to Sydney, N.S., in tow of the *Douglas H. Thomas*.

The British s.s. *Hendon Hall*, which sailed from Louisburg, N.S., Apr. 11, for Rotterdam, has been sunk. She was owned by the West Hartlepool Steam Navigation Co., and has been on the Canadian route for some time.

The Oceanic Steam Navigation Co. (White Star Line) reports a very successful year during 1915, with a surplus of \$9,841,425. This is in addition to the certain profits in excess of a certain percentage, payable to the British Government. The dividend of 65%, which dropped to 35% in 1914, has been resumed.

The Canadian Ex. Co. has been given judgment for \$10,800 due, and \$7,200 in lieu of notice, against the Hamburg-American Steamship Co., for rent of offices in the Canadian Express Building, Montreal. The company ceased to do business in Canada on the outbreak of war, and closed its offices.

The White Star s.s. *Cymric*, while en route from New York to a British port, was torpedoed off the Irish coast, May 8. An attempt was made to run her into an Irish port before she sank, but this was not successful. Five lives were lost in the explosion of the torpedo, but all the other members of the crew were saved.

The C.P.R. s.s. *Empress of Asia* arrived at Vancouver, May 6, from Hong Kong, on her first trip since being released from Admiralty service, in which she has been constantly engaged since the commencement of war. She was actually released about the beginning of the winter, and has since been thoroughly overhauled and refitted.

The Dollar Steamship Co. is reported to have purchased the British s.s. *Strathardle* from Burrell & Sons, Glasgow, Scotland, for operation on the Pacific Ocean between Vancouver, B.C., and the Orient. The company's s.s. *Robert Dollar* is reported to have been sold to Japanese parties for \$1,000,000 and delivered to the new owners at Vladivostok.

A press dispatch from Copenhagen, Denmark, states that owing to the exceptional shortage of shipping, any vessels, so long as they float, are being pressed into service between Scandinavian ports. Two sailing vessels, it is said, which were built, one in 1776 and the other in 1786, have been overhauled and rigged and placed in service.

The s.s. *Bayern* opened the St. Lawrence navigation season, when she arrived at Montreal, May 1. She was formerly German owned, but was captured by the Italians in the early stages of the war, and is now being operated under the Italian flag as a freighter. The Allan Line s.s. *Sicilian* was the first passenger vessel to arrive in the St. Lawrence, landing passengers at Quebec, May 2.

The Battle Line s.s. *Eretria* was sunk, presumably by a torpedo, near France, May 12. She was owned by the Steamship *Eretria* Co., Ltd., Rothesay, N.B., controlled by Wm. Thomson & Co., and was one of a number of vessels controlled by this firm, all with Grecian names. She

was built at Glasgow, Scotland, in 1901, and was screw driven by engine of 303 n.h.p. Her dimensions were, length 341 ft., breadth 47½ ft., depth 23.5 ft.; tonnage, 3,464 gross, 2,255 register. She was operated from Canadian ports to Great Britain, and has latterly been engaged in war transport service.

Maritime Provinces and Newfoundland.

The s.s. *Cissy*, under charter to the Dominion Coal Co., ran aground near St. Esprit, N.S., when en route to Sydney, May 1.

The Nova Scotia Steel & Coal Co. is establishing a shipbuilding plant at New Glasgow, the first vessel to be built at which will be for the company's own service.

The exports passing through St. John, N.B., for the fiscal year ended Mar. 31, were \$120,048,580, against \$43,872,932 for the previous year. The increase is largely due to the shipment of war supplies.

Liverpool, Eng., cablegram, May 23:—A provisional agreement for the amalgamation of the Cunard and the Commonwealth and Dominion Steamship Lines is officially announced. This extended the Cunard influence to Australia and New Zealand.

The Dominion Government has granted a subsidy to the St. John River Steamship Co., for a service to be given by the s.s. *Elaine*, between Gaspe Basin, Dalhousie and Campbellton. The report that the Government purchased, or chartered the vessel, is incorrect.

An order in council has been issued restoring the compulsory payment of pilotage dues in the pilotage district of Parrsboro, N.S. The original order in council providing for such compulsory payment was made in 1881, and cancelled in 1900.

The old shipping agency business of S. Cunard & Co., Halifax, N.S., has been transferred to the Robert Reford Co., Montreal, who will continue to act as agents for the Cunard Line, as well as the Donaldson, Thomson, Cairn and Crown Lines. S. Cunard & Co. were the first agents for the Cunard Line, which originated in Halifax.

The s.s. *Hampstead*, owned in St. John, N.B., will probably be placed on the Fredericton-Gagetown route this year, under a new ownership. It is reported that J. Williams, formerly chief engineer on the s.s. *Victoria*, destroyed by fire recently, will be the purchaser, and that the Dominion Government has promised a subsidy of \$800 for service over the route named.

Some attempts were made recently to salve the s.s. *Desola*, formerly owned by the Reid-Donald Steamship Co., Montreal, which was practically destroyed by sulphuric acid and fire, and sunk, at St. John's, Nfld., some time ago. On account of the condition of the hull, which was found to be so corroded by the acid that it would not be able to stand any pressure, the attempts were abandoned.

The exports through St. John, N.B., by the C.P.R. for the winter season closed recently, were 916,103 tons, against 486,668 for the previous winter season. The total for April was 199,229 tons, against 66,084 tons in Apr., 1915. The imports by the C.P.R. for the same periods were: winter season 1915-16, 61,232 tons; for 1914-15, 59,107 tons; Apr., 1916, 14,410 tons; Apr., 1915, 8,816 tons. These fig-

ures do not include exports of grain and lumber.

The Shepody Navigation Co., which, as announced in our last issue, was offering its s.s. *Wilfrid C.* for sale, is requesting that the City of Moncton, N.B., pay the full subsidy for 1915, instead of only \$250 as suggested. It is claimed that the company performed the full service in the expectation of receiving the subsidy. F. W. Sumner, President, urged that the service be continued, as communication between the city and down river points was necessary.

The wooden vessel which is under construction at Meteghan, N.S., for A. B. Mackay, Hamilton, Ont., will be of the four masted schooner type and about 500 net tons, built to register 12 years in the American Bureau of Shipping. Her dimensions will be, length of keel 150 ft., beam 36 ft., depth of hold 13 ft.; tonnage, about 500 tons. She will be completed by about November. Construction is being carried on under the supervision of Capt. G. L. Wetmore, Yarmouth, N.S.

The Minister of Trade and Commerce announced in the House of Commons recently that he had been able to secure the s.s. *Elaine* for service between Campbellton and Gaspe ports, and that she would make fortnightly trips from Campbellton to Gaspe and from Campbellton to Paspébiac, one service through to Gaspe, and one service through to Paspébiac each week. The s.s. *Elaine*, which is registered as being owned by the St. John River Steamship Co., was built in 1888, and is screw driven by engine of 31 n.h.p. Her dimensions are, length 112.7 ft., breadth 23.8 ft., depth 7.8 ft.; tonnage, 272 gross, 156 register.

The C.P.R. has purchased the Charlottetown Steam Navigation Co.'s s.s. *Empress*, for its Bay of Fundy service. She was built at Newcastle upon Tyne, England, in 1906, and was operated by the company between Prince Edward Island and the mainland, from that time until the retirement of the company from business, as announced in our last issue. She is equipped with engine of 365 n.h.p. driving a screw, and her dimensions are, length 235 ft., breadth 34.2 ft., depth 20 ft.; tonnage, 1,342 gross, 612 register. She is said to have a speed of about 16½ knots, which is considerably faster than the s.s. *Yarmouth*, at present in the St. John-Digby service.

Province of Quebec Marine.

The Lachine Canal was refilled May 3, after having been empty for five days for repairs to water mains crossing under it.

A pontoon, 200 ft. long by 42 ft. deep, is to be placed at the Napoleon wharf, Quebec, this summer, for the safe mooring of steamships.

The name of the steamship *William A. Haskell*, no. 138,108, and *William J. Averell*, no. 138,108, of Montreal, have been changed to *Joyland* and *Oatland* respectively.

The Quebec & Levis Ferry Co.'s annual meeting was held at Quebec, May 16. Following are the directors for the current year:—C. H. Shaw, President; J. S. Thom, Vice President; A. Gourdeau, G. E. Allen Jones and L. C. Webster.

Steamer *Colin W. Ltd.* and steamer *Marion W. Ltd.*, have been incorporated under the Quebec Companies Act, each with \$10,000 capital and office at Quebec, to carry on a general shipping business. The incorporators are L. C. Webster, H. Aird, Montreal, and W. Q. Stobo, H. C. Thorn and C. St. J. Griffiths, Quebec.

The entrance piers to the graving dock under construction at St. Joseph de Levis, have been completed, and the excavation of the dock proper has commenced. The excavation will be to a depth of 60 ft., and the area will be about 138,000 sq. ft. The completed dock will be 1150 ft. long by 120 ft. wide at the base and 144 ft. at the top.

An order in Council has been passed approving a number of amendments to the bylaws for the Quebec pilotage district, the chief of which is the confirmation of the Minister of Marine as the pilotage authority, with power to appoint a Superintendent and Assistant Superintendents, who shall have immediate control of pilotage affairs under the direction of, and responsible to, the Minister.

An addition to the Montreal Harbor Commissioners' elevator 1, which was completed recently, was officially opened and machinery started, by Lady Borden, May 15. With this addition, Montreal has now the largest seaport elevator in the world. After the opening, a silver tray, with an engraving of the elevator on it, was presented to Lady Borden by W. G. Ross, Chairman of the Commissioners.

The Dominion Iron and Wrecking Co. has acquired the rights to the derelict s.s. Bavarian, formerly owned by the Allan Line Steamship Co., and which was wrecked at Indian Cove, Que., in 1906. J. G. Mayer, Quebec Manager of the company, is reported to have said that it is the intention to float and remove the wreck. The company has been successful in larger undertakings, notably in clearing the wreckage of the partially built Quebec Bridge which collapsed in 1907.

Ontario and the Great Lakes.

Canada Steamship Lines, Ltd., started its Toronto to Niagara service, May 8, with the s.s. Cayuga.

The Public Works Department received tenders May 30, for dredging at Port Maitland, the greater portion being required to be done by hydraulic dredge.

The Canadian Shipping Co.'s s.s. John B. Ketchum 2nd, which ran ashore on the

canal bank near Cardinal, Ont., May 7, was released May 10 with little damage.

The Bassett Steamship Co.'s s.s. Mariska lost her rudder during a heavy gale off Saginaw, Mich., May 11. She was taken into Detour, and later to Collingwood for repairs.

The Northern Navigation Co.'s s.s. Noronic has been chartered for a trip between Detroit, Mich., and the Georgian Bay, June 13, by a party of automobile engineers.

Canada Steamship Lines s.s. Aletha, which ran aground near Bath, May 1, on her first trip this year, to Picton, was released with comparatively small damage on the following day.

The service which has been in effect between Bay of Quinte ports and Charlotte, N.Y., for over 30 years, has been withdrawn, and the s.s. Caspian, now owned by Canada Steamship Lines, Ltd., has been transferred to other service.

The s.s. Centurion, owned by the Hopkins Transportation Co., Cleveland, Ohio, sank in the Livingstone Channel, Detroit River, May 17, after striking a bank some two miles above. She was refloated May 20, and was taken to Cleveland by the tug A. C. Harding.

The United States Lake Survey reports the levels of the Great Lakes in feet above tidewater for April, as follows:—Superior, 602.38; Michigan and Huron 579.92; Erie, 572.42; Ontario, 246.40. Compared with the average April levels for the past ten years, Superior was 0.84 ft. above; Michigan and Huron, 0.34 ft. below; Erie, 0.04 ft. above, and Ontario, 0.03 ft. above.

A deputation of business men from Chatham waited on the Minister of Public Works recently, to urge the dredging of the River Thames to a depth of 14 ft. from Chatham to the mouth of the river. A survey was made by the Government some time ago, and it was understood that the work was to be undertaken, but it is presumed that the war has postponed it for a time.

Press reports state that the Northern Navigation Co. will not operate a vessel on the through run between Georgian Bay ports and Cleveland, Ohio, this year. In

previous years, this service was given by the s.s. City of Midland, which was destroyed by fire last autumn, and for the current year, arrangements had been made with Canada Steamship Lines, Ltd., that the s.s. Rochester would take her place, but it is now stated that the Rochester will not be in service for the present owing to a lawsuit.

With the return of summer, the proposal to establish a dry dock at Owen Sound, is again to the fore. In the spring of 1915, F. F. Wood of Niagara Falls, since deceased, stated that a company to be named the Canadian Drydock & Shipbuilding Co. was to be organized for the purpose of locating a plant at Owen Sound, and that all the necessary financial arrangements had been completed, and negotiations were then proceeding with the Dominion Government with regard to a subsidy in aid being granted for a dock of the first class, instead of a second class type, as previously proposed. The ratepayers of Owen Sound have already passed a bylaw granting \$200,000 for the scheme. Since the death of F. F. Wood, the matter is being taken up afresh and hopes are being entertained in Owen Sound that something will be done.

Manitoba, Saskatchewan and Alberta.

The Peace River Tramway & Navigation Co.'s s.s. D. A. Thomas, was expected to be launched towards the end of May. She was built at Peace River Crossing, Alta., for operation during the summer, between Peace River and Vermillion Rapids. She has accommodation for 110 cabin passengers and about 300 tons of freight, and is equipped with engine of 800 n.h.p., with cylinders 20 by 84 ins. She is 165 ft. long with 35 ft. beam. J. P. Bucey has been appointed captain, and H. J. Hutchinson, chief engineer. The company is controlled by Baron Rhondda (D. A. Thomas), and its affairs are managed in Canada by C. F. Law, Vancouver, B.C.

British Columbia and Pacific Coast.

The Western Shipping Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$40,000 authorized capital and office at Victoria, to build, own and operate steam and other vessels and to carry on a general navigation and transportation business.

Navigation has been reopened on the Fraser River between Prince George and Quesnel, a service between given by the motor boats Rounder and Circle W., each making two round trips a week. An automobile stage line is run by the Inland Express Co. between Quesnel and Barkerville twice a week.

It is reported that the Grand Trunk Pacific Coast Steamship Co. is providing stateroom accommodation for second class passengers on its steamships Prince George and Prince Rupert. Each vessel is to have 6 four-berth and 1 two-berth second class staterooms. The change is stated to have been made on the Prince Rupert, and to be in progress on the Prince George.

The Vancouver Shipmasters' Association is urging the installation of additional aids to navigation at various points along the coast. Among these are a fog signal at Kinnahan Islands, a lighted beacon on the rock at the entrance to Secret Cove, and a lighted beacon on the ledge of rock before Pender Harbor. It

Saulte Ste. Marie Canals Traffic.

The Canadian canal opened April 18 and the U.S. canal opened April 20.

is suggested that the grounding of the s.s. Camosun on Digby Island recently might have been prevented if a signal had been placed on Kinnahan Islands.

Seamen employed on steamships sailing out of British Columbia are agitating for increases in pay and improvements in working conditions. They are asking as follows: deck hands \$55 a month for a 9 hour day, and 50c an hour overtime, Sunday and holiday work to be outside of ordinary duty; firemen, \$60 a month; stewards, an increase of \$10 a month. The matter is under consideration, and it is stated that the decision of Capt. J. W. Troup, Manager, B.C. Coast Service, C. P.R., will be accepted by the vessel owners.

Vancouver Island Marine, Ltd., has been incorporated under the B.C. Companies Act, with \$250,000 authorized capital and head office at Victoria, to carry on a general shipbuilding business, under the bill by which the Province is to grant aid to vessels built locally. C. J. V. Spratt, Victoria, is chiefly interested in the company, and it is stated that the building of one or more vessels for the off-shore lumber trade will be proceeded with as soon as possible. Plans have been prepared for a four masted barquentine, which type is considered the best for the trade. This is the first company formed to take advantage of the legislative aid.

The s.s. *Algonquin*, which was purchased recently from the Port Colborne and St. Lawrence Navigation Co., Toronto, a subsidiary of the Maple Leaf Milling Co., by A. B. Mackay, Hamilton, Ont., has been sold to the Wasis Steamship Co., Ltd., a subsidiary of the Nova Scotia Steel & Coal Co., New Glasgow, N.S. She is now being reclassified and refitted, but, at the time of writing, it has not been decided as to what route she will be operated over. She was built at Yoker, Scotland, in 1888, for Thomas Marks & Co., Port Arthur, Ont., and was sold in 1893 to the St. Lawrence & Chicago Steam Navigation Co., Toronto, and lengthened to her present full Welland Canal size. The latter company sold her to the Port Colborne & St. Lawrence Navigation Co. in 1913. She is of steel, divided into three compartments, and has hatches 24 ft. centres, and is equipped with triple expansion engines with cylinders 21, 33 and 54 ins. diam. by 36 ins. stroke, 1,000 i.h.p. at 70 r.p.m., and supplied with steam by two Scotch boilers under forced draught at 160 lbs. Her dimensions are, length 245 ft., breadth 40 ft. 1 in., depth 20½ ft.; tonnage, 1,806 gross, 1,172 register.

Wooden Shipbuilding in the Maritime Provinces.—Recent enquiries for the construction of six ocean going wooden barges of 3,000 tons dead weight capacity each within three months of placing the order, elicited the fact that owing to the difficulty of securing materials and labor, this could not be undertaken, but that three vessels of this type could be built. The cost was given as \$100 a registered ton, which is considered extremely high, and a further offer to build at cost plus 5% is under consideration.

The Buffalo & Fort Erie Steamship Co., Ltd., has been incorporated under the Ontario Companies Act, with authorized capital of \$100,000 and office at Fort Erie, to build, own and operate steam and other vessels, and to carry on a general merchandise and transportation business. The incorporators are, A. Fasken, D. McArthur, G. H. Sedgewick, J. O. Buckley and A. T. Struthers, Toronto.

Mainly About Marine People.

Richard Clancy, who has been in the Allan Line service for 32 years, has been appointed Port Agent, Canadian Pacific Ocean Services, Ltd., Quebec, Que.

D. R. Campbell, shipbuilder, Sydney, N.S., who died there recently aged 51, had been associated with the shipbuilding trade in Sydney for about 18 years.

W. C. Casey, General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Winnipeg, left during May for a two months trip to China and Japan.

James A. Allan, whose death was announced in our last issue, was a grandson of Capt. Alex. Allan, the founder of the Allan Line, and was connected with the service from early life. He was a director of the Allan Line from 1884 to 1909, and after the latter date took no active part in the business.

Capt. Edwin Dunn, a prominent lake navigator, for several years in command of Dominion Government fisheries protection steamships, died recently after a long illness. He was buried at Owen Sound, May 22. The last vessel under his command was the *Vigilant*, stationed on Lakes Ontario and Erie, and he retired to occupy a shore position for the Ontario Government, in 1907.

Joseph M. Shea, who has been appointed New England Passenger Agent, Canada Steamship Lines, Ltd., Boston, Mass., was born at Springfield, Mass., Feb. 14, 1879, and entered transportation service, June 24, 1899, since when he has been, to June 10, 1900, ticket agent, Boston and Maine Rd. and Central Vermont Ry., Brattleboro, Vt.; June 10, 1900, to Sept. 24, 1904, City Ticket Agent, G.T.R. and Central Vermont Ry., Boston, Mass.; Sept. 24, 1900, to May 1, 1916, Travelling Passenger Agent, same railways, Boston, Mass.

A. J. Blaisdell, who was appointed General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Shanghai, China, in January, died at Washington, D.C., May 10. He had been in C.P.R. service for several years, and prior to Oct., 1908, was City Passenger Agent, St. Louis, Mo.; Oct., 1908, to Mar., 1913, General Agent, Passenger Department, Cincinnati, Ohio; Mar., 1913, to July, 1914, General Tourist Agent, Montreal; July, 1914, to Jan., 1916, General Agent, Passenger Department, Railway and Steamship Lines, St. Louis, Mo.

J. F. Dolan, who has retired from the position of General Agent, Passenger Department, Canada Steamship Lines, Ltd., Boston, Mass., to enter private business in Montreal, was entertained to luncheon and presented with a silver tea set by a number of transportation representatives at Boston, May 2. He entered steamship service in 1893, as City Passenger and Ticket Agent, Richelieu and Ontario Navigation Co., Toronto, and in 1901 was appointed Passenger and Stock Transfer Agent, same company, Montreal. From 1913 to 1914, he was District Passenger Agent, same company at Boston, Mass., since when he has been General Agent, Passenger Department, Canada Steamship Lines Ltd., there.

C. E. Croft, recently appointed Chief of the Commissary Department, Canada Steamship Lines, Ltd., Toronto, was born at Cobourg, Ont., Aug. 26, 1882, and entered steamship service in Apr. 1904, since when he has been, to 1907, stenographer, Passenger Department, Richelieu & Ontario Navigation Co., Montreal; 1907 to 1911, secretary to Traffic Manager, same company, Montreal; 1911 to

1913, chief clerk, Traffic Department, Montreal; 1913 to 1914, chief clerk to Manager, Eastern Lines, same company, Montreal; 1914 to 1915, chief clerk to Operating Superintendent, Canada Steamship Lines, Ltd., Montreal; 1915 to March 1916, General Agent, same company, Toronto.

The Imperial Oil Co.'s s.s. Iocolite was launched at Collingwood, Apr. 29. This is the second of three vessels which the company is having built there. They are of steel, 258 ft. long, 43 ft. beam and 18 ft. deep to main deck, with an expansion trunk 7½ ft. above the deck running fore and aft. The hull is fitted with closely spaced bulkheads athwartships, and a continuous longitudinal bulkhead to divide the hold spaces into 10 tanks for crude or refined oil, and 4 tanks for carrying lubricating oil. A cross bunker for fuel oil is fitted forward of the boiler room, and the pump room is located at the fore end of the foremost tank. The vessel is to have a speed of 8 knots an hour when fully loaded.

British Government War Risk Insurance.—The British Government, in connection with the insurance of ships' cargoes against war risks, has adopted a new method of dealing with these insurances, which effects a considerable saving in clerical work, and at the same time is of advantage to merchants and brokers in the expedition of their business. Under the old system, a policy to cover war risk was issued for each insurance, but under the present scheme, a floating policy for a very large amount has been effected, and the slips, that is, the detailed applications for insurance, are themselves validated as certificates entitling the holders to the benefit of the floating policy.

Rules of the Road for the Great Lakes. The Marine Department has issued a booklet containing the rules of the road for the Great Lakes, as adopted by order in council, Feb. 4. They cover the territory including Georgian Bay and connecting and tributary waters and the St. Lawrence River as far east as the lower exit of the Lachine Canal, and the Victoria Bridge, Montreal, and are a revision of former rules, with no changes of importance with regard to the lights and signals to be used. Special regulations for the operation of motor boats are included in the new edition.

Quadra-Charmer Collision.—Subsequent to the delivery of the judgment on the collision between the Dominion Government s.s. *Quadra* and the C.P.R. s.s. *Charmer*, near Nanaimo, B.C., Feb. 26, in which the former vessel was lost, it was announced, as stated in our last issue, that the master of the *Quadra* intended, on the advice of counsel, to appeal to the Minister of Marine against the judgment, on the ground that the finding was opposed to the trend of the evidence. We were advised recently that the Department of Marine had received no intimation of an appeal. One of the nautical assessors dissented from the judgment rendered.

Coasting Voyages Extended.—The Dominion Parliament has amended the Canada Shipping Act, extending the definition of a coasting voyage, to mean a voyage between any port in Canada and any other port in Canada, Newfoundland, Labrador, St. Pierre-Miquelon, United States, Mexico, Central America, the West Indies or the eastern coast of South America, and on the coast of Alaska, or the western coast of South America, not farther south than 40 deg. south latitude.

Stranding of the s.s. Kenkon Maru Investigated.

An investigation was held at Victoria, B.C., recently, into the causes of the stranding of the Japanese s.s. Kenkon Maru No. 3, on the Belle Chain reef, on the south side of the Gulf of Georgia, Jan. 12. Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, presided, and was assisted by Capt. Ridley and Parsons as nautical assessors. The judgment stated that the evidence, so far as the captain, officers and crew of the Kenkon Maru were concerned, was clear and convincing, but that the reverse was the case with the only British witness examined, viz., J. E. Butler, a pilot belonging to the Nanaimo District, to whom the vessel had been entrusted. The court regretted to say that it had rarely heard evidence of a more evasive and contradictory nature, and it was evident that it was given for the sole purpose of misleading and deceiving the court as much as possible as to what were really the causes of the stranding. It was successful to a great extent, but as is generally the case in evidence of this character, it was too transparent, and proved the witness's undoing. The court therefore, after having studied the evidence, which, with the exception of Butler's, had all been translated from Japanese, found that the sole blame for the stranding must be imputed to J. E. Butler, the pilot in charge at the time. Instead of taking every precaution under the circumstances then existing, he navigated the vessel in a most careless and casual manner, taking no notes of time, courses or anything else, and when the weather became densely thick with snow, he, with absolute disregard of article 16, and uncertain of his position as he must have been, went on blindly at full speed, without even the engine room telegraph at stand by, until

the vessel struck the rocks. As this was not his first accident, and as a warning to others, he was fined the costs of the investigation, \$230. No blame was attached to the officers and crew of the Kenkon Maru, as they were strangers on the coast, and naturally had an instinctive respect for, and confidence in, a British pilot. There was no excessive deviation in the vessel's compasses, and any such did not contribute to the stranding.

We are advised that an appeal against the court's decision has been decided upon.

Rumored Sale of Montreal Transportation Co.'s Business.

In the early part of May, rumors were current to the effect that A. B. Mackay, formerly of R. O. & A. B. Mackay, Ltd., Hamilton, Ont., who has lately been dealing considerably as a vessel broker, in conjunction with "a prominent Chicago financier," had secured control of the Montreal Transportation Co., and that the Nova Scotia Steel & Coal Co. held the balance of the stock. A. B. Mackay's investment was mentioned as being in the neighborhood of \$500,000.

Montreal Transportation Co. officials were reported, May 8, to have declined to discuss the report more than to say that while there had been negotiations, nothing had been consummated. The Nova Scotia Steel & Coal Co. issued a statement, May 9, to the effect that the company was not interested in a syndicate which was stated to be negotiating for the control of the Montreal Transportation Co., and we were officially advised that the press reports that A. B. Mackay had secured control of the company were not correct. The facts appear to be that A. B. Mackay obtained an option on the M. T. Co.'s stock, or nearly the whole of

it, and the impression is that he will exercise it. The "prominent Chicago financier" referred to is said to be J. S. Norris, of the Norris Grain Co. A Montreal report mentions Sir Herbert Holt and L. C. Webster, of the Nova Scotia Steel & Coal Co., as being interested.

The Montreal Transportation Co., Ltd., is an old established business, and until 1903, had an authorized capital of \$300,000. In that year the company was reorganized with a capital of \$1,000,000. The paid up capital is about \$913,000, and there are no bonds outstanding. The steamships owned are: Advance, Glenmount, India, Kinmount, Rosemount, Simla, Stormount and Windsor; tugs, Bartlett, D. G. Thomson, Emerson, Glide, H. F. Bronson, M. P. Hall and Mary; lake barges, Augustus, Burma, Dunmore, Hamilton, Hiawatha, Kingston, Lapwing, Melrose, Muskoka, Quebec, Selkirk, Thrush, Ungava, Valencia and Winnipeg. In addition to this, the company owns the entire capital stock of the Prescott Terminal Co., \$500,000. The chief officials are, B. McLennan, President; Farquhar Robertson, Vice President; L. L. Henderson, Managing Director; A. Kingman, A. G. Thomson, H. A. Calvin and A. E. Ogilvie, other directors.

The International Mercantile Marine Co., which has been in the receiver's hands for some time, will, it is reported, pass under the American International Corporation's control shortly. This corporation was formed a few months ago, with an authorized capital of \$50,000,000, with the object of promoting U. S. trade in foreign fields. The Pacific Mail Steamship Co. has been acquired, and it is stated that control of the International Mercantile Marine Co.'s stock has been purchased in the open market.

Cost of Levis Car Ferry.—Hon. Mr. Loughheed stated in the Senate, May 4, that the total cost to date of the car ferry steamship plying between Quebec and Levis, was \$601,231.03. In January it made 62 trips across the river, carrying 904 cars and 9 locomotives, and in February, 63 trips, carrying 883 cars and 2 locomotives. The cost of operation was \$4,839.32 in January, and \$4,828.85 in February. The cost per car for ferriage was \$5.37.

Grain Trade Enquiry.—R. Magill, W. D. Staples and J. P. Jones, of the Dominion Grain Commission, have been appointed by the Dominion Government as a commission to investigate the handling and marketing of grain in Canada, and particularly its grading and weighing, shipment from country elevators, financing and shipment to lake and ocean ports.

The rule established during the war, in Great Britain, that blinds on the windows and doors of railway carriages, must be kept lowered when travelling with lights burning, is being strictly enforced. Several passengers have been fined for infractions recently.

J. S. Dennis, Assistant to President, C. P.R., Calgary, Alta., advised the Lethbridge Board of Trade, recently, that if the Alberta Government decided to erect a school for agriculture in that district, the company would consider making a grant of land for a site.

E. Pope, Superintendent, Dominion Government Telegraphs, Quebec, Que., is reported to be about to place a new multiplex telegraph system on the market. He has been actively engaged in telegraphy since 1855, and has held his present position since 1863.

Progress on Welland Ship Canal Construction.

J. L. Weller, M.Can.Soc.C.E., Engineer in Charge, Welland Ship Canal, is reported to have said at St. Catharines, May 10, that notwithstanding the war, most satisfactory progress had been made on the four sections under contract, and that three of the sections at least, will be finished within the time limit of four years from the placing of the contract in 1913. The work on sections 1 and 2 is about 50% completed.

Sec. 1 extends from Lake Ontario for about three miles, and includes pier and trestle work at the entrance to the canal, the construction of lock 1, and canal work to bridge 2. The contract was awarded Aug. 1, 1913, and the date for completion set at Apr. 1, 1917. The amount of the contract as based on schedule rates is

\$3,487,727, and the contractors are the Dominion Dredging Co.

Sec. 2 covers the work from bridge 2 to bridge 5, about 4½ miles, including locks 2 and 3. This contract was awarded to Baldry, Yerburch & Hutchinson, Dec. 31, 1913, for completion by Apr. 1, 1917, and the amount based on schedule rates is \$5,377,185.75.

Sec. 3, from bridge 5 to about half way between bridges 9 and 10, covers the heaviest portion of the whole route, and includes the erection of twin guard gates at Thorold, the single lock 7, the construction of a short stretch of canal below lock 7, and also the three twin locks 6, 5 and 4 in flight, one flight for down bound vessels and the other for up bound vessels, overcoming a descent of 139½ ft. The contract was awarded to O'Brien & Doheny, Oct. 4, 1913, for completion by Apr. 1, 1917, and the amount based on schedule rates is \$9,540,050. This work is about 25% completed, and it is not expected that it will be finished on schedule time, but will be at least a year behind time. The work done has been very heavy, in some places rock having been blasted down to 80 ft. Some little labor difficulty has also been experienced, but it is stated that this has now been settled and the laborers, mostly foreign, have all returned to work.

Sec. 5, from just above bridge 12 to just above bridge 13, about 2¾ miles, is reported to be about 50% completed. This contract was awarded to the Canadian Dredging Co., for completion by Apr. 1, 1918, and the amount based on schedule rates is \$1,945,788.

The acting Minister of Railways and Canals has stated that no further contracts will be let this year.

The Venture-Wakena Collision Investigated.

An investigation was held recently at Vancouver, B.C., by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Commander Unwin, R.N.R., and Capt. H. S. Hilton, as nautical assessors, into the collision between the Union Steamship Co. of British Columbia's s.s. Venture, and the Clatskanie Transportation Co.'s s.s. Wakena, from Portland, Ore., in the first narrows of Burrard Inlet, Feb. 26. The evidence produced, was, owing to the fact that witnesses for the Venture alone were present, necessarily one sided. For some unexplained reason after having made all arrangements to be present, the witnesses for the Wakena failed to appear. The evidence adduced was, however, clear and convincing, and the court's opinion was that there can be no doubt that the Wakena's master, in the thick fog then prevailing, lost his bearings when entering the first narrows, and while endeavoring to get his vessel into midchannel, collided with the Venture. No blame can be attached to those in charge of the Venture, the master, John Park, being justified in entering the narrows, though undoubtedly the weather was very thick at the time, not only because he knew where his vessel was, but also because there are very efficient aids to navigation in that locality to meet the requirements of navigation under the conditions then prevailing. The Venture was handled in a proper and seamanlike manner, and the master had verified his position off Prospect Bluff, was going dead slow and sounding his whistle at proper intervals, was as close to the starboard side of the channel as he could be with safety, and

kept an efficient lookout. The court therefore absolved him from all blame. The court surmised that the non appearance of witnesses for the Wakena, implied that they knew they would not be held blameless.

Welland Canal Lock Accident.

On May 2, the wooden steamship W. J. Averell, Capt. Patterson, formerly owned by the Rutland Transit Co., Ogdensburg, N.Y., and now owned by the Canada Shipping Co., Montreal, while upbound to Cleveland with a small cargo of package freight, struck and carried out the two headgates at lock 8 in the Welland Canal. The rush of water from lock 8 level carried the vessel and towpath gate out into the lower reach. The heelpath gate remained near the head gate of the lock, clinging to its anchorage. The level above lock 8 is a short one and the reach below is about 1¼ miles long; consequently very little water overflowed the banks and there was no damage to the latter. The vessel was not damaged. It was necessary to place two spare gates before navigation could be resumed. Locking was resumed in the afternoon, navigation having only been delayed about eight hours. The damage is estimated to be \$3,000, which is said to be fully covered by insurance. The accident was caused by the steel hawser getting caught in the vessel's compressor and it was not even placed on the snubbing post on the lock wall to check her speed. The vessel's engines were reversed too late to avert the collision with the lock gates. We are indebted to L. D. Hara, Superintending Engineer, for these particulars.

Improvements to C. P. R. Great Lakes Steamships.

During the past winter, in addition to the usual overhaul, the steamships Kewatin and Assiniboia, of the C.P.R. Great Lakes fleet, have received a number of improvements. The most important of these is an extension of the upper and promenade decks right to the stern. This provides, abaft the verandah cafe, a roomy, covered in and sheltered space for evening dances. Immediately above, the promenade deck has been extended, giving a clear space of 50 x 36 ft., which, without interfering with the promenade, gives accommodation for quoits, shuffle deck and other shipboard games.

The dining saloons have been entirely remodelled, and have been fitted with a number of small tables to accommodate parties of two to six people. The windows have been enlarged, and now measure 4 ft. wide by 3 ft. deep, with a leaded glass top sash, which provides ventilation without draught. The new windows will provide a good view from any seat in the saloon. The smoking room windows have also been increased in size.

In addition to the original suites de luxe, several rooms have been fitted with connecting shower baths. The main entrance hall has been enlarged, and made adaptable for a quiet smoke or game of cards in the evenings. A new barber shop and news stand have been built off the entrance hall.

The Fort William Grain Co., Ltd., has been incorporated under the Dominion Companies Act, with \$40,000 authorized capital and office at Fort William, Ont., to carry on a general grain dealing business, and to own and operate steam and other vessels, wharves, docks, elevators, etc.

Reported Appeal of Quadra-Charmer Collision Decision.

Subsequent to the judgment on the causes of the collision between the Dominion Government s.s. Quadra and the C.P.R. s.s. Charmer at the entrance to Nanaimo Harbor, B.C., Feb. 26, it was stated that Capt. LeBlanc, master of the s.s. Quadra, had decided to appeal against the decision on the ground that it was opposed to the trend of the evidence. One of the nautical assessors dissented from the judgment rendered. We were officially advised early in May, that the Department of Marine at Ottawa had received no intimation of an appeal, and we were also officially advised that the Wreck Commissioner of British Columbia had not heard anything about an appeal and did not think there would be one.

In writing to the Victoria Times, May 10, regarding the report of an appeal, Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, stated that Capt. LeBlanc, master of the s.s. Quadra, never appealed, never intended to do so, and had nothing to appeal about.

Interviewed by a representative of that paper, the solicitors representing Capt. LeBlanc, are reported to have said that immediately the judgment was made public, they asked the Marine Department at Ottawa for a rehearing before a disinterested and independent tribunal. They also claimed that the finding was not delivered in a legal manner, as it should have been made in open court.

The court dealing with the case consisted of the Wreck Commissioner for British Columbia, Capt. J. D. Macpherson, assisted by Capt. Ridley and Gardner as nautical assessors. The judgment delivered by the Commissioner was concurred in by one of the assessors, the other dissenting. It is being claimed on behalf of Capt. LeBlanc, that the judgment was not legally delivered, as it was not given in open court, and a section of the Canada Shipping Act is quoted, which has no bearing on the present case, as neither the suspension nor the cancellation of the master's certificate was in question, and under the circumstances the delivery of judgment in open court does not appear to be a legal necessity. The Act provides that the Minister of Marine may order a rehearing, "if new and important evidence which could not be produced at the investigation has been discovered, or if for any other reason there has been in his opinion ground for suspecting that a miscarriage of justice has occurred."

In arriving at a decision on such a matter, the Minister would be guided by the evidence submitted, the report of the Commissioner and assessors, and if one of the assessors dissented, his reasons for so doing would be considered with the evidence. In the present case, there seems to be no indication of new and important evidence for a proposed rehearing, and the reasons for Capt. Gardner's dissent chiefly refer to a possible contributory negligence on the part of the s.s. Charmer, while they confirm the wrongdoing of the s.s. Quadra in giving certain signals, which he admits are not international signals, but are the outcome of custom and long usage and recognized by local masters.

Dredging is proceeding in the Lake St. Clair channel, by the U. S. Government, and a loading draught of 19 ft. 5 ins. has been recommended for this year. This is an increase of 5 ins. since the reopening of navigation.

Aid for Shipbuilding in British Columbia.

The British Columbia Legislature is considering a bill to aid the development of the shipbuilding and shipping industries in the province. Two schemes are embodied, one providing for assistance in the building of wooden ships, and the other a bonusing of cargoes taken from B.C. ports for ten years after the conclusion of the war. A commission of three is to be appointed for the administration of the act, one of whom is to be the Minister of Finance, who will be unpaid, the other two being salaried. The scheme for providing financial assistance for shipbuilding covers advances to the extent of 55% of the value of the plant and of whatever ships may be built, and will be for a period to be determined by the commissioners, who will exercise considerable control over the construction and subsequent operations of vessels so built, which will remain under the commissioners' control in the same manner until the loans are repaid in full. The second form of assistance is designed to keep the vessels under the commissioners' control returning to British Columbia, to ensure an outlet for B.C. products. It is proposed to grant a bonus of \$5 a ton for ten years on all cargoes, based on the dead weight, taken from B.C. ports. The administration of the act, when it becomes effective, will be almost solely under the Government control, as practically every act of the commissioners is subject to an order in council.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Canuck Supply Co., Ltd., railway material and supplies, Montreal, has removed from 404 St. James St. to spacious new offices at 418 St. James St.

The Brown Hoisting Machinery Co., Cleveland, Ohio, announces the appointment of its Vice President, Alex. C. Brown, as General Manager, succeeding R. B. Sheridan, who has resigned to accept another position.

Telegraph, Telephone and Cable Matters.

The Dominion Government Telegraph Lines are valued at \$2,411,550, showing a general average of \$244 a pole mile for the whole system.

The Grand Trunk Pacific Telegraph Co. estimates the average cost per mile of telegraph lines on the Lake Superior Division at \$291.22, with two wires to each pole, and on the Prairie Division at \$343 a mile, with four wires to a pole. On its Mountain Division, with two wires to a pole, the average cost per mile was \$606.93. For branch line construction, with an average of 1.12 wires to a pole, the average cost per mile was \$189.27.

The Canadian Northern Telegraph Co., which is now in working agreement with the Great North Western Telegraph Co., in giving figures to the Board of Railway

Commissioners recently, stated that at June 30, 1911, it had 4,440 miles of pole line estimated to be worth \$1,021,200, and 13,550 miles of telegraph wire worth \$273,500, making a total for pole lines and wires of \$1,294,700, which averages \$291 a mile.

The Great North Western Telegraph Co. has opened offices at St. Jean l'Evangeliste, Que.; Beaumaris, Cardinal Canal, Gogoma, Hagersville and Kashbaw, Ont.; Eriksdale, Man.; Errington, Jasper, Lavoy, Stanmore and Tollerton, Alta.; Ashcroft, Blue River, Boston Bat, Chilliwack, Hope, Kamloops Jct., Langley, Lucerne, Lytton, Matsqui, Port Mann, Rosedale and Spences Bridge, B.C. Its offices at Marmora, Ruel and Stackpool, Ont., have been closed.

The C.P.R. telegraph plant was valued recently at \$6,696,421.40, made up as follows: pole line and equipment, \$3,897,238.39; wires, \$2,190,968.37; cables, \$275,044.11; call box system, Toronto, Montreal, etc., 4,865 boxes at \$7, \$34,055; 105 linemen's equipment at \$138.25, \$14,378; 37 gangs' equipments at \$646.49, \$23,920.13; instruments, \$119,149.40; batteries and dynamos, \$50,559; furniture, \$41,109; material in stock, \$50,000. The gross operating revenue of the C.P.R. telegraphs for the financial year ended June 30, 1915, was \$2,504,241.50, and the net operating revenue, \$1,121,734.34, against \$2,991,273.06 and \$1,377,585.42 respectively for the year ended June 30, 1914. The cost of the company's telegraph system is \$6,696,421. The number of messages sent was 3,842,779, received 3,596,07, for the year ended June 30, 1915, against 4,038,505 sent, and 3,694,784 received for the previous year. The company's telegraph system has been constructed, and is being operated, as a part of the railway, although a general commercial telegraph business is conducted.

Among the Express Companies.

C. H. S. Hammond has been appointed agent, Dominion Ex. Co., Weyburn, Sask., vice J. L. Weir, transferred.

B. P. Tretwell has been appointed cashier, Dominion Ex. Co., Windsor, Ont., vice E. Anderson, transferred.

L. I. Watts has been appointed agent, Canadian Northern Ex. Co., Moose Jaw, Sask., vice A. G. Douglas, transferred.

E. Anderson, heretofore cashier, Dominion Ex. Co., Windsor, Ont., has been appointed cashier at Peterborough, Ont.

F. S. Cox, a former employee of the Canadian Northern Ex. Co. at Saskatoon, Sask., has been awarded the distinguished conduct medal for services to the wounded at the front.

The Dominion Ex. Co. has placed its service on the Canadian Government Railways branch from Dartmouth to Upper Musquodoboit, N.S., 69 miles, and has opened offices at Musquodoboit Harbor and Middle and Upper Musquodoboit.

The Board of Railway Commissioners passed order 24976, May 15, requiring the Canadian Express Co. to provide an improved service for freight from the Niagara Peninsula. It is given in full under "Traffic Orders by Board of Railway Commissioners," on an earlier page of this issue.

The Marine and Fisheries Committee reported to the House of Commons, May 4, on the matter of the prices at which fish was sold at various points inland, and made certain recommendations for the widening of the market. Among these, were: the improvement of express

facilities to ensure daily transportation from the east coast in refrigerator cars; improvement of the refrigerator car service so that it may be available on east trains; and the inauguration of an exclusive express service to be operated by the Government over the Canadian Government Railways, as a preliminary of a general scheme for the nationalization of the express business.

Transportation Conventions in 1916.

June 14-17.—Master Car Builders' Association, Atlantic City, N.J.
 June 19-22.—American Railway Master Mechanics' Association, Atlantic City, N.J.
 June 20.—Train Despatchers' Association of America, Toronto, Ont.
 June 20-22.—Association of Railway Telegraph Superintendents, St. Paul, Minn.
 June 20-23.—American Association of Freight Agents, Cincinnati, Ohio.
 June 21.—Train Despatchers' Association of America, Toronto.
 June 21.—American Association of General Baggage Agents, Boston, Mass.
 June 27.—American Society for Testing Materials, Atlantic City, N.J.
 June 27-28.—Association of Transportation and Car Accounting Officers, Boston, Mass.
 June 28.—Association of American Railway Accounting Officers, Detroit, Mich.
 July.—International Railway General Foremen's Association.
 August.—International Railroad Blacksmiths' Association, Chicago, Ill.
 August 29.—International Railway General Foremen's Association, Chicago, Ill.
 Aug. 16 to 18.—American Association of Railroad Superintendents, Memphis, Tenn.
 Sept. 5 to 8.—Traveling Engineers' Association, Chicago, Ill.
 September 12-14.—Master Car and Locomotive Painters' Association of United States and Canada, Wilmington, Del.
 September.—Railway Signal Association, Mackinac Island, Mich.
 September 19-22.—Roadmasters and Maintenance of Way Association, Chicago, Ill.
 October.—Association of Manufacturers of Chilled Car Wheels, Chicago, Ill.

October 3-5.—Railway Fire Protection Association, New York.

October 17-19.—American Railway Bridge and Building Association, New Orleans, La.

October 17-19.—Maintenance of Way and Master Painters' Association of the United States and Canada, Philadelphia, Pa.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—J. Reilly, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday each month, 8.30 p.m., except June, July and August.

Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.

Canadian Ticket Agents' Associations—E. de la Hooke, London, Ont.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—W. H. Burr, Chairman, Toronto.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Twin Cities Local Freight Agents' Association—E. J. Travers, Fort William, Ont.

Western Canada Railway Club—Louis Kon, Box 1707 Winnipeg. Meetings at Winnipeg 2nd Monday each month, except June, July and August.

Winnipeg Traffic Club—James Gehrey, Bannatyne Avenue, Winnipeg, Man.

THE CANADA SOUTHERN RAILWAY COMPANY.

The Annual General Meeting of the Shareholders of The Canada Southern Railway Company, for the election of Directors, and other general purposes, will be held at the Company's Head Office in the City of St. Thomas, Ontario, on Wednesday, the 7th day of June, at 11 o'clock in the forenoon.

DWIGHT W. PARDEE,

Secretary.

St. Thomas, Ont., May 8th, 1916.

CANADIAN PACIFIC RAILWAY CO. Dividend Notice.

At a meeting of the Board of Directors, held to-day, a dividend of two and one-half per cent. on the Common Stock for the quarter ended 31st March last, being at the rate of seven per cent. per annum, and three per cent. per annum from Special Income Account, was declared payable on 30th June next to Shareholders of record at 3 p.m. on 1st June next.

By order of the Board,

W. R. BAKER,

Secretary.

Montreal, 8th May, 1916.

NIAGARA TO THE SEA

A Magic Chain of Delightful Scenes

Makes this famous 800 mile trip through America's greatest, and most interesting Waterway the Vacation Trip without parallel.

The service on our palatial steamers is unexcelled. The Falls of Niagara, the Thousand Islands, the Rapids of St. Lawrence, quaint old Quebec, Murray Bay, Tadousac and the Saguenay—all these attractions combine to make an ideal vacation trip.

The Saguenay River with its wealth of scenic beauties—its exhilarating atmosphere—is a never-ending source of enjoyment. Shorter trips at proportionate rates.

WRITE for our beautifully illustrated booklet "Niagara to the Sea". It tells about a vacation trip every minute of which you will enjoy. Enclose 6c. to cover postage.

Columbia Batteries

The Versatile Power Units

These little energy producers are indeed versatile. They can be used for any one of a multitude of different uses with the assurance of satisfactory operation in each instance. Use them in telephone and telegraph service, train dispatching, signals, etc.

For steady, sure operation of bells and annunciators they are ideal. Splendidly adapted as a source of energy for the lighting of battery operated lamps and lanterns.

As a source of ignition current of gasoline engines they are unapproachable. In fact for every battery-use it will pay to specify the famous

Columbia Batteries. Cost no more—Last longer.

Write for Catalog.

Canadian National Carbon Co., Limited

99 Paton Road, Toronto, Ont.

Manufacturers of Columbia Track and Signal Cells, Helios Storage Batteries, Carbon Brushes, Lighting Carbons and manufactured carbon in every form.

Are You in the Market for Trolley Catchers, Retrievers, Bases or Head Lights

We manufacture Knutson No. 5 Trolley Retriever, Knutson No. 2 Trolley Retriever, The Ideal Trolley Catcher, The Simplex Trolley Base, The Peerless No. 10 Roller-bearing Trolley Base, The Peerless Check Valve, The Peerless Junior Head Light, The Perfect Head Light, The Hollis Safety Fender, No. 3 Detachable Fender.

Write our Canadian Representatives Allen General Supplies, Limited they will be pleased to give you complete information as to any of the above as well as our other lines.

Enameled Iron Signs

70 Bond Street - Toronto

Copyrighted by International News Service.

Why?

A defective signal wire might easily cause just such an awful wreck as this.

Why take the chance?

To safeguard your road against such catastrophes you should not only have the best signalling equipment but you must use

Northern Electric Railway Signal Wire

No conditions impose a severer test on wire than those used in connection with a railroad signalling system.

Northern Electric R.S.A. wire meets the R.S.A. specifications in every particular and goes a step further—it meets the more rigid Northern Electric specifications which gives you, the user, double protection.

Buy your wire and cable from the largest makers in Canada.

You Can Bridge This Gulf

In life there is a gulf. On one side live the untrained who work for small wages in jobs that thousands can fill. On the other side live those men who have trained themselves in skilled trades or professions which bring them independence and good salaries.

On which side of the gulf are you? If you are on the wrong side, you don't have to stay there. The International Correspondence Schools have helped tens of thousands of men to travel over to the right side on the bridge called "training." This bridge is open to you.

All you have to do now is to use this coupon. In return the I. C. S. will explain how they can help you to prepare, without losing a minute's time from your work, for a position of real earning power.

Wherever you live, whatever you do, no matter how limited your education, the I. C. S. can fit you for the position you want, in the work you like best. Mark and mail the coupon now.

I. C. S., Box 8405, Scranton, Pa.

TEAR OUT HERE International Correspondence Schools Box 8405, SCRANTON, PA.

Explain, without obligation, how I can qualify for the position, or in the subject, before which I mark X.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished and are available only by reputable wholesale jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

Grand Prize, San Francisco, 1915.

Absolute Permissive Block-

is the title of a new bulletin on a thoroughly tried-out single-track signal-system which has been installed on 21 steam and electric railways, totaling 2,323 miles of Absolute-Permissive Signaling.

The cost of installation per mile of the A-P-B System is less than one-half the cost per mile of the steel in your tracks. The maintenance and operation is close to 50 cents per mile per day. An increase in your track capacity of only about 4 per cent. will pay for the investment. In addition to increasing your track capacity, the A-P-B System provides "protection" and eliminates numerous delays. If you are contemplating double-tracking your line, the Absolute Permissive Block System will save you approximately 9/10 of the cost and give you the signal protection you need.

Mr. W. J. Eck, President of the Railway Signal Association, in a report on the "Progress of Signaling" which appeared in the December 31, 1915, issue of the Railway Age Gazette, wrote in part as follows:

"Single-track automatic signaling is receiving an increasing amount of attention and the mileage in-

stalled during the year greatly exceeds that on double track. It has been only a few years since railway officers believed that automatic signals on single track would hinder instead of facilitate movements. Particularly since the so-called 'absolute permissive block' has been developed has this idea given way to a realization of the safety and aid that the system affords. In the A-P-B System for single-track signaling the trains are given an absolute block from passing siding to passing siding for opposing trains and a permissive block for following trains. This system has been almost exclusively installed during the past year."

Ask for a copy of Bulletin 128-A and learn more fully of the desirable features of this System.

The NATIONAL MOTOR TRUCK

is the best investment that you can make. The National is a sturdily built Truck that stays on the road all the time. National Trucks are doing duty over city pavements and country roads; carrying heavy loads without a falter or a stop.

The Engineers who are building NATIONAL Motor Trucks have made a special study of the conditions under which a Truck must operate in Canadian cities. The NATIONAL is a Canadian Made Truck. It is guaranteed by a Canadian Company.

You owe it to your Company and to your self to get all the information about the NATIONAL line of Trucks. Five models: 1500 lbs., 2000 lbs., 3000 lbs., 4000 lbs. and 7000 lbs. capacities.

BROWNHOIST Locomotive Crane

is used from start to finish on track construction work — excavating, filling in, driving piles, unloading ties and rails, and placing the ballast. The crane is one man operated and does the work of 25 to 40 men. Its daily cost is only \$8 to \$10 including depreciation, 6% interest, and all operating costs.

The illustration shows the crane working with drop hammer and wooden leads for driving piling. A steam hammer can also be used, the steam being furnished from the boiler on the crane. And leads can be provided which permit driving batter piles.

These many operations are shown in our catalog I which will be sent upon request.

RESULTS COUNT

That's Why 465 Railroad Shops Are Using Thermit

Thermit offers the only sure and reliable repair for locomotive frames and other heavy sections.

The superheated liquid Thermit steel is produced in bulk and poured all at once into a mold surrounding a broken section, resulting in the perfect amalgamation of the Thermit steel with the parts with which it comes in contact. The fact that those parts are first preheated, makes the weld doubly sure.

The operation of welding locomotive frames is easily accomplished, without removing the frame from position, and with very little dismantling, no matter if the frame be broken in the splice, jaw, next to the cylinder saddle, or at any other point. The engine is returned to service in from ten to twelve hours.

Hundreds of thousands of pounds of Thermit are being used annually by railroad companies in the United States and Canada.

There is only one reason for this, and that is that Thermit produces results and we all know that "results count."

Our pamphlet No. 2144 will be of interest.

All Thermit and Thermit appliances are made in our Canadian shops.

A Solderless Trolley Anchor

The clamp casting in the center and the two cam tips hold the wire firmly in the O-B Type B Strain Plate.

Has smooth under-run and plenty of clearance for trolley wheel.

Provided with six holes for guy wire.

Listed with other O-B Line Material in General Catalog No. 16.

The Ohio Brass Company

Mansfield, Ohio

It is an Established Fact

That fireboxes of all types equipped with the Tate Flexible Staybolt show the lowest maintenance cost and highest earnings.

The Flexibility in the bolt serves to accommodate the relative expansion of plates under working operations of the fire box and boiler in a manner that has afforded less destruction to the sheets and seams than were found under conditions where fireboxes were rigidly stayed.

The Tate Flexible Staybolt is designed and made to give satisfactory results in the final measure of its usefulness, as an economic, safe and reliable factor in reducing the costs of firebox repairs and maintenance.

In use on all the prominent railroad systems of Canada.

FLANNERY BOLT COMPANY, Vanadium Building, Pittsburgh, Pa.

Manufactured and sold in Canada by Canadian Allis-Chalmers, Limited, General Offices, Toronto, Ont.

Berry Brothers' Railway Varnishes

Represent Nearly 60 Years of Varnish Making Experience

These are a few of the many finishes for locomotives that you should know.

Locomotive Black

A fossil gum varnish of the highest grade—for the best attainable finish on locomotives, tenders and valuable rolling stock, combines excellence with durability—efficient because its use is true economy—a case of the best being the cheapest.

Hand Rail Black

Especially adapted for imparting an attractive finish to hand rails. It dries quickly and hardens with a smooth, handsome lustre, and has no tendency to get soft or tacky when handled.

Front End Black

For the front end of locomotives. It covers well, makes a handsome jet black finish, and stands a high degree of heat without injury.

Smoke Stack Black

Made especially for use on smoke stacks, producing a jet black and brilliant lustre, and resisting heat of a high degree without injury.

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

Scientific Treatment of Boiler Waters

Dearborn Service to Railroads

Twenty-five years devoted to the subject of water chemistry, embracing the analysis and successful treatment of waters in all parts of America, and in many countries of the eastern continent as well, including supplies used in locomotive, stationary and marine boilers of every type and size, and operated under the varying conditions that obtain in different industries, gives us a background of experience which is of value in handling new problems, and an assurance to our customers that only expert, efficient service will be offered them.

Scores of Railroads are using Water Treating Preparations compounded by us to meet their requirements, with great benefit to the railroad companies, in the increased life of the boilers, reduced consumption of fuel and lubricating oil, ability to haul greater tonnage, increased mileage between boiler washings, and generally improved operating conditions.

We would be glad to analyze the waters on districts where you are having trouble, and advise with you regarding treatment.

ENGINEER AND PASSENGERS RIDE ON

For Locomotive
Cab Seats

REG. U. S. PAT. OFF.

For Car Seats and
Vestibule Curtains

Is Guaranteed Superior to Coated Splits

Railroad officials know the value of a **guaranteed** article, know too, that coated splits are never guaranteed, and that six months' wear as car seat upholstery shows why. If you're in doubt as to why, send for "How Many Hides Has a Cow?" It tells what coated splits are made from, what Fabrikoid is made of, and why the latter is the equal of best genuine leather. Du Pont Fabrikoid is the ideal material; for cab seats

it is much less expensive than leather, and stands severe service. For coach upholstery, it cuts both initial and maintenance expense. It is tough, yet pliable, will not split nor crack, is waterproof, sanitary, comfortable and combines both saving and service in the most thorough manner. For vestibule curtains, it offers advantages that commend its use in modern railway service.

*Investigate Fabrikoid yourself. See what the economy of Fabrikoid will mean to your road.
Send for free samples and examine them.*

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE—INTERCOLONIAL RAILWAY

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

Cut Filing Costs in Half

Filing is like drilling. The moment the file wears smooth, it takes twice, or three times, the energy to accomplish the desired result. Engineers have got it down to a scientific basis in drilling. The moment a drill reaches its "inefficient point" it is discarded and this "efficient point" is determined by the amount of power used to drill a certain dimension.

Workmen are not machinery; consequently you have to depend upon

the personal element and educate your men up to the point where they will know at once when their files have reached the "inefficient point". If you can educate your men to do this you will get double the results at the bench, compared by results when men have been working with files that are inefficient.

The Famous Five are: Kearney & Foote, Great Western, American, Arcade, Globe
(MADE IN CANADA)

Write for our booklet "File Philosophy." It is well worth reading by any manufacturer, shop superintendent, shop foreman or workman who is concerned with the use of files.

WIRES and CABLES for STEAM and ELECTRIC RAILWAYS

THE fact that most of the steam and electric railroads in this country are using our products and continue from year to year to send in their repeat orders, is the best indication of what users think of Northern Electric quality.

No manufacturer pays more painstaking attention to the wire and cable requirements of the railroads; and the manufacturing and shipping facilities of our new Montreal plant are unsurpassed.

Here are some of the lines we make:—

- Railway Signal Wire, bare and rubber covered.
- Rubber-Covered Wire for round houses and repair shops.
- Asbestos Insulated Wire for Headlights.
- Reinforced Weatherproof Cables and Armored Cables for use in car shops.
- Magnet Wire for rewinding motors.
- Car Wire for electric light, fan, annunciator, motor and control circuits.
- Trolley Wire.
- Bare Weatherproof and Paper Insulated Feeder Cables.
- Bonding Cables.
- Paper-insulated, Lead-covered Telephone Cables and Bare Wires for Train Dispatching.
- Paper-insulated and Rubber-insulated Telegraph Cables.
- Armored Cables for bridge installations.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

The Columbia Hot-Shot Battery

A compact unit battery, developed to take the place of a number of individual dry cells.

Consists of a number of cells permanently connected—only two connections necessary to place this battery in service. No loose cells to handle, no chance for poor connections or broken circuits.

Contained in a moisture-proof fibre case, with a convenient handle.

Thousands of "Hot-Shots" are used by railroads everywhere. They are the ideal batteries for speeders and motor cars and all classes of ignition service.

Splendidly adapted for signal, telephone and telegraph service, and for any class of work where a number of cells would ordinarily be used.

Columbia Hot-Shot Batteries are made in different sizes and voltages, for every class of battery work.

If you are not already using the Columbia Hot-Shot Battery you are missing real battery economy.

Write for detailed information.

July, 1916.

The June Railway Mechanical Conventions at Atlantic City.

The two great railway mechanical conventions of the year, the Master Car Builders' Association and the American Railway Master Mechanics' Association, were held in Atlantic City, N. J., the former on June 14 to 16 and the latter on June 19 to 21. The most important features of these annual conventions are the reports of the standing and special committees, and the individual papers presented. The principal ones are given on this and following pages, either in full or in abstract.

Use of Powdered Fuel in Locomotives.

The American Railway Master Mechanics' Association committee, C. H. Hogan, Asst. Supt. Motive Power, New York Central Lines, East of Buffalo, chairman, reported as follows:—The use of powdered fuel in manufacturing plants has proved quite successful and has passed beyond the experimental stage. After years of experimental and development work, apparatus for the drying and pulverizing of coal has been perfected. The problems to be encountered in the use of powdered fuel in locomotives are more serious, on account of the necessity for storage of powdered fuel and the limited restrictions of space available on a locomotive. The first application of such a device for burning powdered fuel on a steam locomotive was made about a year ago, and special apparatus had to be designed, tested, improved and perfected to make it adaptable to locomotive practice, therefore discouragement should not be felt because in so short a time there are not a large number of locomotives in regular successful service burning powdered fuel.

None better than the members of this Association know the great difference in the burning of run-of-mine coal from different sections of this country, and even different mines in the same section; therefore they will readily appreciate at least that similar difficulties must be encountered and overcome in burning in powdered form the same coals containing various amounts of moisture, ash, etc., besides the added process of actually pulverizing the fuel. It is easily within the memory of all as to the difficulties at first experienced in the burning of oil in the limited confines of a locomotive fire box, and the apparatus used successfully; therefore today it would hardly be recognizable to the early designers and experimenters therein.

Perhaps most would agree today that but for the difficulty in obtaining fuel oil, and its excessive cost, the use thereof would be much greater than it is; nor is the end of increased cost of oil in sight, since methods have been devised for producing gasoline therefrom; hence it is believed that the perfection of apparatus for burning powdered fuel with equal advantage offers an acceptable substitute, and on account of the greater supply of

coal and its less cost, particularly the smaller sizes, many of which at present are entirely wasted, the field for the use of powdered fuel would appear to be much more extensive. The results to be obtained from successful use of pulverized fuel in locomotives may be briefly summarized as follows: Operation free from smoke, cinders and sparks; ready maintenance of fuel boiler pressure, increased boiler efficiency, decreased fuel cost, saving of manual labor in stoking, elimination of grates, as well as ash pit delays and expense.

The New York Central locomotive, being the first equipped for burning powdered fuel, has been used chiefly for the development and improvement of apparatus necessary for supplying powdered fuel to the fire box and in drafting the locomotive. This is a 10 wheel superheater engine, and has been used in helper and in freight service. Its leading features are as follows:—

Weight on drivers, 158,000 lb.
Tractive power, 31,000 lb.
Cylinders, 22 by 26 in.
Driving wheels, 69 in. diam.
Boiler pressure, 200 lb.
Grate area, 54 sq. ft.
Superheater heating surface, 540 sq. ft.
Total boiler heating surface, 3,188 sq. ft.

The Chicago & North Western locomotive, equipped less than a year ago, is Atlantic type, superheated, and of the following general description:

Weight on drivers, 96,000 lb.
Tractive power, 21,850 lb.
Cylinders, 20 by 26 in.
Driving wheels, 81 in. diam.
Boiler pressure, 185 lb.
Grate area, 46.3 sq. ft.
Superheater heating surface, 428 sq. ft.
Total boiler heating surface, 2,187 sq. ft.

This locomotive has been used in regular local and through passenger service, and a comparative test made with a duplicate locomotive burning coal on grates has thus far proved favorable to the powdered fuel, especially in saving fuel in firing up, movement at terminals, dead time, etc. This can readily be appreciated when it is recalled that on most locomotive coal tests it has been found that about 20% was used for work other than while pulling the train, or left in the fire box at the end of the run.

The Delaware & Hudson Co. has just received from the builders a consolidated locomotive equipped for the burning of powdered fuel, the following being a general description of same:—

Weight on drivers, 267,500 lb.
Tractive power, 61,400 lb.
Cylinders, 27 by 32 in.
Driving wheels, 63 in.
Boiler pressure, 195 lb.
Grate area, 99.8 sq. ft.
Superheater heating surface, 793 sq. ft.
Total boiler heating surface, 3,814 sq. ft.

It was hardly to be expected that your committee would be able to render at this time a comprehensive or conclusive report on the burning of pulverized fuel in locomotives, a matter so new to the art in locomotive practice; however, we wish it understood that not a little advancement has taken place in this very short period of time and submit the above merely as a report of progress and ask for the continuance of the committee.

Report of Committee on Car Construction.

The Master Car Builders' Association committee, W. F. Keisel, Jr., Asst. Mechanical Engineer, Pennsylvania Rd., Altoona, Pa., chairman, reported as follows: In the report made in June, 1915, a box car design was submitted and a request made that before Dec. 1, 1915, recommendations for changes and other criticisms, or approval of design, be sent to the chairman. Replies to this invitation were quite meagre, but indicated a desire on the part of railway companies to await the results of the development of the box car design which was under way by the American Railway Association subcommittee.

As members of your committee were also acting in an advisory capacity with the American Railway Association subcommittee it was deemed advisable to do nothing for the present in the development of the Master Car Builders' design of box car, but to assist, as far as possible, in perfecting the American Railway Association box car design in line with the work already accomplished on the proposed M. C. B. box car. In regard to this subject, we can only report progress. No other subjects were before your committee during the past year, as all of the items covered by our previous report, with the exception of one small item, were, by letter ballot, adopted by you as Recommended Practice.

The proper distance between centre sills of steel cars is one that will require serious consideration, as we should adopt either the present spacing generally in use, which is 12½ in., or determine on some other spacing that can be considered fixed for a number of years. The spacing of 12½ in. permits a car 40 ft. long to pass around a curve having 50 ft. radius without interference between the wheel flanges and centre sill flanges. It will readily be seen that if the distance between centre sills is increased, or if the distance between centres of trucks is increased, the radius of curvature around which car will pass will have to be greater. The distance between centre sills affects the work of the Coupler Committee and Draft Gear Committee, in addition to that of the Committee on Car Construction. We would recommend that the present spacing of 12½ in. be adopted as Recommended Practice, and that draft gear and couplers be made for this spacing of centre sills.

Dimensions for Flange and Screw Couplings for Injectors.

The American Railway Master Mechanics' Association committee, M. H. Haig, Mechanical Engineer, Atchison, Topeka and Santa Fe, chairman, reported as follows: The report of the committee presented before the 1915 convention, was referred back for further consideration. The original members of the committee were continued and the committee was

enlarged by the addition of two new members. After further and careful consideration, the committee confirms the report presented at the last convention.

Because of the difference in size of couplings and number of threads used by the several manufacturers, it is not possible to select a set of common standards which will interchange with all the individual standards of the several manufacturers. Realizing this, the committee selected a set of dimensions representing practices most common to the greatest number of railways and based its original report on these dimensions. There is no doubt that the proposed dimensions are thoroughly satisfactory in providing for mechanical strength and in meeting all injector conditions, for a large proportion of the roads are now using couplings conforming practically to the dimensions proposed. The principal differences between the proposed standards and the 10-thread couplings commonly used is in the shape of the thread, and the proposed shape was selected because of its interchanging most satisfactorily with all other shapes used.

It is not unusual for the principal manufacturers to make injectors to suit connections of different standards, and at least some, if not all of the manufacturers now have injector connections in service which will interchange with the proposed common standards.

It is not to be expected that manufacturers could immediately discontinue their individual standards in favor of a common standard or that the different railways would attempt to modify the couplings on present injectors to conform to a new common standard. It would be more natural to expect the gradual adoption of a common standard as new injectors are applied to locomotives under construction and to some lesser extent as old injectors are replaced by new ones during repairs. It is, therefore, a matter of the pleasure of the Association to decide whether a common standard should be adopted for flange and screw couplings for injectors. At the 1914 convention a motion was made to appoint a committee "with a view to preparing a standard and recommended practice." This committee has investigated the subject and has been guided in its recommendation by the information submitted by the railways. It has been the duty of the committee to analyze this information and place the facts before the Association, and the committee feels that it is now the office of the Association to decide whether it wishes a standard.

Settlement Prices for Reinforced Wooden Cars.

The Master Car Builders' Association committee, John McMullen, Mechanical Superintendent, Erie Rd., Meadville, Pa., chairman, reported as follows:—Your committee recommends that rules 115, 116 (except that part relating to trucks), 117 and 118 of the Code of 1915, be eliminated, and that new rules be substituted therefor, covering the settlement for cars destroyed on foreign lines.

Your committee further recommends the following in connection with determination of prices and depreciation:

(a) The original cost of a unit of equipment, inclusive of body, trucks and air brakes, shall be used as the basis for settlement, from which will be deducted depreciation figured from the date of the original cost to the date of destruction. If, however, betterments have been added during the life of the car, and added to

the book cost, depreciation on such betterments shall be figured from the date when made and deducted from the cost of such betterments. The total of the depreciated first cost and of the depreciated betterment cost will be the amount to be paid in settlement for the destroyed car.

(b) A car will be considered as new when written out of service and rebuilt, when the cost of renewals (repairs, renewals or betterments made at the same time) constitutes the major portion of its value as renewed, and settlement will be made as in the case of a new car. In no case shall the charge for the rebuilt car exceed the cost at current market prices for labor and material of new equipment of similar type, equal capacity and equal expectation of life in service, less a suitable allowance on account of the second-hand parts remaining therein.

(c) In order to provide uniform rates of depreciation for the settlement of cars destroyed on foreign roads, your committee would recommend the following:

Wooden cars, all classes, except refrigerator cars 5 per cent.

All-steel cars, all classes, including steel tanks of tank cars 3 per cent.
Wooden cars, steel-framed or steel-underframed, or both 4 per cent.
Refrigerator cars, all wood 7 per cent.
Refrigerator cars, steel-framed or steel-underframed, or both 6 per cent.

The above rates are to be applied on the so-called straight depreciation basis. For example, the depreciation on a wooden car, 10 years old, at the rate given above (5%), which cost originally \$1,000, would be \$500. These rates apply to body, trucks and air brakes; but depreciation shall in no case exceed 80% of the value upon which it is based.

(d) In order to provide for settlements for trucks, when trucks only are destroyed, prices headed "Trucks," rule 116, page 204, 1915 Code of Rules, and paragraphs of the rule following the table, should be retained. Depreciation to be figured at the rate established for the type of car the trucks were under when destroyed.

(e) Rules 112, 114 and 120 to be rewritten by the arbitration committee to conform to the recommendation in this report.

Report of Committee on Mechanical Stokers.

The American Railway Master Mechanics' Association committee, A. Kearney, Assistant Superintendent, Motive Power, Norfolk & Western Ry., chairman, reported as follows:—Your committee a year ago shared the opinion of your executives that it would be interesting and none the less valuable if further data could be secured (preferably on a laboratory test plant) to show the relative efficiency of at least the prominent types of locomotive stokers, using the different grades of fuel under the usual range of operation; at the same time they fully realized that to make the work complete a great deal of time and labor would be necessary—perhaps much more than any railway officer not having a plant could afford to spare. Your committee has given this matter a great deal of thought without being able to determine as yet where and how the work could be undertaken, but further than that they feel confident that even if the opportunity presented itself it would be better and very much more satisfactory in the end to postpone the work until the machines more nearly approach standard designs.

Relative fuel consumption and cost figures would, of course, be pertinent, but as the records already obtained in connection with the general performance of stokers under service conditions (a good deal of which has found its way into print), is not only complete but comprehensive, embracing considerable information upon the efficiency as affected by the use of many of the grades of coal commonly offered for fuel purposes, some tests being conducted to show fuels especially prepared with respect to their condition—a factor of considerable importance—and figures pertaining to the cost of maintenance and durability being available, your committee, after taking all things into consideration at this time, does not deem it expedient to advocate going to the expense of getting figures for any of the machines in their present transitory stages, especially since so many of the extensive improvements now under way may materially alter their standing for accurate comparative purposes.

Furthermore, the stoker field is gradually narrowing itself down to a few types. Those that have withstood the storm and continue to show merit are

practically embraced in the Street, Hanna, Standard and Crawford machines; at the same time even these machines are undergoing alterations for higher efficiency and greater range of adaptability, though not necessarily departing from the general principles upon which the machines were originally laid down. The first three machines, the Street, Hanna and Standard, belong to the scatter or overfed group, while the Crawford is the only distinctly underfeed machine in the field.

As time and opportunity have shown wonderful advances in nearly every known device, it is safe to assert confidently that the full development of the mechanical stoker has not yet been reached. At the same time some of the original designs of the four prominent types mentioned have been in service some four or five years, or longer, and are still doing good work. As of April 1, 1916, the following number of machines of the four named types were in service and on order:

	In service April 1, 1916	On order April 1, 1916
Street	866	152
Crawford	413	63
Hanna	39	39
Standard	100	125
Total	1418	379

In order to show the headway made in stoker designs and improvements during the past four years records of those in service have been prepared as shown in tabulation. The figures are interesting as they show how the number of machines in service has increased by years to date. The following table shows the total of all mechanical stokers in service as of April 1, 1916. As mentioned in your committee's last year's report there are other machines in service undergoing trial, still others in contemplation, but your committee has been advised of none beyond those alluded to in their last report.

Year.	Street.	Crawford.	Hanna.	Standard.	Ttl.
1910	5	1	6
1911	10	1	1	..	12
1912	165	46	1	..	212
1913	173	153	2	..	328
1914	418	301	3	2	724
1915	531	301	18	22	872
1916	866	413	39	100	1418

The practicability of the stoker, as well as its range of value and adaptability, depending upon local conditions of opera-

tion, is no longer a matter of conjecture, as standard designs are to be found on the market which are being applied in fairly large orders, as the records show. Still, the manufacturers are working zealously and satisfactorily for higher merit.

Generally speaking, the progress in the stoker designs during the past year has been quite encouraging. Since our last report the Locomotive Stoker Co. has brought out its duplex machine, which has for its object the conservation and efficient utilization of a greater amount of the finer produce in the fuel heretofore subject to more or less loss with any of the scatter type machines.

Much time is being devoted to the study of pushing coal through open and closed ducts and troughs, to ascertain the range of possibility and necessary mechanical conditions, also the effect of grinding and further pulverizing the fuel in its passage from the tank to the fire box through the helicoid screw in the horizontal or vertical planes, as well as the general effect through the pressure zones, the fruits of which it must be realized can only be obtained as developments are carried forward.

The Street Co.'s regular type C stoker, like other machines on the market, continues to do excellent work, and is showing improvement in durability. The Street Co. has recently designed and constructed two machines of a type known as the duplex, one of which has been applied to a Mallet locomotive on the Norfolk & Western, and the other to a locomotive of a similar type on the C. & O. R. The Hanna and Standard companies have both been pushing with much earnestness the introduction of a number of detail improvements in their machines for greater durability of parts, as well as higher efficiency in their operating engine and controlling mechanism, none of which, however, materially alters the original principle upon which the machines are constructed. All of this work requires a great deal of time and experimenting. We are informed that many improvements in detail have been made in the Crawford stoker which forecast substantial progress, efficiency in operation, and lower cost in maintenance.

Your committee, cognizant of what has been done and what is in contemplation, deems it premature at this time to attempt any elaborate efficiency tests, but suggests that the work be deferred until designs and improvements become more permanent, especially since data necessary for all practical purposes have either been reported or are readily obtainable by those who may be seriously considering their use. Furthermore, by the time the present machines reach a more favorable stage for a comparative test the opportunity for such an investigation, which at best is going to be very expensive and require a great deal of time, may be more opportune than at present.

Report of Committee on Car Trucks.

The Master Car Builders' Association committee, J. T. Wallis, General Superintendent Motive Power, Pennsylvania Rd., chairman, and of which L. C. Ord, formerly Assistant Works Manager, Car Shops, C. P. R., Montreal, who is now on active military service, was a member, reported as follows:—On account of the American Railway Association committee on design of standard box car having under consideration some minor changes in the design of truck bolsters, involving

probable slight changes in the limiting dimensions of cast steel truck sides, your committee deems it advisable to await the final conclusions of that committee before recommending any changes in the present Recommended Practices.

The committee on brake shoe and brake beam equipment submitted to the car truck committee a proposed design of brake beam hanger and manner of fastening to truck which received the approval of the car truck committee, inasmuch as the hanger conformed in length and location to the limiting dimensions for cast steel truck sides, now a Recommended Practice of the Association. Subsequent to this, criticisms have been made of the manner of securing the

brake beam hanger to the truck and of the design of the hanger, involving changes in the hanger where it enters the brake head and modifications of the hanger hole in the brake head. Your committee, therefore, recommends that the design of brake hanger and its fastening to the truck be held over until next year, when the question of truck design for standard box car will be settled by the American Railway Association standard box car committee, and when this is concluded the committee on car trucks will confer further with the committee on brake shoe and brake beam equipment on desirable changes in the tentative design of the brake beam hanger and its fastening to the truck.

Report of Committee on Superheater Locomotives.

The American Railway Master Mechanics' Association committee, W. J. Toller-ton, General Mechanical Superintendent, Chicago, Rock Island and Pacific Rd., chairman, reported as follows:—As of Jan. 1, 1916, there were 15,666 superheater locomotives in service in the United States and Canada, practically all of the fire-tube type, as follows:

Superheaters applied at time of construction of locomotive	9,900
Superheaters applied to locomotives already in service	5,766
	15,666

With the exception of one prominent railway, very few locomotives, originally equipped with slide valves, have been changed to piston valve and had superheaters applied. With the exception of 142 Mallet locomotives, equipped with superheaters, having slide valves on the low pressure cylinders, very few superheater locomotives are equipped with slide valves. The railways on which these Mallet locomotives are operating is experimenting with a view of applying piston valves. Therefore, your committee does not feel this subject can be thoroughly discussed at this time.

Of the railway reporting, 99% of the superheater locomotives were equipped with brick arches. The use of brick arches is specially recommended on superheater locomotives, where practicable, as it causes more perfect combustion, better distribution of heat in the fire box, protects the flues and sheets and effects a reduction in smoke and sparks and cinders in flues and front end. In extreme bad water districts, the application of arches should be determined by local conditions.

It is recommended that a programme be adopted for the application of superheaters to existing power on a monthly schedule. This will enable the railways to place orders in advance for the necessary material and thereby avoid delay to locomotives undergoing repairs, awaiting superheater material.

There is a decided difference of opinion as to the advisability of equipping switching locomotives with superheaters, as follows:—Some railways maintain the same relative economies are effected through superheating switching locomotives as are obtained by superheating road locomotives. Others will not give consideration to superheating switching locomotives until all available road locomotives have been equipped, owing to the greater returns to be obtained. Your committee commends the application of superheaters to switching locomotives, but considers their application to road locomotives as being generally of greater importance.

It is felt no set rule can be formulated covering the application of superheaters to existing locomotives, as age, general condition, capacity and further service to be secured must govern. Several railways reported having superheated locomotives 10 to 15 years old.

From replies received, it is apparent that the superheater will be specified on all road and many switching locomotives purchased in the future.

The return tube, top header, double loop superheater is the type most generally used.

In view of the many complete reports which have already been rendered on tests covering the economies effected through the application of superheater, and superheater and brick arch, your committee does not believe it necessary to publish further data in this report. However, on a conservative basis, it is felt that an economy of 15 to 25% in fuel and 20 to 30% in water consumption can be expected in every-day operation through use of the superheater and brick arch. Numerous tests have shown greater economies. On a number of railways the application of superheaters has reduced the time of freight trains on the road 10 to 15% and eliminated one stop for coal and two stops for water over one freight engine division.

It is generally felt by all, and proved by some careful comparative tests, that the cost of repairs (maintenance of equipment) is greater for locomotives equipped with the superheater and brick arch. However, for the railways as a whole, the reductions effected in the cost of coal and water and the increased general efficiency (conducting transportation), offset this many times over.

As a general proposition, no changes are necessary in the front end arrangement, due to the application of superheater, aside from those made an account of superheater elements, header and damper. Replies received indicate no great variation in the size of exhaust nozzle tip between saturated and superheated locomotives of the same general characteristics.

The committee feels that the best results will be obtained in operating superheater locomotives by carrying about two gauges of water, with full throttle on short cut-offs, so far as operating conditions will permit. The engineers should also be required to crack the throttle when drifting.

The investigation develops that the majority of superheater locomotives are equipped with hydrostatic lubricators without booster, although a considerable number of railways are using the hydrostatic lubricator with the booster attach-

ment. The booster is of value if the hydrostatic lubricator has a restricted equalizing passage. If the hydrostatic lubricator is designed with the proper size equalizing passage, the booster attachment is unnecessary, as its principal function is to compensate for the restricting equalizing passage. The use of the force feed lubricator is very limited, but a number of railroads are experimenting with this type at the present time. The use of an independent feed for lubricating the cylinders is limited. It is the opinion of your committee that this is unnecessary and should be discontinued, as it is very questionable if any benefits are being derived therefrom.

The majority of railways are now using a superheat oil for the lubrication of superheater locomotives, stating that it does not carbonize and better results are obtained. It generally has been necessary to increase the valve oil allowance 20 to 25% for the superheater locomotives over the allowance for saturated locomotives of similar type and size. However, this does not apply in the same proportions to bad water districts, where superheating has reduced the foaming and eliminated water being carried over into the cylinder, in which cases no increase in oil allowance has been necessary.

Various methods have been tried for the use of graphite on superheater locomotives, but the replies received indicate the majority are not using graphite for lubricating superheater locomotives.

Trouble has been experienced with carbonization of oil in valve spools, and piston heads, this has been remedied by decreasing the amount of oxygen drawn into the cylinder, by drifting with a partially open throttle or drifting valve. The use of superheat oil will also decrease the trouble.

The application of superheaters to locomotives equipped with slide valves has been so limited, the committee does not feel warranted in discussing the system of lubrication for that type of locomotive at this time.

Vacuum relief valves are generally used, although there is some question as to what benefit, if any, results. The majority of replies received indicate that the by-pass valve is not in general use on superheater locomotives. These have only been advocated for large cylindered locomotives, to take care of the high compression in the cylinders.

A number of railways are now using, and others are experimenting with, drifting valves, either manually or automatically operated. When drifting is done with the throttle valve, on superheated locomotives, superheated steam is used. When drifting valve is used, either manually or automatically operated, saturated steam is used. Generally, no distinction is made as to size of drifting valve or steam connections between large and small locomotives in passenger and freight service, and for the sake of standardization such practice is desirable. When locomotives are not equipped with by-pass, automatic or manually operated drifting valve, or other drifting valve in the cab, the throttle should be cracked while drifting a sufficient amount to prevent the admission of air. This will decrease carbonization.

Very little experimenting has been done in the application of pyrometers to locomotives, outside of special tests, but the committee believes it is desirable to make tests from time to time to ascertain the degree of efficiency being obtained. In view of the initial cost, it is felt that

portable instruments would answer the requirements, a certain number for each division, to be transferred from one locomotive to another. The pyrometers should be adjusted at regular intervals, in order to obtain accurate readings.

Some difficulty has been experienced due to superheater headers cracking, units leaking and packing melting. As a general proposition, however, the trouble has not been serious from these sources. There are no comparable data available as regards locomotive failures as between superheated and saturated locomotives. Better design or foundry practice is recommended as a remedy for the trouble with the headers and better workmanship for the units. The standard set of tools as recommended by the superheater manufacturers is recommended for adoption as standard for the care and maintenance of superheaters. At present there are a number of railways which have no printed instructions for round-house forces, back shop employees and enginemen on the operation and maintenance of superheater locomotives. In order that the greatest efficiency may be obtained, it is very necessary that all employees be fully conversant with these features. For the guidance of round-house and back shop employees, a standard practice card, embodying the instructions as recommended by the superheater manufacturers, should be issued.

A number of railways are welding all flues in the back flue sheet successfully, the welding being done with the ordinary types of welding equipment.

With the exception of one prominent railway, all railways reporting are using superheater dampers in the front end satisfactorily.

The investigation develops that a number of railways have had more cracked cylinders and saddles with superheater locomotives. They have now adopted outside steam pipes, which involved change in design of cylinders, on superheater locomotives.

Welding of Cast Steel Truck Side Frames and Bolsters.

The Master Car Builders' Association committee, W. O. Thompson, Superintendent, Rolling Stock, New York Central Lines, East of Buffalo, chairman, reported as follows:—Your committee desires to submit the following recommendations, one member of the committee dissenting.

Cast steel truck side frames must not be welded if cracks extend more than 1 in. from edge of any rib or flange.

Cast steel truck bolsters must not be welded if cracks extend more than 1½ in. from edge of rib or flange, unless bolster is reinforced at place of failure by addition of plates, either welded or riveted, to bolster.

J. T. Wallis, General Superintendent of Motive Power Pennsylvania Rd., Altoona, Pa., presented the following minority report:—I cannot concur in the report of the majority of the committee permitting welding of cast steel truck side frames and bolsters, as I consider the practice of welding cracks in these members, by either acetylene, electric or any other present known methods, unsafe, for the reason that the fractures indicate weakness in design, and the welding will not add to the strength, but introduces a condition of further weakness by improper workmanship. It is a well known fact that a large number of cast steel truck side frames and bolsters, especially the former, are failing as a result of

weakness in design. Where the proper sections are used, and the design proved, these cracks do not appear. I cannot, therefore, subscribe to a practice of continuing in service such vital parts of car construction which, as evidence by fracturing, are inherently weak, or to a method of repairs which in no way strengthens the part, but, on the contrary, introduces another chance for failure, and consequently is unsafe.

Report of Committee on Safety Appliances.

The Master Car Builders' Association committee, D. R. MacBain, Superintendent Motive Power, New York Central Rd., Cleveland, Ohio, chairman, reported as follows:—From the title of this committee about the only matter that can be reported on is the progress that is being made in the equipment of freight cars with safety appliances to comply with the law, and your committee is pleased to state that in a general way, notwithstanding the strenuous conditions with which railways have had to contend, fairly satisfactory progress has been made in our efforts to comply with the requirements of the law. From information received from railways operating 2,505,159 freight cars, of which, according to reports, 1,905,929 were put in service prior to July 1, 1911, between the periods July 1, 1911, and Dec. 31, 1915 (the latest data available), 1,303,906 cars built prior to July 1, 1911, have been equipped with safety appliances, or an average of 289,757 cars per year. The actual total each year has been as follows:

Half year ended Dec. 31, 1911.....	37,667
Year ended Dec. 31, 1912	223,137
Year ended Dec. 31, 1913	331,846
Year ended Dec. 31, 1914	338,321
Year ended Dec. 31, 1915	372,935
	1,303,906

Of cars built prior to July 1, 1911, there remained to be equipped on Dec. 31, 1915, 681,571 cars. To complete the equipment of these cars by the time set by the Interstate Commerce Commission will require a great deal of effort on the part of the railways, especially in view of the difficulty of getting the cars home from foreign roads and the procurement of materials with which to do the work. In order to expedite the movement of cars home for this purpose, the Arbitration Committee has proposed, with the approval of the Executive Committee, the incorporation in rule 4 of the following: "After Jan. 1, 1917, no car will be received from owner unless properly equipped with U. S. Safety Appliances or U. S. Safety Appliances Standard."

The committee feels that this matter should be given the closest attention possible, that there should be co-operation on the part of the railways to the end that on July 1, 1917, we may say to the Interstate Commerce Commission that practically all of the cars in the country have been equipped in accordance with the requirements of the law.

Air Brake Association.—The following officers were elected for the current year at the recent convention at Atlanta, Ga.: President, T. W. Dow, Erie; First Vice President, C. H. Weaver, N.Y.C. west of Buffalo; Second Vice President, C. W. Martin, Pennsylvania; Third Vice President, F. J. Barry, New York, Ontario and Western; Secretary, F. M. Nellis, Pittsburgh, Pa., and Treasurer, O. Best, New York.

The Best Design and Materials for Pistons, Valves, Rings and Bushings.

The American Railway Master Mechanics' Association Committee, Joseph Chidley, Assistant Superintendent of Motive Power, New York Central Rd., Lines West of Buffalo, chairman, reported as follows: Your committee was requested by the secretary to cover the subject of extension piston rods and also the matter of lubrication, in accordance with action taken by the Executive Committee. The committee has not attempted to cover the matter of lubrication, on account of this subject being covered quite thoroughly by the report issued by the Superheater Committee. The committee issued a cir-

tained depends not only on the material and design, but also on the efficiency of lubrication, the class of service and maintenance. A road traversing level country should obtain more mileage from the different parts than could be obtained by a mountain railway. This is equally true of roads traversing bad water districts, compared with those in good water districts. A road on which much drifting is done will obtain more mileage if its locomotives are equipped with automatic drifting and by-pass device. The service for which heavy, modern types of locomotives are used is generally more severe

Piston Valve Bushings.—Of the 34 roads reporting, 8 use cast iron for piston valve bushings on superheater locomotives and 26 use Hunt-Spiller gun iron. Cast iron is used on saturated locomotives by 17 roads, Hunt-Spiller gun iron is used by 10 roads and 7 roads have no saturated locomotives with piston valves. Short bushings are used by 26 roads, while 6 roads favor long bushings, extending across the exhaust passages to the steam-chest cover.

The number of roads using an even number of ports is about the same as those using an odd number. Apparently

Fig. 1. Piston Valve Bushing.

Fig. 2. Piston Valve L Ring

Fig. 3. Piston Valve Z Ring.

cular of inquiry to members with regard to the materials and designs used by the various railways for pistons, valves, rings and bushings, with a view of ascertaining the prevailing standards of material and design. This was also intended to bring out the changes, if any, which have been necessitated by the very general change from the use of saturated steam to superheated steam in the last few years. The committee has received replies from 34 railways, representing about 37,000 locomotives. In general, we may say that most roads make no distinction between saturated and superheater locomotives in the design of pistons, valves, rings and bushings, on locomotives equipped with piston valves. Many railways are using Hunt-Spiller gun iron for pistons, valves, rings and bushings for both superheater

than that of older and lighter types, which would be expected to give more mileage, other things being equal. The replies received by the committee indicate the difficulty of making a comparison between the service of the various parts on superheater and saturated locomotives. Most modern locomotives are equipped with superheaters, while the saturated type of locomotives is represented for the most part by a lighter class of locomotives, built, as a rule, a number of years ago, and not to be classed as types of modern locomotive construction. Several roads state that they find no difference in the mileage of the various parts under discussion on superheater and saturated engines, others obtain more mileage with the saturated locomotives, and a few report more mile-

not much attention has been paid to this feature of the design, although several roads are now changing from an odd to an even number of ports, which seems to be the preferable design. The object in having an even number is to have the bridges come near enough to being opposite each other so that the bushings can be readily calipered over the bridges to measure the amount of wear. The minimum width of bridges varies from 17-32 in. to 1¼ in. The committee favors a small number of bridges, with sufficient metal in them to give the necessary strength to the bushing. The usual form of steam ports is rectangular, although several roads report the use of diagonal bridges, forming diamond shaped ports. The committee has no evidence as to the advantages or disadvantages of this style

Fig. 4. Piston Valve Anchor Ring.

Fig. 5. Piston Valve T Ring

Fig. 6. Cylinder Bushing.

and saturated locomotives, while a smaller number use ordinary cast iron for the purpose; a number of roads use Hunt-Spiller iron for superheater locomotives and ordinary cast iron for saturated locomotives. Throughout this report the words "Hunt-Spiller," or the letters "H.-S.," denote Hunt-Spiller gun iron, and the words "Cast Iron," or the letters "C. I.," denote other varieties of cast iron.

The committee asked for data regarding the mileage obtained for different designs and materials in passenger and freight service on superheater and saturated locomotives. Mileage figures were submitted by something less than half of the roads reporting. The variation in mileage is so great, according to the replies received, that the committee hesitated to draw any conclusions from considerations of mileage. The mileage ob-

age with superheater locomotives. By the term "mileage," as used in this report, we refer in all cases to the mileage obtained between renewals for the parts under discussion. It is worthy of notice that of the 34 railways replying to the circular, some use Hunt-Spiller gun iron, some merely state that they use cast iron, others use a special grade of cast iron, some roads giving their own specifications for cast iron, and none state that they follow the specifications of the A.R.M.M.A., which were adopted in 1906 and revised in 1915.

of port. Sixteen roads use a fillet in all corners of ports in piston valve bushings, and 15 provide no fillet in the corners of the ports, or provide fillets only on the exhaust edge of the steam ports.

The committee asked the members to report on the mileage between renewals of piston valve bushings, but it is evident from a consideration of the replies that in some cases mileage is given between borings. The largest mileage reported between renewals on superheater locomotives is 300,000 miles, obtained in both freight and passenger service on one of the standard trunk roads with the use of short Hunt-Spiller gun-iron bushings. The maximum mileage reported between

renewals on saturated engines is reported by the same road as being 360,000 miles in both passenger and freight service, using short Hunt-Spiller gun-iron bushings. The committee recommends the use of short piston valve bushings with an even number of ports and bridges, and with a small number of ports and bridges, not more than eight, and preferably six in number. The committee also recommends the use of a fillet in all corners of piston valve bushing ports. A $\frac{1}{2}$ -in. radius is recommended as the standard size of fillet. Rectangular ports are to be preferred to diagonal bridges and diamond shaped ports, in view of the

Fig. 7. Cylinder Bushing.

practice of the majority of the members. Fig. 1 is an illustration of what the committee considers the best general design of piston valve bushing. The bushing is to be forced in, and the bridges are turned 1-32 in. smaller diameter on outside than the rest of the bushing, in order to allow the bushing to be forced into position without cracking or burring the edges of the ports.

Piston Valve Packing Rings.—Cast iron is used for piston valve packing rings on superheater locomotives by 5 of the 34 roads reporting; Hunt-Spiller is used by 27 roads; bronze is used by one road, and one road does not state. Cast iron is used on saturated locomotives by

Fig. 8. Cylinder Bushing.

13 roads, and Hunt-Spiller is used by 14 roads. The committee has information from one road using bronze piston valve packing rings, indicating there may be a field for further experiment.

Figures for the mileage obtained by the use of different materials and designs were submitted by 16 roads. Although these figures vary widely among themselves, we have taken the average figures as representing the results obtained in the United States and Canada. These average figures are here given, together with the maximum figures received, and similar figures for the roads using cast iron and those using Hunt-Spiller.

Mileage of Piston Valve Packing Rings—Average of replies from 16 roads:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	60 000	100 000	90 000	100 000
Average	30 900	40 000	34 200	43 500

Mileage of Cast-iron Piston Valve Packing Rings.—Replies from 4 roads using C. I. for superheater locomotives and 6 roads using C. I. for saturated locomotives:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	27 500	34 750	30 000	49 800
Average	16 400	23 200	20 300	33 200

Mileage of Hunt-Spiller Piston Valve Packing Rings.—Replies from 10 roads using H.-S. for superheater locomotives and 6 roads using H.-S. for saturated locomotives:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	60 000	100 000	90 000	100 000
Average	35 900	50 800	48 300	53 800

ures for the roads using cast iron and those using Hunt-Spiller.

Mileage of Piston Valve Bull Rings—Average of replies from 13 roads:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	150 000	200 000	120 000	165 000
Average	73 400	102 700	69 200	92 400

Mileage of Cast-iron Piston Valve Bull Rings.—Replies from 9 roads using C. I. for superheater locomotives and 7 roads using C. I. for saturated locomotives:

	Frgt.	Pass.	Frgt.	Pass.
Maximum	150 000	120 000	120 000	165 000
Average	72 000	78 500	64 700	93 100

Mileage of Hunt-Spiller Piston Valve Bull Rings.—Replies from 4 roads using H.-S. for superheater locomotives and 2 roads using H.-S. for saturated locomotives:

Fig. 9. Piston Packing Rings.

These figures indicate that better results are obtained by the use of Hunt-Spiller gun iron for piston valve packing rings than is obtained by the use of other varieties of cast iron.

The arrangement of piston valve bull ring and packing rings in most common use is shown in fig. 2. This shows the old familiar L ring, which is used by the greatest number of the roads reporting. Several roads also use the Z ring and anchored ring, shown in figs. 3 and 4, respectively. Two large roads use a T ring, as shown in fig. 5. Several roads use the standard designs of the American

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	135 000	200 000	90 000	100 000
Average	76 500	145 000	85 000	90 000

Fig. 2 shows the bull ring used in connection with the L type packing ring, and is considered the best design by the committee. Figs. 3, 4 and 5 show other styles of bull rings used with Z rings, anchored rings and T rings.

Cylinder Bushings.—Cast iron is used for cylinder bushings on superheater locomotives by 10 of the 34 roads reporting. Hunt-Spiller is used by 24. One of these roads uses Hunt-Spiller for passenger locomotives and steeled cast iron for

Fig. 10. Piston Packing Rings.

Balanced Valve Co. The data are not available to make a comparison of the various designs upon a mileage basis. The Z ring and anchored ring have the advantage that if broken they are held in place by their shape, but in view of the successful use of the L ring, shown in fig. 2, by the majority of the roads reporting, the committee believes this to be the best design of piston valve packing ring.

Piston Valve Bull Rings.—Cast iron is used for piston valve bull rings on superheater locomotives by 22 roads out of the 34 reporting; Hunt-Spiller gun iron is used by 10; cast steel is used by one, and one does not state. Cast iron is used on saturated locomotives by 21 roads, and Hunt-Spiller is used by 6. Figures for the mileage obtained on piston valve bull rings were submitted by 13 roads. We give below the maximum and average of all the replies received, and similar fig-

freight locomotives. Cast iron is used on saturated locomotives by 20 roads; Hunt-Spiller is used by 12, and 2 do not state. The replies were very meagre and incomplete with regard to mileage, only 9 roads giving any figures. A number of the figures received are obviously mileage between borings instead of mileage between renewals, as asked for in the circular.

The thickness of cylinder bushings as shown on the drawings submitted, varies from $\frac{5}{8}$ in. to $1\frac{1}{2}$ in. Fig. 6 shows a design of cylinder bushing that is in quite general use. This is a straight bushing extending from the front cylinder head to the back cylinder head. The steam opening at each end may consist of a single opening, as shown, or may have one or two bridges. Fig. 7 shows a design of cylinder bushing used by several roads. This is a straight bushing, with the ends cut away at the top to provide

steam passages. This bushing is placed in position from the front, and is held in position at the back end by a shoulder in the cylinder casting. Fig. 8 shows another style of straight cylinder bushing, terminating at the inside of the port at the back end. The straight bushing seems to be preferred by most of the members, only one road reporting the use of a bushing with a shoulder. One road uses a bushing made in two sections, each section being pressed in from the cylinder ends. The committee has no knowledge of the advantage of this arrangement. All the bushings illustrated are considered good, but in the opinion of the committee the simplest and best is shown in fig. 7.

Piston Packing Rings.—Cast iron is used for piston packing rings on superheater locomotives by 6 of the 34 roads reporting, and Hunt-Spiller is used by 28. Cast iron is used on saturated locomotives by 18, and Hunt-Spiller by 16. Figures for mileage obtained on piston packing rings were submitted by 15 roads. The maximum and average figures are given below, together with similar figures for the roads using cast iron and those using Hunt-Spiller.

Mileage of Piston Packing Rings—Average of replies from 16 roads:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	45 000	60 000	60 000	70 000
Average	18 300	22 700	26 400	33 800

Fig. 11. Piston Packing Ring.

Mileage of Cast-iron Piston Packing Rings—Replies of 4 roads using C. I. for superheater locomotives and 8 roads using C. I. for saturated locomotives:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	14 000	20 000	32 500	49 800
Average	8 200	14 900	20 800	30 900

Mileage of Hunt-Spiller Piston Packing Rings—Replies from 11 roads using H.-S. for superheater locomotives and 7 roads using H.-S. for saturated locomotives:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	45 000	60 000	60 000	70 000
Average	21 900	25 700	38 600	37 600

Four roads report using Dunbar type packing, the others using the ordinary snap rings. The data in possession of the committee are such that at the present time no recommendation is made as to advantage of either, but offer sketches of some designs of rings, as shown. See figs. 9, 10, 11, 12.

Piston Heads and Bull Rings.—Cast iron is used for piston heads or bull rings on superheater locomotives by 16 of the roads reporting, and Hunt-Spiller is used by 16. Two roads are experimenting with pistons having a brass or bronze wearing face cast on the periphery of the piston. Twelve roads submitted figures for the mileage obtained on piston heads and bull rings. We give below the maximum and average of all the replies received, together with similar figures for the roads using cast iron and those using Hunt-Spiller.

Mileage of Piston Heads and All Bull Rings—Average of replies from 12 roads:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	135 000	180 000	135 000	180 000
Average	58 600	70 800	58 200	79 400

Mileage of Cast-iron Piston Heads and Bull Rings—Replied from 3 roads using cast-iron on superheater locomotives and 7 roads using cast-iron on saturated locomotives:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	72 000	98 000	62 500	100 000

Rings—Replies from 6 roads using H.-S. on superheater locomotives and 3 roads using H.-S. on saturated locomotives:

	Superheater.		Saturated.	
	Frgt.	Pass.	Frgt.	Pass.
Maximum	135 000	180 000	135 000	180 000
Average	69 300	81 300	98 300	113 300

The piston shown in fig. 13 is an illustration of a box type piston, which is the type of piston in most general use in this country. Fig. 14 is an illustration of a steel plate type piston with a bull ring increased in width at the bottom, thus affording larger bearing area, where bearing area is needed. Fig. 15 shows a

Fig. 14. Plate Type Piston with Bull Ring.

solid steel plate type piston recommended for use in connection with extended piston rods.

The committee feels that fig. 13 is representative of the best design of solid box type pistons. It is believed, however, that plate type pistons will be more generally used in the future, and the committee considers fig. 14 to be representative of the best design of plate type piston and bull ring.

The committee submitted the question of the desirability of providing extra long piston rods on new locomotives, or in rebuilding old locomotives, in order that the piston head can be moved forward

enough to replace cylinder packing without disconnecting cross-head. The opinion expressed by reports received is almost unanimous in favor of this practice for new locomotives. Most of the reports also favor this practice in the cast of rebuilding old locomotives, if it is practical to do so.

The committee can substantiate that part of the report of the committee on the maintenance of superheater locomotives, page 239, Proceedings A.R.M.M.A.,

1912: "A metal suitable for use as cylinder and steam-chest bushings of superheater locomotives should be homogeneous, close grained, tough and of good wearing quality, combined with sufficient strength. It should be tough in order to resist wear, but at the same time it must be of such composition that it can be readily machined." The qualities described are necessary not only for valve and cylinder bushings, but also for piston valve packing rings and bull rings, piston packing rings, and piston heads or bull rings.

We present here a summary of the percentage of the roads reporting that use Hunt-Spiller gun iron for the various parts on superheater and saturated locomotives:

Name of part.	Percentage of the Roads Reporting That Use H.-S.	
	For superheater locomotives, per cent.	For saturated locomotives, per cent.
Piston valve bushings	76	37
Piston valve packing rings	79	52
Piston valve bull rings	29	22
Cylinder bushings	71	35
Piston packing rings	82	47
Piston heads or bull rings	47	21

The large number of roads using Hunt-Spiller gun iron leads the committee to an investigation of what this product is. We

quote from the report of the Committee on Maintenance of Superheater Locomotives for 1912, as follows: "Replies to the circular of inquiry indicate that Hunt-Spiller gun iron has been used on many railways with excellent results. This is said to be an air furnace charcoal iron, and the process of manufacture, combined with the proper chemical composition, seems to result in a metal which is well adapted for use with highly superheated steam." Upon further investigation the committee ascertains that Hunt-Spiller gun iron is not a new product, but in fact is a very old one. It seems that as far back as about 1810 the late Cyrus Alger made many improvements in the metallurgy of iron, and by the process suggested and manipulated by himself was enabled to increase the strength of certain kinds of pig iron from its nominal strength to that of some 35,000 lbs. per sq. in. This iron was produced for the purpose of fabrication of ordnance and it was because of the use to which it was put that it derived its name, "gun iron." The analysis of this iron is practically as shown in the report of the committee of 1912. The physical structure, however, was not referred to, and,

noted that the report of the Committee on the Maintenance of Superheater Locomotives for 1912 shows that 18 out of 36 roads replying to the circular had locomotives equipped with extended piston rods, but 3 of these were eliminating them. It is seen, therefore, that there has apparently been no increase in the use of extended piston rods since that time. It is the contention of some that the use of extended piston rods reduces the wear of cylinder bushings and packing rings, due to the fact that they are relieved of the weight of the piston, with a consequent reduction of friction inside the cylinder. On the other hand, there is the increased first cost and the cost of maintenance of the extended rod and its cross-head, cross-head guide and extra set of rod packing, if this arrangement is used.

The question arises as to what extent extended piston rods are used on saturated locomotives. Only one road reports the use of extended rods on saturated locomotives. This road uses extended rods upon the low-pressure cylinders of both superheater and saturated Mallet locomotives. The committee finds that most of the roads using

being over 24½ in. With regard to the tendency of the extended piston rod to spring, reports show that 5 roads find this tendency. Nine roads state that there is no increase in expense of maintaining rod packing with extended piston rods, and 3 roads state that the expense is increased. One road states that the expense of maintaining piston rod packing is doubled by the use of the extended piston rod. Lubrication by oil cups is almost universal, only one road using the splash system for extended piston rods. Open-hearth steel is very generally used for extended piston rods. Experiments with vanadium steel or other special alloy steels have not developed to a point where the committee can recommend them for this purpose.

From a careful consideration of the replies, the committee concludes that there is no particular necessity for the use of extended piston rods, except where railways traverse hilly country where long stretches of drifting is usual. However, where its use is desired, we advise the necessity of such a diameter of extended rod as to prevent springing, and are of the opinion that in no event is the extended rod necessary on cylinders of 20 in. diameter and less.

Fig. 13. Box Type Piston.

although exceedingly important, your committee also has made no attempt to determine and explain, due to the short time remaining in which to make the report. That Hunt-Spiller gun iron is generally considered to be efficient, economical, and for these reasons desirable, cannot be doubted, considering the fact that 80% of the roads reporting are using this product in their superheater locomotives for some of the parts mentioned; therefore the committee does not hesitate to recommend its use for piston valve bushings, piston valve packing rings, piston valve bull rings, cylinder bushings, piston packing rings, and pistons or piston bull rings.

Extended Piston Rods.—The committee included in its circular of inquiry a list of questions on the use of extended piston rods. Eighteen roads report experience with extended piston rods. A great diversity of experience and opinion has been expressed. Three roads out of the 18 have entirely discontinued the use of extended piston rods as a result of their experience, and several others find them to be of no advantage. On the other hand, several roads state that a saving is effected by the use of the extended piston rods. For comparison it may be

extended piston rods are using a small cross-head on the front end of the extended rod; in fact, only one road reports the use of any other device. This road uses an arrangement in which the extended piston rod slides in a brass sleeve. The Cole type of piston rod extension is in most general use. This arrangement is described as consisting of a miniature cross-head at the front of the extended rod, which slides on a cylindrical surface, rigidly supported and easily located on the cylinder head. The wear of the extension cross-head on the guide is taken care of by lining up between the small cross-head shoe and its body. The packing on the extended rod is easy of access and can be repaired without difficulty. The extension guide is self-centered on a circular flange of the cylinder head, and requires no adjustment in service, as it cannot get out of position. The guide is made with an open top, so that when it is necessary to remove the guide it can be dropped from the rod.

Twelve roads have reported the minimum size of cylinders used in connection with extension piston rods. The minimum diameter of high-pressure cylinders varies from 20½ in. to 29 in., the average

Fig. 15. Solid Steel Plate Piston for use with extended piston rod.

International Railway Fuel Association.—At the annual convention at Chicago, Ill., recently, it was announced that there was a total membership of 636. During the meetings 68 new members were enrolled. The officers for the current year are: President, W. H. Averell, Baltimore and Ohio; Vice Presidents, E. W. Pratt, Chicago and North Western; L. R. Pyle, Minneapolis, St. Paul and Sault Ste. Marie; W. L. Robinson, Baltimore and Ohio. The convention for 1917 will be held at Chicago.

Railway Storekeepers' Association.—The officers for the current year, elected at the recent annual convention, are: President, W. A. Summerhayes, Illinois Central; First Vice President, H. S. Burr, Erie; Second Vice President, E. J. Roth, Chicago, Indianapolis and Louisville; Third Vice President, J. N. Shaw, Delaware, Lackawanna and Western; Treasurer, J. P. Murphy, New York Central.

In machining operations the speed and the feed are settled upon in the works planning department, and are based on the power of the machine and the character of the metal to be machined. These have been worked out after careful study, and for efficiency displace the old method of relying on the workman's judgment.

Report of Committee on Car Wheels.

The Master Car Builders' Association committee, W. C. A. Henry, Superintendent Motive Power, Pennsylvania Lines, Columbus, Ohio, chairman, and of which L. C. Ord, Assistant Works Manager, Car Shops, Angus Works, Canadian Pacific Railway, Montreal, now on active military service, was a member, reported as follows:

The following resolution of the American Railway Association's Committee on Maintenance was forwarded Nov. 7, 1913, by the General Secretary of that association to the Secretary of the M.C.B.A.:

Thickness of Flange for All Chilled Iron Car Wheels Recommended by Association of Manufacturers of Chilled Iron Car Wheels.

"Resolved, That the subject of the contour of chilled car wheels and the throat clearance for frogs, guard rails and crossings be referred to the American Railway Engineering Association and the Master Car Builders' Association jointly for a full investigation and report, with their

Thickness of Flange for All Chilled Iron Car Wheels Recommended by Association of Manufacturers of Chilled Iron Car Wheels.

"Resolved, That the subject of the contour of chilled car wheels and the throat clearance for frogs, guard rails and crossings be referred to the American Railway Engineering Association and the Master Car Builders' Association jointly for a full investigation and report, with their

FIG 3 STEEL TIRE RETAINING RING FASTENING

FIG 4 STEEL WHEEL MINIMUM DIMENSIONS FOR WROUGHT STEEL AND STEEL TIRE WHEELS

recommendations for any change that they may conclude is desirable."

This subject, having been referred to the Committee on Car Wheels, has been investigated jointly with the American Railway Engineering Association's Committee on Track. This subject was originally brought up by the Association of Manufacturers of Chilled Car Wheels, that association arguing that the strength

of the flange of the chilled iron car wheel has not kept pace with the increase in the load, and that the wheels under cars, especially of the higher capacities, should have the flanges thickened. The following diagram shows the thickness of the flange recommended by them for all chilled iron car wheels. The Association of Manufacturers of Chilled Iron Car Wheels has been called upon for all information available, tending to show the necessity for a thicker flange. They have also been represented at a meeting of our committee, as well as at a joint meeting with

Figure 5.

a subcommittee of the American Railway Engineering Association's Committee on Track.

On May 1, 1914, a circular was sent to all M.C.B. Association members, requesting that special reports be made of all broken wheels, and explaining in detail the information desired. Replies were received from 33 railways and 1 private car line, representing an ownership of 1,297,-

Exhibit A. Summary of Flange and Tread Failures.

909 cars, approximately 46.2% of the cars owned or controlled by railways or individual companies, members of the M.C.B. Association.

Exhibit A is a tabulation of replies received to this circular, covering all M.C.B. wheels of the present standard cast from 1909 to 1915, having broken flanges and for which the flange thickness was given. For each of the three standard

weights of wheels the information has been grouped so as to show the year cast and the thickness of the flange, measured at a point three-eighth inch above the tread. In addition to the 103 cases shown on this tabulation, there were four 625-lb., five 675-lb., and seventeen 725-lb. wheels reported, a total of 26 for which the thickness of flange was not shown.

Exhibit B shows the location and direction of the fracture for such of the wheels shown in Fig. 2, for which this information was furnished. Of the 103 cases shown in Fig. 2, 62 were reported as the result of seams, 3 due to worn flange, 2 to defective castings, 1 to worn tread, 1 overheated, 3 thick chill, no reason whatever being given for the remaining 31 cases. By referring to Figs 2 and 3 it will be seen that these failures are not by any means confined to wheels having the

Exhibit B. Location of Flange and Tread Failures.

thinner flanges, and that of the 103 cases, 27 occurred with a flange thickness over one and three-sixteenths inches, or above the minimum thickness for a new flange. The location and direction of the fracture in nearly all cases more nearly approaches the vertical than the horizontal, and does not occur through the minimum section of metal.

One of the roads represented on this committee has obtained the exact contour and dimensions of the flanges of all cast iron wheels that were withdrawn from service on account of seams in the tread at or near the throat of the flange during a period of twelve months. These are accurately shown on Exhibits C, D and E for the three sizes of wheels; also the outline of the flange and a portion of the tread of the M.C.B. standard cast iron wheel of the three nominal weights are shown. In obtaining these specimens in each case the flange back of the seam was broken off with a sledge, and the outline traced from a section cut from same at the middle of the seam. The

depth of the seam is indicated by the heavy line extending downward from the tread. All of these cases, if not detected by inspection and the wheel withdrawn from service, would have finally resulted in a so-called broken flange, and for purposes of study are of the same value as if actually broken off in service.

Of the 12 cases shown on Exhibit C there are no fractures in even an approximately horizontal direction across the flange, while in a number of cases the fracture extends in an almost perpendicu-

way track clearances.

It is most apparent from a study of the thickness of the flanges as shown on exhibit A, the location and direction of the fractures as shown on exhibit B to E, inclusive, that the flange thickness at or near the base line, or for such distance from the base line as would affect rail clearances, can have little or no bearing on failures of this nature, as in the majority of cases the original failure occurs in the tread, and the term "broken flange" as ordinarily used is being ap-

made, under tenders, of special cast iron wheels having a flange of $\frac{1}{8}$ in. greater thickness than the present M.C.B. standard. These wheels were mounted 4 ft. 8 in. throat to throat, or 5-16 in. wider than standard. The average age of 203 of these wheels when condemned was 11 months. Of a like number of M.C.B. wheels in the same service, the average age when condemned was 11.1 months. Of the special wheels, 28% were condemned on account of worn flange, the average age of which was 12.5 months. Of the M.C.B. wheels, but 15.2% were condemned on account of worn flanges, the average age in this instance being 13.7 months. These figures indicate that the thicker flange did not improve conditions, but rather the reverse. Two roads report having experimented with thicker flanges, and upon examination found that the back of the flange in almost every case was grooved by contact with guard rails and frogs. Four typical cases are shown on exhibit F.

In addition to the above, there are the further minor objections to heavier flanges: of increased weight and a slightly increased cost; although these latter objections are not worthy of consideration if the thicker flange gave indications of adding anything to the safety or life of the wheel.

Failures of flanges of cast iron wheels, under fair usage, other than those caused by circumferential seams, are so rare as to be almost unknown. These seams will frequently reach a length of from 24 to 28 in. before failure actually occurs, and the location and direction is such that the addition of metal to the back of the flange, within limits that will affect rail clearances, gives no promise whatever of

lar direction, and is distinctly a tread failure. Particular attention is called to flange no. 2, which failed on account of a seam starting about midway between the top of the flange and the base line. It would be expected in this case that if the flange proper were not sufficiently strong for the purpose intended and the service to which subjected, it would have broken off in a nearly horizontal direction.

In exhibit D, as in exhibit C, the direction of fracture in nearly all cases approximates the vertical, and in many instances the location of the seam is at a considerable distance from the flange. Attention is called particularly to no. 14. In this case the seam is within $\frac{1}{4}$ in. of the middle of the tread. On this sheet there is one flange failure, namely, no. 15, which is similar to no. 2 on exhibit C. Of the 18 cases shown in exhibit D there is only one, viz., no. 16, where the direction of the fracture would indicate the probability that metal added to the back of the flange might have prevented the fracture.

In the case of exhibit E, on which are tabulated the heavy wheels, the location and direction of fracture is about the same as for the lighter wheels. Particular attention is called to flanges nos. 7 and 8. The former was obtained from a wheel of special design, weighing 750 lb., cast in Jan., 1913. The flange of this wheel was reinforced by the addition of considerable metal at the back and below the base line. Attention is called to the seam which was found in this wheel, and which occurred in the characteristic location. The direction of the same, as well as the line of fracture when breaking off the flange, differ in no respect from the majority of the others. The back of the flange of this wheel has been worn or grooved considerably by contact with guard rails and in passing through frogs, the original contour at this point being shown by dotted lines. Flange no. 8, which was obtained from a 700-lb. wheel cast in Mar., 1906, is the only one among the 15 on this sheet that might have been helped by the addition of metal to the back of this flange, although this would be at such point as not to affect in any

plied to what is primarily a tread failure.

A flange thicker than the present standard has some distinct disadvantages. One of the strongest arguments offered for the adoption of the present taper of tread of 1 in. in 20 in. was the opportunity afforded a pair of wheels to move laterally until both run upon a common di-

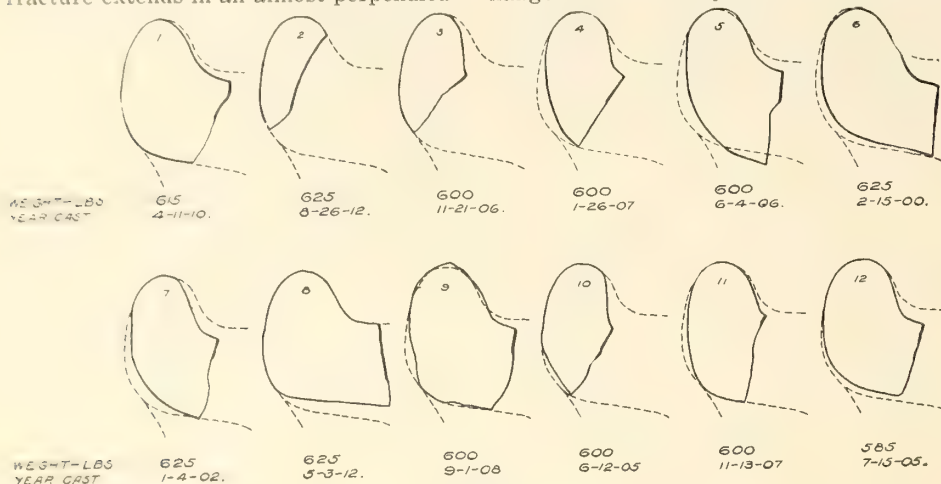

Exhibit C.

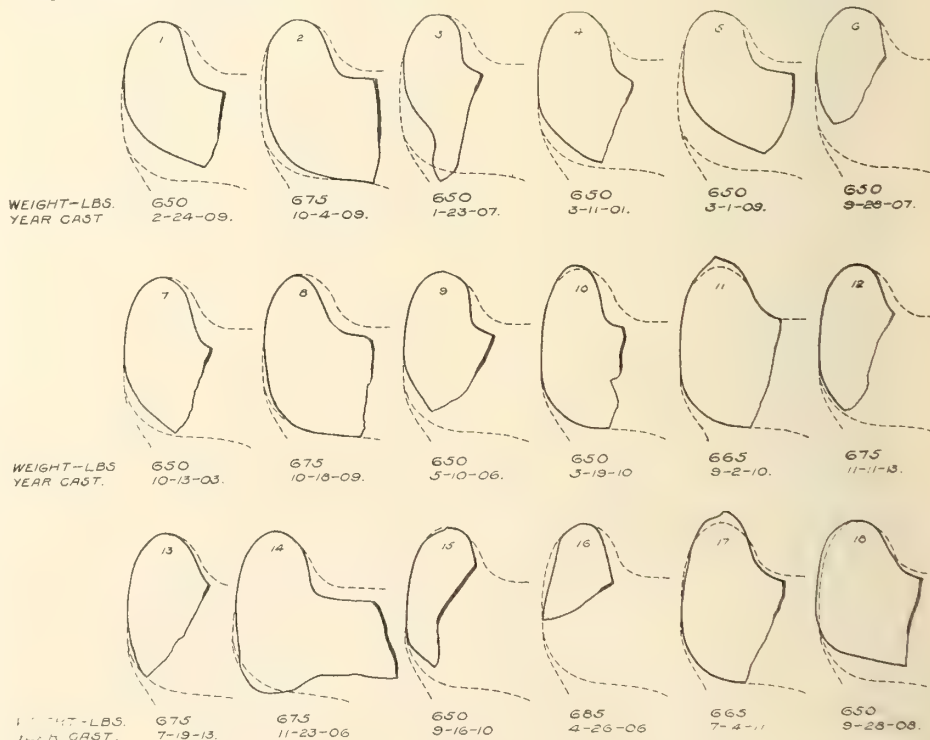

Exhibit D.

ameter, this condition tending to keep flanges away from the rail, thereby not only decreasing the flange and rail wear, but train resistance as well. Unless the whole track structure is changed a thicker flange would reduce or eliminate entirely this opportunity for lateral motion. Confirming the above, we would cite the case of one railway on which a trial was

affording any relief from so called flange failures. A study of the information available does not indicate that under the present standards for new flanges and the condemning limits for thin flanges, the horizontal thickness of the flange has anything to do with failures of the kind under consideration.

Under date of March 14, 1916, your

committee addressed a communication to the American Railway Engineering Association's subcommittee on track, advising that it was the unanimous opinion of our committee, after a thorough study of flange failures and so called flange failures that the addition of metal to the back of the flange within any limits that would alter the relation of the flange to the track would have no effect whatever on flange failures; furthermore, that we saw no reason for recommending any changes for throat clearances for frogs, guard rails and crossings, and that it was our recommendation that there be no change in the dimensions and contour of flanges of car wheels or throat clearances for frogs, guard rails and crossings, as adopted in 1909.

Your committee is unanimously of the opinion that nothing will be gained in the interests of safety or economy by adding metal to any portion of the flange of cast iron car wheels in such location as will in any way affect track clearances. Wheth-

sideration, with the recommendation that it be adopted as recommended practice:

MOUNTING PRESSURE IN TONS.

Axle.	Wheel seat Diam.	Cast iron wheels.		Steel wheels.	
		Min.	Max.	Min.	Max.
A	5½ in.	30	45	45	60
B	5¾ in.	35	50	50	70
C	6½ in.	40	60	60	80
D	7 in.	45	65	65	85
E	7¾ in.	50	70	70	95

The following change should be made in specification governing dimensions and tolerances for solid wrought steel wheels:

Paragraph "3g. Limit of Wear Groove"—The limit of wear groove to be located as shown on sheets M.C.B.—R, S and T."

This change is a correction, as M.C.B. sheet C, referred to in present specifications, is not intended to apply in the case of specifications for new wheels.

There appears to be more or less misunderstanding as to the condemning limits for steel tired wheels as shown on M. C.B. sheet C. In order to make the matter more clear, we would recommend that

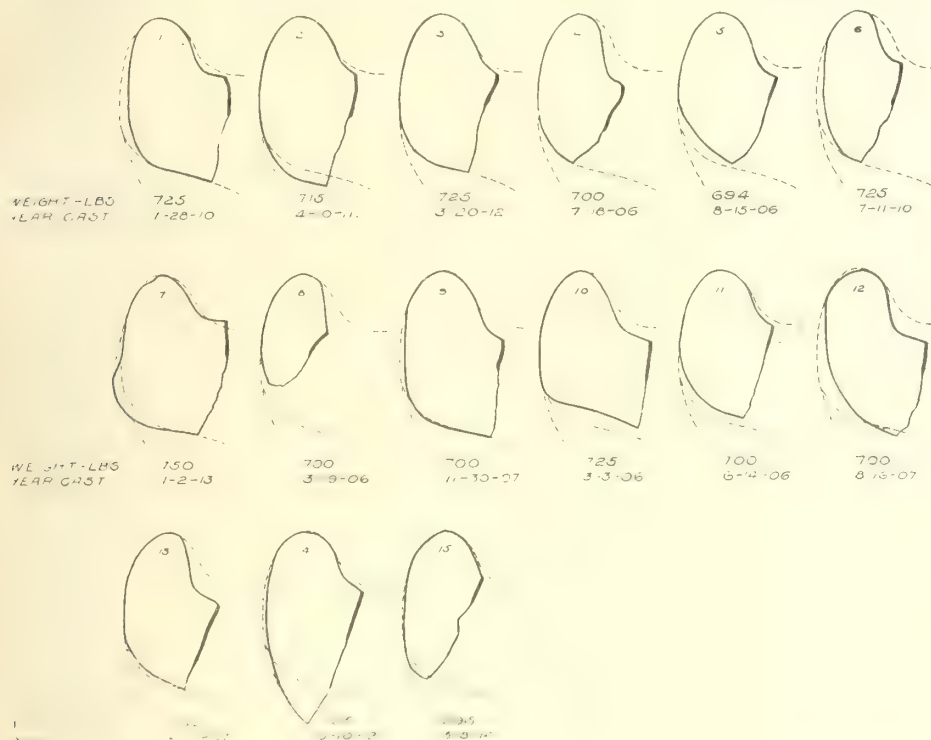

Exhibit E.

er the addition of metal to the back of the tread so as to increase throat thickness will afford any relief is a question on which your committee is not at this time ready to express an opinion, although the matter is under consideration.

The subject of the shape and thickness of plate for cast iron car wheels is one that gives promise of leading to changes that will result in reducing plate failures. Experiments are being conducted by the Pennsylvania Rd. at Altoona, Pa., for the information of the Car Wheel Committee in investigating this subject, and it is hoped that we will be in a position to make report to the next convention.

The question of design and specifications for a cast iron wheel for use with the 6 by 11 in. axle is under consideration, and will be made the subject of a future report.

It has been recommended that this association should have standard maximum and minimum pressures for mounting wrought steel and cast iron wheels on axles of the different sizes, and the following table is hereby submitted for con-

sideration, with the recommendation that it be adopted as recommended practice: MOUNTING PRESSURE IN TONS. The following change should be made in specification governing dimensions and tolerances for solid wrought steel wheels: Paragraph "3g. Limit of Wear Groove"—The limit of wear groove to be located as shown on sheets M.C.B.—R, S and T."

This change is a correction, as M.C.B. sheet C, referred to in present specifications, is not intended to apply in the case of specifications for new wheels. There appears to be more or less misunderstanding as to the condemning limits for steel tired wheels as shown on M. C.B. sheet C. In order to make the matter more clear, we would recommend that

figs. 1, 2, 3 and 4 be changed, as shown herewith, the change consisting in removing reference to the flange height, which has no bearing on this subject, removing the words "Not less than ½ in." from fig. 3, and indicate that certain other dimensions affected by wear are all minimum dimensions. We have received complaint that it is extremely difficult to maintain tools for turning the limit of wear groove for steel and steel tired wheels, as shown on M.C. B. sheets C, R, S and T, and it has been recommended that to correct this trouble the shape of the limit of wear groove be slightly modified so that there will be a fillet at the bottom of the groove instead of the present sharp angle. It is therefore recommended that the shape of the limit of wear groove be changed in accordance with fig. 5, and that it be shown on sheets C, R, S and T, and to such scale as to make the shape and dimensions plain. The Secretary is requested to make corrections and changes in M.C.B. sheets C, R, S and T, referred to above.

Railway Supply Exhibits at the Atlantic City Conventions.

The Railway Supply Manufacturers' Association exhibit was, as usual, of a very comprehensive nature, larger than in 1915 but not as large as in 1914. Among the principal exhibitors were the following:—

American Brake Shoe & Foundry Co., Mahwah, N.J.—Reception booth.

American Locomotive Co., New York, N.Y.—Reception booth.

Anchor Packing Co., Philadelphia, Pa.—General locomotive packings.

Buffalo Brake Beam Co., New York, N.Y.—Freight brake beams for all classes and capacities of equipment; truss beams with either malleable iron or forged steel struts to M.C.B. standards; also beams for E. & L. equipment and all classes and capacities of tenders and electrical equipment for standard broad and narrow gauge; Buffalo passenger brake

Exhibit F.

beams for all classes of service, including L.N. & P.C. equipment with automatically adjustable heads and safety locks.

Chicago Car Heating Co., Chicago, Ill.—Car heating apparatus.

Consolidated Car-Heating Co., Albany, N.Y.—Nine foot section of one side of a passenger car in which all the specialties used in a modern steel car are installed; Thermo-vapor temperature regulator, whereby a constant temperature is maintained; automatic attachment whereby temperatures in sleeping and private cars can be so controlled that they will maintain a 70 deg. temperature in the day time and 60 deg. temperature at night.

Dearborn Chemical Co., Chicago, Ill.—Boiler feed water treatment scientifically prepared to meet requirements shown by analyses of the waters used.

Detroit Lubricator Co., Detroit, Mich.—Detroit locomotive lubricators; flange oilers, and air cylinder lubricators; Detroit lubricators; force feed oilers; packless radiator valves; Stewart carburetors.

Du Pont Fabrikoid Co., Wilmington, Del.—Fabrikoid; superior leather substi-

ture; travel goods; bookbinding novelties.

Fairbanks Morse & Co., Chicago, Ill.—50 h.p. 2 phase, 60 cycle, 220 volt, 900 r.p.m. type H electric motor with special insulation treatment; 25 h.p. 3 phase, 60 cycle, 220 volt, 1,200 r.p.m. type KHV motor with special insulation treatment; 15 h.p. 3 phase, 60 cycle, 220 volt, 900 r.p.m. type H motor with special insulation treatment and CC starter; Rotor complete with half bearing arm for large type H motor; CP type ball bearing motor with special water proof insulation treatment.

Flannery Bolt Co., Pittsburgh, Pa.—Tate flexible staybolts; Tate radial staybolts; installation tools for application of Tate flexible staybolts.

Franklin Railway Supply Co., New York, N.Y.—Franklin automatic adjustable driving box wedge; Franklin fire door; Franklin single water joint; Stone-Franklin lighting equipment.

Galena-Signal Oil Co., Franklin, Pa.—Reception booth with samples of oils.

Garlock, Packing Co., Palmyra, N.Y.—Garlock air pump and throttle packing; superheat sheet and gaskets; packings for general shop purposes.

Goldschmidt Thermit Co., New York, N.Y.—Thermit and appliances for Thermit welding; sample welds; samples of carbonfree metals and alloys produced by Thermit process; large sample weld on a 9 in. crank shaft; materials and appliances for demonstrating pipe welding for the purpose of welding locomotive superheater units; sample of superheater unit welded by Thermit process.

Hunt-Spiller Manufacturing Corp., Boston, Mass.—Cylinder packing; cylinder bushings; piston heads; valve packing; valve bushings; valve bull rings; side rod bushings; knuckle pin bushings; air pump packing; air pump bushings; eccentrics; eccentric straps; crosshead shoes; slide valves; valve strips; pedestal shoes; pedestal wedges; driving boxes.

Locomotive Superheater Co., New York, N.Y.—Pictures illustrating meth-

ods and process used in manufacture and superheater units and headers at plant at East Chicago, Indiana.

Norton, A. O., Inc., Boston, Mass.—Self lowering high speed jacks.

Standard Coupler Co., New York, N.Y.—Westinghouse Air Brake Co., Pittsburgh, Pa.—Reception booth.

Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa.—Reception booth.

Westinghouse Friction Draft Gear Co., Pittsburgh, Pa.—Reception booth.

Westinghouse Lamp Co., Pittsburgh, Pa.—Reception booth.

Westinghouse Lamp Co., Pittsburgh, Pa.—Reception booth.

Westinghouse Pacific Coast rake Co., Emeryville, Cal.—Reception booth.

Westinghouse Traction Brake Co., Pittsburgh, Pa.—Reception booth.

Wheel Truing Brake Shoe Co., Detroit, Mich.—All kinds of abrasive brake shoes for operating upon locomotive tires and car wheels.

Report of Committee on Modernizing of Existing Locomotives.

The American Railway Master Mechanics' Association committee, F. J. Cole, chairman, reported as follows:—This committee had the following subjects referred to it for consideration:—

1. Length of time a locomotive should be built in order to justify modernizing. 2. The conversion of consolidation locomotives into mikados. 3. Change of type of locomotives. 4. Superheating saturated-steam locomotives. 5. Brick arches. 6. Outside valve gear. 7. Size of valves. In order to obtain information from railways as to what had already been done in this respect, a circular was sent to the members on Nov. 1, 1915, inquiring as to the character, extent and results of their practice in the direction of modernizing existing locomotives. Only 32 replies were received. The conclusions of the committee and their answers to the questions are as follows:

Question 1. Length of time a locomotive should be built in order to justify modernizing.—In this question the matter of what constitutes modernizing should be clearly borne in mind. Old locomotives are usually lighter in weight and have less tractive power than those built at present. The track, bridges, etc., have been increased in strength on most railways, so that higher axle loads and greater total weights can be borne with safety than in previous years. In many instances, however, the capacity, weight and condition of old locomotives would justify the application of many improvements, such as superheating, etc., which make for economy and increase in capacity.

When consideration is given to the question of changing the type of locomotives, as for instance changing the wheel arrangement of consolidation 2-8-0 into mikado 2-8-2, the matter of weight and capacity is the vital issue. Will the locomotive, after a large amount of money, say 50% of its cost, has been spent, be modern in all respects, and will it perform the work in the most satisfactory and economical manner? In other words, will it, when rebuilt, be a thoroughly up-to-date locomotive as could be purchased for this particular service? The matter, therefore, resolves itself into one of judgment as to how much should be spent upon an old locomotive and whether the old locomotive after being rebuilt or modernized is a thoroughly satisfactory

one for the service which it is intended to perform.

Question 2. The conversion of consolidation locomotives into mikados.—A great many locomotives have been thus modernized. This change is especially desirable where greater boiler capacity is necessary in maintaining speed and sustained horse power in cases where the limitation of the locomotive has been the inability of the boiler to supply the necessary amount of steam. Where consolidation locomotives are of large size, with wheels of suitable diameter and ample crank pins and axles, having modern tenders of large capacity, where many other parts can be used to advantage, it is often economy to reconstruct such consolidations 2-8-0 and convert them into mikados 2-8-2. One leading railway system has converted between 400 and 500 consolidations 2-8-0 class into mikados 2-8-2 class. The efficiency of its power is thereby materially increased.

Most consolidations built during the last 10 or 15 years have shallow fire boxes on top of the rear pair of drivers. It is more difficult with such locomotives, on account of the shallow throat, to equip them in a satisfactory manner with brick arches. When they are converted into mikados a fire box of any size and depth can be used and brick arches applied in a most satisfactory manner. Flues may be increased in length and smoke box temperatures, that is the heat of the escaping gases, may be decreased correspondingly. The longer bodies also permit the use of combustion chambers, if desired.

A mikado locomotive can at times be operated at much longer cut off without lowering the steam pressure too much, the boiler being ample to provide an adequate amount of steam under the most exacting conditions.

As a general proposition, a locomotive boiler cannot be made too large. It often is made too small. Therefore, one of the most satisfactory means of increasing economy and capacity is to increase the boiler capacity. Fuel is burned on many old locomotives at the rate of 180 to 200 lb. per sq. ft. of grate per hour, but this practice is very uneconomical, as the rate of combustion is so high that a great deal of unburned products of combustion are passed through the flues and

smokestack without giving up all their available heat. On the other hand, if ample grate surface is provided, the rate of combustion can be kept down to reasonable limits and the economy of the locomotive increased materially. These economical conditions prevail when a deep fire box of ample size is provided, and the coal can then be burned under the best conditions.

Question 3. Change of type of locomotives.—A partial answer to this question is contained in question 2. The majority of locomotives which have had the type changed in modernizing have consisted of consolidations 2-8-0 to mikados 2-8-2. Some consolidations 2-8-0 have been converted to eight-coupled switching locomotives by removing the truck and changing the distribution so as to throw the spring-supported weight farther back. As a general proposition, in considering the conversion of type, it is very necessary to make careful study of parts that can be used on the old locomotive, such as wheels, axles, rods, tender, etc., at the same time estimating or obtaining bids from builders as to what the work can be done for. Very careful consideration must also be given to ascertain whether, after the rebuilding has been accomplished, the railway would be in possession of a really modern locomotive best adapted to perform the service for which it is intended.

Question 4. Superheating saturated steam locomotives.—The advantages gained from the use of superheated steam on locomotives are now so widely recognized that no special argument in its favor is necessary in this report. At present, nearly all new locomotives are equipped with superheaters. Thousands are being applied every year to old locomotives, and in the near future the majority of the 68,000, or thereabouts, of locomotives in the United States and Canada will be so equipped. At present it is estimated that 15,500 locomotives in the United States and Canada have superheaters applied. Superheated steam is a much better working medium in steam engines than saturated steam. The expression, "dry, saturated steam," is often used, but in practice it is seldom realized, because the steam before it enters the cylinders contains a certain percentage of moisture, and when in contact with the cylinder walls much more heat is given

up, so that at the time of actually moving the pistons it contains a large amount of moisture.

Steam is said to be superheated when its temperature is higher than the boiling point corresponding to the pressure. Steam cannot be superheated in contact with the water from which it was generated. In order to receive additional heat, it must be separated from its liquid and subjected to still higher temperatures. Saturated steam is an unstable fluid or vapor. When in contact with its liquid at any given pressure, it is evident that a narrow margin of heat divides the liquid from the vapor. Any abstraction, therefore, of heat causes one of two things: either a portion will become liquefied or the pressure will be decreased. Superheating affords the only means of adding heat to the steam without increasing its pressure. The economy of highly superheated steam for locomotives is obtained, 1st, in its freedom from condensation losses in the cylinders and steam pipes; 2nd, from the increased volume of superheated steam per unit of

even greater than this increase in indicated horse-power. The reason of this is that at the running speeds of trains about 40% of the i. h. p. is absorbed by the internal friction of the engine and tender, leaving only about 60% to be transmitted to the drawbar. Consequently an increase of 33% of i. h. p. represents a much greater gain in dynamometer horse-power. Therefore, the friction of the locomotive being fairly constant, a much greater drawbar pull than 33% is available at the critical points.

This large addition to the hauling capacity of a highly superheated steam locomotive may be applied either to the hauling of heavier trains or to higher speeds, or to both. An increase in total weight or wheel load due to the application of the superheater is relatively small, say 3000 to 4000 lb. Consequently increased tractive power is obtained without material addition to the weight.

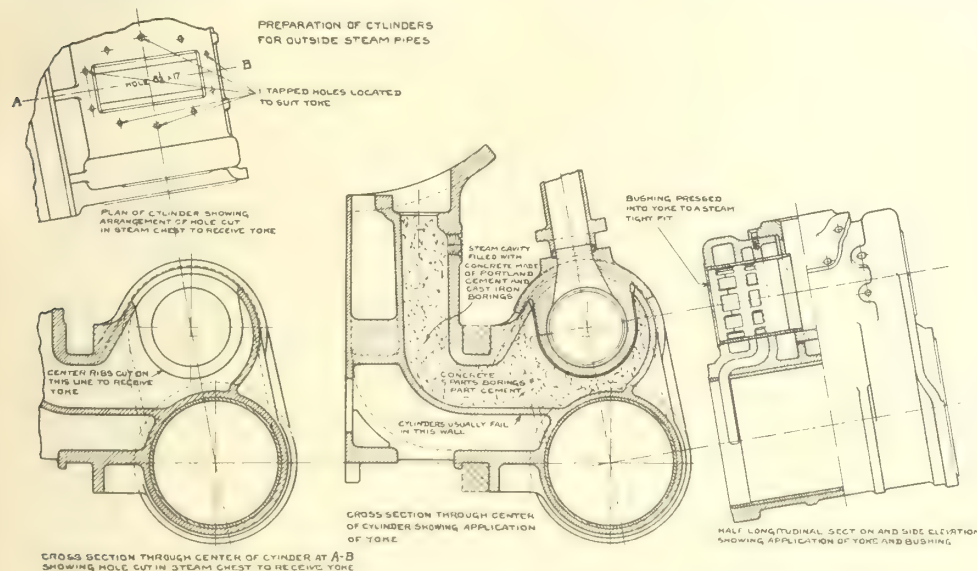

Superheating affords the most available means of meeting in a very economical way the steadily increasing demand

same locomotive. The limitation of locomotives in many instances is the inability to supply them with coal in sufficient quantities and at the proper time; therefore, any device which reduces the amount of coal necessary to be fed to the furnace is a long step toward improving the general efficiency of the engine.

When new fire boxes or fire box tube sheets are required, it is desirable to consider the application of superheaters to such locomotives, the boilers of which are otherwise in good condition, whose age does not exceed, say, 15 years, or where new boilers are required on locomotives which otherwise can be used with advantage for some particular service. In such instances the application of superheaters to old locomotives is one which will well repay the outlay.

Question 5. Brick arches.—On the majority of locomotives a brick arch, properly installed and maintained in good condition, will produce a substantial saving in fuel, and also, by doing the work with smaller amount of coal, improve the general efficiency of the locomotive. Probably a saving of about 5 to 10% can often be made by the application of brick arches. It therefore follows that if without the arch it takes 100 lb. of coal to do a certain amount of work, that with a saving of 10% and the same amount of coal is fed to the fire box, an increase in the steaming capacity of 11% will be produced. The brick arch, by increasing the length of flameway in the fire box and preventing the gases and unburnt coal from entering directly into the boiler tubes before complete combustion has taken place, adds materially to the steaming capacity of the boiler and reduces the amount of coal necessary to be fired. Much benefit will also be derived from its use by preventing the formation of black smoke.

Question 6. Outside valve gear.—Few locomotives at present are built with the inside or Stephenson valve gear. The size of locomotive has increased to such an extent that it is very difficult to maintain the eccentrics and the inside portions of the moving parts of a Stephenson gear in a satisfactory condition. The outside gears are much easier to lubricate, maintain and inspect. Their moving parts consist mostly of articulations, provided with case-hardened pins and bushings in place of the large rubbing wearing surfaces, such as eccentrics and straps. The repairs and maintenance of outside valve gears to keep them in good condition are much easier and cheaper than the Stephenson. Furthermore, the reduced wear of the outside valve gear, by reason of its case hardened pins and bushings, does not distort the gear to the extent that the wear of the eccentrics and straps does on the Stephenson gear. This is a very important matter, since the outside gear requires but little or no adjustment or resetting of valves from time to time, it being the custom on many railways to make the gear what is termed "a blacksmith job," that is, provided with no means of adjustment, so that any change required in valve-setting must be made by upsetting or lengthening the rods in a blacksmith shop. This is a distortion due to wear with the outside gear, except that caused by the wearing of the main box in the pedestals, the position of the wedge, or wear of the shoe, it follows that the outside gear can be left alone without tinkering or adjustment to a greater extent than is possible with the Stephenson or inside gears. Another advantage of the outside valve gear is that transverse bracing can be used between the frames to maintain them in proper

Method of Applying Outside Steam Pipes to Piston Valve Cylinder, Southern Pacific Co.

weight. At 200 lb. boiler pressure, with 250° of superheat, this amounts theoretically to about 40% greater volume than an equal weight of saturated steam. The amount of cylinder condensation in a simple saturated-steam locomotive is estimated to be from 35% at 20½% cut-off, to 12% at 70% cut-off. Assuming that each 1% of moisture will require about 7.5° of superheat to entirely prevent condensation, it follows that with 25% of moisture a superheat of at least 187° will be required, and more is advantageous.

In considering the advantages of superheated steam for locomotives, two general conditions may be noted. 1. The economy in coal and water from the use of superheated steam. 2. The additional power made available by the more economical operation of the locomotive. If a simple locomotive, using highly superheated steam, consumes on an average 25% less fuel in the same service than the same locomotive using saturated steam, then 75 lb. of coal consumed with superheated steam will do the same work as 100 lb. used with saturated steam. There will be, therefore, an increase in

indicated horse-power of $\frac{100 - 75}{75} \times 100$

= 33 per cent. in favor of the superheater, and the actual gain in tractive power delivered at the drawbar will be

for more powerful locomotives without making them abnormally heavy. The application, to existing locomotives, of an efficient superheater capable of producing and maintaining a high degree of superheat, is equivalent to a considerable increase in boiler capacity, which is usually equivalent to a large increase in the hauling capacity of a locomotive. Not only is there considerable fuel economy, ranging from 20 to 25%, in the use of superheated steam, but the general efficiency of the locomotive is so increased as to make it a necessary part of the equipment of all new locomotives and in many cases on old ones. By reducing the amount of fuel required for a given amount of work, the superheater increases the capacity of the boiler. Most locomotives, especially the older ones, are limited in their service by the amount of steam which the boiler will generate, so that a device which will do the same amount of work with, say, 25% less fuel, will obviously make a marked improvement, not only in economy and efficiency, but in the hauling power of the locomotive.

From a very large number of locomotives now equipped with superheaters in the United States, data are available which show conclusively their advantages. On many railways records exist showing that with the use of superheated steam several hundred tons of additional hauling capacity can be obtained from the

vertical alignment and also for distributing the stresses.

Question 7. Sizes of valves.—With superheated steam it is possible to use a smaller diameter of piston valve for the same size of cylinders than would be necessary for saturated steam. This is largely on account of the lightness of the superheated steam, which permits it to traverse the passages and ports at a much higher velocity. The sizes of piston valves used by a prominent locomotive builder in this country are as follows:

Cylinder Diameter.		
Valve	Saturated Steam.	Superheated Steam.
10 in.	17 in. to 18 in.	18 in. to 19 in.
11 in.	18 in. to 20 in.	19½ in. to 21 in.
12 in.	20 in. to 22 in.	21½ in. to 23 in.
14 in.	22 in. to 24 in.	23½ in. to 27 in.
16 in.	24 in. upward	27½ in. upward

Extensive tests were made by the Pennsylvania Rd. on the locomotive testing plant at Altoona to determine the limitations in the use of piston valves varying from 7 to 16 in. in diameter, on locomotives having 22, 24 and 25 in. diam. of cylinders. In all cases these tests were made with locomotives using superheated steam. The conclusions drawn from these tests led the Pennsylvania to adopt 12 in. diam. of valves for cylinders between 20 and 27 in. in diam., and for cylinders 20 in. and less, 8 in. diam. valves. Some of the conclusions drawn from these tests, are as follows:

"To establish a relation between the valve and cylinder so that the valve may be standardized, it may be stated generally that the diameter of the valve in inches for superheated steam should not be less than $0.016D^2$ where D = the diameter of cylinder in inches. The 12-in. valve is now used for cylinders between 20 and 27 in. in diameter, while for cylinders of 20 in. or less an 8-in. valve is used. Cylinders above 27 in. diameter have not been used for any class of locomotive of which there is more than one example, and a valve diameter for such cylinders need not be considered at present. Decreasing the valve diameter on a locomotive necessitates increasing the percentage of cut-off to obtain the same power at the same speed. This causes a longer valve travel."

From a maintenance point of view, it is of course desirable and economical for a railway to carry in stock as few diameters of piston valves as possible. These considerations doubtless led the Pennsylvania to adopt the 8 and 12 in. valves as standard to be used in new construction and reconstruction wherever possible.

These sizes adopted by the Pennsylvania are so much smaller than required by current locomotive practice in the United States, that some caution should be observed in adopting them without due consideration. For instance: The statement in the last paragraph of the conclusion, viz., calling attention to the necessity of an increase in percentage of cut-off with the smaller valve diameter in order to obtain the same power at the same speed, is significant, since it necessarily follows that the expansive force of the steam is not utilized as advantageously, and it would therefore appear that some decrease in economy would result.

The question of size of piston valves is of interest in the modernizing of existing locomotives, since many railways were committed to the use of slide valves because of their many recognized good qualities. With the general introduction of the superheater and its recognized necessity for modern locomotives difficulty was experienced in applying superheaters to locomotives equipped with slide valves, because a film of oil could not be maintained by ordinary methods of lubrication between the valve and its seat and to the deformation of the valve and its seat at the higher temperatures.

A steam chest containing a piston valve that can be applied to existing slide-valve cylinders has been designed, manufactured and tried on many leading railways. At present it is estimated that upward of 75 locomotives having slide-valve cylinders are equipped with superheaters, these steam chests and piston valves. The sizes of piston valves which have been used for this purpose are 8 in. diameter, with ports up to and including 19 in. in length; 9 in. in diameter, with ports 20 to 22 in. in length, and 10 in. in diameter, with ports exceeding 22 in. in length.

A novel method of applying outside steam pipes to piston-valve cylinders, used by the Southern Pacific Co. at its Los Angeles shops, is shown in the accompanying plan. It consists of cutting a hole $8\frac{1}{4} \times 17$ in. in the upper wall of the steam chest and dropping therein an integral finger-ring bushing fitted and bolted to place and afterward bored out for the bushings. The only steam-tight joint necessary for this finger-ring casting is where the bushings are pressed in. The fitting between the finger-ring bushing and the outside wall of the steam chest need not be steam-tight; only a solid bearing for bolting is required. We understand that a number of different

methods have been used for a similar purpose by other railways.

The report then reproduces the replies to the different questions received from the railways answering, and proceeds as follows:

Will the cutting up or scrapping of old locomotives continue at the same rate as in the past? This matter is related to the modernizing of existing locomotives, since the length of time that a locomotive can be economically kept in good working order is dependent largely upon its weight and capacity. A locomotive can be kept in working condition indefinitely by renewing worn out parts such as boilers, fire boxes, frames, cylinders, wheels, axles, etc. Thus a locomotive can be maintained in good serviceable condition, so that it would not be called worn-out, if renewals are made when necessary. Such a method of continuous replacement is economically possible, provided the locomotive is suitable and powerful enough for service. Before the end of the last century there were no large locomotives such as we are accustomed to see today. The tremendous increase in weight, size and power came in the first 15 or 16 years of this century. In many instances this increase in size of locomotives was in advance of the bridges and roadway, so that it was necessary to rebuild a large portion of the main lines in this country. Now that this has been accomplished and the roadbeds laid with heavy rails and provided with bridges of sufficient capacity to carry the heaviest wheel loads, it is a question whether the increase in weight and power of locomotives can take place as rapidly in the next 10 or 15 years as in the opening years of this century. Assuming this is the case, and that there will be no such tremendous increase in the power of locomotives for the next few years, it logically follows, then, that their life may be increased by renewals of parts. Therefore, instead of taking 20 as an approximation of the number of years a locomotive would last in service, the life of the large modern locomotive may be increased for a longer period. During this time it would be necessary to renew many parts, and it is also probable that many economical devices which would fall under the head of modernizing of existing locomotives could also be applied. It is therefore quite possible that a greater proportion of locomotives will be rebuilt or modernized in the future than in the past.

Report on Fuel Economy and Smoke Prevention.

The American Railway Master Mechanics' Association committee, William Schlafge, General Mechanical Superintendent, Erie Rd., reported as follows:—In its first report on fuel economy, your committee considered the subject generally, indicating the chief elements influencing the fuel supply cost, giving typical outlines of organizations for road supervision and briefly touching upon the effects of special appliances. The second report was chiefly devoted to instructions for enginemen and firemen, the other elements of the problem being touched upon lightly. In continuation of the subject, and as a logical sequence of the rules presented last year, it is proposed to consider the means through which the rules are to be applied and how the road supervision is to be selected, instructed and developed. In its last report your committee presented a pamphlet on

"Fuel Economy on Locomotives," which covers the fundamentals of all instruction methods, and, in order to make it practical and easily understood, it was made free from technicalities. But much of the advantage that should arise from rules and instructions will be lost if they are simply memorized without a thorough understanding of what they mean and how the principles are to be applied.

The road supervision must point out the results of improper methods and the advantage derived from an observance of the rules. The inexperienced fireman must be shown the effects of good firing, that he may learn through his own observation that the methods outlined produce the best results. He can then be instructed concerning the abstract theories of combustion, and it should naturally follow that practical application of these principles will be unconsciously

made. It should be the aim of the organization to accomplish its purposes through appeal to the man's appreciation of his increased efficiency, to the intelligent completion of his task and to that feeling of self-respect which arises from a sense of personal capability. If these measures fail, obedience to the rules for the routine performance of the fireman's task must be secured through the employment of such disciplinary measures as may be required. Fuel costs the railways in excess of \$170,000,000 annually and its use must be conserved.

Having outlined in a general way the course to be pursued, the question arises, What should govern the selection of a superintendent of locomotive operation, a travelling engineer, travelling fireman, or other road supervision. It seems trite to say that the effective instructor must have a knowledge of methods and pro-

cesses involved, and that he will be most efficient who has learned by the same means that he will employ in teaching others. Nor can any man pretend to occupy such a position who does not inform himself upon the best methods of producing the results sought, upon the underlying principles of his work and upon the advances that are made by other men in his line. The true instructor must be capable of placing himself in the position of the learner, must appreciate his difficulties and possess the ability to approach his task as though he were himself a novice. Knowledge of men is, of course, a prime essential. No leader can hope to succeed who is incapable of appreciating the problem introduced by the human element with which he has to deal. By familiarity with his duties, by the exercise of patient perseverance and by tactful consideration, the confidence of the men must be inspired. Co-operation must be secured or failure will result. The efficient instructor must be capable of overcoming his prejudices and conforming his ideas to progressive methods and appliances. His views must be sufficiently liberal to permit acknowledgment of his own deficiencies and to enable him to see wherein the methods of his contemporaries are productive of better results. This presupposes an active inter-

circular of inquiry, which showed that in general there were no definite methods of training road supervision, and this means that men are assigned to duty as road foremen or supervisors and left largely to their own resources, their work being judged by mechanical standards, to the exclusion of those features of economical operation which are daily becoming more pressing. The successful road foreman must produce reasonable economies in those expenditures for which he is properly responsible.

The lack of definite methods of selection is emphasized by the lapse of time which frequently occurs between the date of a vacancy and the appointment which follows, indicating that the question of succession had received little or no thought and that the qualifications of the candidates required review before the vacancy could be filled. In those circumstances, it is not surprising that mistakes are made which subsequently become embarrassing and are corrected with difficulty. The requirements of effective organization demand that local officers shall know and study individual engineers with a view to the vacancies which may occur, selecting for appointment those who have demonstrated by their work and their record that they are qualified for advancement.

or more engineers or firemen should be requested to come prepared to discuss one of the subjects of the meeting, prospective candidates for promotion being occasionally designated. These meetings, being of general educational value, may be made to serve a useful purpose in training future road supervision through the opportunity offered for presenting the aims and methods of the company with respect to the practical problems of economical locomotive operation; for a discussion of specific problems, with details of the sources of information bearing upon them and extracts therefrom, and for the correction of individual weaknesses by indirect methods, in order that character and efficiency may be developed.

On large systems, appointments to minor road positions, in order to obtain knowledge of the capabilities of the prospective candidates for appointment, can, and are, usually made by placing the men on special duty, and the results in this way should be followed up and the first few trips should be made in company with the road foreman or his assistant in order to observe the methods used in directing firemen and enginemen and the means employed to secure the co-operation of the men. On these trips the candidate should make the prescribed report, which can be checked and criticized privately by the officer whom he accompanied. After a number of such trips and an appointment has been made, the new supervisor should be accompanied by his immediate superior, who should, at the proper time, advise and counsel his subordinate concerning his work on these trips, particularly his manner of dealing with the men. Many men are ill fitted by temperament to occupy any supervisory position and, unfortunately, this in many cases can be determined only after trial, but it should be determined while the man is on probation and before appointment. Practical instruction should be accompanied by instruction in classes, which may include prospective candidates from two or more divisions, the respective road foremen acting as instructors. This work should include the special subjects that must subsequently be covered by the road foremen with the men, such as the details of the book on "Fuel Economy on Locomotives," the principles of combustion, locomotive design, the operation of special devices, care of the locomotive, and other related subjects. The head of the fuel department should be present at these instruction classes as often as possible, in order that his active interest may be appreciated and that he may counsel and advise his subordinates.

On the larger roads the employment of an expert instructor on locomotive operation and fuel economy is recommended, who should come under the head of the motive power department, and under his direction a special course should be provided for road foremen. The efficiency of such an instructor would probably be improved if he were provided with a car equipped for lecture purposes with a stereopticon and moving-picture machine, and such other apparatus as may be required to perform the simple experiments in combustion that are ordinarily used to illustrate the principles of good firing. On the smaller roads such instruction could be given by the head of the fuel department, the general road foreman of engines, or other officer of corresponding jurisdiction. The advantage in the use of lantern slides and classroom instruction arises not only because of the added interest aroused, but because it is easier to follow the lecturer, particularly where any statistics are presented. Title of Officer Making Report.

est in the development of these devices that effect fuel economy and reasonable familiarity with the work of others in his field. A man occupying any supervising position must be of high moral character, for, no matter what his other qualifications may be, if he is immoral—if his time outside regular working hours is devoted to intemperance or to other vices that are the accompaniment of late hours and bad habits—his condition mentally and physically will fail to meet the standard of efficiency demanded of a high-grade organization and he will not command the respect of the men, which is essential to his success.

It should be unnecessary to say that your committee recognizes the fact that no one man combines in himself all the knowledge, experience and executive ability suggested as essential, but final selection must be governed by: Physical fitness, personal character, practical experience, knowledge of underlying principles, ability to demonstrate, capacity to impart information, and ability to adapt himself to progressive methods and appliances. Having enumerated the qualifications which the members of a high grade organization should possess, it is proposed to inquire in which manner the ideal may be approximated in actual development and training. That there is opportunity for such a discussion is indicated by the replies to your committee's

Having made a tentative decision as to those giving the greatest promise of development, special effort is required in following up the candidate, in checking his work and judging his efficiency. For this purpose the road foreman's trip report blank appearing in the appendix should be of assistance. This has been prepared in convenient form for the pocket with leaves in two sections, one for the engineer and one for the fireman, the pages being perforated to facilitate detachment so that they may be filed alphabetically. They will thus form a continuous and permanent record of the individual, from which his progress and relative standing may be judged. The forms have been prepared with the requirements of fuel economy in view, but other items may be added if desired. It is recommended that these reports be filed in the local division office of the road foreman, supervisor or master mechanic.

The final selection will be governed by a knowledge of the men, gained through personal contact and through occasional staff meetings. This will afford opportunity to determine the position of the men with respect to those policies for efficiency and economy which it is the aim of the company to promote. The subjects for staff meetings should be announced in advance, so that opportunity may be given for preparation. One

lowing are offered as typical subjects for treatment by lantern slides: Enginemen's work reports on arrival at terminals, showing actual samples of those properly made out with full information and those improperly made out. The diagrams on pages 10 and 11 of "Fuel Economy on Locomotives," including correct methods of cross-firing. Diagrams on pages 13 to 16, inclusive, of "Fuel Economy on Locomotives." These should be colored to bring out the effects of improper firing. Photographs of locomotives in operation, emitting dense volumes of smoke, indicating poor combustion. Photographs of locomotives with pops open, with rod packing blowing, and other miscellaneous steam leaks. Photographs of tenders properly and improperly coaled and trimmed. Charts and diagrams showing the relation of valve events to corresponding points on the indicator diagram. Indicator diagrams showing the coal and water consumed for equal work done with locomotives operating with full throttle and short cut-off, and with throttle partly closed and corresponding increased cut-off, so that the advantage of increased steam expansion can be clearly brought out. The chart on page 23 of "Fuel Economy on Locomotives," showing the variation in coal consumption with varying superheat at different cut-offs. Moving pictures may be made to indicate the correct methods of preparing fires, firing locomotives, and the results of improper practices in these particulars. Pictures of locomotives in operation, showing the influence of proper and improper firing upon the smoke emitted, may also be made extremely instructive.

The instructions given by the chief instructor on "Locomotive Operation and Fuel Economy" should cover the road foremen, assistant road foreman, traveling enginemen, etc., and at these instruction meetings the policies and aims of the organization should be formulated and the opportunity taken for a general discussion of important topics, as for example: Standards of divisional performance, and individual performance if possible; improved methods to be pursued; improvements of standard; methods of inducing employes to attain the standard; legitimate troubles experienced by the men; demonstration of methods to be employed, especially devices that produce economy.

It is the duty of the head of the organization to establish the standards by which the results of the divisions are measured, and to do this successfully it is necessary to have complete and accurate statements as to what can be done. Where individual performance sheets are employed, they might properly form the basis for divisional statements prepared on a gross ton-mile basis, or in the case of passenger service on a straight mileage basis. In all cases the best previous record must constitute the measure by which the results are gauged, and they must be interpreted with due regard for unusual conditions. It must be granted that results cannot be secured without comparisons. They are needed by the individual road foreman as a measure of his work and by the head of the department as a spur to the organization.

Every road foreman should be required to read at least one periodical monthly, dealing with railway matters, and the officer in general charge should have a list of the magazines to which his subordinates subscribe. This will permit special attention to be drawn to an article of unusual value appearing in any particular paper. Interest will be stimulated

if an opinion is occasionally asked on some article in a current number of a periodical and, when occasion affords, single marked copies may be distributed with a similar request. By this means each man should increase his knowledge, keep up with the developments in his line and acquire new ideas for instruction work.

Whenever possible, the head of the fuel department should attend meetings of the associations, particularly the Traveling Engineers and the Fuel Association, dealing with the subjects in which they are interested. He should be encouraged to take part in the proceedings, accept committee assignments and actively engage in the work of the associations. The advantages derived from attendance at association meetings require no elaboration in a paper before a convention whose membership is wholly in sympathy with the work of related organizations.

Finally, the road work must be constantly reviewed. It is necessary that a check be kept upon the road supervision and upon the locomotive crews. The trip reports should be examined and questioned, that effort may be stimulated and efficiency increased. To successfully effect the desired fuel economies, it is necessary that confidence and enthusiasm be developed, and this must be obtained through the influence of the general officers and the local supervision.

The subject of education and training for railway service has received no little attention from editorial writers and essayists, but there has been no general movement among the railways themselves for specific instruction of supervision in the operating department. The training of supervision constitutes preparation for subsequent increased efficiency. When a corporation undertakes to produce a commodity on a commercial basis, the processes of manufacture are carefully planned in advance, elaborate study is given the required equipment and the means through which the maximum efficiency may be realized. The results secured will be proportional to the care exercised in these preliminaries, as well as to subsequent operating efficiency. It is equally true of special education and training. The net results will depend upon the care with which the system is planned, the time spent in preparation of the supervision and the manner in which the preliminary training is subsequently applied. As the burden of railway operating expenses becomes constantly heavier, the necessity for economies becomes increasingly urgent, and the tendency is to restrict expenditures in those directions yielding direct results. The rapidity with which the transportation systems have developed has naturally resulted in obscuring the possibilities for indirect influence upon net returns, but your committee is confident that training for supervision in road service will receive that consideration to which it is entitled by reason of the relation which locomotive operation and fuel economy bear to the total operating expenses.

Smoke Prevention.—In connection with the problem of smoke prevention, your committee directs attention to the report of the committee of the Chicago Association of Commerce, on "Smoke Abatement and Electrification." The investigations conducted by this committee were continued over more than four years and reduced the subject to a scientific basis where the influence of locomotive operation upon smoke emission may be judged in its true proportion. There is given

below a table abstracted from the report, indicating the various classes of service responsible for air pollution.

Responsibility of Each Service for Smoke Pollution Within Chicago, on Percentage Basis.

	Visible smoke, Per cent.	Solids of smoke, Per cent.	Total of smoke, Per cent.	Gaseous carbon, Per cent.	Gaseous sulphur, Per cent.
Steam locomotives	22.06	7.47	10.31	10.11	18.22
Steam vessels	0.74	0.33	0.60	0.55	0.45
High pressure steam and heating plants	44.49	19.34	44.96	40.68	53.70
Low pressure steam and other stationary heating plants.	3.93	8.60	23.00	23.06	19.73
Gas and coke plants.	0.15
Furnaces for metallurgical, manufacturing and other processes	28.63	64.26	21.13	25.60	7.90

One-third of all air pollution is due to dirt other than that of combustion. These percentages refer to the remaining two-thirds. From this table it will be observed that steam locomotives contribute to:

	Per cent.
Visible smoke	22.06
Solid constituents of smoke	7.47
Gaseous constituents of smoke	10.31

The portion of the total visible smoke of Chicago which is chargeable to different locomotive services is interesting, and is as follows:

	Per cent.
Yard	10.25
Road freight	2.01
Freight transfer	4.59
Passenger transfer	.19
Through passenger	2.07
Suburban passenger	1.54
Locomotives at locomotive terminals	1.41

Total for steam locomotives 22.06

The proportions, while applicable only to Chicago, nevertheless indicate in a way the relations existing at other large terminals, and while the above report shows that the visible smoke produced by steam locomotives was only 22.06%, it suggests the necessity for further study in connection with the abatement of the smoke nuisance on engines in switching service. Your committee takes occasion to again draw attention to the recommendations contained in its report of 1913, wherein a type of apparatus for smoke prevention was described which had proved successful in extended practice. It is believed that the apparatus should at least be employed on all yard and transfer engines operating in congested city districts.

Canadian Railway Officials at Atlantic City.

Among the railway officials in attendance were the following:

Canadian Government Railways:—G. R. Joughins, Superintendent Motive Power, Moncton, N.B.

Canadian Northern:—W. C. Lancaster, Electrical Engineer, Montreal; A. L. Graburn, Assistant Superintendent Rolling Stock, Toronto.

Canadian Pacific:—H. H. Vaughan, Consulting Engineer, Montreal; C. W. Van Buren, General Master Car Builder, Montreal; T. G. Armstrong, Master Car Builder, Winnipeg; D. T. Main, Superintendent Motive Power, Montreal.

Central Vermont:—W. Gillespie, Mechanical Superintendent, St. Albans, Vermont.

Grand Trunk:—W. D. Robb, Superintendent Motive Power; J. Coleman, Superintendent Car Department; J. Hendry, Master Car Builder; A. A. Maver, Master Mechanic, K. F. Nystrom, Chief Draftsman, Locomotive Department, Montreal; T. Treleavan, Master Car Builder, London, Ont.; W. H. Sample, Master Mechanic, Battle Creek, Mich.; A. Copony, Master Car Builder, Elsdon, Ill.

Report of Committee on Design and Maintenance of Locomotive Boilers.

The American Railway Master Mechanics' Association committee, C. E. Fuller, Superintendent Motive Power, Union Pacific Rd., chairman, reported as follows:—This committee has been continued from last year's committee on design, construction and inspection of locomotive boilers. Last year a report was presented on methods of figuring stresses in locomotive boilers, which has since been adopted as Recommended Practice, bringing about for the first time a uniform and harmonious method of calculating the various stresses and safety factors on new locomotive boilers. That there may be misunderstanding as to the true intent of this work, the committee wishes to state that these formulæ are obviously intended for use in connection with designing new construction only, where there are no restrictions, and do not apply to existing boilers. This year circular K was issued, and replies received from 31 roads, which replies were tabulated and grouped for further study and analysis, the result of which your committee now presents for consideration in connection with the design and maintenance of locomotive boilers.

The modern locomotive being called upon to maintain high speed, with heavy and increasing train loads, and to meet greater demands for steam, the design and maintenance of boilers would seem to take precedence over any other part of the locomotive. That locomotive designers are aware of this seems evident from many of the replies received to the circular of inquiry, and the various means by which a number of roads are endeavoring to meet these conditions. Among the many devices tending to show the efforts in this direction may be mentioned a fire box which consists of squared water tubes, expanded into water and steam drums at the top and a water leg at the bottom, eliminating staybolts on the sides of fire box; a corrugated fire box; also the several types of water tube locomotive boilers; devices to improve the circulation around the fire box; various forms and adaptations of combustion chambers, either of the ordinary type or of special construction, having a bridge wall with air inlets. In some cases the adoption of combustion chambers has been due to a desire to avoid excessively long flues, while others have considered that the construction is desirable from its being inductive to longer flame travel, increasing fire-box temperatures on account of the more complete combustion obtained. The increase in the ratio of fire box volume and grate area is held to be beneficial, producing better steaming boilers, while the improved combustion has the effect of eliminating black smoke. It does not appear that the maintenance and repair with combustion chambers is greater than is the case with the ordinary construction, while the life of the flues is greatly increased by their use. There appears to be little experimental data on the relative evaporative performance of boilers with or without combustion chambers.

The fire box design being recognized as of paramount importance, there has been a general trend toward wider water spaces, about $4\frac{1}{2}$ to 5 in. for the sides and $5\frac{1}{2}$ to 6 in. at the front, being representative practice. Fire box door flanges have been given considerable attention, the majority of opinion favoring flanging the sheets toward each other; the joint in many cases being welded, with beneficial

results, from the elimination of rivets, with their tendency to collect mud. Some state that the welded method is cheaper than the riveted joint.

From the replies it is found that cross braces are used as a matter of necessity on Belpaire fire boxes and boilers with flattened surfaces, and to some extent on crown bar boilers.

The use of flexible staybolts, instead of tee bars and sling stays, to support the front end of fire box has become quite general, and the results have been satisfactory. In order to obtain proper bearing for flexible radial stays which are at a sharp angle with the wrapper sheet, one road reports having pressed out bosses in the sheet, while another road builds up bosses by autogenous welding. The results, giving sufficient full threads through the sheets for the bolts, have been very satisfactory.

Regarding venting crown sheet in case of low water, two members report that on coal-burning locomotives they omit the button heads on four front transverse rows of stays. Another member reports omitting button heads on the 6th, 7th, 8th and 9th rows back from the back flue sheets for the same purpose. The majority, however, do not make any allowance for this contingency.

Regarding the relative value of fire box and tube heating surface, there appears to be little data derived from tests. However, the accepted value assigned to fire box and flues, respectively, averages about 6 to 1, with special designs of fire box claiming a ratio as high as 12 to 1. The most effective ratio of fire box volume to grate area is indicated by the reports to be approximately from 5.5 or 6 to 1 for bituminous coal, and 4.5 or 4.85 to 1 for anthracite coal.

The use of long flues is not favored, for, while the total evaporative capacity of the boiler may be increased by their use, the rate of evaporation per unit area of heating surface is lower, and discounts the theoretical increase in capacity. In this connection tests show conclusively that there is a great variation in the evaporative value of the boiler tube, about one-half of the heat being transmitted in the first quarter of the tube length. It appears that a proportion of tube length to diameter of 100 times the inside diameter is most satisfactory. Longer tubes do not require any greater spacing than reasonably short tubes.

The addition of superheaters is practically unanimous, and all replies indicate that members will use superheaters on all new equipment, with the possible exception of some few roads which are not certain about switch engines. The ratio of superheating surface to total saturated heating surface seems to vary from .198 to .29, the average for modern power being about .27 to .29 for boilers with combustion chambers and .20 to .22 for boilers without combustion chambers.

In a general way it may be deduced that in modern practice the built up type of dome is being generally abandoned in favor of one piece pressed-steel domes. In regard to the elimination of boiler seams, no general effort has been made, although one member reports satisfactory results from combining the throat sheet and bottom half of last course. In almost all cases fire box sheets, as well as wrapper sheets, are made in one piece.

There does not appear to be any development along the lines of welding circumferential seams.

The support of the back end of the boiler above frames seems to be satisfactorily met by either expansion plates or by expansion shoes.

The use of cylinder volume as a basis in designing locomotive boilers, as outlined by this Association in the Proceedings of 1897, has, with the development of new and larger types of locomotives and superheaters, proved unsatisfactory, and your committee is of the opinion that better results are obtainable from ratios based on cylinder horse power.

The most interesting feature brought out by the committee in connection with boiler maintenance is the wide adoption of autogenous welding. The welding of flues into flue sheets, of fire box seams, and the application of patches varying in size from small crack and pitting repair plates to half side sheets and back heads, marks a radical and economical means of handling what has heretofore been a difficult and expensive problem. Both electric and acetylene welding processes have been used, but we are unable to determine which method gives the best results, as it seems to be largely a matter of opinion. Fire box seams have been welded successfully, one member reporting 14 engines with all seams welded by the acetylene process. Several roads report having side sheet seams welded, with little or no trouble experienced. Occasionally it has been necessary to re-weld a seam, on account of opening up.

Among the other uses to which the electric and oxy-acetylene processes have been put is in cutting off old smoke boxes, burning off stay bolts, instead of nicking and breaking them, and to loosen the caps on flexible staybolts to permit of easy removal without damaging threads. The autogenous processes of welding have recently been used to quite an extent for patching in fire boxes. Some of the replies indicate that welding can be done at about 40% of the cost of riveting; others report very little difference in cost. The methods of patching are still an experiment on most roads; others are reporting satisfactory results. The methods preferred seem to be a matter of opinion; the patches are of all shapes and sizes; some are welding by lapping the plates, others by beveling the patch and plate and filling in the groove, and others report patches being boxed out or bulged with a corrugation for expansion; but from the replies it is impossible to draw a conclusion as to the best way or method. Fire door openings have also been replaced by welding, with success.

The practice of welding cracks in the knuckle of flue sheet is quite extensively used, in most cases the welding being done on both sides of sheet. Two members cut out the crack and weld in a patch, but in the majority of cases the crack is filled up without patching. While some roads report welding in half side sheets and half back heads with satisfactory results, the practice has not yet become general. One member reports welding brick arch studs on side sheets of fire box, with success, but no welding-in of arch tubes has been reported.

The methods of safe-ending superheater flues, as reported, are rather uniform, the usual way being to cut off at the small end, scarf, apply safe end, and weld in flue welding machine. A few members report that they have welded safe ends by the electric or oxy-acetylene process. In this method, after scarfing, the flue and safe end are separated about

1/8 in. and the opening filled up, rotating the flue during the process. It seems to be accepted practice to avoid the use of more than one weld in a superheater flue at a time, which is accomplished by increasing the length of safe ends in successive applications, the old weld being cut off and a longer safe end used. Few roads weld safe ends to the enlarged portion of the flues. Results are in most cases reported as being satisfactory. The usual practice in setting tubes appears to be, for the back end, to insert a copper ferrule in the hole, then roll, expand and bead the flue, after which the point is cleaned and welded lightly on the edge of the bead. One member reports that copper ferrules are not used, nor flue beaded, but welded in by the electric process, which is indicated to be the most generally used in this class of work. Flues in the front flue sheet are not welded, but rolled, and about 10% beaded.

While a few roads are rebuilding old locomotives and converting consolidation types to mikados, and prairie types to Pacific types, there is no general trend in this direction. Many roads are applying superheaters to their more modern types of saturated locomotives, and in some cases at the same time eliminate old styles of staying, bracing, etc. The application of combustion chambers, brick arches and outside valve gear has been reported by several members. On engines having cylinders smaller than 20 in. diameter, it has not as a rule been considered advisable to apply superheaters.

In view of the development of the locomotive, it is our opinion that the ratios of 1897, being unsuitable, should be superseded by a method of calculation which will meet the variable conditions imposed by modern practice. The reports indicate a wide departure from the Recommended Practice of 1897. Ratio of grate area in square feet to volume of two cylinders in cubic feet, for simple passenger or freight locomotives, should not be less than: 4 for large anthracite coal. 9 for small anthracite coal. 3 for bituminous coal. From the replies received, for modern power these ratios have been increased 23%. The ratio of heating surface in square feet to grate area in square feet, for simple passenger and freight locomotives, should not be less than: 40 for large anthracite coal. 20 for small anthracite coal. 60 for bituminous coal. From the replies received, for modern power these ratios have been increased 28%. The ratio of heating surface in square feet to volume of two cylinders in cubic feet, for simple passenger or freight locomotives, should not be less than: 180 for large anthracite coal. 200 for small anthracite coal. 200 for bituminous coal. From replies received, these ratios for modern power have been increased 34%. We would, therefore, submit for adoption as Recommended Practice the following ratios based on cylinder horse-power: D, Diameter of cylinder. P, Boiler pressure. A, Area one cylinder diameter. H-p, Horse-power. TP, Tractive power. D, Diameter of drivers. S, Stroke in inches.

1. From weight limitation on drivers, and from service, type, etc., obtain the required tractive power.

2. From tractive power, boiler pressure, stroke and size of drivers obtain diameter of cylinder.

$$D = \sqrt{\frac{TP \times d}{.85 \times P \times S}}$$

$$D = \sqrt{\frac{.85 \times P \times S}{TP \times d}}$$

$$H-p = .02120 \times P \times A \text{ — saturated steam.}$$

$$H-p = .02290 \times P \times A \text{ — superheated steam.}$$

Maximum horse-power assumed to be reached at the following piston speeds: Saturated steam ... 700 ft. per minute. Superheated steam... 1000 ft. per minute.

The following figures are based on reports from various testing plants and road tests made under different conditions, and are liberal and can be more than met under favorable conditions:

3. Estimate total steam per hour from:
H-p. \times 27.0—saturated steam.
H-p. \times 20.8—superheated steam.

4. Estimate total coal per hour from:
H-p. \times 4.00 lb.—saturated steam
H-p. \times 3.25 lb.—superheated steam, based on coal containing 14,000 B.T.U. per pound, using a percentage factor for poorer or better grades of coal.

5. Estimate size of grate from total coal divided by 120, or

$$\text{Grate area} = \frac{H-p.}{30} \text{ — saturated steam.}$$

$$\text{Grate area} = \frac{H-p.}{36.9} \text{ — superheated steam.}$$

6. Estimate evaporation of fire box, including combustion chamber and arch tubes, if used:

$$\text{Sq. ft. fire-box heating surface} \times 55 = \text{evaporation in lb. per hr.}$$

7. Subtract (6) from (3) to obtain tube and flue evaporation required. Base evaporation on 10 lb. water per hr. per sq. ft.

8. To obtain percentage of boiler, divide total pounds of steam proposed boiler will evaporate by these formulae pounds of steam required.

9. The ratio of fire-box volume to grate area should be about 5.5 or 6 to 1, for bituminous coal; 4.5 or 4.85 to 1, for anthracite coal.

The ratio of length to diameter for tubes should be about 100 to 1 \times internal diameter, which for 2-in. tubes would give a length of about 16 ft. and for 2 1/4-in. tubes about 18 ft.

The ratio of superheating surface to total saturated heating surface should be, without combustion chamber, about .22, and with combustion chamber about .29.

The methods of figuring stresses in locomotive boilers, adopted as Recommended Practice last year, with the ratios submitted in this report, will place in the hands of the members a basis for locomotive boiler design which, meeting all modern conditions, will doubtless have the effect of improving the present variation in methods.

Your committee has been greatly impressed by the possibilities of the processes of autogenous welding for boiler maintenance. We would offer as a suggestion that a committee of this Association be appointed for the purpose of assembling and analyzing all available information on this important subject, with a view to arriving at standard methods of using the processes, and to develop further the present largely experimental work along this line.

In conclusion, your committee wishes to express its appreciation for the assistance which the members have given them in furnishing information relative to their practice.

C.P.R. employes on the Ontario Division have subscribed a further \$800 to the Toronto and York County Patriotic Fund, making a total of \$8,600 since Sept. 1915. A large number of the employes are also subscribing four days pay during the year, which it is expected will realize about \$55,000.

Election of Railway Mechanical Association Officials.

The following elections took place at Atlantic City:

American Railway Master Mechanics' Association.—President, Wm. Schlafge, Erie, Rd.; 1st Vice President, F. H. Clark, Baltimore and Ohio; 2nd Vice President, W. J. Tollerton, Chicago, Rock Island and Pacific; 3rd Vice President, C. F. Giles, Louisville and Nashville; Treasurer, Angus Sinclair. Executive Committee: J. Purcell, Atcheson, Topeka and Santa Fe; M. K. Barnum, Baltimore and Ohio, and W. E. Dunham, Chicago and Northwestern. M. A. Kinney, Hocking Valley, was elected to serve on the executive committee during J. F. De Voy's unexpired term.

Master Car Builders Association.—President, C. E. Chambers, Superintendent Motive Power, Central Rd. of N.J.; 1st Vice President, T. W. Demarest, Superintendent Motive Power, Pennsylvania Lines West, Northwest System; 2nd Vice President, James Coleman, Superintendent, Car Department, Grand Trunk; 3rd Vice President, G. W. Wildin, Mechanical Superintendent, New York, New Haven & Hartford; Treasurer, J. S. Lentz, Master Car Builder, Lehigh Valley. Executive Committee: S. Lynn, Master Car Builder, Pittsburg & Lake Erie; J. C. Fritts, Master Car Builder, Delaware, Lackawanna & Western; C. B. Young, Mechanical Engineer, Chicago, Burlington & Quincy.

Railway Supply Manufacturers Association.—President, E. H. Walker, Standard Coupler Co.; Vice President, Le G. Parish, American Arch Co.; Executive Committee: W. Beaver, Yale & Towne Mfg. Co.; G. Thompson, Edison Storage Battery Co.; W. McConway, Jr., McConway & Torley Co., G. A. Cooper, Frost Railway Supply Co., R. Carr, Dearborn Chemical Co.

St. John & Quebec Ry. Contractor's Suit.—A Quebec court on June 14, dismissed the action brought by F. A. Hibbard against A. D. Gould, President, St. John & Quebec Ry., before it was taken over by the New Brunswick Government, to recover \$10,000, being the amount of the transfer of his interests in the Hibbard Construction Co., and the St. John & Quebec Ry. Co. for the construction of a part of the railway between Fredericton and Woodstock. The defendant had refused to complete his contract, claiming that the representations made by Hibbard were incorrect. After hearing evidence the court dismissed the action.

Comparative Average Railways Costs.—There are 198,554 miles of railway in Europe, with a total capital cost of \$25,059,644,889, showing an average cost per mile of \$126,211. The United States has 235,815 miles, with total capital cost of \$15,719,696,925, or an average cost per mile of \$66,661. The U.S. mileage only included railways with \$100,000 or more gross annual income, so that a further 8,440 miles may be added, with \$197,486,000 capital cost, reducing the average capital cost to \$65.166 per mile.—Bureau of Railway News and Statistics.

The C.P.R. General Superintendent's office at Calgary had, when war began, a staff of 23 male clerks and several female clerks and stenographers. Fifteen of the men have enlisted, 10 of them are at the front, 1 is in England and 3 are training in Calgary battalions, 2 are lieutenants in British regiments, 2 are staff sergeants, 2 are corporals and the others are privates.

Examinations Among G.T.R. Motive Power Department Apprentices.

The annual examination of apprentices employed in the G.T.R. motive power department has been completed recently, and awards made in the various competitions connected therewith. For the purpose of fair competition, the 26 stations at which instruction is given throughout the year were divided into four groups, according to the number of apprentices employed at each station. Each group competed for class and individual prizes aggregating \$450. The examinations were set in drawing and mathematics, according to the year of apprenticeship, and were based as nearly as possible upon problems likely to arise throughout the shop work. The following questions are taken from each of the five papers, and serve to convey an idea of the work accomplished:

"A $\frac{5}{8}$ in. drill when drilling cast iron should make 608 r.p.m. At what speed should a $1\frac{1}{2}$ in. drill be run to give the same cutting speed?"

"A power plant used 4 tons of coal in one day, 9 lbs. of water being evaporated by 1 lb. of coal. The feed water consumption was 25% greater on this day than on the preceeding day. How much water was evaporated during the preceeding day?"

"How much weight can an air hoist lift whose efficiency is 79% if the cylinder is 18 in. dia., and the air pressure is 75 lb. per sq. in.?"

"The ratio of 2 pulleys is as 5 to 3. The first makes 105 r.p.m. How many r.p.m. does the second one make? If the second pulley is 27 in. dia. find belt velocity."

"What diameter safety valve is required in order that it acts when a pressure of 200 lb. per sq. in. is reached the total pressure then upon the valve being 1790 lb.?"

Detailed blue prints of parts of a locomotive were given in the drawing competitions, and it was required to make a complete assembled drawing from the details.

To the individual in each year who made the highest combined score a special capital prize was awarded, and in one case a score of 196, out of a possible 200, made up of 98 marks in each subject, won the prize. In one or other of the subjects there were scores of 100, but lower points in the other subject prevented these scores capturing the high prize.

The winning stations in the various groups were as follows:—Group A: 1st, Stratford; 2nd, Battle Creek. Group B: 1st, Sarnia; 2nd, Toronto. Group C: 1st, Allandale; 2nd, Belleville. Group D: 1st, Port Huron; 2nd, Hamilton.

The capital prize winners in group A (main shops) in the different years are as follows:—1st Year: A. Anderson, Stratford. 2nd Year: W. Leask, Montreal. 3rd Year: W. Davis, Stratford. 4th Year: A. McDowell, Stratford. 5th Year: N. Smith, Montreal.

In addition to the above, apprentices in groups B, C and D (roundhouse classes) competed for capital prizes for highest combined scores; W. Hess, of Port Huron, coming 1st, and C. O'Neill, Sarnia; W. Pearce, Belleville; and C. Foss, Island Pond, coming next in the order named.

These competitions are eagerly looked forward to and are the means of encouraging closer studies on the part of the boys, in order that their respective stations may have the honor of coming out ahead. The keen interest taken in

everything pertaining to apprentice matters, by the officials of the motive power department, permeates the whole system, and means that an apprentice serving his time with the G.T.R. is insured of a practical as well as a thorough theoretical training.

Canadian Northern Railway Station for Vancouver.

The new station about to be erected by the Canadian Northern Pacific Ry. at False Creek, in the centre of the City of Vancouver, will be fireproof and up to date in every respect. It has been designed along dignified classic lines, with a strong central arched feature and supporting features at the extreme corners. The total frontage will be 321 ft. with a depth of 105 ft. It will contain a basement and three stories above street grade.

The ground floor will contain a large general waiting room and ticket lobby, immediately adjacent to which and entering directly from it, will be waiting rooms for men and women, dining room and lunch counter, barber shop, ticket office for rail and steamship, commercial telegraphs, hand baggage, general baggage, government mail, express and sleeping and dining car departments, etc. The two upper floors will accommodate the company's general offices in Vancouver. There will be elevator service to all floors.

Directly in front of the main entrance, on the opposite or rear side of the station, will be situated doors leading to a covered concourse 50 ft. wide, running along the entire length of the rear of building. From this concourse access to the various train platforms will be had. These platforms will also be covered. In all there will be 16 tracks leading into the station and the average of the platforms will be about 1200 ft.

The building will be amply supplied at all points with natural light and ventilation, the form of the building on the upper floors, permitting of direct light and air to all rooms and corridors. The large waiting room, which will have a lofty ceiling, will be lit not only from the top but also by means of clerestory lights on three sides, which will also afford splendid natural ventilation.

Externally the front and both side walls will be constructed of granite up to base, and above, in stone, both of which materials will be procured locally. The general waiting room will be finished in marble about 6 ft. up, above which Caen stone will be used to ceiling, the latter to be panelled in ornamental plaster. The floors will be finished in terazzo. Marble will also be used in all corridors and lavatories, with terazzo floors. It is the intention as far as practical to use British Columbia materials in the construction.

The general scheme also calls for the construction at once of freight offices, with freight shed, and the usual trackage and teamway facilities for the rapid handling of this branch of the business.

The cost of the passenger station, with its concourse and platforms, will be about \$1,000,000. The architects are Pratt & Ross, of Winnipeg and Vancouver.

Auditing of Railway Accounts. In connection with the loans to the Canadian Northern and Grand Trunk Pacific Railways, authorized at the Dominion Parliament's last session, the Dominion Government has appointed Marwick, Mitchell, Peat & Co., to audit the C.N.R. accounts, and Price, Waterhouse & Co. to audit the G.T.P.R. accounts.

Railway Accommodation for Camp Borden.

The laying out by the Dominion Government of the new military camp, named after the Premier of the Dominion, in Simcoe County, has necessitated the building into it of two spur lines, one from the C.P.R. and the other from the G.T.R. The camp lies in the section of Simcoe County through which the Pine River runs, north and east of the G.T.R. line from Beeton to Collingwood, south and west of the G.T.R. line from Allandale to Collingwood, and west of the C.P.R. Toronto-Sudbury line. The two last mentioned lines are the most convenient for access to the camp.

The C.P.R. has built its spur line from Ypres, 57.3 miles from Toronto. It runs for 1.75 miles on the company's own right of way, and then for 2 miles on the Government lands, connecting up with the Government tracks. The building of the line was an exceedingly simple piece of work, there being no gradients to amount to anything, and no bridgework of importance. It was done by the company's own forces. A station building and siding accommodation is being provided. From Toronto to the camp there are 4 trains each week day, 3 extra trains on Saturdays, 1 extra train on Tuesdays and Thursdays, and 3 trains on Sundays. From Camp Borden to Toronto there are 4 trains each week day, 2 extra trains on Saturdays, 1 extra train on Mondays and Thursdays, and 4 trains on Sundays. The running time varies from $1\frac{3}{4}$ hr. to 2 hr. 40 min.

The G.T.R. spur line starts from Angus, 10.60 miles from Allandale, and is 4 miles long, the station being 2.6 miles from Angus. Two sidings, each half a mile long, have been laid at the station; there are also 5 spur tracks for the Ordnance and Army Service Corps, each spur being about 1,600 ft. long, and a 1,900 ft. Y at Angus for turning trains. There is a summer station 400 ft. long, with platforms 800 ft. long, nearing completion. Construction work was started May 11, and was reported to be practically completed June 15. A train service was put in operation June 1, consisting of the Camp Special, leaving Toronto at 6.40 a. m., reaching the camp at 9.10 a. m. and returning at 6 p. m., reaching Toronto at 8.30 p. m. Additional service was to be put on during the march. Special trains are being operated between Allandale and the camp and between Collingwood and the camp.

The Government lines include a belt line round the central part of the location, with spur sidings as required, with which both the C.P.R. and the G.T.R. lines are connected.

A G.T.R. Conductor's Appeal.—Judgment has been reserved in the appeal of Conductor Sinclair against a conviction in the Toronto police court last March for theft of money from the company. The appeal was based on the ground that the conductor received cash from persons travelling on the trains, as a bribe, and not for fares, and it was contended that, if that were so, the cash was not the property of the company, and was therefore not stolen.

Ticket Agent Found Guilty of Treason.—Israel Schaefer, a general ticket agent at Montreal, after a second trial was found guilty of treason there, June 20, having supplied tickets to Austrian subjects at the outbreak of the war; thereby "assisting the King's enemies."

Collection of Demurrage at Destination.

S. J. McLean, one of the commissioners of the Board of Railway Commissioners, gave the following judgment recently:

The Security Traffic Bureau of St. Paul, Minn., submits papers in connection with a claim which it has presented to the Canadian Freight Association on behalf of one of its clients. The essence of the claim is this: At the time the shipment moved in 1912 the car service charge was \$1 a day. Subsequent to the date of shipment, the Board's order 18178 of Nov. 30, 1912, was issued. This authorized for a limited period a car service charge of \$2 for the first 24 hours or any part thereof, and \$3 for each succeeding 24 hours or any part thereof, for delay beyond the free time allowed for loading and unloading the cars. Applicant contends that the charge should be \$1 a day, it being stated that this was the authorized rate in effect at the time the bills of lading were issued. Applicant points out that the bills of lading contain the provision—"Received, subject to the classification in tariff 'in effect on day of issue of this original bill of lading.'"

Under the Car Service Rules, free time is allowed for loading and unloading as well as for certain other services therein specified, and provision is made as to when the free time shall begin. The carrier is obligated under the contract of carriage to take the car to a given destination. When the notice has been given or the car has been placed and such free time has been allowed as the Board under the Car Service Rules has approved as being reasonable for the purposes of loading or unloading, etc., the obligations of the carrier under its contract of carriage have ceased. The car service charges for the excess time are, therefore, independent of the tariff applying on the shipment, and, consequently in the case presented, the car was liable to the car service charge in force at the time of its arrival at destination.

Reference may be made to the practice of the Interstate Commerce Commission under its Conference Ruling 405, where it provides in respect of demurrage rules that the rules in effect at the time the shipment arrived at demurrage point must control. By its Conference Ruling 473, it provides that demurrage and storage in transit are controlled by the tariff in effect when the initial movement begins, but that demurrage and track storage at destination are controlled by the tariff in effect when the car is actually or constructively set for unloading.

The Canadian Northern Ry. appeal to the Supreme Court at Ottawa against the award of Judge Cassels in the Exchequer Court of \$166,000 as damages against the Dominion in connection with the entry of the National Transcontinental Ry. into St. Boniface, Man., has been dismissed. The C.N.R. claimed that the lands it owned at St. Boniface had been depreciated in value to the extent of from \$2,500,000 to \$10,000,000 by the construction of the N. T.R. The appeal was argued at Ottawa May 2.

The Minister of Labor has informed the machinists and other striking employees of the Toronto, Hamilton & Buffalo Ry., that the representatives of the men, the company and the Government having agreed upon an award, under an arbitration in conformity with the act, the Department can do no more, and that it is the duty of the men and the company to get together.

Transportation Course and Scholarships at McGill University.

A circular issued by George Bury, Vice President, C.P.R., in reference to 2 free scholarships covering 4 years tuition in the Faculty of Applied Science in McGill University, Montreal, which are offered, subject to competitive examination, to apprentices and other employees enrolled on the company's permanent staff and under 20 years of age, and to minor sons of employees, was published in Canadian Railway and Marine World for June. For some years the C.P.R. has been giving a course at McGill to 5 of its employees, or sons of its officers or employees, and after the session of 1916-17 this will be increased to 10. All the students taking advantage of this course will be required hereafter to qualify in chemistry, civil, mechanical or electrical engineering. The company will bear the expense of these courses, and they will be open to any employee or the son of any official or employee who may qualify.

For some years past the Canadian Pacific and Grand Trunk have contributed largely to the expense of the transportation course at McGill, which will come to an end with the session of 1916-17. The G.T.R. has withdrawn its grant this year, and it is said that the C.P.R. will do the same. The course will be given next session only to 4th year students, who will be allowed to finish their course.

Litigation Respecting the Pacific Great Eastern Railway.

A unique action has been taken by the leader of the opposition in the British Columbia Legislature, in connection with the legislative action respecting the P.G.E.R. He first submitted a motion to the Legislature asking that legal proceedings be taken by the Attorney General against certain persons, under the Criminal Code, sec. 160, for the manner in which the money received for the sale of the P.G.E.R. guaranteed securities had been paid out. The statute guaranteeing the securities provided that their proceeds should be paid out as the work progressed "in the proportion of work done and materials and supplies purchased for the said railway as compared with the whole work done and to be done thereon, pending completion of the said line," and the motion submitted alleged that \$18,035,198.53, the entire amount received from the sales of the guaranteed securities, had been paid over while \$18,803,805.59 had been expended on the line, which was only partially completed. The motion was defeated by 30 votes to 4; and a subsequent motion, asking that the Lieutenant Governor appoint a royal commission to investigate all matters connected with the construction of the railway, was also negatived. In the writ, issued June 1, it is alleged that the act granting a loan of \$6,000,000 to the company to complete the line is invalid on the ground that the Legislature legally expired Mar. 15; and that the payment of a large portion of the \$18,000,000 odd to the company was a breach of trust. The action is regarded as a move in the provincial political game.

The Train Dispatchers' Association of America held its 29th annual convention at Toronto, June 20 to 22. About 200 members were present on the opening day, and were given a civic reception by the Mayor and council.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, for Western Lines, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$921,000	\$285,100	x\$145,400
Aug.	1,192,800	954,000	238,800	x5,900
Sept.	2,014,500	1,358,000	661,600	1,900
	\$4,413,600	\$3,227,000	\$1,186,600	x\$79,300
Decr.	\$658,300	\$579,000	\$79,300

x Decrease.

Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with October, the figures show the earnings of the entire system, both eastern and western lines.

	Gross Earnings	Expenses	Net Earnings	Increase
Oct.	\$3,678,500	\$2,421,500	\$1,257,000	\$537,800
Nov.	3,535,200	2,323,800	1,211,400	618,400
Dec.	3,435,600	2,233,500	1,202,100	768,900
Jan.	2,086,800	1,331,400	755,400	88,100
Feb.	2,089,200	1,959,800	129,400	x193,500
Mar.	2,607,000	2,240,600	366,400	x134,800
Apr.	2,824,300	2,274,400	549,900	5,500
	\$26,958,900	\$20,133,300	\$6,825,600	\$1,847,700
Inc.	\$5,906,200	\$4,058,500	\$1,847,700

x Decrease.

Average mileage in operation at Apr. 30, 7,824, against 6,974 for the same period of 1914-15.

Approximate earnings for May, \$3,088,900, against \$2,721,400 for May, 1915, and for three weeks ended June 21, \$2,254,400, against \$1,226,700 for the same period 1915.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$7,896,375.47	\$5,094,972.35	\$2,800,403.12	\$978,042.71
Aug.	8,801,351.52	5,359,136.80	3,442,314.72	79,157.02
Sept.	10,273,165.45	5,527,864.81	4,745,300.64	378,252.25

Nov.	13,351,283.51	6,996,870.48	6,354,413.03	3,710,340.86
Dec.	12,705,673.45	7,003,351.97	5,702,321.48	3,502,797.67
Jan.	8,588,826.04	6,498,417.81	2,090,408.23	954,174.93
Feb.	8,795,830.30	6,501,487.56	2,294,342.74	315,328.12
Mar.	10,380,981.98	6,959,651.62	3,421,330.36	448,315.63
Apr.	10,881,306.37	7,147,570.40	3,733,735.97	1,045,980.76

\$105,117,108.53 \$63,953,104.09 \$41,164,004.44 \$12,170,410.32
Inc. \$21,025,428.31 \$8,315,017.99 \$12,710,410.32

Approximate earnings for May, \$12,187,000, against \$6,996,000 for May, 1915, and for three weeks ended June 21, \$7,934,000, against \$4,827,000 for same period 1915.

Grand Trunk Railway Earnings.

Following are the earnings and expenses for the G.T.R., including the Canada Atlantic Ry., the G.T.W.R. and D.G.H. and M.R., for April, compared with those for April, 1915:—

Grand Trunk Railway.			
	1916.	1915.	
Earnings	\$3,585,000	\$3,200,000	
Expenses	2,344,000	2,032,800	
Net earnings	\$1,241,000	\$1,167,500	
Grand Trunk Western Railway.			
Earnings	\$ 820,700	\$ 609,250	
Expenses	671,400	590,500	
Net earnings	\$249,300	\$17,750	
Detroit, Grand Haven and Milwaukee Ry.			
Earnings	\$ 280,000	\$ 197,200	
Expenses	252,200	205,000	
Net earnings	\$27,800*	\$7,800	

*Deficit.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to Mar. 31.—			
	1916	1915	Increase
G.T.R.	\$17,128,159	\$14,971,617	\$1,157,142
G.T.W.R.	3,738,626	2,850,836	887,790
D.G.H.&M.R.	1,310,609	961,518	349,091
	\$22,177,964	\$18,783,971	\$3,394,023

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section, 916 miles, for May, were \$422,385, against \$211,772 for May, 1915, and the aggregate for five months ended May 31 was \$1,941,586, against \$1,135,445 for same period 1915.

Final Judgment in the Rogers Pass Tunnel Suit.

The case of McIlwee vs. Foley et al is of such great importance to engineers and contractors generally that we feel it important to devote considerable space to it. The plaintiffs are J. A. McIlwee & Sons, of Denver, Col., and the defendants Foiey, Welch & Stewart, to whom the C.P.R. let a contract with the defendants for boring connecting lines at Rogers Pass, B.C. In the particulars of claim published in Canadian Railway and Marine World for Dec., 1914, pg. 542, the plaintiffs set out that as sub contractors they entered into a contract with the defendants for boring a five mile tunnel, the defendants to provide tools, mules, equipment, air for ventilation and other drilling purposes and to make monthly advances on account of work done. The plaintiffs undertook to drive 900 ft. a month and were to receive a bonus of \$1,000 for every foot of tunnel driven beyond the 900 ft. a month, the total bonus to be earned not to exceed \$250,000. Work was started April 2, 1914, and so much was done that early in September plaintiffs claimed to have earned \$215,076 on bonus account. The plaintiffs allege that the defendants then began to hinder them in their work and that after considerable friction the general contractors annulled the sub contract Sept. 24. Plaintiffs' claim was made up as follows: Bonus earned, \$215,076; bonus which they were prevented from earning, \$34,924; loss of profit on contract for pioneer tunnel, \$125,325; loss of profit on contract for centre tracking, \$164,036. When the case was heard before Mr. Justice Clement, plaintiffs were awarded \$32,000 as damages, at the rate of \$600 a day unearned profits from the time of stoppage of work until Oct. 9, 1914.

Both the plaintiffs and defendants appealed from the judgment and the B. C. Court of Appeal on Aug. 10, 1915, allowed the McIlwee appeal in full with costs and dismissed defendants' appeal. A majority of the court found that McIlwee & Sons were entitled to the full amount of the bonus claimed and also to all the damages for loss of profits they could show on reference to the trial judge. Subsequently leave was granted to amend the statement of claim in accordance with this finding and this was done, the total claimed for bonus and damages being put at over \$800,000. Foley, Welch & Stewart then appealed to the Judicial Committee of the Imperial Privy Council, which has unanimously sustained the B.C. Court of Appeal's judgment.

The Privy Council's Judgment.

The appeal to the Judicial Committee of the Imperial Privy Council was heard by Earl Loreburn, Lords Atkinson, Parker of Waddington and Spenser. Earl Loreburn delivered the committee's judgment as follows:

"This is a dispute arising out of a contract between Foley Brothers and McIlwee and Sons. Messrs. McIlwee, who are the plaintiffs, agreed to construct a tunnel some 5 miles long. It would be necessary to make the tunnel from both ends. In Sept. 1914, a quarrel arose between Mr. Dennis, who was acting on behalf of Foley Brothers, and Mr. McIlwee, acting on behalf of his firm. Mr. Dennis in his haste sent a notice cancelling, at all events, part of the contract, and he also thereupon stopped the supply of air which was necessary to enable the work to continue. After some fruitless interviews, Mr. McIlwee broke up his staff, and treated the contract as ended, inasmuch as the action and the notice of

Mr. Dennis went to the very root of the contract. Their Lordships feel no doubt that the letter of Sept. 24 containing the notice and the action of Foley Bros. through Mr. Dennis justified Messrs. McIlwee in treating the contract as having been repudiated in respect of matters going to the root of it. The work was in fact discontinued by Messrs. McIlwee because of the action of and the notice that had been given by Mr. Dennis. An argument was addressed to the Board to the effect that the discontinuance of the work and the cancellation or annulment of the contract was due to a common agreement by both sides. This view seems to be quite untenable. It did not commend itself either to the trial judge or the Court of Appeal, and it is not necessary to elaborate the facts bearing upon that issue.

"Messrs. McIlwee thereupon brought an action, and certainly are entitled to damages; but an important question has been raised upon what principle those damages ought to be assessed. With regard to that matter, the trial judge, Mr. Justice Clement, and the Court of Appeal differed, and it is desirable to explain how that difference arose. The unwisdom of Sept. 24 had hardly been written, and action hardly taken, before the author of it appeared to have had some misgivings, and he wished and his principals wished that the contract should be continued. Messrs. McIlwee, for obvious reasons, were anxious to continue the contract, but seem to have been annoyed at the treatment they thought they had unjustly received. Thereupon two offers were made by Mr. Dennis on behalf of Foley Bros. He offered upon Oct. 9 that the work should be continued, and that Foley Bros. should pay damages up to date. At this time the workmen originally engaged had been discharged by Messrs. McIlwee and part of the staff—nearly all apparently—had been disbanded. Of course, the damage arising from the breach of contract might continue beyond the date of Oct. 9. Messrs. McIlwee professed to be ready to renew the contract, but were uncertain as to whether the terms of the offer included damage which might occur after Oct. 9. They could not obtain any assurance that this was intended, or that this was offered, and they would not renew the contract without being satisfied upon that point. The Court of Appeal thought this was reasonable; their Lordships agree with that view, and must regard the letter of Oct. 9 as being, to say the least, doubtful in construction.

"The second offer was made upon Nov. 10, by which time five more weeks had elapsed, and Messrs. McIlwee had now been kept from work for six weeks. The offer by Foley Bros. amounted to this—that they would pay all damage of every kind arisen or to arise from the breach, and would restore the terms of the old contract. By this time it had become necessary that considerable modifications should be made in the old contract to meet the new situation, as regards the time, for example, and other matters. Messrs. McIlwee expressed their demands in a letter of Nov. 11. If any legal adviser, by which is meant any person competent to give an impartial opinion upon this contract, had been asked in regard to this letter of Nov. 11, their Lordships think he would have said there must be considerable modification in the contract before any renewal could be advised, and

that he could not advise a renewal unless the points raised in that letter were cleared up and satisfactorily settled. In point of fact when the letter was received it was not treated as being a basis of settlement, and the offer of Nov. 10 came to nothing. The Court of Appeal thought that this was not unreasonable conduct on the part of Messrs. McIlwee, and their Lordships are not prepared in any way to differ from that opinion.

"Perhaps it would be advisable to say one or two words in view of some of the expressions that have been made use of in the judgments. Their Lordships think that the quotation by Mr. Justice Gallihier from the judgment of Lord Chief Justice Cockburn in the case of *Frost v. Knight*, L.R. 7 Ex. 111, 41 L.J. Ex. 78, truly expresses the law. The Lord Chief Justice, in speaking of the event of one person treating a contract as broken and suing at once for breach of it, says: 'He will be entitled to such damages as would have arisen from the non-performance of the contract at the appointed time * * * and in assessing the damages for breach of performance a jury will of course take into account whatever the plaintiff has done, or has had the means of doing, and, as a prudent man, ought in reason to have done, whereby his loss has been, or would have been, diminished.'

"In many cases the nature of the contract, or its circumstances may make it extremely difficult, if not impossible, to apply any such rule, but that rule of law seems applicable to all contracts where it can practically take effect. Under these circumstances, their Lordships will humbly advise His Majesty that this appeal ought to be dismissed with costs."

McIlwee & Sons' Offer.

The letter of Nov. 11, 1914 referred to in the above judgment was written by S. S. Taylor, K.C., counsel for McIlwee & Sons, to Foley Bros., solicitors as follows: "We have yours of today stating that yours of yesterday is not 'without prejudice' which, of course, also means that the letter of Foley Bros., Welch & Stewart, of Oct. 9, 1914, is also not 'without prejudice.' Our clients are, and always have been, willing and anxious to do anything within reason; their conduct in the face of Mr. Dennis' unreasonable behavior at the time of cancellation showed plainly that they were most anxious to proceed with the work. They complain most bitterly against the treatment accorded them by Mr. Dennis and even after the indefinite letter of Oct. 9, 1914, referred to above, they complain that Mr. Dennis strongly intimated to them that it would not be well for them to return to work; these peculiar things have upset their confidence, because on the one hand Foley Bros., Welch & Stewart invite them in an indefinite letter, but nevertheless in writing, to return to work, whilst on the other hand, verbally, the man who represents Foley Bros., Welch & Stewart intimates to the contrary. In view of the above, and in any event, if they are to have the opportunity to return to work there must now be a very definite understanding. My clients are unquestionably the largest tunnel contractors upon this continent, and have very large contracts elsewhere, hence are not in the position of people looking for a job, nor of those having got one to suffer to be knocked out one day and taken back the next.

"I may say that they are willing to attempt to arrive at a definite under-

standing with your clients, the basis of which will need to be somewhat as follows: 1. The present contract stands.

"2. Your clients' conduct has completely broken up the entire organization of McIlwee & Sons at Rogers Pass. Their foreman, sub-foreman and workmen are distributed all over Canada and the United States, and it will be impossible to get many of them together again. This condition existed even on Oct. 9, 1914. This means that considerable provision must be made in allowance of time to permit McIlwee & Sons to again get together an organization as efficient and capable of handling this work as the organization existing in Sept. 1914, so that the work can be carried on at the least possible cost to our client and at the greatest possible speed per month; our statement of claim herein shows that every month, by reason of their weeding out process and retaining the best men, they were able to accomplish faster and better work and at a greater profit and do more lineal feet per month, thus demonstrating all I have claimed for them. Inasmuch as this condition of affairs must again be worked up through the process of several months at great expense and disadvantage and loss, your clients must agree to pay that loss, which must be arrived at in a lump sum before we can again consider going back to work, and provision must be made for early payment of this loss. This damage, of course, will embrace all expense connected with Mr. McIlwee's own office staff and organization as well as that of his workmen.

"3. The number of feet required to be done per month before the lineal feet constituting the basis for bonus calculations shall be counted, must be less than heretofore, for such number of months after recommencing the work as will permit of the perfecting of organization, etc.; to the standard existing at the time of cancellation of the contract. The same, of course, applies to all other maximum requirements of the existing contract.

"4. Tunnel equipment conditions must be as favorable as they were during the first week of Sept., 1914, and the equipment for carrying out ventilation and the supply of power must be put in first class shape and be operated to the fullest extent reasonably required by McIlwee & Sons or any person representing them. In other words, as to ventilation, the workings must be kept clear at all times from gas and the workings supplied with pure air and no delays must occur on this account nor by reason of any lack of power. You can readily see that if our clients return to work these things could be neglected or done in such a way that it would be impossible for our clients to make any profit out of their work. There must be full, fair dealing in the future. Nothing unreasonable is asked. Our clients must be given the very best and most honest opportunity of carrying out the work at the highest pitch of speed that they are capable of. The new agreement will make ample provision for this, so that the existing agreement will be honestly and fairly carried out and not left to the quirk of any engineer.

"5. Your clients have, also, done a great deal of the rock work since the date of cancellation, which rock work was embraced in our clients' contract, and our clients have lost the profit that they otherwise would have made upon this work. This profit must be fixed and paid to them.

"6. Our clients will lose for some time

to come the rate of profit that they could have made had they not been interfered with and their organization disrupted. A definite agreement must be made to provide for this lost opportunity for profit and, as definite a sum as can possibly be fixed, must be fixed and paid.

"7. Our clients have been greatly damaged in the earning of the bonus in respect of which at the time of cancellation they show an average entitling them to \$215,000; provision must be made to protect this and the balance of the bonus, and to provide for the payment. My own opinion is that the basis for earning this bonus has been so wrecked by the action of your clients through their cancellation proceedings, that this amount should be now fixed definitely and paid. However, that can be a matter of negotiation, but I do think that it is unfair to entirely disrupt their organization upon which the earning of this bonus so directly depended and now to throw the average upon which it is based into jeopardy with an entirely new organization and under new conditions. I think it only fair that this should be disposed of finally. This item is a very heavy one and certainly

Stock Cars for Canadian Government Railways.

As stated in Canadian Railway and Marine World for February, 200 wood frame stock cars are being added to Canadian Government Railways rolling stock. The principal dimensions are:

Capacity	60,000 lbs.
Length over end sills	36 ft. 9 $\frac{1}{2}$ in.
Width over side sills	9 ft.
Height top of sill to underside of plate,	7 ft. 10 $\frac{3}{4}$ in.
Length inside	36 ft.
Width inside	8 ft.
Height top of floor to underside carlin	8 ft.
Door openings, side	5 ft.
Door opening, end	2 ft.
Distance between centre of trucks	26 ft. 9 $\frac{1}{2}$ in.

As shown by the accompanying illustration the design is of the standard construction for wood stock cars. Instead, however, of having the wood draft sills with the standard draft gear for wood cars, these cars are equipped with the Intercolonial standard metal draft arms, which are composed of steel plates and shapes rivetted together, and when applied to the cars, the capacity of the draft gear equals that of the steel frame

Stock Car for Canadian Government Railways.

must be adequately protected.

"8. Our clients must first inspect the tunnel and see the present conditions and view the work that has been done by your clients since cancellation, and also the present ventilation plant and the plant for the supply of power, the bunk houses and the boarding house accommodations, because it may be that your plant and working conditions there have so changed that our clients could not possibly hope to succeed to carry out the work profitably.

"9. Your clients must make provision for fair treatment to be accorded our clients by your engineers; in other words, you know it is difficult to anticipate everything that a person can do to hamper a contractor. All that we ask is absolute fair treatment.

"The above will give you an idea of the difficulties to be surmounted in this matter, and I am sending a copy of this letter to my clients tonight so that if you wish to further discuss the matter, we will very soon be in a position to carry on that discussion."

Canadian Northern Ry. Contractors' Suits.—Suits have been entered by the Johnston & Carey Co., railway contractors, St. Paul, Minn., against the Canadian Northern Ry. and Foley, Welch & Stewart, for \$250,000, \$19,000 and \$47,000, in respect of certain contracts for railway construction in the neighborhood of Fort Frances, Ont.

car. The cars, some of which have already been delivered, are being built by Canadian Car & Foundry Co., at Amherst, N.S.

The Pennsylvania Railroad's Elevator Buffalo, N.Y., is to be improved by an additional marine leg and extensions of the weighing and car loading apparatus so as to make it possible to unload grain from a vessel at the rate of 40,000 bush. an hour and pour it into cars out of stores at the rate of 45,000 bush. an hour.

G.T.R. employes have made a further contribution to the Canadian Patriotic Fund, of pay for one day in May, representing over \$20,000. The amount contributed at the commencement of this year, was \$135,000, and during this year, four days pay, one day each quarter, will be contributed.

Four German locomotives, originally intended for use on the Bagdad Railway, are being used on the Egyptian State Railways, having been captured, together with a German vessel, early in the war, and condemned by a prize court at Alexandria.

The Montreal Harbor Commission has it is reported decided not to proceed any further at present with the project to electrify its railway lines.

C.N.R. Toronto Employes Picnic.—The annual picnic of the Canadian Northern Ry. Toronto employes was held at Orillia, Ont., June 17.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Express, Telegraph, and Railway and Canal
Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C. E.
Managing Director and Editor-in-Chief.

Extension of Time for Installing Safety Appliances.

The Board of Railway Commissioners passed general order 166 May 29, as follows: Re general order 102, Feb. 17, 1913, prescribing Rules and Regulations Respecting Safety Appliances on railway trains, and general order 128, July 20, 1914, granting an extension of time until July 1, 1916, within which the railway companies shall make certain changes, as set forth in the order, upon reading what is filed on behalf of the railway companies it is ordered that they be granted an extension of time until July 1, 1917, within which to make the changes required under general order 128.

In a circular transmitting the order to railway companies it is stated that the Board expects rapid progress to be made with the work and that monthly reports be forwarded to its Chief Operating Officer as to the equipment of the cars.

Another Railway Construction Battalion.

J. W. Stewart, of Vancouver, B.C., of the contracting firm of Foley, Welch & Stewart, and President of the Pacific Great Eastern Ry., has been authorized by the Minister of Militia to organize a battalion of railway men for overseas service, of which he will probably have the command. The construction corps will have the same establishment as an infantry battalion, that is approximately 1,150 men, including base company. It will be organized on similar lines to that of the Canadian Overseas Railway Construction Corps raised under C.N.R. auspices. A recruiting office has been opened in the 400 Block on Homer St., Vancouver. It was reported, June 7, that about 250 men had then enlisted. The battalion will, it is stated, be mobilized at Valcartier, Que.

Grain Inspection at Western Points.

The following figures compiled by the Department of Trade and Commerce, show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division for May, and for nine months ended May 31, with a comparison of the number of cars inspected for nine months ended May 31, 1915.

	May	Nine months to May 31, 1916	Nine months to May 31, 1915
C.P.R.	17,104	152,712	56,908
C.P.R. Calgary	465	6,069	6,078
C.N.R.	8,918	80,239	36,308
G.N.R. Duluth.	160	4,845	1,344
G.T.P.R.	2,485	35,474	14,180
Totals	29,131	279,339	114,818

The Canadian Northern Ry has provided a special demonstration train for the use of the Saskatchewan Agricultural College. It contains a refrigerator car, live stock car, flat car for live stock demonstrations, boys' and girls' car, field crop production car, lantern lecture car, and household science car, and is to be used by the college to give agricultural instruction to residents along the C.N.R. lines in the province.

Russia's new railway from Petrograd to the White Sea, is nearing completion. Construction of the railway was begun last February, and the work has been executed by 10,000 prisoners, all Slavs from the Austrian army. Five hundred skilled men from Canada have also been engaged upon the fourth section. The line is single track.

Delaware and Hudson Co's Report.

The Delaware and Hudson Co.'s report for the year 1915 covers the operations of the company's collieries and steam and electric railways in the United States and its two lines in Canada—the Napierville Junction Ry. and the Quebec, Montreal and Southern Ry. The statistical statements cover the operations of the whole undertaking, but an incidental reference to the Canadian lines is made in the comments upon the finances. Specific details of the operations of the two Canadian lines, covering the year ended June 30, 1915, were given in our June issue, pg. 218.

The company operates 909.07 miles of railway in the U. S. and 232 miles in Canada. The total operating revenue for 1915 was \$23,787,519, against \$22,722,961.55; the operating expenses being \$14,823,625.67, against \$15,188,850.92; leaving a net operating revenue of \$8,963,893.33, against \$7,534,110.63. The Interstate Commerce Commission's new classification reserve, effective July 1, 1914, consequently the figures for 1914 have been readjusted in order to place them upon a comparable basis with those of 1915. Adding other sources of income, the railway department had a net income for the year of \$9,356,838.21, from which was deduced rentals, fixed charges, etc., amounting to \$4,840,953.24, bringing a net income of \$4,515,884.97, against \$3,171,457.82 for 1914. Adding thereto net income from coal mining department and from all other sources, the net income for the year was \$6,071,440.64, against \$4,609,793.85; representing 74.28 per cent., against 10.84 per cent. on the capital stock of \$42,503,000. Dividends at the rate of 9 per cent. were declared during the year, absorbing \$3,825,270. The general balance sheet shows total liabilities of \$133,803,442.88, and total assets of \$154,514,595.13, the surplus of assets being \$20,711,152.25, against \$18,773,318.34 in 1914.

The report contains the following paragraphs relating to the Canadian lines: "The Quebec, Montreal & Southern Ry. shows a decrease in operating revenues of \$47,963.04, compared with the previous year. Operating expenses decreased \$12,876.21. Income from hire of equipment decreased \$10,189.80. Net income, not allowing for interest due Delaware and Hudson Co., was \$96,188.56, a decrease of 35.47 per cent. The Napierville Junction Ry. shows an increase in operating revenues of \$9,949.74, compared with the previous year. Freight revenue increased \$11,538.07, while passenger revenue decreased \$2,129.95. Operating expenses decreased \$3,632.31. Net income was \$41,923.02, or 6.99 per cent. on capital stock outstanding, an increase of \$17,064.91, compared with the previous year. A dividend of 5 per cent. for the year 1915 was declared."

The table of securities owned by the company includes \$1,000,000 of the Quebec, Montreal and Southern Ry. stock and \$600,000 of Napierville Junction Ry. stock.

The Canadian Construction Co. has been incorporated under the Quebec Companies Act with authorized capital of \$90,000 and office at Montreal, to carry on a general contracting and construction business, and in connection therewith to own and operate quarries, railway sidings, rolling stock, etc. The provisional directors are: J. A. Beaudry, J. E. Valin, E. T. Sayers, U. Beaudry, and G. E. Couillard, Montreal.

Canadian Northern Railway Construction, Betterments, Etc.

Mount Royal Tunnel & Terminal Co.—In order to overcome a difficulty which has been raised in connection with the leasing of the Mount Royal Tunnel & Terminal Co.'s property to the Canadian Northern Ry., the Canadian Northern Ontario Ry. and the Canadian Northern Quebec Ry., an act has been passed by the Dominion Parliament declaring that the provisions of the statutes of 1914, chap. 28, sec. 1, sub. sec. 2, were intended to make and did make the whole of the rents or sums reserved or made payable under the agreement or lease therein referred to a charge upon the whole of the property, assets, rents and revenues of the lessees, parties to the said agreement or lease, the said charge ranking next after penalties heretofore or hereafter imposed for noncompliance with the requirements of the Railway Act, and in priority to all mortgages, changes or encumbrances made or created by such lessees before or after the passing of the said chap. 78, and in priority to all securities thereby secured."

Canadian Northern Ry.—Tenders are under consideration for the extension of the company's freight car shops at the west yard, Winnipeg.

M. H. MacLeod, General Manager and Chief Engineer, promised recently to have an investigation made into the proposal to build a 12 mile extension from Beulah, the present terminus of the Rapid City section, to Birtle, Man.

A contract is reported let to Shannon Bros. for remodelling of the ground floor of the station at Saskatoon, Sask., and the building of a brick extension thereto. The main part of the contract is said to involve the bricking in of the pillars at present supporting the extension of the roof over the platform at the north end of the general offices, thereby converting what is now platform space into a commodious office for the dining and sleeping car department. A wide passage will be left between the north wall of the present general office and the first pillar so that passengers will not require to go out of their way to gain access to the trains. A second platform is also to be built between the first and second tracks. It is expected that the work will be completed early in August.

The Board of Railway Commissioners has ordered the company to complete the fencing of its line east and west of Onoway, Alta.

Canadian Northern Pacific Ry.—M. H. MacLeod, General Manager and Chief Engineer C.N.R., and T. H. White, Chief Engineer C.N.P.R., have completed a trip of inspection over the route of the proposed branch line from Kamloops to Kelowna, B.C. Mr. MacLeod is reported to have told the Kelowna Board of Trade that construction would be started on the line at an early date, probably before the end of July. The branch including branch, sidings and spurs will require 140 miles of track, and will run through Armstrong and Vernon, from which point there will be a branch to Lumley. The line was located in 1913; and about 80% of the right of way is reported to have been acquired, with station sites at Armstrong, Vernon, Kelowna and Lumley.

We are officially advised that the intimation given by Mr. MacLeod, in respect to construction on this branch, was that

work would be started on some of the heavy work in the neighborhood of Kamloops in about six or eight weeks from the date of the inspection.

Vancouver Terminals.—The plans for the erection of the station building at False Creek flats, Vancouver, were received in that city June 1, and tenders for its erection were received up to June 20. A description of the building appears on another page of this issue. It is reported that the work to be done in addition to the building of the station, and for which other contracts will be let, will involve the handling of 4,000,000 cubic yards of filling, the laying of 130,000 ft. of tracks; the building of a freight shed 800 x 40 ft. and a locomotive house.

Vancouver Island Lines.—Track is reported to have been laid from Patricia Bay to near Victoria, B.C., and ballasting is being gone on with. A contract is reported let to Robertson & Co., Vancouver, for the erection of a concrete bridge over the Burnside Road, Victoria. Work has been started and is to be rushed to a completion as fast as possible. It is expected that construction will be started upon the car ferry slip at Patricia Bay at an early date. It will be 303 x 27 ft. (May, pg. 178.)

Birthdays of Transportation Men in July.

Many happy returns of the day to:

A. A. Allen, Vice President, The Holden Co., Ltd., Montreal, formerly Master Mechanic, Timiskaming and Northern Ontario Ry., born at Grafton, Ont., July 7, 1870.

J. H. Black, ex-Superintendent, Timiskaming and Northern Ontario Ry., now at Toronto, born near Smiths Falls, Ont., July 8, 1874.

M. S. Blaiklock, Engineer Maintenance of Way, G.T.R., Montreal, born at Quebec, July 19, 1859.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

H. F. Bradley, Passenger Department, H. & A. Allan, Ltd., Montreal, born at Waterville, Que., July 20, 1876.

D'Alton C. Coleman, Assistant General Manager, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

George Collins, Superintendent, Ottawa Division, Ontario Grand Division, Canadian Northern Ry., Trenton, born at Kingston, Ont., July 20, 1860.

G. C. Conn, Vice President, Pere Marquette Rd., Detroit, Mich., born at Woburn, Mass., July 1, 1867.

D. D'E. Cooper, Canadian Freight Agent, Lehigh Valley Rd., Toronto, born at Buffalo, N.Y., July 8, 1862.

John Corbett, ex-General Foreign Freight Agent, C.P.R., Montreal, born in Lanarkshire, Scotland, July 19, 1863.

H. Darling, Locomotive Foreman, G.T. Pacific Ry., Smithers, B.C., born in Northumberland, Eng., July 27, 1873.

S. E. Dewey, General Eastern Freight Agent, G.T.R., New York, born at Beckenham, Kent, Eng., July 4, 1879.

A. H. Eager, Assistant Superintendent of Rolling Stock, Western Lines, Canadian Northern Ry., Winnipeg, born at Waterloo, Que., July 15, 1868.

F. C. Foy, Canadian Passenger Agent, New York Central Lines, Toronto, born there, July 5, 1881.

J. F. Gildea, District Master Mechanic, C.P.R., Montreal, born at Strood Park, near Horsham, Sussex, Eng., July 7, 1884.

A. D. Huff, ex-Division Freight Agent, G.T.R., Ottawa, now Traffic Manager, Laurentide Co., Montreal, born at Chatham, Ont., July 17, 1866.

C. W. Johnston, Assistant General Passenger Agent, G.T.R., Montreal, born at Actonvale, Que., July 27, 1879.

M. Kelly, Resident Engineer, District 4, Ontario Division, C.P.R., Toronto, born at Thamesville, Ont. July 6, 1874.

A. E. Lock, Superintendent Car Service, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., born at Albany, N.Y., July 14, 1879.

G. A. McNicholl, Assistant General Freight and Passenger Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Montreal, July 31, 1876.

H. D. Mackenzie, District Master Mechanic, Intercolonial Ry., Stellarton, N.S., born at Churchville, N.S., July 22, 1864.

T. J. Maguire, Accountant, Quebec Central Ry., Sherbrooke, Que., born at Quebec, July 31, 1860.

W. G. Manders, General Freight Agent, Western Lines, Canadian Northern Ry., Winnipeg, born at Owen Sound, Ont., July 24, 1876.

J. E. Morazain, Superintendent, District 1, National Transcontinental Ry., Quebec, Que., born at Wheatland, Que., July 31, 1875.

R. E. Perry, Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., born at Drayton, Ont., July 5, 1876.

R. Preston, Assistant Superintendent of Motive Power, Western Lines, C.P.R., Winnipeg, born at Toronto, July 28, 1863.

J. E. Quick, General Baggage Agent, G.T.R., Toronto, born at Richmond, Ontario Co., N.Y., July 10, 1851.

G. G. Ruel, Chief Solicitor, Canadian Northern Ry., Toronto, born at St. John, N.B., July 5, 1866.

George Stephen, Assistant Freight Traffic Manager, Western Lines, Canadian Northern Ry., Winnipeg, born at Montreal, July 5, 1876.

Sir Thos. Tait, President, Fredericton and Grand Lake Ry. and Coal Co., Montreal, born at Melbourne, Que., July 24, 1864.

G. A. Walton, General Passenger Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, July 17, 1881.

Increased Working Hours in Intercolonial Ry Shops.—Commencing June 1 the working hours in the I.R.C. shops at Moncton, N.B., were fixed as from 7 a.m. to 6 p.m., with one hour for dinner, daily, except Sunday. That is one hour of overtime each day for five days, and two hours on Saturday. It is stated that the extra hours are necessary owing to the general conditions. During the winter traffic was very heavy, and with the difficulty of securing and holding mechanics it has not been possible to keep the rolling stock up to requirements.

The Engineers' Club of Montreal shows a net profit for the financial year ended Mar. 31, of \$12,805, which has been applied to writing off portions of the general equipment accounts. The balance sheet shows assets of \$281,000 with liabilities of \$91,000. There are 515 members, of whom, 19 are on active service overseas. Four members were killed in action during the year. The President of the club is H. Holgate, and R. W. H. Smith is Secretary.

No. 1 Construction Battalion for Overseas Service.

Considerable information about the No. 1 Construction Battalion which is being raised by Lt. Col. Blair Ripley, M.Can. Soc.C.E., heretofore Engineer of Grade Separation, C.P.R., Toronto, was given in Canadian Railway and Marine World for June. In addition to the appointments then mentioned four supernumary lieutenants have been taken on as follows:

F. A. R. McNair, of the City Works Department, Toronto. He has been connected with the roadways branch for some years and has had charge of considerable roadway and paving work.

C. M. Saul, of Montreal, a civil engineer who served his time in Scotland. During the past three years he has been with the California Highway Commission, his special line of work being paving and roadway construction.

The Late James Jerome Hill.

The death of J. J. Hill, at one time President, and later Chairman, Great Northern Ry., took place at St. Paul, Minn., May 29, too late for an announcement to be made in our June issue. He had been in indifferent health for some little time, but his death was not anticipated until within the last few days of the month.

He was born at Rockwood, near Guelph, Ont., Sept. 16, 1838, and attended school there until he was 14 years old, when his father died, and he worked at the village store. In 1856 he obtained work at St. Paul, Minn., as a shipping clerk, and in 1865 was appointed agent for the Northwestern Packet Co., at St. Paul, and two years later, local agent for the St. Paul & Pacific Ry., running a short line between St. Paul wharf and St. Anthony's Falls. During this period he began a friendship

considerable knowledge of the mineral resources of those regions. In the meantime some extensions had been made to the St. Paul & Pacific Ry., as far as the Red River, but owing to bad management, it deteriorated until in 1873 it became bankrupt. Again in conjunction with N. Kitson, he organized a syndicate to acquire the property, and through Donald A. Smith, then chief representative of the Hudson's Bay Co. at Winnipeg, later Lord Strathcona, enlisted the support of George Stephen, then President, Bank of Montreal, later Lord Mount Stephen, and purchased the property for about 40% of the par value of the outstanding securities. The company was reorganized in 1879 as the St. Paul, Minneapolis & Manitoba Ry. with George Stephen as President, and J. J. Hill as General Manager. In the late seventies the line was extended to the International Boundary at St. Vincent, Minn., where it connected with the line built from the other side of the boundary at Emerson Minn., to St. Boniface, opposite Winnipeg, by the Dominion Government and which was known as the Canadian Pacific Railway, Pembina Branch. In 1881 he became one of the members of the syndicate formed to take over from the Dominion Government the portions of the C.P.R. which were completed and under construction, and he was one of the first directors of the C.P.R. Co. Wm. C. Van Horne, afterwards Sir Wm. C. Van Horne, being selected as the first General Manager on his recommendation at the end of 1881. He only remained on the C.P.R. board for a comparatively short time, devoting his energies to the St. P.M. & M.R., and in 1882 he was elected its Vice President, and in 1883, President, when he relinquished his holdings in the C.P.R., and confined himself exclusively to the upbuilding of the system of railways now known as the Great Northern, and also becoming largely interested in the Northern Pacific, and the Chicago, Burlington & Quincy. This, it is claimed, was accomplished without any Government aid in cash, and with only 3,675,000 acres of land as a grant. He retired as President, G.N.R. in 1907, and was for a short while Chairman of the Board.

Recruiting Car No. 1 Construction Battalion, Canadian Expeditionary Forces.

The car shown above is being used in Toronto for recruiting for No. 1 Construction Battalion, which is being raised by Lt.-Col. Blair Ripley, M.Can.Soc.C.E., until recently Engineer of Grade Separation, C.P.R. Toronto, and full particulars of which were given in Canadian Railway and Marine World for June. The car has been loaned by the Toronto Ry., and was decorated by men of the battalion. Lieut. G. Fleming, son of R. J. Fleming, General Manager, Toronto Ry., is in charge of recruiting for the battalion.

Leslie B. Allen, civil engineer of the City Works Department, Toronto, who has had a number of years experience in paving and roadway work.

R. W. H. Palmer, of St. Catharines, Ont., a civil and mining engineer and a retired captain of the Imperial Army.

No appointment of major has been made and this office will probably remain unfilled until the battalion reaches England.

While the enlistment has not proceeded as rapidly as was expected, it is said that the battalion is filling up faster than any of the infantry battalions, the strength being already over 500, with indications that the balance necessary to complete the full force, 1038 officers and men, will be secured quicker than the first half.

It is not intended to give the men much drill, in fact not more than is necessary for the purpose of obtaining discipline and fitting them for moving about from place to place with expedition.

and later entered into partnership with Norman Kitson, who ran an ox wagon and sledge service to Winnipeg, and obtained practical knowledge of the conditions of the northwest on trips to and from Winnipeg. He also built up a business at St. Paul, supplying fuel to steamboats, and this developed into the firm of Hill, Griggs & Co., and later, the Northwest Fuel Co., and in connection with this business, he brought the first boat load of eastern coal to St. Paul from Peoria, Ill., by way of the Illinois & Mississippi Rivers. In 1870, in partnership with N. Kitson, he organized the Red River Transportation Co., and built two vessels, which, in connection with the stage route, established the first through service between St. Paul and Winnipeg. While he was acting as railway agent, it was part of his duty to pilot the scientists Louis and Alexander Agassiz through the Red River and Lake Superior districts, and while with them he gained

Pullman Co.'s Profit Sharing Plan.

The directors have set aside 5,000 shares of stock, which will be sold to employees at \$155, which is about \$10 below current market price. The employees will make deferred payments, and only those who have been in the company's service over one year will be allowed to purchase. An employee will be allowed to purchase one share for each \$500 of his annual pay, or portion thereof, up to 25 shares for those having a salary of \$12,000. Payments will be at the rate of \$4 a month per share. Interest will also be paid on the deferred payments, at not more than 4%, and the purchaser will receive dividends from the date of his purchase.

Too Forceful Ejection From Train.

The Supreme Court of Canada in giving judgment in the appeal case of Diplock against the Canadian Northern Ry. has decided that the company's servants must not use undue force in ejecting trespassers from its premises or trains. The plaintiff was beating his way from Saskatoon to Regina in company with another man. In the altercation the company's brakeman kicked the second man, knocking him against Diplock, who fell off the train, with the result that he lost a portion of his foot. The jury awarded him \$1,000 damages, which award has been affirmed.

St. John and Quebec Railway Construction and Operation.

The Dominion Parliament has passed an Act providing aid for the building of the St. John & Quebec Ry., and to confirm an agreement between the company, and the Governments of Canada and of New Brunswick. The Act, in the first place, repeals the statutes of 1912, chap. 49, and the statutes of 1914, chap. 52, these being the Acts confirming agreements for subsidizing the building of the line up to \$6,400 a mile, the building of three bridges across the St. John and Kennebecasis Rivers by the Dominion Government, and for the operation of the line as a branch of the Intercolonial Ry., on the division of the gross receipts in the proportion of 60% for the I.C.R., and 40% for the New Brunswick Government. The Act further authorizes the Minister of Railways to enter into an agreement (set out in a schedule); provides that the Government Railways Act, and the Acts heretofore or hereafter passed amending the same, shall extend to the lines operated under the agreement, and that any expenditure made under the Act and of the agreement shall be paid out of the Consolidated Revenue Fund. The second part of the Act provides for the granting of a subsidy up to \$6,400 a mile, for a railway from Andover to Centreville, 26 miles; from Centreville to Gagetown, 120 miles, and from Gagetown to Westfield on the C.P.R., 45 miles, in lieu of the subsidies granted in 1913, and that any sums paid under the Railway Subsidies Act of 1913, shall be considered as having been paid under this Act. It is also provided that any portion of the company's line constructed on lands acquired by purchase or lease from the C.P.R. in or near Fredericton, may be included for the purpose of the subsidy as part of the total length of the company's line.

The schedule to the Act contains the agreement made between the Department, the New Brunswick Government and the company. This agreement cancels the former agreement made Mar. 5, 1912, respecting the leasing of a line from a junction with the National Transcontinental Ry. at Grand Falls to St. John, at a rental of 40% of the gross receipts, and substitutes therefor a new agreement providing for the leasing of the line in sections as built, upon terms to be agreed upon, and for the leasing of the whole line when completed within the time limits mentioned—Aug. 1, 1917, as for the line from Gagetown to the C.P.R. at Westfield, and Dec. 1, 1919, as for the section from Centreville to Andover—at a rental of 40% of the gross proceeds, payable to the New Brunswick Government. This rental is to be used by the New Brunswick Government to pay interest and sinking fund on the bonds issued for the construction of the line, to which the guarantee of the Province has been affixed. The total bond issue is not to exceed \$35,000 a mile; and any sum remaining after the bond issue has been provided for is to be paid over to the company. The agreement for the operation of the completed line from Centreville to Gagetown, is to date from April 1, 1915. The Dominion Government is to provide the necessary rolling stock for the operation of the line. The company is authorized to build certain portions of its railway in Fredericton upon Dominion lands, upon terms to be fixed by the Dominion Government. The company undertakes to purchase or lease from the C.P.R. suffi-

cient right of way from near the Victoria Station in Fredericton to the Intercolonial Ry. Y connection with the C.P.R., 133 miles; and to acquire by lease running rights over the C.P.R. and the St. John Bridge & Ry. Extension Co.'s from Westfield into St. John, upon terms and conditions to be approved by the Dominion and New Brunswick Governments. The expenditures by the Dominion Government for additional track, sidings, yards, buildings, alignments and grade revisions and other facilities required for the economic and efficient handling of traffic on the line, shall be repaid by the Dominion out of any part of the gross earnings received by the company, or by debentures secured by mortgage on the railway at 4%, but no such expenditure shall be made without the consent of the company, or an order of the Board of Railway Commissioners. Differences are to be submitted to arbitration, the Dominion Government being one party, and the Province of New Brunswick and the company the second party. In the event of anything arising which is not provided for, the matter shall, on the application of either party, be submitted for decision to the Board of Railway Commissioners.

Appended to the agreement are the specifications for the construction of the line.

The New Brunswick Legislature, on April 29, passed an Act respecting aid to the St. John Valley Ry., the provincial title of the company by which the railway known to the Dominion Parliament as the St. & Quebec Ry. is being built. The measure ratifies the agreement referred to above with the Dominion Government. The Premier informed the Legislature that the cost of the completed section of the line from Centreville to Gagetown, 120.3 miles, had been \$37,153 a mile. The Act authorizes the construction of the line from Gagetown to the C.P.R. at Westfield, and from Centreville to Andover, the Province to guarantee the bonds of the company, which is now controlled by the Province, for \$35,000 a mile. The question of the building of a line from Andover to Grand Falls to a connection with the National Transcontinental Ry., was held over for further consideration, as also was the proposition to make a connection with the Maine Central Rd.

A contract for building the 40 mile extension from Georgetown to Westfield on the C.P.R., has been let to the Nova Scotia Construction Co., in which T. Cozzolino is interested, and of which H. Lindsay is Managing Director. F. W. Sumner, Chairman of the Board of Directors of the Ry., is reported to have said that the contract figure is considerably lower than the price originally submitted. There was one other tender submitted. The work is to be sufficiently advanced by Feb. 1, 1917, to allow trains to pass over the section with safety, and the contract is to be completed by Aug. 1, 1917.

The Premier of New Brunswick, referring to the letting of the contract, June 8, is reported to have said that the delay in reaching a definite decision as regards the route was due to the fact that a final decision had not been reached on some sections on which there were conflicting surveys. There were portions of the route as to which there was no doubt and work on these would be gone on with at once.

Subcontracts are reported as follows: From Gagetown south, 10 miles, Smith &

Merrithew; next ten miles, Lynch and Gorman; next ten miles, Poupore Bros.; next 10 miles to Westfield, Kennedy & McDonald. (May, pg. 183.)

Railway Finance Meetings, Etc.

Canada Southern Ry.—At the annual meeting at St. Thomas, Ont., June 7, the following were elected directors for the current year, and also for the Niagara River Bridge Co., and the Niagara Grand Island Bridge Co.: J. E. Brown, C. M. Depew, H. B. Ledyard, W. H. Newman, F. W. Vanderbilt, W. K. Vanderbilt, W. K. Vanderbilt, Jr., and E. A. Wicks.

Central Vermont Ry.—The Massachusetts Legislature has authorized the C.V.R., a G.T.R. subsidiary, to acquire any or all of the Southern New England Ry.'s stock.

Guelph Jct. Ry.—The amount paid over to the city of Guelph, Ont., May 30, as the result of the operations of the Guelph Jct. Ry. for the previous quarter, was \$9,775, an increase of about \$1,600 over the same quarter in 1915. The amount received represents about 5% on the stock the city holds.

Temiscouata Ry.—Net earnings for March, \$199. Aggregate from July 1, 1915, to Mar. 31, \$24,346.

Toronto Belt Line Ry.—The annual meeting was held at Toronto, June 13. Following are the board for the current year:—E. J. Chamberlin, President; H. G. Kelley, Vice President; Frank Scott, Secretary-Treasurer; and J. E. Dalrymple.

Toronto, Hamilton & Buffalo Ry.—The Dominion Parliament has confirmed an agreement made between the company, the Michigan Central Rd., the Canada Southern Ry., the New York Central Rd., the C.P.R. and the Trust Co., dated Feb. 1, making certain traffic arrangements for 50 years, and providing for the guarantee of consolidated mortgage bonds to be issued by the company.

The Vancouver Transportation Club's members have inaugurated what they call the Social and Educational Ry, under which title its meetings are being conducted. The first of the series was held at the club rooms, 553 Granville St., May 26. The honorary officers of the club are: President, R. Marpole; first vice president, D. E. Brown; second vice president, R. W. Brodie; third vice president, W. A. Powers. The other officers are: President, J. A. McFaulds; vice president, J. K. Burns; second vice president, C. E. Lang; secretary treasurer, H. W. Schofield; directors, J. W. Nutt, A. Whitnall, A. Brostedt, A. L. Clements, J. A. Archer, C. E. Jenney, and C. E. Whitelock. The membership has reached 150, of whom about 100 were present at the inaugural meeting.

Fort William Terminal Development Co.—Superior Terminal Co.—A company with this title has been incorporated under the Ontario Companies Act, with authorized capital of \$250,000, and offices at Fort William, to deal in lands, buildings, etc. The provisional directors are A. J. McComber, G. A. McTeigue, and Miss E. E. Allen. These directors, with the addition of Miss L. McComber, are named as directors of the Superior Terminal Co., which was incorporated under the Ontario Companies Act, on the same day, with authorized capital of \$250,000 and offices at Fort William, Ont., to carry on grain elevator business in connection with a grain growing, buying and milling enterprise.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta & Great Waterways Ry.—We are officially advised that track has been laid to mileage 203 on the railway, which starts from a junction with the Edmonton, Dunvegan & British Columbia Ry., at Carbondale, Alta., mileage 14.4 out of Edmonton. (Mar., pg. 106.)

Blomidon Ry.—The Nova Scotia Legislature has extended the time for the construction of this projected railway, which is to be operated by steam, electricity or any other motive power, from Canning, on the Dominion Atlantic Ry. Cornwallis branch, to Cape Blomidon, with branches to Cape Split, and from Canning to Wolfville. (Oct. 1911, pg. 935.)

Dominion Government Ry. to Hudson Bay.—The Dominion Parliament at its recent session appropriated \$3,000,000 to carry on construction work on the railway, and on the terminals at Port Nelson, Man.

Construction is reported to have been restarted all along the line for the season, and it is fully expected that track will be laid by the end of the season to the Kettle Rapids, mileage 332 from Pas, Man.

Tenders are under consideration for the supply of hardware supplies for the Port Nelson terminals, and for the supply of hardware supplies for the Port Nelson terminals, and for the supply of provisions for the construction staff there. (June, pg. 219.)

Grand Trunk Ry.—Acting Superintendent McMillan attended a special meeting of the Lindsay, Ont., Town Council, June 8, to confer with that body as to the creation of a new locomotive house and machine shop there. The plans for this work were prepared some considerable time ago, but the outbreak of the war in 1914, caused a delay in taking action. Mr. McMillan is reported to have said that it was expected the work would be started at a very early date. It was proposed to put up a 20 stall locomotive house, built in circular style, so that it could be extended when circumstances warranted it. The biggest type of locomotives in use would be seen on the division before long. Besides the locomotive house a mechanical coal chute would also be constructed as well as a machine shop 50 x 100 ft. It was the intention of the company to erect the locomotive house between Angeline and Adelaide Sts., and between the railway and line fence in order that it might face Adelaide, but owing to the fact that there was only 220 ft. of land, it was decided to put its back to the north. The company as a result of these plans would have to carry four tracks across Adelaide St. at this point, and the consent of the council would have to be obtained before the tracks could be laid. The company would also have to build an extra water tank, which meant that they would get more water from the town. Consideration is being given to the matter by the council.

We have been advised by an officer of the G.T.R. that, so far as he is aware, there is no intention on the company's part to erect a new roundhouse or other buildings at Lindsay, Ont.

Plans are being prepared for the erection of two coal chutes at London, Ont., which hit is said will cost approximately \$40,000.

Edmonton, Dunvegan & British Columbia Ry.—Preparations for construction for the season are reported to be well forward. The new construction will cover a 54 mile extension from the present

terminus at Spirit River, to the B. C. Block, passing through the Pouce Coupe Prairie district. A sub-contract was reported let to W. T. Craig, Winnipeg, for the first six miles, June 2; and other sub-contracts were being arranged with G. Webster, J. Timothy, F. V. Riley and A. McGregor.

The finishing up of the line to Spirit River, including station and other buildings, etc., will be completed, and the ballasting and finishing up of the branch from Spirit River to Grande Prairie, will also be done this season.

It is reported that funds for the carrying on of the season's operations were secured by the deposit of \$2,420,000 of 4½% bonds, guaranteed by the Province of Alberta, with Chicago and Cincinnati bankers, on terms netting the lenders 5½%. (May, pg. 183.)

Great Northern Ry.—The company's officers have informed the Vancouver City Council that the contract for the building of the station at False Creek flats, let to Grant Smith and McDonnell Co., is on a percentage basis; that all employees are citizens of Vancouver; that they are being paid the current rates of wages, and that as far as possible all materials will be purchased in British Columbia. (June, pg. 222.)

Grand Trunk Pacific Ry.—A press report states that a grading outfit left Moose Jaw, May 27, for Gilroy, the end of track on the Regina-Moose Jaw-Gilroy line, to start grading for the extension of the line to the Saskatchewan River at Riverhurst, Sask.

The G.T.P.R. has deposited with the Minister of Public Works at Ottawa, description of the site and plans of a warehouse at Prince Rupert, B.C., in front of water block G., approval of which is required under the Navigable Waters Protection Act. (May, pg. 182.)

High River, Saskatchewan & Hudson Bay Ry.—The Dominion Parliament has extended the time for building this projected railway from any point in Tps. 25 to 28, range 1, west 4 meridian Alberta, to Saskatoon, Sask., to the Saskatchewan-Manitoba boundary between Tps. 52 and 56, and on to Pas, Man. (Mar., pg. 106.)

Intercolonial Ry.—In connection with the subway improvements completed recently on Main St., Moncton, N.B., the station platforms are being extended easterly to the subway. Tenders are under consideration for the erection of a viaduct, station building and train shed at Levis, Que., to replace the station destroyed by fire about a year ago. The plans for the building have been prepared by Ross & McDonald, Montreal. It is expected that building will be started early in July, and rushed as fast as possible. (July, pg. 231.)

Manitoba & Ontario Ry.—The application to the Dominion Parliament for the incorporation of a company with this title was withdrawn before the bill reached a third reading. (Feb., pg. 51.)

Margaree Coal & Ry. Co.—The Nova Scotia Legislature has extended the time for the construction of the company's projected railway from the Intercolonial Ry. near Orangeville to St. Rose, N.S., 46 miles, and from the Intercolonial, near McIntyre Lake, to Caribou Cove, Port Malcolm, N.S., four miles. (July, 1913, pg. 331.)

Michigan Central Rd.—A press report states that the company is planning to

erect a steel bridge across Bear Creek, near Enniskillen, Ont., at an estimated cost of \$60,000. There is no station named Enniskillen on the M.C.R. in Ontario, and the only place of the name in the province we know of is a post office near Burketon Jct., on the C.P.R. (June, pg. 223.)

Michigan Central Rd.—L. J. McKee, Superintendent, St. Thomas, Ont., an another official visited Sarnia, Ont., June 15, and was interviewed by a deputation to urge the transfer of the present terminals at Courtright to Sarnia. The officials went over the whole waterfront, made considerable enquiries, and informed the deputation that the matter would be carefully considered. (June, pg. 222.)

Montreal Central Terminal Co.—C. N. Armstrong, President, addressed the Builders' Exchange members in Montreal, June 2, on the company's terminal project. He said it would cost in the neighborhood of \$40,000,000, which would be furnished by U. S. financiers. The proposed station site would be from Bleury St. to St. Lawrence Boulevard, and Vitre St. to Lagauchetiere St., the building of which would necessitate the entire re-erection of Vitre and Lagauchetiere streets from Victoria Square to St. Denis St. The proposed station would have 10 lines of railways running into it. There are nine railways coming into Montreal now, but another company is planning to extend its tracks to this city. The station would be larger than the Pennsylvania Rd. station in New York and would be large enough to handle three times as many trains a day as go in and out of the C.P.R. Windsor St. station. On the west side of the building it would be necessary to expropriate the whole of St. Antoine St. Connection would be made with the Harbor Commissioners' tracks, both at the east and west, and a short line would also be built to give a connection at Fulham St. The present stations at Windsor St., Place Viger and Bonaventure would be maintained for freight purposes, and the train level in the station would be the same as the present level of the G.T.R. The main entrance to the station would be on Lagauchetiere and Vitre Sts., but approaches would also be provided from Bleury and St. Lawrence streets. The traffic into and out of the station would be operated by electricity. The tunnel under the St. Lawrence river would run from the Laurier pier in Hochelaga, to the G.T.R. wharf at Longueuil. From there a belt line would run around to the C.P.R. Lachine bridge by which it is proposed to enter the city on the western side to save the present construction of another bridge. The company's plans had been submitted to the Board of Railway Commissioners, and the Montreal Board of Control was preparing a report on them for submission to the council.

It was stated to the meeting that both the C.P.R., and the G.T.R. are opposed to the project. Controller Villeneuve is reported to have said, June 9, that while no railway could enter the city and use its streets would out the consent of the Board of Control and the City Council, the Board of Railway Commissioners was the principal body which should pass upon the proposal. (June, pg. 223.)

National Transcontinental Ry. Tenders will be received by the Railways Department, Ottawa, up to July 4, for

the construction of reinforced concrete foundations, on wood piles or concrete piles, for a 1,000,00 bush. storage capacity grain elevator, working house and track shed at Transcona, Man.

Pacific Great Eastern Ry.—The British Columbia Legislature has authorized the raising upon treasury bills or notes, or by the issue of British Columbia stock, of \$10,000,000, bearing interest at 4½%, and to be redeemable not later than June 30, 1941, out of which the Government is authorized to advance to the P.G.E.R. \$6,000,000. In consideration of this loan the company is to transfer to the Government, free of any liability whatever, \$2,000,000 of its share capital; it shall pay the cost of placing the loan; shall pay 4½% interest half yearly, and provide for the repayment of the principal before June 30, 1926. The money advanced is to be expended upon the construction of the company's railway, under the Government engineers' supervision. Security for the repayment of the loan is to be given by a mortgage upon the company's entire undertaking and lines, the mortgage to rank next after the securities issued under chaps. 34 and 36 of the statutes of 1912, and chap. 65 of the statutes of 1914, and to assign to the Government \$10,250,000 of the company's share capital, in addition to the \$2,000,000 provided for to be absolutely transferred. Any bonus granted by the Dominion, the City of Vancouver, or the town of Prince George, is to be paid over to the Government. The P.G.E. Development Co. is to be joined as a party to the transaction by the deposit of 49% of its share capital, and that the Government is to control the price and conditions of sale of the company's lands, and after the cost of subdivision and sale have been paid, one half of the proceeds is to be paid to the Government, on account of the repayment of the loan.

The Premier, in bringing the matter before the Legislature, stated it was clear that it was the Government's duty to assist with its credit in the completion of the railway. Failure to finish the line this year would mean a loss of \$2,000,000, being \$1,000,000 in road bed depreciation, and another \$1,000,000 for interest. If the province did not come to Foley, Welch & Stewart's aid that firm could not raise the money for the early completion of the line. The road would be valuable in bringing out wheat from the Peace River country, and some of the territory lying east in Alberta. The P.G.E. should also be finished as early as possible to give access to the Prince George district. Foley, Welch & Stewart could finish the line more expeditiously and more cheaply than any other firm, and it would be unwise to endeavor to cancel the contract they held, in favor of any one else.

D'Arcy Tate, Vice President, is reported to have said in an interview, June 5, that construction on the line had been resumed. Track laying had been restarted at the present end of track at Clinton, with the steel on hand. It had been found that comparatively little damage had been done during the exceptionally severe winter to the sections graded. It is expected that 40 miles of additional steel will be laid at once from stock. Preparations for building bridges on the section graded from Clinton towards Fort George, and from Fort George towards Clinton, and supplies and plant are being got ready for transport on the 24.5 miles of grading to be completed near the Horse Lake Summit. The total distance from Clinton to Fort George is 263.5 miles. Orders are reported to have been placed

for 4,000,000 ft. of lumber for use in trestles and bridges.

In connection with the building of the line from North Vancouver to Squamish, a public meeting was held May 31, to consider the advisability of having the company's tracks removed from the water front to the Esplanade. Property owners are willing to grant additional land for public purposes if the project can be carried out. (May, pg. 183.)

Quebec Bridge.—It is said that an announcement will be made at an early date as to when the connecting span to join the two arms of the central span of the bridge will be floated into position. The pontoons to carry the span are reported to be nearly ready at Sorel. The span itself is well advanced to completion at the shore shops. The north arm of the span is completed, and but little work remains to be done on the north arm. (June, pg. 223.)

The Regal Collieries are reported to have made considerable progress with the development of some coal mines near Taber, Alta. Among the works being carried out is the building of a spur track from the old Eureka mine, north of the town, to the C.P.R. Grading was reported completed June 6, and the men were working for the delivery of the steel to begin track laying. W. A. Aubin and W. E. Bullock, Taber, are interested in the project.

Toronto, Hamilton & Buffalo Ry.—Grading on the extension of the Smithville-Dunnville branch from the latter point to Port Maitland, is reported to be well advanced. Bridge and culvert work is being gone on with and it is expected that track laying will be started at an early date.

The company is making application to the Minister of Public Works, under the provisions of the Navigable Waters Protection Act, for approval of site and plans for a car ferry dock and slip at Port Maitland, in front of lot A of what was formerly the naval reserve lands. (June, pg. 223.)

Toronto Terminals Ry. Co.—Rapid progress is being made with construction on the new union station on Front St., Toronto. The whole of the concrete foundation work is practically completed. This comprises the putting in of about 500 concrete bases down to rock bottom, and necessitated the use of 5000 cubic yards of concrete. The sub-basements are from 25 to 30 ft. below the street level. The steel work for the superstructure is being rapidly erected, and it is expected to have it completed about the end of July. In this frame work there will be about 30,000 pieces of steel having a total weight of 5000 tons. Four large derricks are being used to handle the material. (April, pg. 139.)

Vancouver, B.C.—A press report states that the Vancouver, B.C., Harbor Board is planning a terminal railway system to link up the Kitsilano Indian reserve with the water front area on Burrard Inlet.

Damage Suit Against the C.P.R.—Judgment was given by Justice Clute recently in the action brought by O. E. Fleming against the C.P.R. to recover \$30,000, present and future damage to gravel beds on the Attrill estate, near Goderich, Ont., caused by the building of a bridge on the Guelph and Goderich Ry. Judgment was given for the plaintiff, with damages to date of judgment of \$600, and in default of either party within 30 days, asking for a reference, all future damages are fixed at \$3,500.

Traffic Orders by the Board of Railway Commissioners.

Charges for Heated Refrigerator Cars.

24994. May 22. Re tariffs of the railway companies showing charges for use of heated refrigerator cars; and order of 24680, Jan. 27, 1916, suspending such tariffs in eastern Canada and from eastern to western Canada. The companies having filed tariffs covering similar service in western Canada, and from western to eastern Canada, it is ordered that the following tariffs showing charges for the use of heated refrigerator cars be suspended pending hearing by the Board, viz.: Canadian Pacific, C.R.O. no. W.2155, C.R.C. no. W-2156, C.R.C. no. 326, C.R.C. viz.: Canadian Pacific, C.R.C. no. W.2155, C.R.C. no. 83; Grand Trunk Pacific, C.R.C. no. 157, C.R.C. no. 158; Canadian Northern, C.R.C. no. W-934, C.R.C. no. W-936.

Mining Students' Rates from Montreal to British Columbia.

25066. June 15. Re orders 12829, Jan. 26, 1911, and 21375, Feb. 17, 1914, authorizing the C.P.R. to grant a special rate of \$40 per capita to a party of mining students from Montreal to Rossland, Phoenix, and Greenwood, B.C., and return or at a rate of \$50 per capita from Montreal to Vancouver and return, including side trips to Rossland, Phoenix, and Greenwood. Upon reading what is filed on behalf of the C.P.R., it is ordered that orders 12829 and 21375 be rescinded.

Interswitching to East End Cattle Market, Montreal.

25074. Re general order 11, July 8, 1908, known as the General Interswitching Order, and the complaint of S. J. Wallace of Beachburg, Ont., that the C.P.R. refused to accept from the Canadian Northern Ry. and switch to the East End Cattle Market in Montreal, a carload of cattle shipped by the complainant via Canadian Northern Ry. from Beachburg to Montreal. Upon hearing the complaint at Ottawa, May 17, 1916, in the presence of counsel for the Canadian Pacific and Canadian Northern Railways, the Montreal Board of Trade and the Canadian Manufacturers' Association being represented at the hearing, and upon reading the written submission filed on behalf of the Canadian Northern Ry. and the report of the Chief Traffic Officer of the Board, it is ordered that, independently of the said General Interswitching Order, and pending the adjustment of the entire switching question, now before the Board, the toll of the C.P.R. for switching live stock from its connection with the Canadian Northern Ry. at Montreal to the East End Cattle Market in Montreal, be \$5 a car. That the C.P.R. be directed to accept such traffic from the Canadian Northern Ry. and perform the necessary switching service over its line to the East End Cattle Market in Montreal, at the toll herein provided.

Master Boiler Makers' Association.

The following officers were elected at the annual convention at Cleveland, Ohio, recently: President, D. B. Lucas, C. B. & Q., Havelock, Neb.; First Vice President, J. B. Tate, Pennsylvania, Altoona, Pa.; Second Vice President, C. P. Patrick, Erie, Cleveland, Ohio; Third Vice President, T. Lewis, Lehigh Valley, Sayre, Pa.; Fourth Vice President, T. P. Madden, Missouri Pacific, St. Louis, Mo.; Fifth Vice President, E. W. Young, C.M. & St. P., Dubuque, Iowa; Secretary, H. D. Vought, New York, and Treasurer, F. Gray, Chicago and Alton, Bloomington, Ill.

Mainly About Railway People Throughout Canada.

S. H. Reynolds, Chairman of the Great Winnipeg Water District Commissioners, died suddenly at Chicago, Ill., June 16.

Lieutenant Wanklyn, who was killed in action in Belgium recently, was a son of F. L. Wanklyn, General Executive Assistant, C.P.R., Montreal.

Thomas Cantley, President, Nova Scotia Steel & Coal Co., has been elected President of the Canadian Manufacturers Association.

A. L. Mohler, President, Union Pacific Rd., will retire from active service on July 1, but will continue to be identified with the system in an advisory capacity.

Baron Shaughnessy left Montreal June 20, with Lady, the Hon. Marguerite, and Mrs. W. J. Shaughnessy, for his summer place, Fort Tipperary, St. Andrews-by-the-Sea, N.B.

T. Duff Smith, Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, has been elected a member of the executive committee of the International Railway Fuel Association, for two years.

F. C. Salter, European Traffic Manager, G.T.R. and Canadian Express Co., London, Eng., has completely recovered from his recent serious illness, and has resumed his full duties.

George Strubbe, City Ticket Agent, Canadian Government Railways, Montreal, committed suicide by shooting, June 1. He is stated to have become mentally unbalanced through business worry.

Howard Brown, a gunner in the Canadian Field Artillery, and son of M. H. Brown, Division Freight Agent, C.P.R., Toronto, who was first reported missing, is a prisoner at Dulmen, Westphalia.

W. M. Godsoe, heretofore Superintendent of Telegraphs, Atlantic Division, C.P.R., St. John, N.B., is on a trip to the Pacific Coast, before entering on his new duties as Commercial Representative, Halifax, N.S.

J. L. Higgins, foreman boiler maker, Prince Edward Island Ry., Charlottetown, who retired recently on the pension fund after 40 years service, was presented with a gold watch, chain and fob by his associates.

Lt. Col. Chas. H. Mitchell, B.A.Sc., M. Can. Soc. C.E., who has been overseas in the Canadian Expeditionary Forces since the early stages of the war, has been made a member of the Distinguished Service Order.

Lieut. T. B. Saunders, of the 74th Battalion, Canadian Expeditionary Forces, who was killed in action early in May, was the eldest son of Dyce W. Saunders, K.C., one of the Michigan Central Rd.'s solicitors at Toronto.

Mrs. G. McL. Brown, wife of the European Manager, C.P.R., presided at a Canadian dinner at the Ladies' Lyceum Club, Piccadilly, London, Eng., recently, at which Canadian officers and others associated with Canada were present.

D. B. Hanna, Third Vice President, Canadian Northern Railway, and Mrs. Hanna, went to New York early in June to see their daughter-in-law off for England, where her husband, Lieut. W. B. Hanna, is with the 92nd Battalion, (Highlanders).

T. J. Kennedy, who is one of the receivers of the Algoma Central and Hudson Bay Ry., of which he was President prior to the receivership, has been confined to his house at Sault Ste. Marie,

Ont., for some little time past, his doctor having advised complete rest.

Acton Burrows, Managing Director, Canadian Railway and Marine World, has been unanimously re-elected chairman of the Canadian Press Association's Trade and Class Section, and also a director of the association and a member of its Postal and Parliamentary Committee.

Jas. Bruce Robb, who is a private in the Canadian Expeditionary Forces, and is a son of W. D. Robb, Superintendent Motive Power, G.T.R., Montreal, received gun shot wounds in the ear and leg while in action recently, and was admitted to the war hospital at Dartford, Kent, Eng. His injuries are not serious.

Elisha Lee, General Superintendent, Philadelphia, Baltimore & Washington Rd. (Pennsylvania System), has been

Lt.-Col. C. W. P. Ramsey, C.M.G.,
O. C. Canadian Overseas Railway Construction Corps.

promoted to the newly created office of Assistant General Manager, Pennsylvania Lines East of Pittsburg. He was born in Chicago in 1870, and is a brother of Frank Lee, Principal Assistant Engineer, C.P.R., Winnipeg.

Thomas C. Irving, Jr., A.M. Can. Soc. C.E., Vice President, Robert W. Hunt & Co., Ltd., consulting and inspecting engineers, who went overseas with the 1st contingent, Canadian Expeditionary Forces, as Captain in the Canadian Engineers, and was later promoted to Major, has been made a member of the Distinguished Service Order.

Captain G. A. E. Bury, of the 106th Light Infantry, Winnipeg, son of George Bury, Vice President, C.P.R., who has been at the front for some 8 months, during most of which time he was on the firing line, has been appointed Deputy Adjutant Quartermaster General at the Canadian Training Division Headquarters in England.

Captain Ian M. W. Sinclair, of the 13th Battalion, son of Angus Sinclair, railway

contractor, Toronto, who was mentioned as having returned to duty after being slightly wounded in the shoulder while in action, and who had been previously wounded in the knee at the Orchard battle, was reported on June 9 to be suffering from shell shock.

H. P. Leslie, a former Assistant General Baggage Agent, G.T.R., Toronto, died at Detroit, Mich., June 6, aged 77. He was for several years in charge of the Great Western Ry. baggage department at Hamilton, Ont., and on the taking over of that line by the G.T.R. was appointed Assistant General Baggage Agent at Toronto, holding that position until 1896, when the department was reorganized on the present basis. He was retained in the service until his retirement in 1906.

Cesaire Senay, whose appointment as Assistant Superintendent, District 3, Eastern Division, C.P.R., Montreal, was announced in our last issue, was born at St. Cesaire, Que., Jan. 31, 1873, and entered C.P.R. service in Oct., 1894, since when he has been, to June, 1902, freight clerk and telegraph operator, Westmount, Que.; Mar., 1903, to Mar., 1904, telegraph operator, Mile End, Que.; Mar., 1904, to July, 1912, agent, Atwater, Que.; July, 1912, to Jan., 1913, agent, St. Henry, Que.; Jan. to Dec., 1913, agent, Mile End, Que.; Dec., 1913, to May, 1916, General Agent, Quebec, Que.

Elroy Theodore Agate, C.E., M. Can. Soc. C.E., who has been appointed Assistant Superintendent, Lake Superior District, Canadian Northern Ry., Capreol, Ont., was born at Pittsford, N.Y., Dec. 7, 1874, and graduated from Cornell University in 1897. He was with the C.P.R. Construction Department from 1897 to 1906, and from 1906 to 1910 was engaged in railway work in British Columbia and Washington State. From July, 1911, to the completion of the line he was engaged as District Engineer, District 1, Port Arthur-Sudbury Line, Canadian Northern Ontario Ry., Sudbury, Ont.

R. W. D. Harris, Trainmaster, C.P.R., who has been transferred from Wilkie, Sask., to Ignace, Ont., and who was born at Victoria, B.C., is the elder son of Dennis R. Harris, M. Can. Soc. C.E., of Victoria, whose wife is the youngest daughter of the late Sir Jas. Douglas, first Lieutenant Governor of British Columbia, who founded and named the city of Victoria. He began work as a clerk in the Bank of British North America at Victoria and in 1905 entered the Mechanical Department, C.P.R., at Revelstoke, B.C. In April 1914 he was appointed Trainmaster at Wilkie, Sask.

Alexander Scott, whose appointment as Resident Engineer, Prince Edward Island Ry., Charlottetown, P.E.I., was announced in our last issue, was born at Kirkcaldy, Scotland, Sept. 6, 1884, and entered railway service May 17, 1911, since when he has been, to Aug. 31, 1911, draughtsman, C.P.R., Montreal; Sept. 1, 1911, to Oct. 15, 1912, draughtsman, C.P.R., Sudbury, Ont.; Oct. 15, 1912, to April 30, 1914, transitman, C.P.R., Sudbury, Ont.; May 1, 1914, to Apr. 1, 1915, chief of survey party, C.P.R., North Bay, Ont.; Apr. 19, 1915, to Apr. 30, 1916, Assistant Engineer, Prince Edward Island Ry., Charlottetown, P.E.I.

Lieutenant Ralph Featherston Lake Osler, who died of wounds received in active service in France early in June, entered C.P.R. service in Jan., 1912, as

a clerk in the President's office, and for a time was secretary to the President. In Nov., 1913, he was transferred to the Kettle Valley Ry., one of the C.P.R. subsidiaries, where he worked under J. J. Warren, President, and the Manager of Construction. In Dec., 1914, he enlisted for overseas service, as a private in the Penticton Company of the 30th Battalion of Victoria, and was promoted to Lieutenant on the field. He was a nephew of Sir Edmund Osler, M.P., director, C.P.R.

G. G. Grundy, General Manager, Temiscouata Railway, who died at Fraser-ville, Que., June 9, 1915, without leaving a will, left the following estate: Interest in Montreal real estate, \$500; promissory notes, \$442; securities for cash, \$12,660; furniture, \$278; automobile, \$1,550; 5 shares Mackinnon-Holmes & Co. stock, \$450; Quebec Central Ry. bonds, \$387; 8 Canadian Mortgage Investment Co., \$704; 74 Dominion Steel Foundry Co., \$3,663; 16 Bank of Commerce, \$3,248; 1,000 Dome Extension Mines, \$80. He held 8,027 shares of stock in other companies which are now valueless. Four brothers, a sister, and two nephews will divide the property.

Ejner L. Landorph, who has been appointed Engineer of Water Service and Tests, Western Lines, C.P.R., Winnipeg, was born at Copenhagen, Denmark, Sept. 9, 1888, and during the summer of 1910 acted as assistant teacher of surveying, etc., at the University of Copenhagen, and in Jan., 1911, graduated from that university as a civil engineer. He entered C.P.R. service June 24, 1912, as draughtsman, Winnipeg, and from Nov. 7, 1912, to Apr. 30, 1913, was transitman, Brandon, Man.; May 1, 1913, to Nov., 1915, Resident Engineer, District 2, Manitoba Division, Brandon; Nov., 1915, to Apr. 1, 1916, Resident Engineer, District 1, Manitoba Division, Kenora, Ont.

Everett Gordon Wickerson, whose appointment as Passenger Agent, Canadian Northern Ry., Prince Albert, Sask., was announced in our last issue, was born at London, Ont., Sept. 27, 1886, and entered railway service Aug. 15, 1906, since when he has been, to Oct., 1906, night operator, C.P.R., Parkbeg, Sask.; Oct. to Nov., 1906, night operator, C.P.R., Pasqua Jct., Sask.; Nov. to Dec., 1906, night operator, C.P.R., West Prince Albert, Sask.; Dec., 1906, to June, 1907, day operator, Canadian Northern Ry., Craik, Sask.; June, 1907, to Apr., 1912, day operator and ticket clerk, C.N.R., Prince Albert, Sask.; Nov., 1912, to Dec., 1915, ticket clerk, C.P.R., Regina, Sask.; Dec., 1915, to May 1, 1916, Passenger Agent, Canadian Northern Ry., Brandon, Man.

Hugh F. Coyle, Superintendent, Districts 5, 6, 7, 8, 9 and 10, comprising the Belleville Division, Ontario Lines, G.T.R., died in his official car, May 31, when returning from Meadville, Pa., to his home at Belleville, Ont. He had been suffering from heart trouble for some time, and during April was granted leave of absence on account of his health. Prior to 1908 he was Assistant Superintendent, District 4 and Montreal Terminals, Eastern Lines, Montreal, and in Jan., 1908, his jurisdiction was extended over District 5. In June, 1912, he was appointed Assistant Superintendent at Belleville, Ont., and in Jan., 1913, was promoted to Superintendent there, which position he retained to the date of his death. The funeral took place at Belleville, June 2.

Jas. Coleman, superintendent, Car Department, G.T.R., who was elected 2nd Vice President, Master Car Builders

Association, at the annual convention at Atlantic City recently, was born in Port Huron, Mich., and started work with the G.T.R. as a car department apprentice in 1873. He worked at Port Huron until 1889, when he was appointed foreman at Chicago, remaining in that position until

Alexander Scott,
Resident Engineer, Prince Edward Island Railway.

C. Senay,
Superintendent, District 3, Eastern Division,
Canadian Pacific Railway.

1899, when he was appointed Master Car Builder, Central Vermont Ry. at St. Albans, Vt. In 1905 he entered the Canada Car Co.'s service at Montreal, taking charge of the manufacturing department, and in 1906 returned to his former position with the Central Vermont. In

Jan. 1908 he was appointed Superintendent, Car Department, G.T.R., at Montreal succeeding W. McWood who retired on pension.

Herbert Gates Reid, who has been appointed Master Mechanic, District 3, National Transcontinental Ry., Transcona, Man., was born at Pembroke, Ont., Oct. 27, 1863, and entered C.P.R. service in Mar., 1884, since when he has been, to Nov. 1884, wiper, North Bay, Ont.; Nov. 1884 to Nov. 1887, fireman, North Bay, Ont.; Nov. 1887 to Dec. 1905, locomotive man, North Bay, Ont.; Dec. 1905 to June 1906, relieving Road Foreman of Locomotives, North Bay, Ont.; June 1906 to Feb. 1907, locomotive man, North Bay, Ont.; Feb. to Apr. 1907, Locomotive Foreman, Chappleau, Ont.; Sept. 1907 to Oct. 1908, District Master Mechanic, District 1, Lake Superior Division, North Bay, Ont.; Oct. 1908 to Apr. 1915, Master Mechanic, Lake Superior Division, North Bay, Ont.; Apr. 1915 to May 1916, Master Mechanic, Saskatchewan Division, Moose Jaw.

Moses A. Fullington, A.M. Can. Soc. C.E., who has been appointed Superintendent, District 5, Eastern Division, C.P.R., Smiths Falls, Ont., was born at Johnson, Vt., May 12, 1880, and entered C.P.R. service in Oct. 1904, since when he has been, to Jan. 1905, rodman, Toronto; Jan. to Oct. 1905, transitman, London, Ont.; Oct. 1905 to Apr. 1907, Assistant Engineer of Terminals, Toronto; Apr. 1907 to Jan. 1912, Resident Engineer, Districts 1 and 4, Ontario Division, Toronto; Jan. 1912 to Jan. 1913, Resident Engineer, Dominion Atlantic Ry., Kentville, N.S.; Jan. to July 1913, Assistant Division Engineer, C.P.R., Montreal; July to Sept. 1913, Assistant Engineer, Eastern Lines, Montreal; Sept. 1913 to Feb. 1915, Assistant Superintendent, District 4, Eastern Division, Ottawa, Ont.; Feb. to May 1915, Assistant Superintendent, District 5, Eastern Division, Smiths Falls, Ont.; May 1915 to June 1916, Superintendent, District 3, Eastern Division, Montreal.

F. E. Dewey, who has been appointed General Manager, Wellsville & Buffalo Rd., Buffalo, N.Y., was born Apr. 22, 1858, and entered railway service Feb. 1875, as messenger, Auditor's office, Central Vermont Ry. He subsequently held various positions with different companies, including General Superintendent, New York and New England Ry. In 1898 he was appointed Superintendent, Midland Division, New York, New Haven & Hartford Rd., Boston, Mass., and later served as General Manager, Detroit & Lima Northern Rd.; General Superintendent of Construction, Missouri & Arkansas Rd. and Arkansas & Choctaw Rd.; and as General Superintendent, St. Louis, Memphis and Southeastern Rd.; Oct. 1903 to May 1905, Vice President and General Manager, Mobile, Jackson & Kansas City Ry.; May 1905 to 1906, Vice President, Suffolk and Carolina Rd.; and later he served as Assistant to the President, Wisconsin Central Rd.

Lieutenant-Colonel C. W. P. Ramsey, commanding the Canadian Overseas Railway Construction Corps, has been created a Companion of the Order of St. Michael and St. George, for service in the field. He was born at Bury, Que., Jan. 15, 1883, and entered C.P.R. service as apprentice in the Mechanical Department, in 1898, at the company's Delormier Ave. shops, Montreal. From that date to Sept. 19, 1903, he served the company in various minor capacities, and on the latter date he was appointed a draughtsman in the Construction Department, Montreal, and

then passed through the various grades of transitman, Assistant Engineer and Division Engineer, until Mar. 15, 1912, when he was appointed Engineer of Construction, Eastern Lines, and continued in that position until Feb. 25, 1915, when he was granted extended leave of absence to take command of the Canadian Overseas Railway Construction Corps. During his connection with the company he was closely identified with the construction of the Lindsay, Bobcaygeon & Pontypool Rd., the Toronto-Sudbury Branch, and the double tracking of a large portion of the Eastern Lines, and lastly he had charge of the construction of the Campbellford, Lake Ontario & Western Ry., which constitutes the C.P.R. Lake Shore Line from Glen Tay to Agincourt, Ont. He has been a member of the Canadian Society of Civil Engineers since 1903, when he entered as a student member, becoming an associate member in 1908.

Charles R. Scoles, General Manager, Atlantic Quebec and Western Ry., and Quebec Oriental Ry., New Carlisle, Que., died at Bermuda recently, after having been in ill health for some time. The funeral took place at New Carlisle, June 2, and was attended, in addition to immediate relatives, by a number of the railway companies' employees. He was born at Grantham, England, Aug. 27, 1856, and educated at Bedford College there. He entered railway service in 1890 as General Manager, Salisbury and Harvey Ry., in New Brunswick, and was later appointed General Manager, Atlantic and Lake Superior Ry. From 1885 he was engaged for several years in railway contract work in New Brunswick, and built the Caraquet Ry., and a portion of the Central Ry. of New Brunswick, in addition to carrying out several contracts on various lines in Quebec. He continued as General Manager of the Atlantic and Lake Superior Ry. throughout its final financial troubles, and the acquirement of the property by the Atlantic, Quebec and Western Ry., and on completion of the deal was appointed General Manager of the A.Q. & W.R., and its provincial company, the Quebec Oriental Ry. He was also associated with the New Canadian Co., railway and general contractors, and with the Gaspé Lumber Co., and other concerns, all of which have become inextricably mixed with the affairs of the Charing Cross Bank of London, Eng., which failed a few years ago, the manager being sentenced to a term of imprisonment for fraud.

Jules Edouard Morazain, whose appointment as Superintendent, District 1, National Transcontinental Ry., Quebec, Que., was announced in our last issue, was born at Wheatland, Que., July 31, 1875 and entered C.P.R. service May 3, 1890, since when he has been, to May 21, 1890, freight clerk, Drummondville, Que.; Aug. 1, 1890, to Jan. 8, 1891, night operator, Foster, Que.; Jan. 9 to Aug. 12, 1891, day operator, Richmond, Vt.; Sept., 1891, to June, 1892, attended college at Sherbrooke, Que.; Aug. 15, to Sept. 26, 1892, night operator, Sutton, Que.; Sept. 26, 1892, night operator, Sutton, Que.; Sept. 26, 1892, to Feb. 9, 1894, night and day operator, Highlands, Que.; Feb. 9 to July 15, 1894, day operator, Richmond, Vt.; July 15 to Oct. 12, 1894, relieving agent and operator at various points; Oct. 12, 1894, to May 27, 1895, day operator, Highlands, Que.; May 27, 1895, to Sept. 24, 1901, agent, Highlands, Que.; Sept. 24, 1901, to Nov. 15, 1908, agent, Mile End, Que.; Nov. 15, 1908, to Feb. 1, 1913, General Agent, Operating Department, Quebec, Que.; Feb. 1 to Dec. 3, 1913, As-

sistant Superintendent, District 3, Eastern Division, Quebec; Dec. 3, 1913, to Feb. 7, 1914, Assistant Superintendent, District 2, Eastern Division, Montreal; Feb. 7 to Oct. 21, 1914, Assistant Superintendent, District 3, Eastern Division, Montreal; Oct. 22, 1914, to Feb. 10, 1915, Acting Superintendent, District 1, Eastern Division, Farnham, Que.; Feb. 11, 1915, to Apr. 1, 1916, Assistant Superintendent, District 3, Eastern Division, Montreal.

Canadian Pacific Railway Construction, Betterments, Etc.

A press dispatch from St. John, N.B., June 17, says the improvements to be carried out during the present season on the Atlantic Division include the construction of a third line from Bay Shore yards to West St. John, construction of storage siding at West St. John, to accommodate 350 additional cars and the replacing of all light steel in tracks and switches with heavier rails to permit use of more powerful locomotives. A new 20,000-gallon water tank will be erected to furnish a reserve supply for locomotives and for fire fighting. Additional sidings will be laid between St. John and Montreal to lessen the possibility of congestion, and two of the larger bridges will be strengthened for use of heavier rolling stock.

We have been officially advised that it has been decided to let the old North Toronto station remain where it is for the present, so that none of the tenders received for its removal were accepted. It has been leased to the City of Toronto for use as a market at the nominal rent of \$1 a year.

The stations and buildings between Toronto and Windsor, Ont., will be repainted this season.

The line between London and Windsor, Ont., will, it is said, be rebalasted this year with dustless ballast.

Tenders are under consideration for filling about 12,500 cubic yards of earth at Gull Lake, on the Transcontinental line, between Swift Current and Medicine Hat, Sask.

It was reported in Moose Jaw, Sask., June 14, that the management had decided to begin construction at once on the section of line, about eight miles, required to convert Vantage, the present terminus of the Moose Jaw-Expanse branch, with the present terminus of the Assiboine branch. Tenders for grading were received June 30.

A press report from Winnipeg, June 15, states that the line now in operation for 75 miles east from Stirling, Alta., will be extended a further 10 miles to Manyberries, this year.

A press report states that the company is preparing to build a concrete dock at Vancouver, B.C., to cost about \$1,500,000. When Pier D, the docks used for the coast service, were planned provision was made for two other wharves between D and A, the docks for trans-Pacific steamers. The new dock will probably be built as part B of the general dockage development scheme. F. W. Peters, General Superintendent, is reported to have said that more space is urgently required to handle the large cargoes which are being consigned to the port for trans-shipment. We are officially advised that the report referred to is somewhat premature. What gave rise to it appears to be the fact that the management had a special study made recently of the dock situation at Vancouver to see if any additional facilities are required. The

management has not yet decided what, if any additions or improvements will be made in the near future. (June, pg. 222.)

Wages Increase on the Canadian Government Railways.

It was reported in Moncton, N.B., June 14, that an increase of 25c. a day had been granted to trackmen on the Intercolonial and the Prince Edward Island Railways, with corresponding increases in other departments, the new rates of pay to date from June 1. The increases are said to vary from 20 to 40c. a day for men paid by the hour, and at the rate of \$5 a month for men paid by the month. The employees affected by the new schedule are said to include freight handlers, station baggage masters, station porters, railway ferry men, locomotive wipers and inspectors, ashpit men, boiler washers, tube cleaners, stationary engine drivers, and firemen and other locomotive house employees, fuel men, store men, watchmen, lamp men, car checkers, janitors, tank men, parlor, sleeping and dining car men, and all classes of employees heretofore covered by the Canadian Brotherhood of Railway Employees' schedule, and several others which are included in the new schedule.

A Winnipeg report of June 16 states that the same increases have been given to employees on the National Transcontinental Ry.

A Moncton despatch of June 14 said:—"Better working conditions and a still further increase of pay are to be discussed within 60 days, and if an agreement is not arrived at, the question is to be submitted to arbitration."

Great Northwestern Ry. of Manitoba Suit.—A settlement, the terms of which were not announced in court, was reached at Winnipeg recently in the action of Delap against the C.P.R. The G.N.W.R. was absorbed by the C.P.R. in 1900, and Mr. Delap, who resides in England, sued the C.P.R., the G.N.W.R., Baron Shaughnessy and R. B. Angus for one-tenth of the G.N.W.R. Co.'s assets. The negotiations for the purchase of the G.N.W.R., in which Mr. Delap owned the controlling interest, were begun in 1898, and a tentative agreement was made, under which he claimed he was to receive \$550,000, out of which he was to discharge the company's outstanding indebtedness. Mr. Delap declined to agree unless he was paid in addition one-tenth of the value of the company's assets, but upon negotiations agreed to retain 500 shares of the capital stock, representing one-tenth of the share capital. The agreement of sale was subsequently assigned by the late G. M. Clarke, then general counsel, C.P.R., who concluded the negotiations, to Sir Thomas Shaughnessy and R. B. Angus. The \$550,000 was paid, but Mr. Delap claimed that when he applied for the registration of the 500 shares of stock in his name a refusal was given. The action was brought to secure these shares.

Railway Lands Patented.—Letters patent were issued during May, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary & Edmonton Ry.	963.00
Canadian Northern Ry.	1.1 00
Grand Trunk Pacific Ry.	31.25
Grand Trunk Pacific Branch Lines Co.	7.07
Qu'Appelle, Long Lake & Saskatchewan Rd. and Steamboat Co.	3,444.30
Vancouver Power Co.'s railway right of way.	10.02
Total.	4,936.64

Freight and Passenger Traffic Notes.

The Canadian Northern started operating a daily local train service each way between Vancouver and Hope, B.C., June 11.

C.P.R. train 707, from Toronto to Owen Sound, Ont., Mondays and Wednesdays, returning to Toronto, Tuesdays and Thursdays, carries a parlor car.

The Canadian Northern put a daily train service in operations between Edmonton and Calgary, Alta., June 11, replacing the previous tri-weekly service.

The C.P.R. steamship express trains run from Toronto to Port McNicoll, Ont., to connect with the steamships Keewatin and Assiniboia, on their sailing days three times a week.

The Canadian Northern Ry., owing to lack of rolling stock, will not inaugurate a daily transcontinental train service at present, but will maintain the tri-weekly service to Vancouver.

The Canadian Northern started on June 18, running a special Sunday train from Ottawa to points in the Rideau Lakes district. It will be operated during the summer only.

The Grand Trunk, in connection with a general change of trains time on June 25, start running a new train from Toronto for Detroit and Chicago, leaving the union station at 11.30 p.m.

The Canadian Northern started June 11, operating a regular train service to Victoria Beach, Man. A general accommodation train runs on Tuesdays and Fridays, and on Saturdays, two special trains are run.

The Grand Trunk Pacific has started running an additional train between Winnipeg and Prince Rupert. Trains now leave Winnipeg, Tuesdays, Thursdays and Saturdays. The service to Edmonton remains unaltered.

The Canadian Northern put in operation June 11, a bi-weekly service between Edmonton and Alliance, Alta., via Camrose, the trains eastbound running Tuesdays and Thursdays, and westbound Wednesdays and Fridays.

The Grand Trunk Pacific Ry is now operating parlor observation cars between Winnipeg and Prince Rupert, on through trains, but not on trains 1 and 2, between Winnipeg and Edmonton, when there is no through connection with Prince Rupert.

The C.P.R. trains York and Rideau, running between Ottawa Central Station and North Toronto, via Kempton and the Lake Ontario Shore Line (Campbellford, Lake Ontario and Western Ry.) carry buffet library observation and cafe parlor cars.

The National Transcontinental has added to its service a through sleeping car service between Winnipeg and Quebec, the car being detached from and to the National train to and from Toronto at Cochrane, and being run over the N.T.R. to Quebec.

The Board of Railway Commissioners opened a sitting in Winnipeg, June 12, to hear the application of the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific, to increase general merchandise freight rates from Winnipeg, Portage la Prairie and Brandon to Manitoba points.

Freight and passenger traffic on the National Ry. of Mexico, which has been interrupted for several months, is reported to have been resumed June 9, be-

tween Torreon and Aguas Calientes, and it was said that train service between Mexico City and Juarez would be resumed by the end of the month.

The Canadian Government Railways, National Transcontinental section, put in operation its Great Lakes Express service, starting from Winnipeg June 17, at 10.30 p.m., and from Fort William, June 18 at 5.00 p.m. The service is a tri-weekly one, leaving Winnipeg Tuesdays, Thursdays and Saturdays, and Fort William Mondays, Wednesdays and Fridays.

A press report stated recently that as soon as track connection between the Michigan Central Rd. and the London & Port Stanley Ry. was made at St. Thomas, a through sleeping car service would be inaugurated to and from London, via the two lines mentioned. We are advised by officials of both the lines that the question has not even been considered.

In order to avoid congestion at the ticket offices in the union station, Toronto, the baggage checking room on the west side of the Front St. entrance, is to be converted into ticket offices for the C.P.R. and Canadian Northern. The ticket offices on the east side of the main entrance, at present used by the C.P.R. and the G.T.R., will be used entirely by the G.T.R.

The important alterations for the summer on the C.P.R. lines east from Montreal include the starting of the Halifax express at 7 p.m., instead of 7.15 p.m.; the resumption of service of the Twilight Express to Quebec, starting from either end at 5 p.m.; and the resumption of the night express service to Portland, Scarborough Beach, Old Orchard and Kennebunkport, Me., leaving Montreal 9 a.m., and arriving in that city 7.25 a.m.

The most important feature of the C.P.R. summer train service, which went into operation June 4, was the putting on of a new train, no. 635, known as the Michigan Special, leaving Toronto 11.50 p.m., for Detroit and Chicago. It carries the local Detroit sleeping car, heretofore handled on train 20. A new train, the Queen City Special, leaves London, Ont., at 9 a.m., and arrives in Toronto at 12.15 p.m., in connection with which the local service between London, Chatham, Windsor and Detroit has been improved.

The Canadian Government Railways announce that ferry service from Riviere Ouelle Wharf, Que., to Murray Bay points eastbound will hereafter be operated in connection with train no. 4, leaving Montreal 8.15 a.m., arriving Murray Bay via steamboat Champlain at 7 p.m. same day. Westbound there will be no change in the ferry service, steamboat Champlain leaving Murray Bay 7 a.m., connecting with no. 3 Maritime Express due Montreal 6.30 p.m. same day, as previously.

The J. D. McArthur railway lines in Alberta have at present a total operating length of 745.5 miles, the longest being the Edmonton, Dunvegan and British Columbia from Edmonton to Spirit River, 357 miles, with a branch from Spirit River to Grande Prairie 49.8 miles. The Alberta & Great Waterways starts from the E.D.&B.C. at Carbondale, mileage 14.4 from Edmonton, and extends to McMurray, mileage 290.2, the most important midway point being Lac la Biche, mileage 113.2. The Central Canada starts from the E.D.&B.C.R. at McLennan, mileage 262.2.

At Board of Railway Commission's sitting at Saskatoon, Sask., June 16, a letter was read from M. H. MacLeod, General Manager and Chief Engineer, Canadian Northern, giving an undertaking to move the balance of the 1915 grain crop from the Goose Lake territory by July 31. To do this arrangements were made with other railways to secure 300 cars a day, which with the company's own cars would enable 700 cars a day to be moved. Ten train a day would be run, and if these could not be moved over the company's own lines, they would be handed over to other companies.

The Canadian Government Railways, National Transcontinental section, put in operation a new train service between Quebec, Que., and Cochrane, Ont., the first train leaving Cochrane June 12, and Quebec June 13. The service is tri-weekly, leaving Quebec Tuesdays, Thursdays and Saturdays at 2 p.m., and Cochrane Mondays, Wednesdays and Fridays at 7.15 p.m. Connection is made at Cochrane with the train to and from Winnipeg, known as the National, operated from Toronto to Winnipeg, via the G.T.R., the Timiskaming & Northern Ontario Ry., and the National Transcontinental Ry.

The Canadian Government Railways, National Transcontinental Division, commenced a train service June 11 from Quebec to Cochrane, making connection there for Winnipeg. Westbound trains leave Quebec on Tuesdays, Thursdays and Saturdays at 2 p.m., arriving at Cochrane at 4.10 p.m. on Wednesdays, Fridays and Sundays, and at Winnipeg at 4.30 p.m. Thursdays, Saturdays and Mondays. Eastbound trains leave Winnipeg Tuesdays, Thursdays and Sundays at 5.15 p.m., Cochrane Wednesdays, Fridays and Mondays at 7.15 p.m., and arrive at Quebec Thursdays, Saturdays and Tuesdays at 9.10 p.m. The trains between Quebec and Cochrane will be known as Western and Atlantic respectively when westbound and eastbound, and from Cochrane to Winnipeg they will be known as Western National and National Atlantic respectively.

The C.P.R. Imperial Limited trains handle all classes of traffic between Montreal and Winnipeg, but carry sleeping car passengers only, from Winnipeg to Revelstoke, B.C. When the summer time table was put in operation, June 4, no alteration was made in the time of starting from Montreal—10.15 p.m.—but the train eastward leaves Vancouver at 20.30 K. (8.30 p.m.) half an hour later than the winter schedule, and arrives at Montreal at 8 a.m. instead of 9.20 a.m. The Trans-Canada train leaves Toronto, under the summer schedule, at 6.40 p.m., the same time as during the winter, but arrives in Vancouver 15 minutes earlier, viz., at 21.15 K. (9.15 p.m.), while the corresponding train eastward leaves Vancouver at 8.25 K., instead of 9 K., and arrives at Toronto 12.30 p.m., instead of 4.15 p.m. The Montreal-Sudbury trains connecting with the Trans-Canada, resumed running June 5 and 6. These two trains have sleeping cars from Montreal attached, which are carried through on the Trans-Canada to Winnipeg and beyond. The summer trains starting from St. Paul, and Minneapolis, Minn., to Seattle, Wash., and Vancouver, B.C., were also resumed June 4.

The New York Central Rd. has removed its Toronto city office from 80 Yonge St. to Dominion Bank Building, 70 Yonge St. Frank C. Foy, Canadian Passenger Agent, is in charge.

Opening of North Toronto Station, Canadian Pacific Railway.

The new station at North Toronto, which is being built by the C.P.R., although not fully completed, was officially opened for traffic June 14, when train 24 left at 10 p.m. for Montreal via Peterborough, carrying also Ottawa sleeping cars. A. D. MacTier, General Manager, Eastern Lines, who came to Toronto for the opening, was entertained at dinner at the National Club, with a number of other guests, by the Mayor and city council, after which the party proceeded to the new station, every portion of which, including the platforms, was thronged with spectators. Speaking from a dais erected in the main wait-

Ottawa via Belleville and Kempton, at 1.55 p.m.; no. 713 for Teeswater, via Streetsville, at 4.45 p.m.; no. 608 for Lindsay at 5.15 p.m., and no. 707 for Owen Sound, via Bolton, at 5.25 p.m. The other arriving trains are no. 605 from Lindsay at 10.30 a.m.; no. 708 from Owen Sound at 8.10 p.m.; and no. 714 from Teeswater via Streetsville at 8.45 p.m.; and the York, from Ottawa via Kempton and Belleville, at 9.20 p.m.

The new station forms part of the whole general scheme of track elevation across the north end of the city, which is now approaching completion, involving the raising of the tracks for about 4

West Toronto, and about four years ago the C.P.R. decided to make use of the line from North Toronto to Leaside Jct. for passenger traffic, starting therefrom one of its Toronto-Montreal night trains, and running one of the Montreal-Toronto night trains into it. This proved such a success that a further development of the northern entrance was decided on. The smallness of the existing station made necessary further accommodation, the result of which is the new station, which is now almost complete. This station has been designed on a larger scale than would be required for C.P.R. traffic alone, as the Canadian Northern

Fig. 1. North Toronto Station, Canadian Pacific Railway.

This view, made from the architect's drawing, does not show the butterfly roofs over the platforms extending along the north side of the station and over the subway. They will be shown in another view, which will be published in *Canadian Railway and Marine World* as soon as the tower is completed, and the whole building, etc., can be photographed in a finished condition.

ing room the Mayor introduced Mr. MacTier, who spoke briefly, and was followed by Sir James Carroll and C. J. Parr, M.P., of New Zealand, and several members of parliament and members of the city council. The Mayor then declared the station open and the party proceeded upstairs to one of the platforms to see train 24 start sharp on time.

At present five trains leave the station each week day and five arrive, the Sunday service being one train out and one in. In addition to the Toronto-Montreal train, leaving at 10 p.m. as above mentioned train 23 from Montreal via Peterborough, carrying also Ottawa sleeping cars, arrives at 8 a.m. The other departing trains are the Rideau, for

miles, with the elimination of all grade crossings. The North Toronto line has for a number of years been used by the C.P.R. principally as a freight cut off between Leaside Jct. and West Toronto from which points the main line runs down to the union station in the lower part of the city. Originally the Leaside-West Toronto line was the only entrance into Toronto of the Ontario & Quebec Ry., which was absorbed by the C.P.R. in its early days, and subsequently a connection was built from Leaside Jct. to connect with the union station, and all passenger trains from the east were run over it. For several years a connecting stub line service was operated both ways between Leaside Jct., and

in planning a permanent entrance into Toronto decided on the northerly entrance, arrangements being made with the C.P.R. to build the station, the C.N.R. to use it jointly as tenants. It is the Canadian Northern's intention to use this station for most, if not all, of its Toronto passenger service, but the C.P.R. will retain its connection with the present union station near the waterfront, only using the North Toronto station for certain trains.

A perspective of the new station is shown in fig. 1; a ground floor plan in fig. 2; and the trackage arrangement in the station vicinity, with its relation to the city transportation conveniences, in fig. 3. The station is located on the east

side of Yonge St., at the present end of the Toronto Ry.'s Yonge St. line, which passes down through the centre of the city. With this convenient and through street car line, the new station is very easily reached from the business centre of the city. The rapid growth of the city

and stone structure, the central section of which has a high roof, flanked by two lower sections containing the station facilities. On the Yonge St. side there is being built a 140 ft. clock tower, the 30 ft. spire of which will be of terra cotta. The station building is 114 x 76

waiting room on the west are the ticket offices and telegraph offices. Flanking the east side of the waiting room are the women's room, smoking room, lavatory facilities, and telephone booths. Adjoining the waiting room in the north-east corner are the news stand and staff

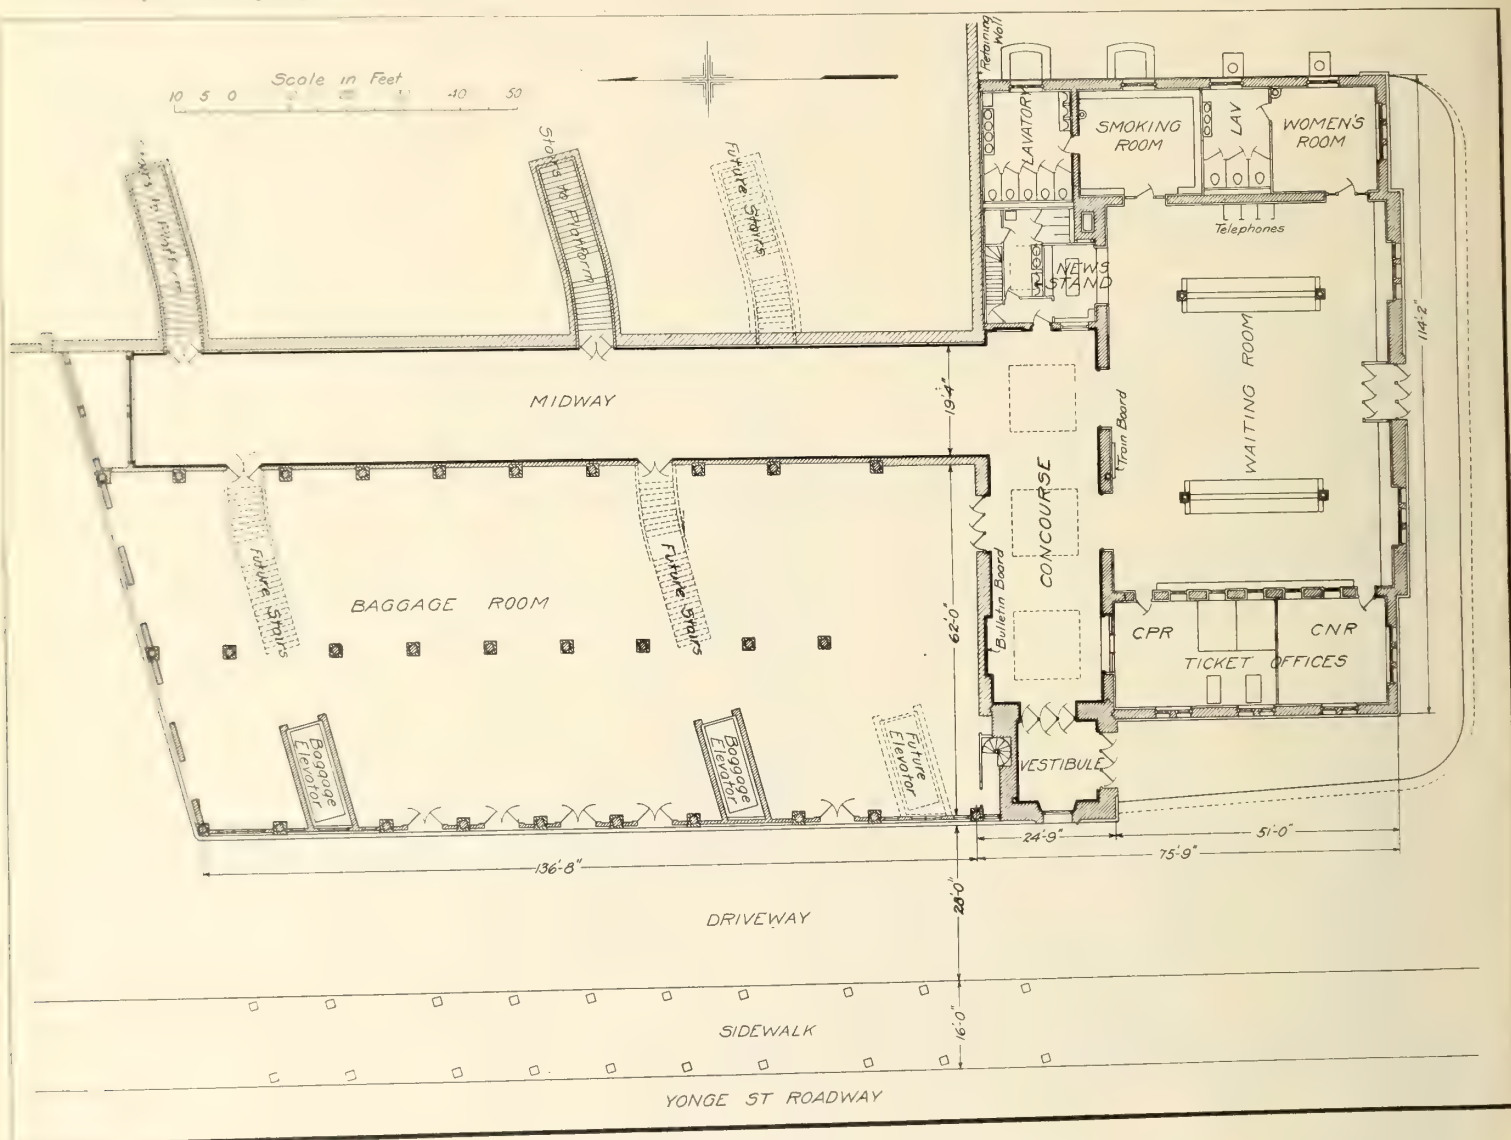

Fig. 2. Ground Plan, North Toronto Station, Canadian Pacific Railway.

The stairs near the south east end of the midway, shown in the above plan as "future stairs," have been built. The two projected stairs on the west side of the midway, also shown as "future stairs," have not been built.

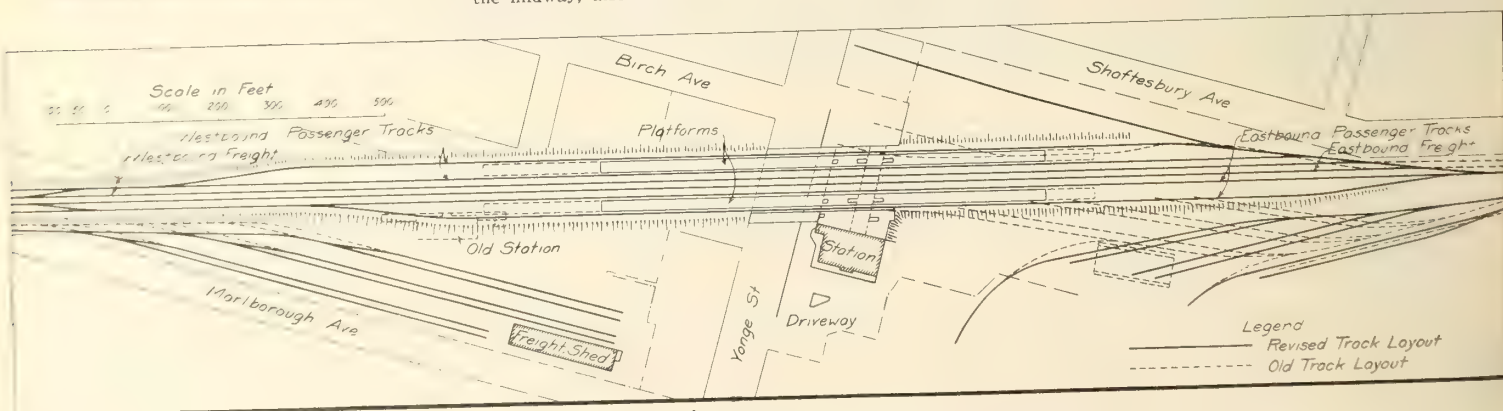

Fig. 3. Track Arrangement, North Toronto Station, Canadian Pacific Railway.

northward makes the North Toronto location particularly available for that section of the city, the new location being more centrally located with regard to the centre of population than the present down town union station.

The new station is a single story brick

ft., the broader side facing south, with the tracks on the north side passing it at an angle of about 15 degrees. The central or high section of the station is the main waiting room, 70 x 51 ft., with a centrally located entrance from the driveway on the south side. Flanking this

lavatory. Directly opposite the main entrance to the midway under the tracks. The vestibule under the tower leads into the concourse along the north side of the west end of the waiting room, connecting at its east end with the midway. The south and west sides of the station have

sidewalks with metal canopies, so that passengers may either alight at the main entrance centrally on the south side, or at the tower vestibule, the expectation being that the latter entrance will be used by the majority of passengers who have already secured their tickets, and only require to pass directly to the trains, relieving the main waiting room of much of the congestion that might otherwise occur. Along the west side of the station is a 28 ft. driveway, so that vehicles may drive up to either station entrance, and pass through under the tracks through this driveway and out on Yonge St. to the north of the station.

The midway is a passage 20 ft. wide passing from the rear of the station to the far side of the tracks, under the latter. The elevation of the tracks makes a difference in grade between the track platforms and the station level of 15½ ft., giving a headway in the midway of about 14 ft.

Passing over the midway are 6 through tracks, which now connect with two main tracks to the west and a single track to the east, but are so located as to connect in the future with the proposed double track to the east on the revised grade. The northerly two tracks are for westbound trains and the southerly two for eastbound trains, each pair being at 31 ft. centres and tributary to a single platform. The two centre tracks at 13 ft. centres from each other and from the adjoining passenger ones are not tributary to a platform and are reserved for freight or other through train movements, the southerly one for eastbound and the northerly one for westbound. As all passenger trains will originate and terminate at the West Toronto yards and may stand in the North Toronto station for a considerable time, this arrangement gives the greatest possible flexibility in operation, by assigning certain tracks for standing trains and keeping certain others open for through movements at all times.

The platforms are 20 ft. 3½ in. wide and 600 ft. long to accommodate 10-car trains. The portions over the baggage room and subways are of reinforced concrete, and the remaining portions are of wood which will be replaced with concrete when the fill upon which they are built has settled. When traffic requirements warrant, they may be extended to a maximum length of 1,600 ft., thus permitting each platform track to accommodate two trains, or a total of four eastbound and four westbound trains clear of the through tracks.

Butterfly, or inverted umbrella roofs, some 360 ft. long, extend over the concrete portions of the platforms, protecting access to the stairways and elevators. When the fill settles sufficiently to give proper foundation, they will be extended to cover the full length of the platforms. The roof proper is of wood, on a steel frame, which is supported by steel posts in the middle of the platforms. It has a spread of 25 ft. and extends well over cars standing on the platform tracks, thus giving, in many respects, the same protection as the Bush type of train shed when trains occupy the platform tracks. The platforms are reached from the midway by three 6 ft. stairways on the east side. The plans provide for future stairways opposite the present proposed stairways.

The baggage room, 137 x 62 ft., occupies all the section beneath the tracks between the midway and Yonge St. driveway. From the latter the baggage is received through 5 doorways, and is

raised on trucks to the platform level by three 15 x 5½ ft. elevators. From the southwest corner of the baggage room a spiral stairway ascends to the track level, where the station master's office is located in the tower above the vestibule. Passenger communication with the baggage room is through the concourse.

The whole exterior of the building, with the exception of the spire, is faced with limestone from Tyndall, Man. The choice of this Canadian stone has been justified by the excellent color effect of the masonry in the mass, an effect equal to any that could have been obtained by the importation of the better known building stones from the United States. The spire on top of the tower will be faced with terra cotta of a color and texture to tone in with the limestone facing of the remainder of the building. The section under the tracks is of steel and concrete construction.

The main waiting room, tower vestibule and concourse are lined with marble for their entire height, the architectural effect being obtained by the use of different colored marbles, all set in practically the same plane, so as to avoid as far as possible all offsets and other dirt collecting projections. The plaster ceiling of the main waiting room is treated in a broad manner with large panels. The midway is lined with glazed brick for its full height, as are the staircases heading up to the platforms.

A complete system of electric clocks of British manufacture will be installed; of these the large tower clock with four 8 ft. dials will form a part. The clocks throughout the building will be controlled by a master clock which will be synchronized daily from the company's chief time station at Montreal.

All ornamental ironwork such as door frames, stairs, large windows and the marquise on the south and west fronts has been executed by a Toronto firm and all the steel sash throughout the building have been imported from England. The plastering, marble, heating, ventilating, plumbing and electric work has all been carried out by Toronto firms. Wherever possible, and there are but few exceptions, all materials and labor employed in the construction of the building are of Canadian or British origin, and, in accordance with the company's requirements, Canadian timber has been used for all woodwork, whether rough lumber or finished mill work.

The plans were prepared by Darling & Pearson, architects, Toronto, under the J. M. R. Fairbairn, Assistant Chief Engineer, C.P.R., and D. H. Mapes, Engineer of Building, C.P.R. The contractors are P. Lyall & Sons Construction Co. Ltd.

The track elevation work, which included extensive baggage room and roadway construction under the tracks, was carried out under the charge of Blair Ripley, M.Can.Soc.C.E., Engineer of Grade Separation, C.P.R., now Officer Commanding No. 1 Overseas Construction Battalion.

The Board of Railway Commissioners held sittings for hearing complaints as follows: Winnipeg, June 12; Saskatoon, Sask., June 14; Quebec, Que., June 17; Edmonton, Alta., June 15; Vancouver, B.C., June 26; Victoria, B.C., June 28; Montreal, June 28. Sittings will also be held as follows: Nelson, B.C., July 5; Calgary, Alta., July 10; Moose Jaw, Sask., July 12; Regina, Sask., July 13; Winnipeg, July 14; Fort William, Ont., July 17; Sudbury, Ont., July 19.

Canadian Northern Railway Guaranteed Securities.

In the article in Canadian Railway and Marine World for June on "Further Dominion Aid to the Canadian Northern Ry. and the Grand Trunk Pacific Ry.," onpg. 225, in the second paragraph under the heading "Returns to Parliament," line three, reference was made to the "Total amount of stock outstanding," while at the end the word "securities" was used. The word "stock" was used inadvertently instead of securities, which word was used in the return submitted in the House of Commons by the Minister of Finance. As generally understood the word "stock," refers to shares or common stock, and not to bonds, debentures or other securities which are secured by mortgage, guarantee or otherwise, and a correspondent contends that even the word "securities" does not properly express the character of the C.N.R.'s outstanding indebtedness mentioned in the return.

As mentioned above the word "securities" was used in the return submitted to Parliament, and if our correspondent feels very much excited about it use he should communicate with the Minister of Finance, instead of with us.

The return referred to, which is in the form of a sessional paper, is headed "Statement of Securities Outstanding." The securities listed include bonds of different kinds, 1st mortgage stock, 1st mortgage debenture stock, terminal debenture stock, branch lines stock, second charge stock, perpetual consolidated debenture stock, and perpetual debenture stock.

In the table at the conclusion of the second paragraph referred to the total amount of securities issued was stated as \$383,770,798. This was made up by adding the \$25,000,000 of income bonds to the \$358,770,798 of guaranteed and unguaranteed securities issued. The total guaranteed and unguaranteed securities authorized amount to \$383,438,742.

Canadian Ticket Agents' Association.

The Association's annual outing was held at Port Arthur, Ont., June 12 and 13. The party, numbering about 200 arrived in the city on the Northern Navigation Co.'s steamship Hamonic from Sarnia, and were received by a reception committee of the city council and the board of trade. After the formal reception the members held the annual business meeting, and the ladies were taken for auto trips in the city, and were entertained in the evening by the Women's Canadian Club. The members held their annual smoking concert on June 12, and on June 13, the entire party were taken on a trip around the bay on the tug Whalen, and in the afternoon went via the Canadian Northern Ry. to Kakabeka Falls. They returned east by the C.P.R. steamship Assiniboia to Port McNicoll.

The following were elected officers at the annual meeting, all being located in Ontario:—President, A. M. Hare, Tillsonburg; 1st Vice President, E. R. Blow, Whitby; 2nd Vice President, H. F. Whittier, Trenton; 3rd Vice President, J. Ransford, Clinton; Secretary-Treasurer, E. de la Hooke, London; Auditor, B. Caswell, Smiths Falls. Executive Committee, J. Jackson, Clinton; W. McIlroy, Toronto; W. J. Moffatt, Toronto; F. W. Churchill, Collingwood; C. B. Janes, Orillia.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Atlantic Quebec and Western Ry., Quebec Oriental Ry.—J. S. GORDON, Assistant General Manager, is acting as General Manager, consequent on the death of C. R. Scoles. Office, New Carlisle, Que.

Canada Steamship Lines, Limited.—THOMAS HENRY, heretofore Passenger Traffic Manager, has been appointed Superintendent of Hotel Department, Office, Montreal.

Canadian Northern Ry.—In consequence of the sale of the C.N.R. steamships to the Cunard Steamship Co., WILLIAM PHILLIPS, European Railway and Steamship Manager, will return to Toronto in the near future and will be given an important appointment in the Traffic Department.

A. McCOWAN, Supervisor of Car Work, Western Lines, Winnipeg, has had his jurisdiction extended over the Eastern Lines, and advises division officials in regard to staff and general efficiency of operation, and also instructs station officials in respect of maintenance of standards and methods of performing work.

E. H. DREW, heretofore Inspector, Sleeping, Dining, and Parlor Cars, Hotels and News Department, Winnipeg, has been appointed Inspector, same department, Ottawa.

G. C. HEARTS, heretofore Erecting Shop Foreman, Trenton, Ont., has been appointed Locomotive Foreman, Toronto, vice S. L. Tracey, assigned to other duties.

E. T. AGATE, C.E., M.Can.Soc.C.E., formerly District Engineer, District 1, Port Arthur-Sudbury Line, Sudbury, Ont., has been appointed Assistant Superintendent, Lake Superior District. Office, Capreol, Ont.

A. PATRICK, heretofore platform inspector, Sleeping, Dining, and Parlor Cars, Hotels and News Department, Winnipeg, has been appointed Inspector, same department there, vice E. H. Drew, transferred.

W. A. SPEAR has been appointed platform inspector, Sleeping, Dining, and Parlor Cars, Hotels and News Department, Winnipeg, vice A. Patrick, promoted.

H. COLEY has been appointed Sleeping, and Parlor Car Hotel and News Department, Edmonton, Alta., vice G. H. Cullingford, transferred to the linen room, at Winnipeg.

W. A. EAGLESON has been appointed Roadmaster, with jurisdiction Lucerne, B. C., to Tollerton, Alta., including Lucerne yard. Office, Lucerne, B.C.

H. A. MACKENZIE has been appointed Roadmaster, with jurisdiction Blue River to Lucerne, including Blue River yard. Office, Blue River, B.C.

J. WARK has been appointed Roadmaster, with jurisdiction Kamloops to Blue River, including Kamloops yard. Office, Kamloops, B.C.

A. ANDERSON, Roadmaster, Boston Bar, has had his office changed to Kamloops, B.C.

A. H. DAVIS, heretofore City Passenger Agent, Winnipeg, has been appointed General Agent, St. Paul, Minn., vice E. P. Wright, who has left the company's service.

Canadian Pacific Ry.—J. R. GILLILAND, heretofore Superintendent, District 5, Eastern Division, Smith's Falls, Ont., has been appointed Superintendent, District 2, Atlantic Division, vice R. McKillop, transferred. Office, Woodstock, N. B.

R. McKILLOP, A.M.Can.Soc.C.E., heretofore Superintendent, District 2, Atlantic Division, Woodstock, N.B., has been appointed Superintendent, District 3, Eastern Division, vice M. A. Fullington, A.M.Can.Soc.C.E., transferred. Office, Montreal.

W. M. NEAL, heretofore Car Service Agent, Montreal, has been appointed Assistant Superintendent, District 2, Eastern Division, vice W. B. Brown, transferred. Office, Montreal.

J. E. RYAN, heretofore Chief Dispatcher, District 1, Ontario Division, Toronto, has been appointed Car Service Agent, Eastern Division, vice W. M. Neal, promoter. Office, Montreal.

E. G. MOORHEAD, heretofore secretary to Superintendent, District 2, Ontario Division, London, has been appointed secretary to General Superintendent, Eastern Division, Montreal.

O. R. BURNS, heretofore Agent, St. Mary's, has been appointed Travelling Freight Agent, Montreal.

W. J. ALLEN, heretofore passenger car painter, has been appointed leading hand painter, West Toronto, vice T. Marshall, transferred to Angus Shops, Montreal.

C. A. WHEELER, heretofore Locomotive Foreman, MacTier, Ont., has been appointed Locomotive Foreman, Ottawa, Ont.

M. A. FULLINGTON, A.M.Can.Soc.C.E., heretofore Superintendent, District 3, Eastern Division, Montreal, has been appointed Superintendent, District 5, Eastern Division, vice J. R. Gilliland, transferred. Office, Smiths Falls, Ont.

K. deS. JOSEPH, Assistant Trainmaster, District 1, Atlantic Division, Brownville Jct., Me., has been appointed acting Trainmaster, District 1, Ontario Division, during the absence on sick leave of A. G. McLeod. Office, Havelock.

T. MULLINS, heretofore City Passenger Agent, Ottawa, has been appointed City Passenger Agent, Toronto, vice W. McLroy.

W. McILROY, heretofore City Passenger Agent, Toronto, has been appointed Chief Clerk, Passenger Department there, vice H. W. Mathewson, promoted.

D. A. SMITH, heretofore Travelling Freight Agent, Hamilton, Ont., has been appointed Travelling Freight Agent, Toronto, vice J. W. Maguire transferred.

J. TREGASKIS, heretofore Assistant Locomotive Foreman, Lambton, Ont., has been appointed Night Locomotive Foreman there, vice S. Illingsworth, transferred.

J. DODD has been appointed Assistant Locomotive Foreman, Lambton, Ont., vice J. Tregaskis, promoted.

J. W. MAGUIRE, heretofore Travelling Freight Agent, Toronto, has been appointed Travelling Freight Agent, Hamilton, Ont., vice D. A. Smith, transferred.

S. ILLINGSWORTH, heretofore Night Locomotive Foreman, Lambton, Ont., has been appointed Locomotive Foreman, MacTier, Ont., vice C. A. Wheeler, transferred.

R. W. SCOTT, heretofore chief clerk to Lines, Montreal, has been appointed As-

sistant Superintendent, District 1, Lake Superior Division. Office, Sudbury, Ont.

R. W. D. HARRIS, heretofore Trainmaster, Wilkie, Sask., has been appointed Trainmaster, District 1, Manitoba Division, vice R. McGregor. Office, Ignace, Ont.

M. BLACK has been appointed Resident Engineer, District 1, Manitoba Division, vice E. L. Landorph, promoted. Office, Kenora, Ont.

J. A. PANTHER, heretofore acting Trainmaster, Calgary, Alta., has been appointed Trainmaster, Kenora, Ont.

E. L. LANDORPH, heretofore Resident Engineer, District 1, Manitoba Division, Kenora, Ont., has been appointed Engineer of Water Service and Tests, Western Lines, vice V. J. Melsted, resigned. Office, Winnipeg.

W. BANNON, heretofore Assistant Yardmaster, Winnipeg, has been appointed Night General Yardmaster there, vice H. Hicks, whose appointment as General Yardmaster, Fort William, Ont., was announced in our last issue.

J. N. MURPHY, heretofore Trainmaster, Medicine Hat, Alta., has been appointed Roadmaster, with jurisdiction over Rapid City, Minn., and Lenors Subdivisions and Brandon yard, vice J. McRae, transferred. Office, Brandon, Man.

J. McRAE, heretofore Roadmaster, Brandon, Man., has been appointed Roadmaster, District 4, Manitoba Division. Office, Souris.

J. A. BERRY, heretofore Car Service Agent, Montreal, has been appointed Car Service Agent, Moose Jaw, Sask., vice G. T. Coleman, whose appointment as Car Service Agent, Toronto, was announced previously.

C. HOOD, heretofore Trainmaster, Nelson, B.C., has been appointed Local Freight Agent, Saskatoon, Sask., vice S. C. Graham, transferred.

S. C. GRAHAM, heretofore Local Freight Agent, Saskatoon, Sask., has been appointed Trainmaster, District 3, Saskatchewan Division, vice R. W. D. Harris, transferred. Office, Wilkie.

D. ENGLAND, heretofore Trainmaster, District 2, Manitoba Division, Winnipeg, has been appointed Trainmaster, District 3, Alberta Division, vice J. M. MacArthur, whose appointment as Superintendent, District 1, Manitoba Division, Kenora, Ont., was announced in a recent issue. Office, Calgary.

A. L. POWELL, heretofore station ticket agent, Moose Jaw, Sask., has been appointed District Passenger Agent, Banff, Alta.

M. D. JORDAN, heretofore in Car Department, Vancouver, B.C., has been appointed Car Foreman, Field, B.C., vice C. J. Crozier, transferred.

For changes in C.P.R. Telegraphs officials see under "Telegraph, Telephone, and Cable Matters," on page 299.

Central Vermont Ry.—G. W. GROOM, heretofore Assistant to Superintendent and Chief Dispatcher, has been appointed Assistant Superintendent, vice J. F. Keefe, resigned. Office, St. Albans, Vt. The position of Assistant to Superintendent has been abolished.

E. T. BUCK has been appointed Chief Dispatcher, St. Albans, Vt., vice G. W. Groom, Assistant to Superintendent and Chief Dispatcher, promoted.

Grand Trunk Ry.—F. J. MILLER has been appointed Assistant Superintendent,

Montreal Terminals. Office, Bonaventure Station, Montreal.

J. C. CARRUTHERS, heretofore in Westinghouse, Church, Kerr Co.'s service at Drummondville, Que., has been appointed ticket agent, G.T.R., Prescott, Ont., vice P. B. Whiteley, enlisted for overseas service.

J. D. McMILLAN, heretofore Trainmaster, Lindsay, Ont., has been appointed Superintendent, Districts 5, 6, 7, 8, 9, and 10, comprising the Belleville Division, vice H. F. Coyle, deceased. Office, Belleville, Ont.

Grand Trunk Pacific Ry.—H. REID, formerly at Edmonton, Alta., has been appointed Car Foreman, Rivers, Man. This is a new position.

F. W. BEHAN, heretofore erecting shop foreman, Transcona, Man., has been appointed Locomotive Foreman, Regina, Sask.

W. SILVERWOOD, heretofore Car Foreman at Edmonton, Alta., has been appointed Car Foreman, Melville, Sask., vice C. A. Munro, transferred.

C. A. MUNRO, heretofore Car Foreman, Melville, Sask., has been appointed Car Foreman, Edmonton, Alta., vice W. Silverwood, transferred.

G. W. WILSON has been appointed Car Foreman, McBride, B.C., vice C. McKinnon, enlisted for overseas service.

D. E. SMITH, heretofore Locomotive Foreman, Regina, Sask., has been appointed Locomotive Foreman, Prince Rupert, B.C.

Michigan Central Rd.—W. HEARD, heretofore Assistant Divisional Storekeeper, London, Ont., is reported to have been appointed Divisional Storekeeper there, vice A. A. Drake, who has retired, after 33 years service.

National Transcontinental Ry.—W. S. STILLWELL, heretofore at Transcona shops, has been appointed Car Foreman, Graham, Ont., vice G. E. Decker, resigned.

J. B. SMITH has been appointed Trainmaster and Chief Dispatcher, District 3, Graham, Ont.

W. A. HILL has been appointed First Trick Dispatcher, Graham, Ont., vice H. M. Bird, assigned to other duties.

J. BIRSE, heretofore District Master Mechanic, District 3, has been appointed Road Foreman of Locomotives, Graham, Ont.

H. G. REID, heretofore Master Mechanic, Saskatchewan Division, C.P.R., Moose Jaw, has been appointed Master Mechanic, District 3, N.T.R., vice J. Birse, transferred. Office, Transcona, Man.

M. F. SCOTT, heretofore charge hand in erecting shop, has been appointed Foreman, Erecting Shop, Transcona, Man.

New York Central Rd.—A. S. INGALLS, heretofore General Superintendent, District 3, Cleveland, Ohio, has been appointed Assistant General Manager, Lines West of Buffalo. Office, Cleveland, Ohio. This is a new position.

R. H. CROLY, heretofore Division Freight Agent, Buffalo, N.Y., has been appointed Assistant General Freight Agent, in charge of freight traffic to and from territory on and adjacent to the Niagara frontier, N.Y.C.Rd. and West Shore Rd. Office, Buffalo, N.Y.

F. F. RIEFEL, heretofore Superintendent Telegraph, Cleveland, Ohio, has been appointed Superintendent, Detroit Division, vice E. R. Bissell, transferred. Office, Detroit, Mich.

F. M. SMITH, heretofore Superintendent, Western Division, Chicago, Ill., has been appointed General Superintendent, District 3, vice A. S. Ingalls, promoted. Office, Cleveland, Ohio.

R. F. FINLEY has been appointed Superintendent of Telegraph, N.Y.C.R., L. E. & W.R., and Western Union Telegraph Co., vice F. F. Riefel, transferred. Office, Cleveland, Ohio.

E. R. BISSELL, heretofore Superintendent, Detroit Division, Detroit, Mich., has been appointed Superintendent, Western Division, vice F. M. Smith, promoted. Office, Chicago, Ill.

Oregon-Washington Rd. and Navigation Co.—J. H. CUNNINGHAM, heretofore Travelling Freight and Passenger Agent, Seattle, Wash., has been appointed in charge of the recently opened office at Vancouver, B.C.

Railway Rolling Stock Notes.

The Eastern Car Co. has shipped 400 gondola cars for the French State Railways.

The Timiskaming and Northern Ontario Ry. Commission has ordered 6 cabooses from Preston Car & Coach Co.

The Canadian Locomotive Co. is quoting on a further supply of locomotives for the Russian Government. The contract for decapod locomotives which the company had has been completed and all shipments made.

The Grand Trunk Pacific Ry., which was intending placing an order for refrigerator cars, in order to cope with the large increase in the transportation of fish from the Pacific coast to Canadian and U. S. points, has decided not to proceed further in the matter at present, pending the result of proposed adverse legislation to the fish trade on the B. C. coast by the U. S. Government, to which reference has already been made.

Referring to the report mentioned in our last issue that Canadian Government Railways had ordered some second hand rolling stock from the Pullman Co., we are officially advised that the purchase was as follows: 19 sleeping cars, 10 tourist cars, 2 parlor cars, 1 dining car, 1 baggage car, and 1 first class car.

Canadian Government Railways, between May 29 and June 10 received the following additions to rolling stock: 1 steel sleeping car from National Steel Car Co.; 3 baggage cars from Preston Car & Coach Co.; 81 stock cars from Canadian Car & Foundry Co.; 4 consolidation locomotives from Canadian Locomotive Co., and 1 consolidation locomotive from Canadian Allis-Chalmers Ltd.

As mentioned in our last issue, Canadian Government Railways have ordered 500 steel frame box cars, 50 tons capacity, for the Intercolonial Ry., from the Eastern Car Co., and also 500 from the Canadian Car & Foundry Co. The under frames will be built up from structural and pressed shapes, with centre sills of 15 in. channels reinforced top and bottom by angles. The door openings will be 6 ft. wide, and the equipment will include twin spring draft gear, Simplex couplers 5 by 7 ins., inside roof, Simplex truck bolster, McCord journal boxes, and trucks of the arch bar type. The dimensions will be:

Inside length	40 ft. 6 ins.
Inside width	9 ft. 0 ins.
Inside height in clear	9 ft. 0 ins.
Trucks centre to centre	31 ft. 0 ins.
Height over running boards	14 ft. 0½ ins.

The French Government has ordered, for the Paris & Orleans Ry., 100 coal cars, 40 tons capacity, from the Eastern Car Co. They will be designed by the builders, and built up entirely of steel with six double vertical swinging doors on each side. The centre sills will be of 10 in.

ship channels, reinforced at bottom with angles and truss rods. The buffer and drawbar arrangement will be of the same type as at present used on the railway, and the truck will be of the arch bar type with bathtub bolsters. The hand brake will be arranged to be applied to one truck and operated from either side of the car, and the wheels will be of the open hearth steel kind with special axles and 5 by 9 in. journals, McCord journal boxes and M.C.B. bearings and wedges. The inside length of the car will be 37 ft., inside height 5 ft. 3½ in., trucks centre to centre 25 ft. 3 ins.

Dominion Government Grain Trade Enquiry.

As mentioned in our last issue, the Dominion Government has appointed a commission to investigate the handling and marketing of grain in Canada. The committee of the Privy Council recently had before it the representations of the Minister of Trade and Commerce, that he thinks it expedient that an inquiry should be made into and concerning the whole matter of the handling and marketing of grain in Canada, and in particular (1) the grading and weighing of grain; (2) the shipping of grain from country elevators; (3) grain exchanges; (4) the financing of grain; (5) the handling of grain at terminal points and in respect of the charges for the same; (6) the shipment of grain to Atlantic ports; (7) lake shipments; and recommends that Robert Magill, Chief Grain Commissioner; W. D. Staples, and J. F. Jones, Grain Commissioners, Fort William, Ont., be appointed commissioners pursuant to part 1 of the Inquiries Act, R.S.C., 1906, chap. 104, to conduct such inquiry; and that they be authorized to engage such accountants, engineers, technical advisers, or other experts, clerks, reporters, and assistants as they deem necessary, and also counsel to assist them, and to authorize any such assistants or any other qualified persons to inquire into any matter within the scope of such inquiry as they may direct; also that the commissioners be required to report to the Governor General in Council the result of their investigation, with the evidence taken, and any opinion they may see fit to express thereon. An order in council was passed subsequently authorizing the commission.

Quebec Transportation Club's Annual Meeting.

The annual meeting of the Quebec Transportation Club was held at Kent House, Montmorency Falls, June 6. After passing the report and discussing of several matters affecting the members in their business, officers for the current year were elected as follows: Hon. Presidents, H. G. Matthews, General Manager, Quebec Ry., Light, Heat and Power Co.; E. O. Grundy, General Freight and Passenger Agent, Quebec Central Ry.; W. M. Macpherson, Manager, White Star-Dominion Line; President, J. S. Thom, President, Quebec Forwarding Co.; First Vice President, J. H. Davidson, Superintendent, Canadian Northern Ry.; Second Vice President, A. F. Dion, Traffic Manager, Quebec Harbor Commission. The executive committee was elected as follows: G. J. P. Moore, C.P.R.; F. S. Stocking, Q.C.R.; J. T. Cassels, Q.R.L. & P. Co.; W. J. Thompson, Quebec and Lewis Ferry Co.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates of orders, immediately following the numbers, are those on which they were drawn.

24995. May 23.—Amending order 24965, May 10, re C.P.R. subway at Decary Ave., Montreal.

24996. May 25.—Ordering Canadian Northern Ry. to erect fences along its right of way east and west of Onoway, Alta.

24997. May 23.—Relieving G.T.R. from providing further protection at highway immediately west of Bronte station, Ont.

24998. May 23.—Extending to July 31, time within which C.P.R. shall install bell at highway at west of Welsford station, N.B.

24999. May 23.—Ordering Canadian Northern Ry. to stop train 25 on flag at Indi, Sask., and dismissing application to stop train 6.

25000. May 25.—Extending to July 1 time within which Canadian Northern Ry. shall build crossing at second concession road allowance over its right of way, Goulbourne Tp., Ont., required by order 24240, Sept. 28, 1915.

25001. May 26.—Authorizing C.P.R. to build spur for Western Canada Flour Co., Calgary, Alta.

25002. May 29.—Authorizing Lake Erie & Northern Ry. to open for traffic its line from Galt to Simcoe, Ont., 43.3 miles.

25003, 25004. May 29.—Authorizing Lake Erie & Northern Ry. to operate across G.T.R. and Toronto, Hamilton & Buffalo Ry. at Brantford, Ont., pending installation of interlocking plant, for three months from date, crossing to be protected by L. E. & N. R.

25005. May 27.—Authorizing G.T.R. to cross Third St., Cobourg, Ont., with three tracks, as shown on plan on file 26998.

25006. May 26.—Authorizing C.P.R. to build switching lead and spur for Canadian Explosives, Ltd., at Nobel, Ont.

25007. May 27.—Authorizing Canadian Northern Ry. to build bridge over Elbow River, Calgary, Alta.

25008. May 26.—Authorizing Canadian Northern Quebec Ry. to build three spurs for Quebec Abattoir Co., Quebec, Que.

25009. May 27.—Ordering C.P.R. within 60 days to install bell at highway first east of Mountain station, Ont., 20 per cent. to be paid out of railway grade crossing fund.

25010. May 27.—Ordering G.T.R. to build station at Rideau at location approved by order 19609 within one year, plans to be filed for Board's approval.

25011. May 29.—Amending order 24754, Feb. 23, re installation of bell by G.T.R. at crossing in Lot 25, Con. 2, Etobicoke Tp., Ont.

25012. May 27.—Ordering G.T.R. to install, by Aug. 31, gates at crossings of Waterloo and Colborne Sts., London, Ont., to be operated day and night; 60 per cent. of cost to be paid by G.T.R., 20 per cent. by City of London, and 20 per cent. out of railway grade crossing fund for each crossing; watchmen to be paid by G.T.R., and balance of maintenance, 70 per cent., by G.T.R., and 30 per cent. by city; protection at Ridout, Richmond, Burwell, William, Maitland, Adelaide, Rectory, Egerton and Clarence Sts., reserved.

25013. May 30.—Authorizing Hydro Electric Power Commission of Ontario for one year from date to maintain wires across Michigan Central Rd., wires and tracks at Main St., Niagara Falls.

25014. May 29.—Authorizing Canadian Northern Ontario Ry. to build spur for International Contractors, Ltd., mileage 170.5 from Toronto, Parry Sound District.

25015. May 29.—Authorizing C.N.R. to divert road allowance between Secs. 22 and 23-9-21, w. p.m., through n.w. ¼ Sec. 23, Man.

25016. May 29.—Authorizing G.T.R. to build siding for John Marks, Hamilton, Ont.

25017. May 27.—Authorizing C.P.R. to divert road allowance on west boundary Sec. 16-5-32, w.p.m., and build its Griffin Subdivision across same at mileage 48.5.

25018. May 30.—Ordering Canadian Northern Ry. to erect station building on old site at Charlesbourg West, Que., to be completed within 60 days after approval of plans, which are to be filed by C.N.R. within 15 days.

25019. May 27.—Authorizing Ange Gardien Municipality, Que., to make highway crossing over Quebec Ry., Light, Heat & Power Co.'s track at Boischatel, Que.

25020, 25021. May 31, 30.—Extending to Aug. 1 time within which G.T.R. shall install bell at Ontario St., Burlington, Ont., and to Aug. 6 time within which it shall install bell at Talbot Road, just east of Courtland station, Ont.

25022. June 2.—Authorizing Sudbury-Copper Cliff Suburban Electric Ry. Co., pending completion of half-interlocking plant, to operate over C. P.R. at Elm St., Sudbury, cars to be flagged across by watchman, appointed by C.P.R. and paid by S.C.C.S.E.R.

25023. May 30.—Extending to Aug. 1 time within which G.T.R. shall install bell at Chatham Road, Thamesville, Ont.

25024. May 31.—Authorizing New York Central Rd. to rebuild bridge 26-A, near Cambridge, Ont.

25025. May 31.—Approving G.T.R. Form Revised 0-33, being special contract and power of attorney and release to be signed by persons who desire for special reasons to travel on cars which are not intended to carry passengers.

25026. May 31.—Approving C.P.R. revised location from mileage 10.82 to 32.81, Coronation to Chaton, Swift Current Northwesterly Branch.

25027. May 30.—Authorizing C.P.R. to build spur at mileage 119.54, Montreal and Ottawa Subdivision, on Lemieux Island, Ottawa River, Ottawa, Ont.

25028. May 30.—Authorizing British Columbia Public Works Department to make highway over G.T.P.Ry. at Raush Valley, mileage 1120, Winnipeg West.

25029. June 5.—Extending to Aug. 1 time within which G.T.R. shall install bell at highway near Allanburg station, Ont.

25030. June 5.—Authorizing C.P.R. to build spur for Conger Lehigh Coal Co., Toronto.

25031. June 5.—Authorizing British Columbia Public Works Department to make highway over Grand Trunk Pacific Ry. at Carnaby.

25032. June 5.—Authorizing G.T.R. to build extension to siding for Lord & Burnham Co. on part Lot 14, Con. 6, Grantham Tp., Ont.

25033. June 5.—Authorizing Toronto, Hamilton & Buffalo Rd. to build spur for Mercury Mills, Ltd., Hamilton, Ont.

25034. June 5.—Ordering Canadian Northern Ry. to fence right of way, on both sides, mileage 6.29 to 12, west of Tollerton, Alta., and on north side, mileage 12 to 17, to be completed by July 15.

25035. June 5.—Authorizing G.T.R. to operate over Gunns Ltd. siding, north of St. Clair Ave., and west of Gunns Road, Toronto.

25036. June 5.—Extending to Aug. 1 time within which G.T.R. shall install bell at crossing of road between Concessions A and B, Etobicoke Tp., Ont.

25037. June 5.—Authorizing Town of Drummondville, Que., to make highway over C.P.R. at St. Jean St.

25038. June 8.—Authorizing Canadian Northern to rebuild trestle at Snake Creek Crossing, mileage 151.5, Dauphin Subdivision, Man.

25039. June 8.—Authorizing Northern Ontario Ry. to use bridge over Magnetawan River, mileage 188.1 from Toronto, in Wallbridge Tp.

25040. June 8.—Authorizing Canadian Northern Ontario Ry. to divert road between Harcourt and Cardiff Tps.

25041. June 7.—Ordering C.P.R. to remove ridge at crossing at Con. 7, East Flamboro Tp., Ont., to give clear view 75 ft. from track.

25042. June 9.—Approving location of C.P.R. station at mileage 21.1, Brantford, Ont.

25043. June 9.—Relieving C.P.R. from providing further protection at Russel Road crossing, Gloucester Tp., Ont.

25044. June 9.—Ordering Canadian Northern Ry., within two weeks, to rebuild fence on Elgin Babcock's property, in Lot 5, Con. 4, Portland Tp., Ont., according to standard required by Railway Act.

25045. June 9.—Authorizing Three Rivers Traction Co. to operate cars for three months over crossing of C.P.R. loop line at St. Maurice St., Three Rivers, Que., applicant's conductors to flag cars over crossing.

25046. June 9.—Authorizing Canadian Northern Ry. to build bridge across Ochre River, mileage 164.26, Manitoba, and rescinding order 22090, June 27, 1914.

25047. June 9.—Approving location of Canadian Northern Ry. station in Sec. 5-36-9 W. 2 M., Sask., mileage 101.

25048. June 9.—Authorizing Michigan Central Rd. to build spur or Page Hersey Iron Tube & Lead Co., Welland, Ont., and approving overhead clearance under crane runway.

25049. June 12.—Authorizing British Columbia Government to make highway over Esquimalt & Nanaimo Ry. at Malahat, mileage 20.2, from Victoria.

25050. June 10.—Ordering G.T.R. to interswitch cars from London & Port Stanley Ry. to G.T.R. team tracks, under agreement of Apr. 25, 1870, between Great Western Ry. of Canada and London & Port Stanley Ry.; to become effective by July 10th.

25051. June 10.—Relieving G.T.R. from providing further protection at first crossing west of Summertown station, Ont.

25052. June 12.—Ordering G.T.R. to build farm crossing between Cons. 2 and 3, Bertie Tp.

25053. June 13.—Ordering C.P.R. to widen bridge at London St., Windsor, Ont., to 56 ft.; 65 per cent. of cost to be paid by C.P.R. and 35 per cent. by the city, or Sandwich, Windsor & Amherstburg Ry., as may be determined by Board.

25054. June 12.—Ordering C.P.R. to appoint station agent at Torquay, Sask., by June 30.

25055 to 25061. June 12.—Approving Bell Telephone agreements with 7 telephone companies and municipalities.

25062. June 13.—Amending order 24991, May 18, re Canadian Northern Ry. station at Carmel, Sask.

25063. June 13.—Ordering Canadian Northern Ry. to build roads to its station at Menzie, Man., by July 15.

25064. June 14.—Approving plans D. 100-16 and D. 100-17, showing details of Canadian Northern Ry. standard reinforced concrete slabs for structures.

25065. June 14.—Authorizing Great Western Mines Development Co. to build bridge over C.P.R. three miles east of Field, B.C.

25066. June 15.—Rescinding orders 12829 and 21375, June 26, 1911, and Feb. 17, 1914, respectively, re transportation of mining students from Montreal to British Columbia.

25067. June 15.—Authorizing C.P.R. to build diversion in lieu of Government trail in n.e.¼ Sec. 1-39-12, w.4.m., Alta.; and to build its Swift Current North Westerly Branch at mileage 18.28 across same at grade.

25068. June 15.—Approving of Brandon, Saskatchewan & Hudson Bay Ry. bylaw 10, June 2.

25069. June 14.—Ordering C.P.R. to lay cinder platform at Mud Lake Crossing, Ont.; trains 37 and 38 to stop there on flag for three months from July 1, record to be kept of travel and report made at end of three months, during this period; flag stops made by trains 37 and 38 at Bolingbroke may be discontinued.

25070. June 15.—Permitting Maine Central Rd. to operate locomotives used in international traffic and merely passing through Canadian territory, equipped with clear vision window in cab of locomotives; permission not to extend to locomotives operated from or entirely within Canadian territory.

25071. June 12.—Authorizing Winnipeg Electric Ry. to operate over C.P.R. crossing on Talbot St.; staying operation of conditions 1, 2, 3 and 4 of order 18260, Dec. 9, 1912, and authorizing C.P.R. to operate over said crossing, cars to come to stop and be flagged over.

25072. June 15.—Approving C.P.R. plan 51850, July 31, 1914, showing subway at Spadina Road, North Toronto grade separation.

25073. June 16.—Authorizing C.P.R. to build diversion in lieu of Government trail, in s.e.¼ Sec. 10-39-12, w.4.m., Alta., and build its Swift Current Northwesterly Branch across same.

25074. June 9.—Ordering that, independently of general interswitching order, and pending adjustment of entire switching question, now before Board, the C.P.R. toll for switching live stock from its connection with C.N.R. to East End cattle market in Montreal, be \$5 a car, and ordering C.P.R. to accept such traffic from C.N.R. and perform necessary switching service over its line to East End cattle market at toll herein provided.

25075. June. Ordering Canadian Northern Ry. to move siding at Lilac, Sask.

25076. June 14.—Ordering Grand Trunk Pacific Branch Lines Co. to build transfer and storage track with C.N.R. at Battleford, Sask., C.N.R. to pay one-fifth of cost of building and half maintenance.

2507. June 17.—Authorizing C.P.R. to build its Gleichen Subdivision across road allowance on east boundary of Sec. 23-22-25, w.4.m. at mileage 12.70.

25078. June 16.—Approving Nelson & Fort Sheppard Ry. bylaw of May 16.

General order 166. May 29.—Extending to July 1, 1917, time within which railway companies, subject to Board's jurisdiction, make changes required under general order 128, July 20, 1914, prescribing rules and regulations respecting safety appliances on trains.

C.P.R. Centre, St. John's Ambulance Association.

The report for last year shows that 1816 persons passed qualifying examinations, out of 2564 who took instruction at the classes. Of wives and daughters of C.P.R. employees 825 have received certificates of qualification. Instruction was given the Borden Battery and Ammunition Column before it left Montreal for overseas. W. T. Davies, C.P.R. ambulance instructor, and Wm. Newcombe, C.P.R. constable, saved three men from drowning at Winnipeg. Particulars were given of administering of first aid in 3,780 cases by members of the C.P.R. Centre, the cases being divided as follows: Atlantic Division 9, Eastern Division 130, Ontario Division 136, Western Lines, 3,440. The report paid a strong tribute to the late Lacey R. Johnson, who was chairman of the C.P.R. Centre and also of the whole Association. While he was chairman nearly 7,000 C.P.R. employees passed qualifying examinations.

Electric Railway Department

Car Operation on Bridge Approaches in Winnipeg.

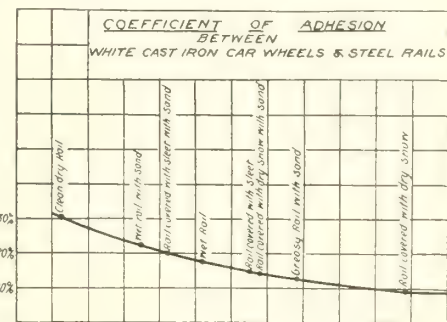

An interesting situation has developed in connection with an order of the Manitoba Public Utilities Commission that the Winnipeg Electric Ry. should operate cars over the Arlington St. overhead bridge which crosses the C.P.R. tracks, at what is said to be the largest individual railway yards in the world. The company's management always contended that the bridge approaches were too steep to operate over and maintained that the company would not be responsible for accidents if forced to operate over it. The commission at first refused an order when requested by the city to force the company to operate over the bridge, but after considerable pressure had been brought to bear, and after a number of engineers had reported on the bridge, grade, tracks, etc., suggesting changes, an order was issued for the company to operate with special equipment, sanders,

account of dry snow on top of the rails. The car used was of the double truck, double end type, 40 ft. 1 in. long over all, and equipped with four GE-67A motors, with gear ratio of 16:67. The car weighed approximately 41,100 lb. but as loaded for the test, weighed about 50,600 lb. Five one-way trips across the bridge were made, during which different combinations of motor braking, air braking and hand braking were attempted. The car was brought to rest during the ascent on a number of occasions, and started up again without any difficulty. The car was brought to rest and allowed to run backwards till a speed of approximately 2 m.p.h. was attained. It was then stopped with the aid of the motors, and started forward again. On the descent, with a headway of approximately 2½ m.p.h., the air brakes alone could control the car, without sand. At higher speed sand had to be used, and above 4 m.p.h., under the conditions existing, the car could not be stopped readily, even with sand, by means of the air brakes alone. The motors had to be resorted to to bring the car to rest.

As to failure of equipment from freezing up of the air equipment, Mr. Guy estimated that under ordinary conditions the chance of a car going out of service from this cause was about 1 in 13,000, while the chances for freezing on the approaches would be about one-sixth of this ratio or 1 in 78,000. Mr. Guy believed, however, that the efficiency of the

have left the service for the front." It is Mr. Guy's opinion that some form of brake, such as grips the rail or pavement, might be used on the cars which operate on the bridge, which would prevent a car from running away in case it started to slide. This would prevent, to a very large extent, any serious accident, and make operation over the bridge comparatively as safe as on the level.

"Following is the result of a mathematical analysis of the operation of cars on the grades under very bad rail conditions," says the report, "and under one difficulty which is apt to arise frequently, that is when it will be necessary to stop on the descent to prevent collisions, or

for other reasons. These problems have been worked out for various other conditions which may arise, and the results show that the operation is practicable.

etc. The company proceeded to carry out the order, and the city made changes to the bridge and tracks. The union of motormen and conductors, however, refused to handle the cars over the structure, on the ground that both the company and the city had refused to accept responsibility for accidents. As a result a test trip was made over the bridge by G. L. Guy, the commission's engineer, representatives of the company, union and commission being present. As the result of the report of Mr. Guy, based on this test, the commission ordered that operation over the bridge be suspended to allow further consideration of the conditions.

On the day the test was made the temperature was 21.4 deg. F. below zero, while operating conditions were bad on

motormen in charge of the cars is a more important factor in safe operation than either the grades or the equipment. He accompanied his report with a chart, showing the relative efficiency, as far as car operation is concerned, of car operations of various lengths of service. This chart is made up from actual statistics of accidents during 1914. "It is apparent," the report states, "that accidents are about 10 times more frequent, considering the time worked, with new motormen than with old experienced men. As new men are almost sure to be on this run, there is much more likelihood of accidents from this cause. Another fact which will affect the chance of accidents in the immediate future is that since Aug. 1, 1914, some 270 old operators

These results, I contend, are borne out under actual tests. The success of it depends on the efficiency of the car operator:

Engineering Computation.

Actual weight of car loaded. 50,600 lb.
Weight normal to incline on
7.1% grade—50,600 Cos O... 50,446.7 lb.
Force down and parallel to
grade due to weight of
loaded car—50,600 Sin O... 3,592.6 lb.
W—Total weight of car in tons.
p—Coefficient of adhesion (bad rail)
10%
r—Train resistance in pounds per ton
of total weight.
G—Per cent grade (7.1%).
a—Acceleration in miles per hour.
Maximum traction effort that can be

exerted without slipping under bad rail conditions— $20p \times W \times 1 - (G 100)^2 = 5034.7$ lb.

This also represents the maximum retarding effort of the brakes before the wheels will slip on the incline with bad rail conditions.

Power required to overcome grade is 20 lb. per ton for each per cent grade—550 lb.

Allowable braking effort to reduce speed—1185 lb.

Pounds per ton of car—59.4 lb.

Maximum negative acceleration—0.91 ft. per sec.

Taking an average condition of requiring to stop the car in 30 ft.—time required to bring car to rest 8.027 sec.

Maximum initial speed allowable to stop car is 30 ft. with bad rail conditions—7.30457 ft. per sec. corresponding to 4.98 m.p.h.

"The calculation takes it as possible to throw the brakes on instantly and set them at the exact pressure, such that any increase would cause the wheels to slip on the rails. This hypothesis, of course, is impossible, but a competent motorman can adjust brakes in $2\frac{1}{2}$ sec. within 25% of the maximum braking effort. From the above, to keep a car under control in bad weather the speed on the grade should not exceed 3 m.p.h.

"Charts herewith show the coefficient of adhesion between car wheels and rails under various conditions of rail. These results are plotted from experimental data. There is also a chart showing the maximum grade that can be ascended under various conditions of track, providing there is sufficient motor capacity. As in the operation of Arlington St. bridge no trailers will be used, there will be 100% of the car's weight on the drivers. Hence where the 100% ordinate is cut by the coefficient of adhesion curve, the abscissa represents the maximum grade mountable. For example, the coefficient of adhesion being .14, the maximum grade a motor car with all weight on drivers could ascend would be 13.3%. Conversely, with a grade of 7.1% the coefficient of adhesion would have to drop below .08, a condition which is not met in practice."

Toronto Railway Co's Rights on Yonge Street.

The Judicial Committee of the Privy Council, sitting in London, Eng., May 26, heard arguments regarding the Toronto Railway Co's right to lay tracks and operate cars upon the portion of Yonge St. within the city limits, lying between the C.P.R. tracks and Farnham Avenue.

Mr. Clausen, for the City of Toronto in supporting the appeal, said the agreement was made in 1891 between the city and the railway and validated by the Ontario statute to grant to the company the right to operate a surface street railway in the city for 30 years. His contention was that the agreement did not give the right now claimed by the company, because no franchise could be granted for more than 20 years, and no franchise to come into operation in future (in this case more than 24 years after the date of the agreement) could be granted at all.

The Metropolitan Ry., in 1891, had a franchise from the County of York over that part of Yonge St., including a piece running from the present C.P.R. tracks to Farnham Ave., and a short time before the agreement the city had acquired this piece of land. The Toronto & Mimico

Electric Ry. had, before the enactment of the validating agreement, obtained a franchise over the portion of Queen St. west of Dufferin St., but the franchise ran out in June, 1915. The Toronto Ry. insisted, however, that it still had a right to run its undertaking over the part of Yonge St. referred to.

The Lord Chancellor said: "The question is whether, on the construction of the agreement by which, by clause 2, the appellants purported to grant the right to respondents to operate tracks along the streets of the city within certain limits, excepting the part of Yonge St. which had been taken over by the Ontario & Quebec Ry., now the C.P.R., and so forth, 'so far as the corporation can legally grant same,' was a grant which passed to respondents, the right to which, in the Canadian courts, they were held to get under the agreement."

Mr. Clausen replied affirmatively, adding that the appellants only granted to the respondents such rights over that portion of Yonge St. in dispute as they had at the date of the agreement power to grant.

Sir John Simon, for the Toronto Ry., submitted that the effect of the agreement was that the city had given the company whatever rights the city had over the street in question; those rights were for a term of 30 years from 1891. His learned friend had shown no ground which entitled the appellants to impose restrictions on the company in the proposed operations on Yonge St. The agreement gave the company the exclusive right to operate such railways for 20 years, and went on to provide that the right should be renewed for a further 10 years in the event of legislation being obtained to enable this to be done. With this object, the appellants' predecessors pleaded that they and their successors would aid in procuring the needed legislation to authorize such renewal if that alone was insufficient to entitle the Ontario Railway and Municipal Board to decide the dispute in favor of his clients. All doubts were set at rest by validating the act which incorporated the company and confirmed the agreement, and declared that under the agreement the respondents had acquired and were entitled to the exclusive right and privilege of using and working the street railways in the city for 30 years, except so far as they overlapped the right already granted to the Metropolitan St. Ry. on that portion of Yonge St. as existed at the passing of the act. The judgment of the court now under appeal, he submitted, gave the correct interpretation to the language of the agreement. The question was not a new one. It had been argued in the Toronto Ry. vs. the City of Toronto as long ago as 1906, and incidentally in other cases decided since then. In these cases the principle decided supported the contention of the respondents in the present case.

The Lord Chancellor said he would consider their opinion, and judgment was reserved.

Judgment was delivered June 23, in favor of the Toronto Ry. with costs. This confirms the original order granting the company permission to extend its tracks on Yonge St., north of the C.P.R. for 1,320 ft. to Farnham Ave.

James Lightbody, who was formerly on the staff of the Daily Province, Vancouver, has been appointed Publicity Agent, British Columbia Electric Ry., vice B. I. Dasent, who has left the company's service.

Brantford Municipal Ry. Wages, Etc.

In consequence of a dispute between the Brantford Municipal Railway Commission and its conductors and motormen, the men having demanded an increase of wages, that motormen be provided with seats on cars, and that there be a written agreement between the Commission and the men, a board of conciliation and investigation was appointed under the Industrial Disputes Investigation Act, 1907, F. W. Frank, of Brantford, representing the Commission, Jos. Gibbons, of Toronto, representing the employees, and Judge Snider, of Hamilton, being chairman. The Board reported on June 2 that, after repeated efforts a settlement between the parties was arrived at, and that a memorandum embodying the same had been signed by the chairman of the Commission and by the employees' representative before the Board, who is also the President of Division 685, Amalgamated Association of Street & Electric Railway Employees. Under the agreement a new schedule of wages was put into effect to date from June 1, 1916, and to remain in effect until June, 1917. Following is a comparison of the old and new rates per hour:

	Old rate.	New rate.
1st month	15c.	16c.
Following 11 months	17½c.	19½c.
2nd year	19c.	21½c.
3rd year	20c.	22½c.

Stools are to be provided for motormen in defined limits; rigid inspection of cars to be constantly made; change to be carried by conductors is to be amply provided by the Commission; boxes for coats and caps provided in each car to be used by motormen and conductors; open cars are to be improved as to storm conditions; charges against employees are to be always open to appeal to the Commission; half cost of uniforms is to be paid by the Commission; seniority as to duties of employees is to be left to the management; all rights and privileges enjoyed by employees on June 1 are to be continued; no discrimination is to be made against any employee on account of his belonging to a labor union. The terms of settlement are to be placed on the Commission's minute book.

Regina Municipal Railway Earnings, Etc.

Following are statistics for April, compared with those for April, 1915, and the total for four months ended Apr. 30:—

	Apr. 1916	Apr. 1915	Jan. 1 to Apr. 30, 1916
Total revenue	\$18,121.67	\$12,946.92	\$72,384.39
Expenses	15,241.47	14,255.67	70,290.30
Capital charges ..	8,963.80	9,137.58	35,855.20
Operating surplus ..	2,880.20	x1,298.75	2,094.09
Deficit	6,083.60	10,436.33	33,761.11
Expenses per car mile without power	15.01c.	13.63c.	18.01c.
Expenses per car mile with power	20.11c.	18.03c.	24.15c.
Platform wages per car hour	72.94c.	73.06c.	73.71c.
Passengers carried ..	410,697	277,330	1,609,117
Expenses less capital charges, percentage	84.10		
Expenses with capital charges, percentage	137.57		

Fare Changes on Kingston, Portsmouth and Catarqui Electric Ry.—On June 1 the company discontinued selling 6 tickets for 25 and instituted a cash fare of 5c. Workmen's tickets, good from 6.30 to 7.59 a.m., and from 5 to 6.30 p.m., are sold at 8 for 25c, and tickets for children between the ages of 5 and 12 are also sold at 8 for 25c.

Electric Railway Projects, Construction, Betterments Etc.

Calgary Municipal Ry.—We are officially advised that an additional half mile of track has been built to the military camp at the Sarcee Indian Reserve, for army freight and supplies, and an additional half mile of sidings to the main track. The main line to the camp, which connects with the city system at Killarney St. was opened for passenger service at the end of May. The extension mentioned above is for freight purposes only, and did not necessitate very much grading. (June, pg. 242.)

Hamilton St. Ry.—The Hamilton, Ont., City Council has been advised by its Street Railway Committee that the company is prepared to lay tracks on Kenilworth Ave., from Barton to Burlington St., and that it was expected to start work by the end of June. (April, 1915, pg. 147.)

Lake Erie & Northern Ry.—The first car over the extension of this line from Brantford to Simcoe, 23.5 miles, was run May 29, and the regular service was started May 30. The cars run right through from Galt to Simcoe, 43 miles, a car running in each direction every two hours. The eight-mile extension from Simcoe to Port Dover is expected to be opened for traffic about the middle of July. The erection of the overhead work on this section is being proceeded with.

The station at Simcoe is a commodious building, containing a large waiting room, ticket office, baggage room and their necessary conveniences.

It was stated in our last issue that the Brantford City Council had approved of the plans for the station to be built in Brantford for the Lake Erie & Northern and the Hamilton & Brantford Railways, with the stipulation that the L.E. & N. buy a strip of land opposite the station site in order to widen Water St., and to deed it to the city for highway purposes, the city offering to give in exchange a small piece of land to the west of the triangular portion of Water St., which will also be used by the railways. The L.E. & N.R. objected to this and went to the Board of Railway Commissioners, which decided, June 9, in favor of the city's contention. As the railway clearance under the bridge is 18 ft. and the station clearance 17 ft., and as the line is electrically operated, and it will not be necessary to have men on the top of the cars, the order provides for the clearance required of 17 ft. on the company giving the usual undertaking that men will not be allowed on the top of cars. We are officially advised that the building of the station is being proceeded with. (June, pg. 240.)

London & Port Stanley Ry.—Work on the new station building in London was reported to be well advanced June 14. It is reported that the building is being erected without a permit from the city council, and having been refused on the ground that the building is described as "shed construction," which is not permitted in first class fire limits embracing the site of the station.

Moncton Tramways, Electricity & Gas Co.—We are officially advised that the company will probably remove its track between Weldon St. and High St., on Main St., and between Main and Park St., on High St., and place the same on Weldon St. from Main to Park St., thence on Park St. to High St., about half a mile.

It is also proposed to pave about 3,000 ft. of track on Main St. with bitulithic at once. The Sunny Brae, N.B., Town Council has appointed a special committee to meet the company, and discuss the question of the extension of the electric railway from Moncton to Sunny Brae. (Feb., pg. 73.)

Montreal Tramways Co.—A petition has been extensively signed by the residents of the Park Ave. extension district, asking that they may be given a car service by the extension of the Van Horne Ave. line for 350 yards to Atlantic Ave. (June, pg. 242.)

Pictou County Electric Co.—The Nova Scotia Legislature has extended the time within which the company may build the various electric lines which its predecessor in title, the Egerton Tramway Co., was authorized to build in 1902, and which have not been built. (Dec., 1915, pg. 482.)

Quebec Ry., Light & Power Co.—We are officially advised that the management knows nothing of the building of a new piece of railway at a cost of \$100,000, which a United States press report stated recently the company had decided on undertaking. The question of the extension of the company's lines in Belvedere Ward is urged by the City Council. The company offered to accept the decision of the Quebec Public Utilities Commission as to the necessity for the extensions asked for, and the city will make the necessary application. (Dec., 1915, pg. 482.)

Regina Municipal Ry.—An extension of track to the Imperial Oil Co.'s headquarters, Winnipeg St., Regina, Sask., has been completed. (July, 1915, pg. 277.)

Sandwich, Windsor & Amherstburg Ry.—Negotiations are in progress between the city and the company for the construction of a second track on London St. West, before the new pavement is laid. There is some difference of opinion between the city and the company as to terms, but it is expected that these will be adjusted so that the work may be proceeded with this season.

We are officially advised that the present single track line between the Michigan Central Rd. bridge and Bridge Ave., on London St., Windsor, Ont., approximately 0.416 of a mile, will be double tracked at an early date. (Nov., 1915, pg. 441.)

Toronto Suburban Ry.—In reference to the proposal to change the gauge of a portion of the line, we are officially advised that the gauge of the lines being operated is 4 ft. 10 $\frac{3}{4}$ in., while that of the extension from Lambton to Guelph, is 4 ft. 8 $\frac{1}{2}$ in. The lines now operative are the ones to Lambton, along Keele St., to Weston and Woodbridge, and the Davenport road line. As it is intended to handle freight over the Lambton-Guelph line, it was necessary that it should be built standing gauge, and as the passenger cars on that line have to operate over both interurban and city lines, the gauge of all should be the same. The gauge of the Toronto Ry. and of the Toronto Civic Ry. is 4 ft. 11 $\frac{1}{4}$ in. (May, pg. 195 and 196.)

Toronto Civic Ry.—We are officially advised that construction is almost completed, upon the Lansdowne Ave. extension, from St. Clair Ave. to the C.P.R., 0.615 of a mile of double track. We are advised by the Commissioner of Works

for Toronto, relative to the new eastern entrance to the Exhibition Park, and the electric railway track there, that it is a continuation from the Toronto Ry. tracks from the corner of Bathurst and Front Sts. to the terminal in the exhibition grounds, just east of the Midway. The total length of the line is approximately 10,900 ft. of single track, and it is for the most part double track construction, with 60 lb A.S.C.E. rails on cedar ties and gravel ballast. The overhead construction is span work, and 2/0 round trolley wire will be used. The line is being built by the city, and will be operated by the Toronto Ry. Orders have been placed for material for track and overhead work. It is expected that this new eastern entrance will be completed by the end of August. (June, p. 242.)

Windsor, Essex & Lake Shore Rapid Ry.—In connection with the City of Windsor's proposal to pave Howard Ave. from the cemetery to Tecumseh Road, the question of the location of the company's tracks came up at the council meeting June 9. The company's tracks are on the boulevard, south of the cemetery, where they were located at the city's request, the city paying \$1,800 to move them there. The matter was referred back to the committee in charge with a request to confer with the company as to moving the tracks to the middle of the road.

The company has been granted permission by the city to pave the road on the west side of its car barn in Windsor. (Mar., pg. 115.)

Winnipeg Electric Ry.—We were officially advised May 26 that negotiations were under way for building a second track on the Winnipeg, Selkirk & Lake Winnipeg Ry., from the north city limits of Winnipeg to Kildonan Park, about a mile. These negotiations were not then completed, and the management was not in a position to state whether the work would be gone on with this year or not. The discussions about this matter, show that the undertaking of the work depends largely upon whether the city of Winnipeg will persist in its application to the company to lay a new line on Talbot Ave. (June, pg. 242.)

The Quebec Ry., Light & Power Co.'s lines after the transfer to the Dominion Government of the line from Quebec to St. Joachim, will consist of the City Division, 19.77 miles, and the Quebec County Division 4.82 miles. The latter line runs from Maple Ave. to Sillery, on the road to the Quebec Bridge. What is known as the Beaufort line is owned by the Beaufort Insane Asylum authorities, and it is and will continue to be operated by them. Whether the company will continue to operate the upper level line to Montmorency Falls has not been decided. (June, pg. 227.)

Safety First at Winnipeg.—For three or four days prior to the closing of the public schools in Winnipeg, R. R. Knox, Traffic Superintendent; H. Long, Electrical Superintendent, and L. Palk, Assistant to the Manager, Winnipeg Electric Ry., attended at the various schools in the district, and gave addresses to the scholars on safety first in relation to traffic on the streets. A quantity of literature was also distributed, in which hints are given to the children, all couched in such language as will be readily understood even by the smaller ones.

J. W. Lyon, President, Ontario Hydro Electric Radial Railway Association, was slightly injured by being struck by a street car in Toronto, June 8.

Safety Provisions on Niagara Falls Park and River Railway.

Following on the serious accident which occurred near Queenston Heights, on the N.E.P. & R. Ry. on July 7, 1915, the Ontario Railway and Municipal Board had its engineers, H. W. Middlemist and J. C. Royce, of Toronto, make a very thorough examination of the whole line, in which they were aided by the company's officials. As a result of the engineers' report, and of conferences between the Board and the company's management, the Board passed an order May 26 requiring the company to do as follows:

That the tracks from the upper arch bridge to the Grand Trunk bridge be ballasted with stone or gravel ballast in a good and sufficient manner under and between the ties and to the tops of the same, to be approved by the Board's engineer; and that all clay and mud be removed from the ballast to the satisfaction of the Board's engineer. That where necessary in the judgment of the Board's engineer suitable drains or ditches be placed in the tracks from the upper arch bridge to the Grand Trunk bridge, with cross drains adequate to carry the water to the edge of the cliff at the lowest points; such work to be done to the satisfaction of the Board's engineer. That immediate temporary or partial repairs be made as in the two preceding sentences mentioned ready for inspection by the Board's engineer not later than June 15, 1916, and that the matter of further permanent repair be reserved for consideration by the Board on said date. That adequate provision be made for the proper drainage of the tracks at all places where the track is low, from the Grand Trunk bridge northerly to the river dock at Queenston; this work to be done ready for inspection by the Board's engineer during 1916. That all ties in the tracks which are defective or unfit for use owing to decay shall be removed at once, and sound, serviceable ties substituted therefor; and so from time to time hereafter. That suitable stone or gravel ballast be put in at all low spots along the line where water is likely to accumulate, and that where low joints are found in the tracks these should be raised and ballasted and the ballast tamped under the ties. That where any spikes are missing in the ties they shall be replaced. That all outer rails which are in a worn condition and which are situated on a curve, be renewed. That all guard rails be carefully inspected and where necessary securely spiked to the ties, and that existing guard rails be added to and extended as required from time to time by the Board's engineer.

That the safety switch near Brock's monument be reconstructed according to the plan approved by the Board.

That all weeds and vegetable growths be forthwith removed from between the rails and for a distance of 18 in. outside the tracks and also (except upon the section of the railway within the Queen Victoria Niagara Falls Park) from the devil strip between the tracks: and that the said areas, except as above excepted, be hereafter maintained free from weeds and vegetable growths. That those portions of the cliff at which the track approaches close to the edge, and which under instructions from the Board were examined by officials of the company and reported upon, be hereafter, not later than the first week in May in each year,

carefully examined by officials of the company, and reported upon in writing to the Board as to the condition and safety of the same. That all culverts under the tracks be rebuilt of concrete or cast iron pipe of suitable diameter in a good and substantial manner during 1916.

That the railway from Queen St., Queenston, to the river dock be reconstructed with a safety switch and with altered grades and curves, in accordance with the plan approved by the Board.

Where the trolley wire is carried on span wires, the trolley poles supporting the span wires shall be erected and maintained at a minimum distance of 7 ft. from the centre line of the nearest track, such distance to be measured to the face of the trolley pole nearest the track; provided that where this is impracticable, owing to the proximity of the railway to the cliff, the Board may permit a trolley pole or poles to be erected nearer the centre line of the nearest track.

That in operating the cars rule 18 of the rules for the government of conductors and motormen shall be strictly observed. That hereafter all cars operated to Queenston dock shall have double motor equipment. That the brake rods and brake equipment of the cars operated shall be strengthened as specified in drawing filed with the Board. That all cars operated on this line shall be equipped with suitable fenders of a type approved by the Board. That sanders of ample capacity, as approved by the Board, shall be fitted to the cars and adjusted to deposit the sand as close to the wheel as possible, and that the sanding adjustment be frequently inspected so as to ensure that it is in good working order. When operating up or down the Queenston grade and if loaded to the full extent of its seating capacity, the number of permissible standing passengers, in excess of such loading, shall be limited as follows,—an open car shall not be loaded beyond 10% of its seating capacity, and a closed car shall not be loaded beyond 30% of its seating capacity.

That the company's rule 133, limiting the speed of cars over switches and curves and square crossings, be strictly observed. That this order shall take effect forthwith and all its requirements shall be satisfied in a manner to be approved by the Board's engineer.

The International Ry. Co.'s management has favored Canadian Railway and Marine World with plans showing the change in track leading to Queenston dock, and the installation of the so-called safety switch on the same piece of track, in connection with which it may be mentioned that the gradient has also been reduced approximately 1% incident to these changes. In regard to the various paragraphs of the Board's order, it is stated that the ballasting of the tracks from the upper arch bridge to the G.T.R. bridge has been completed, and that the necessary drains are being installed. New ties are being put in wherever defective ones appear. This is done regularly each year in carrying on ordinary maintenance work, there being about 10% of renewals yearly. Stone or gravel ballast has been put in all low spots, and where there are low joints they have been raised and ballasted and the ballast tamped under the ties. Where any spikes are missing in the ties they are being replaced. Naturally this work is done

as part of the ordinary maintenance. The same remark applies to the inspection of guard rails and the spiking of them to the ties. Other points where guard rails are desired have been indicated by the Board's engineers, and they will be installed. The desired changes have been made in the safety switch near Brock's monument. The new switch provides an easier approach to the derail.

Mainly About Electric Railway People.

F. W. Brooks, heretofore General Manager Detroit United Ry., has also been elected President, in succession to J. C. Hutchins, elected Chairman of the Board.

Mrs. W. C. Hawkins, wife of the Vice President and Managing Director, Dominion Power & Transmission Co., has been elected President of the Hamilton, Ont., Associated Field Comforts Committee.

Percy Lewis has been appointed Purchasing Agent, British Columbia Electric Railway, vice C. A. Lee, appointed Assistant Engineer in the Electric Engineering Department.

E. Kidd, General Manager British Columbia Electric Ry., left Vancouver, June 9, for London, Eng., for his annual conference with the directors. He expects to return early in August.

Lieut. Col. G. C. Royce, Secretary-Treasurer and General Manager, Toronto Suburban Ry., who for some time has been in command at the alien internment camp at Kapuskasing, Ont., is to raise an overseas battalion in Toronto in connection with Queen's Own Rifles.

R. M. Dunlop, heretofore chief clerk, Freight Office, G.T.R., Chatham, Ont., has been appointed agent, Chatham, Wallaceburg & Lake Erie Ry., there. The position of General Freight Agent, heretofore held by D. L. Welch, who has gone to the London & Port Stanley Ry., has been abolished.

D. L. Welch, heretofore General Freight Agent, Chatham, Wallaceburg & Lake Erie Ry., Chatham, Ont., has been appointed accountant, London & Port Stanley Ry., London, Ont. The report mentioned in our last issue stated that his title would be travelling auditor. Some biographical particulars were given in our June issue.

London, Eng., cablegram May 2:—"The news that Major Norman C. Pilcher of the Canadian Mounted Rifles was killed in action was received with special regret in Liverpool, where his family was well known, his father being a captain. Edward Pilcher, his grandfather, twice refused the Mayoralty of Liverpool. Major Pilcher was several times personally congratulated by General Seely for courage and resource under heavy fire. He served in the Boer war."

Major N. C. Pilcher, General Manager, Sherbrooke Railway & Power Co., was killed in action in France recently, as mentioned in our last issue. J. H. Trimmingham, Superintendent of Power, who acted as General Superintendent during Major Pilcher's absence, has been appointed Sub Lieutenant in the Royal Naval Motor Boat Patrol Service, and has left for England. Capt. Thos. Irving, Assistant Accountant, is now with the 117th Eastern Townships Battalion at St. John's, Que., preparatory to going overseas. Chas. Johnstone, heretofore Accountant, has been appointed Acting Manager, and J. T. Kemp, heretofore with the Aetna Chemical Co., Drummondville, Que., has been appointed General Superintendent.

Contracts for Toronto Civic Railway Cars.

As announced in our last issue, the Toronto City Council has awarded contracts for materials for the assembling and construction of 13 double truck, double end operation, cars for the civic railway, as follows:

Bodies, Preston Car & Coach Co., each..	\$4,907.00
Trucks, Dawson & Co., Montreal, per set	828.50
Electrical equipment, Canadian Westinghouse Co., per set	1,866.00
Wire and cable, Eugene F. Phillips Co., Montreal, per car	123.17
Fare boxes, Coleman Farebox Co., each..	51.10

Tenders were invited originally for the cars complete and delivered in Toronto ready for operation, and also for the bodies, trucks and equipment separately. Two tenders were received for the complete cars, no. 1 for \$8,867 each, and no. 2 for \$9,075 each. Tender no. 1 offered to deduct \$158 if the step and door operating mechanism were supplied by the city. This mechanism would cost \$190 delivered, and the cost of unloading each car at Toronto was estimated at \$25, therefore, based on this bid, the price for each completed car would be \$8,925, or \$116.012 for the lot of 13.

Taking the tenders as submitted for the various parts the Works Commissioner reported that if the parts were purchased and assembled at the civic car barns, the price for each completed car would work out as follows:

Bodies, Preston Car & Coach Co.....	\$4,907.00
Trucks, Dawson & Co.	828.50
Electrical Equipment, Canadian Westinghouse Co.	1,866.00
Air brakes, estimated	350.00
Fareboxes, Coleman Farebox Co.	102.20
Wire and cable, Eugene F. Phillips Co.	123.17
Gears and pinions, Allen General Supplies	108.98
Step and door operating mechanism,	
National Pneumatic Co.	190.00
Unloading and assembling	144.65

	\$8,620.50
or for the 13 cars	\$112,066.50
a total saving of \$3,945.50.	

The St. Louis Car Co. originally bid \$3,300 for the bodies, and later amended its offer to deliver them in Toronto, with freight, duty and war tax prepaid, for \$4,643.50 each, to deduct \$30 a car if the city supplied the step and door operating mechanism, and also to allow a deduction of \$74 a car if the work of installing trucks, motor equipment, air brakes, wire cable and fare boxes were done in Toronto. These deductions brought the price of the car bodies to \$4,539.50 each, which was the lowest tender, but as it was not submitted on the form supplied by the city, it was declared informal. Had this tender been accepted, the total cost of each car complete would have been \$8,200, showing a total saving of \$5,466.50 on the order for 13.

Testing Air Brakes on British Columbia Electric Railway.

In the B.C.E.R. shops at Vancouver, air brake equipment is thoroughly tested at regular intervals. According to requirement of a provincial act gauges are tested once a month, and in accordance with M.C.B. rules brake cylinders are cleaned every six months. Pumps are generally overhauled once every two years. They are torn down, cleaned and scraped out.

To keep a record of the testing of brake cylinders, gauges, compressors and governors it has been found convenient to make use of a wall cabinet by means of which it is possible to indicate the work laid out for this department for six month periods. Opposite the car numbers, which

are arranged numerically, is a row of six ½-in. eye-hooks. If a car or a certain part of its air brake equipment is to be tested during this period a round white cardboard tag, metal bound, is hung on on, the tag representing the month this work is scheduled to be performed. As soon as the work is accomplished the tags are removed. A drawer at the bottom of the cabinet is used for the tags not in use. The tags are stamped with a single letter for the part requiring attention, thus G stands for gauge, P for pump and C for brake cylinder. The board is divided into sections for Vancouver city cars, interurban cars, locomotives and miscellaneous equipment.

The air brake department foreman makes out a weekly report of cleaning and testing in triplicate, one copy going

[illegible]

Weekly Report of Cleaning and Testing Gauges and Valves of Air Brake Equipment.

to the Master Mechanic, one to the General Superintendent and one being retained by himself. The standard M.C.B. report form for brake cylinders and triple valves is used.

International Traction Co.'s Eack Divi-
dends. — Buffalo, N.Y., press dispatch
June 9:—"The International Traction Co.
of which the International Ry. Co. is the
operating company, will pay 42% accumu-
lated dividend on the outstanding 4%
preferred stock on June 30, it was an-
nounced here today. For the first time
since the organization of the company in
1899, it was also announced, the directors
have declared a 1¾% dividend on the
common stock. The total dividend dis-
tributions on June 30 will be about
\$600,000. The International Ry. system
embraces all the electric lines in Buffalo
and along the Niagara frontier includ-
ing Niagara Falls, N.Y., and the Niagara
Falls Park & River Ry. in Canada.

Terminal Grain Elevator Construction is the title of an illustrated lecture given by C. D. Howe, A.M.Am.Soc.C.E., Chief Engineer, Dominion Grain Commission, before the Canadian Society of Civil Engineers' Regina Branch, and the Regina Engineering Society, at a joint meeting. June 22.

The beautifying and planting of the grounds of the Intercolonial Ry. station at Moncton, N.B., were completed June 8, the work having been carried out under the supervision of Mrs. Gutelius, wife of the General Manager, Canadian Government Railways.

Morrisburg & Ottawa Ry.—A meeting of shareholders was called to be held at Ottawa, May 30, to pass resolutions forfeiting, under the provisions of the Ontario Railways Act, sec. 93, all stock upon which any arrearages for calls or interest were due. R. A. Bishop is Secretary-Treasurer.

Port Arthur Electric Ry.—Statistics of operation for April:

Owing to the regulations in England respecting precautions to be taken in case of Zeppelin raids, the hours during which electric street cars can be operated has been curtailed in some towns. This has caused a loss in wages to those employed, amounting to about \$2 a week. In Northampton, where the cars are municipally operated, the wages are being paid as for a full number of hours. The employees declined to accept half rates.

Spitting on Cars.—The International Ry. has requested the Buffalo police to enforce the city ordinances prohibiting spitting and smoking on the street cars, and as a result a number of fines, ranging from \$5 to \$50, have been inflicted recently. So far as the enforcement of the regulations in Canada against spitting is concerned the bylaws are more or less of a dead letter.

The International Ry. is operating for the summer a new fast through service between the Buffalo, N.Y., terminal and Queenstown, Ont., via Niagara Falls, and the Upper Bridge across the Niagara Gorge, returning via the Gorge route. No stops are made between Buffalo and Niagara Falls, and the round trip is made in two hours.

British Columbia Electric Railway Bulletin.

The British Columbia Electric Ry. has commenced the issue of a bulletin for its patrons, from the first number of which the following is reproduced:

"Every Friday morning we expect to publish one of these little bulletins for our patrons' information and edification, and we hope that you will take one from the box, read it, and enjoy it.

"Our purpose is not hard to explain. We aim to give service, whether it is by way of a safe, speedy street car service or a reliable, efficient electric light service. But giving service is not so simple as it may seem, especially when Tom, Dick or Harry each wants a special brand of service different from the others. For instance, Tom, who lives at the end of one of the car lines, wants the car he is on to speed right through and wait for no one. Dick, who lives half way to town, waves at the motorman when he is half a block away from the track and wants to be waited on. Harry, who lives fairly close in, generally walks to work, but occasionally, when it is wet and disagreeable, he rides, and complains because the car is crowded with other persons situated similarly to himself. Now, it is impossible, in a system that is for all, for everyone to obtain exactly what he wants at all times, and so we try to strike a happy medium of service, intended to meet the wishes of as many persons as possible. If we did not run our cars by rule—or on schedule, as it might be put—we would not be giving service. You could not tell when you would get a car, or whether, having found one, it would take you to your destination.

"It is, then, one of the objects of this bulletin to acquaint you with your street car system and incidentally to help you to take the most benefit out of it. You are all anxious to get to your destinations as quickly and as comfortably as possible, and we, who are at your service, are anxious to comply with your wishes. There is just one thing lacking, namely, co-operation between company and patron.

"But why," you may ask, "do you request co-operation, when your company owns and operates the street cars? We ride and pay the bill. What more do you want?"

"The answer lies in our desire to work for the benefit of the public. There are certain things—trivial in themselves, but of great importance in the aggregate—that can be done only by the public. Fast schedules, accurate timing, up to date equipment can do their part in getting the tired business man to his home quickly, but the final element, the assistance of the man himself, has been lacking.

"But how can I assist in making the cars run faster?"

"By having the right fare ready, by handing the conductor your transfer unfolded, by getting on board the car quickly, and in many other ways you can assist the service. Many minutes each trip can be saved by such means. We dare say that many persons never think how they are delaying the system, and incidentally themselves, by not having their transfers unfolded when boarding a car. We want to teach you how to save the seconds on the back platform and how best to use a transportation system that is for you.

"This will be our method of talking to our patrons, and if you have any suggestions to make as to running our car system we want you to make them. Your wishes are what guide us in giving ser-

vice. All we ask is that you be reasonable. Sometimes we are in a better position than you are to choose when there are several opposing wishes which cannot all be satisfied. You may ask why we did not begin this before. Frankly, we were too busy extending our lines into new territory and doubling and trebling our equipment to meet growing conditions. What person during the boom years was not fully occupied with the industrial expansion?

"We believe we can say truthfully that we have been a prominent factor in building up Vancouver and the surrounding part of British Columbia. In our position as a public utility company we are in as close a relation to the people as a government is. We are in a position of trust, inasmuch as we serve the public with transportation, light, heat and power, a continued breakdown of which would paralyze industry itself. There are, therefore a great many interesting things about supplying electrical energy and street railway service that the public has a right to and should know. It will be our endeavor to place such facts before you in an interesting manner, and we invite your criticism. Furthermore, we have many aims in common with the citizens of Vancouver and of the surrounding district. The prosperity of Vancouver means prosperity for us. Though it might seem from this statement that our service is actuated by none but business motives, there is a corollary that our prosperity means better service to you. The tourist brings money to us and to the storekeepers. The factory brings payrolls in which everyone benefits. Population begets traffic, which begets service, and so on. The officials and employees of our company are citizens of the district we serve. A large percentage of them own their homes. All but a small percentage of our earnings remains in this district. We want to convince you that we are just as much interested in the prosperity of Vancouver as you are, and hope to enlist your assistance in making it the city that it should be."

The company offered prizes for the three best suggestions for a name for the bulletin, \$15 for first, \$10 for second, \$5 for third, to be submitted by June 30. For the guidance of competitors it gives the names of bulletins issued by other companies, as follows: Seattle, "The Electrogram"; Tacoma, "Public Service Forum"; Portland, "Watts Watt"; San Francisco, "Transit Tidings"; Denver, "Tramway Bulletin"; Baltimore, "Trolley News"; Olympia, "Public Service"; Sioux Falls, "On the Cars."

The Great Lakes Power Co., which, as announced in our last issue, has purchased the International Transit Co., operating a street railway and ferry service at Sault Ste. Marie, Ont., has also acquired the water power rights owned by the Algoma Steel Corporation, Ltd. It is the intention to increase the plant to 30,000 h.p., under plans and specifications prepared by J. O. Heyworth, M.Am. Soc.C.E., Chicago, Ill., and to have the extended plant ready for operation by Jan. 1, 1918. The company's chief officers are: President, S. Insull, Chicago; First Vice President, M. J. Insull, Chicago; Second Vice President, J. A. McPhail, Sault Ste. Marie, Ont.; Secretary, P. L. James, Chicago; Treasurer, R. W. Waite, Chicago.

Montreal Tramways Co's Wages, Etc.

The Montreal Tramways Co. voluntarily increased its conductors and motormen's wages on June 1. Following is a comparison of the old and new rates per hour:

	Old rate.	New rate.
1st and 2nd year men	22c.	23c.
3rd, 4th and 5th year men.....	23c.	25c.
After 5 years	25c.	27c.

The arrangement regarding uniforms remains the same as before. For the first two years the men pay half the cost, after which the company furnishes uniforms free. There is no extra allowance for Sundays or overtime, but schedules are made out to allow for about time and a half for all extras and trippers. About 70% of the men have been over 5 years in the service.

A. Gaboury, Superintendent, issued a bulletin to conductors and motormen on June 1, containing the following letter from J. E. Hutcheson, General Manager: "The management has had under consideration for some time the question of increased wages for conductors and motormen, and it is with pleasure that I am able to announce that commencing July 1 the wages per hour will be 23, 24 and 27c. respectively, instead of the rate of 22, 23 and 25c. which is in effect at present. There will be no change in the arrangement regarding clothing. The management appreciates very much the loyal services of the staff in the past, and feels confident of faithful co-operation for safe and efficient service in the future. I trust that the end of the war will mean the return of prosperity. In the meantime, assure all the employees of your department that their welfare is ever considered."

Edmonton Radial Railway Earnings, Etc.

	April 1916.	March 1916.
Revenue	\$48,458.19	\$52,631.96
Expenses	54,196.90	56,380.76
Passengers carried ...	982,674	1,081,451

Results of operation from Jan. 1 to April 30:

Debenture redemption..	28,428.60	29,119.80
	\$87,261.40	\$85,068.76

In their report the Commissioners say: "Considering the city has decreased in population and that the citizens have received an improved service as compared with last year, the street railway is holding its own under trying conditions; that is, the street railway earned during the first four months of 1916, over and above its operating expenses, sufficient monies to pay all interest charges, as well as depreciation charges and leaving some \$4,500 on hand to apply on debenture sinking fund account."

Jitney Traffic Notes.

A number of jitneys are operating in London, Ont., the number having been increased owing to the suspension of Sunday operation by the London St. Ry.

The Esquimalt, B.C., Town Council has approved a bylaw respecting the operation of jitneys. A provision requiring a bond of \$5,000 for each car was held over for further consideration, as jitney men claim its enforcement will put a number of them out of business, for the summer traffic. Their interests are being looked after by the Victoria Jitney Association.

The jitney licenses in Vancouver, for the half year, expired May 31, and since then very few of the owners of cars have had them renewed owing to the bonds put up not being acceptable to the City Council. The license inspector has been instructed not to accept any bonds under the bylaw unless they are issued by a company doing business with the Dominion Government's approval. Most of the jitney bonds hitherto accepted were issued by a company which is unable to comply with the requirements in this respect. The jitney men were given a short time to obtain new bonds, and instructions were given to prosecute under the bylaw any jitney men who were operating cars without licenses. The bond issuing company in question is interested in an action taken to quash the council's resolution as to the bonds.

The New York Public Service Commission, second district, has issued a regulation, prohibiting jitneys operating on routes parallel to existing car lines in Rochester. In the course of the investigation some interesting figures were given to show how the presence of jitneys would congest traffic on street. C. R. Barnes, electric railway inspector, made checks to show that 450 vehicles ordinarily passed through Main St. in the evening rush hour. If jitneys were used to take off the passengers who now stand in the trolleys, 304 machines would have to be operated, increasing the traffic 70%. If jitneys were substituted entirely for street cars, Mr. Barnes showed that some 2,000 jitneys would have to be in operation from 5.4 to 37.8 seconds apart. Through Main St. more than 6,500 jitney movements an hour would be necessary. The summing up of the commission was that the existing electric railway of Rochester, viewed as a public agency rather than as a money-making machine, was distinctly worth saving, in the interest of the people of Rochester. It had performed very valuable service in the upbuilding of the city. As a result licenses were refused to 60 jitney operators.

Electric Railway Notes.

Saskatoon, Sask., Municipal Ry. employees are applying to the city council for an increase of wages.

The Saskatoon Municipal Ry. inaugurated a Sunday car service between Saskatoon and Sutherland, Sask., May 28.

Moncton Tramways, Electricity & Gas Co., Moncton, N.B., will change to one-man-car operation in the near future, as soon as the cars are equipped with the Coleman Fare Box Co.'s no. 4 stationary fare box.

A complaint against the Quebec Ry., Light & Power Co., before the Quebec Public Utilities Commission, relative to a cash fare charged for transfers on the

sillery line within the city limits, was heard on May 30, and was adjourned to June 15.

The Oshawa Ry. has ordered one 25-ton electric locomotive from Ottawa Car Manufacturing Co. It will be about 23 ft. long, mounted on trucks and equipped with 4 Westinghouse 101-B-2 motors, L-4 controller, and Westinghouse ET 6 air brake equipment.

Brantford, Ont., Municipal Ry., employees were, on June 2, granted an increase of 2½c. an hour. Stools are to be provided for motor men and conductors, and the conductors are to be supplied with change by the Commission. The union is not to be recognized.

The City Commissioners operating the Edmonton, Alta., Radial Ry. have reported against a proposition to discontinue operation of the cars on Sundays. The surplus revenue from the operation of the cars on Sundays from Jan. 1 to April 30 of this year was reported to be \$4,462.25.

The Hamilton, Ont., City Council has under consideration a revision of the city bylaw affecting the Hamilton St. Ry. traffic. The matter has been under the Street Railway Committee's consideration for some time, with the result that it is recommended that the present clause in bylaw 679 be dropped, and a new one substituted.

The litigation arising out of the attempt to pass the Hebert project for the granting of a new franchise to the Montreal Tramways Co. June 22, 1915, has been called off. The result of the whole matter is that the city is in the position it was before the application for an injunction, and is once more able to take up the question of the franchise with the company.

The Three Rivers Traction Co. has ordered one combination freight car and snow plough from Ottawa Car Manufacturing Co. It will be about 29 ft. long over end sills, equipped with a heavy nose, or wedge plough at the front end and a heavy wing plough at one side. The body, etc., will be mounted on 76-E trucks and equipped with 4 Westinghouse 101-B-2 motors and Westinghouse S-M-E air brake equipment.

Sunday Car Service in London.

The arrangement for the operation of cars on the London St. Ry. on Sundays expired June 6, and the service was discontinued. For some time prior to that date, negotiations were carried on between the company and the city regarding a renewal of the privilege. In return for the renewal, the city demanded the immediate construction of some extensions, some double tracking, the provision of additional cars and a general improvement of the service. The company advised the council that it was prepared to purchase certain second hand cars, of which the City Engineer declined to approve, and also pointed out the difficulty of obtaining steel for new lines. The Board of Control, on June 9, decided to recommend the city council to remain firm in the position it had taken. Negotiations were however continued, and on June 16 a special meeting of the council was called for the following day to complete arrangements for a continuation of the Sunday service. Further negotiations and considerable discussion took place at the meeting on June 17, but without any satisfactory arrangement being arrived at, and the service on Sunday remains suspended.

Cost of Track Weeding on Interurban Railways.

The cost of track weeding on 16 electric interurban railways is given in the American Electric Railway Association's official journal, from a compilation made by E. Karow, Assistant to Vice President, Twin City Rapid Transit Co., Minneapolis, which appeared in reply to a question as to the best method of weeding. The figures of annual cost per mile of single track are as follows:

Company no.	Manual Labor	Chemicals	Weed Burner
1	\$37.50	\$6.25
2	50.00	\$23.90
3	7.50
4	6.00
5	20.00	15.00
6	27.04
7	52.50
8	4.66
9	36.54
10	18.30
11	58.00	12.00	12.00
12	55.00	25.06
13	50.00	43.55
14	75.00	25.00
15	50.00	33.00
16	70.00	28.80

Average .. \$47.00 \$26.00 \$9.00

Some companies clean their track to the end of the ties and others for a considerable distance beyond. Where manual labor is relied on, the track has to be weeded from one to three times per year; but the track is left in the cleanest condition. Burning is the cheapest scheme; but the track is left unsightly, and the work has to be repeated as often as hand weeding. Chemical treatment is the most effective; the cost is high in the first year, but lower in the second and third years.

Toronto Suburban Ry. Wins Case.—

The Ontario Railway and Municipal Board decided June 22 that the Toronto Suburban Ry. has the right to connect its existing line at Lambton, Ont., with its extension to Guelph. The City of Toronto opposed the company's application. If the Toronto Suburban changes its existing gauge of 4 ft. 10¼ in. to the standard, 4 ft. 8½ in., which is the gauge of the Lambton-Guelph extension it will be enabled to run through cars from Guelph to Lambton, thence along Dundas St., Keele St. and Davenport road to Bathurst St. and down that street for some distance in Toronto.

Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has opened offices at Valcartier Camp, Que.; Camp Borden, Ont.; Richlea, Sask., and Stanmore, Alta., and has closed its office at Chandler, Sask.

The following changes have taken place in the C.P.R. Telegraph Department: W. M. Godsoe, heretofore Superintendent, Atlantic Division, St. John, N.B., has been appointed Commercial Representative in Nova Scotia, Halifax; A. C. Fraser, heretofore Superintendent, Eastern Division, Montreal, has been appointed Superintendent, Atlantic Division, St. John, N.B., vice W. M. Godsoe; W. D. Neil, heretofore Superintendent of Traffic, Eastern Lines, Montreal, has been appointed Superintendent, Eastern Division, Montreal, vice A. C. Fraser; W. M. Thompson, heretofore chief operator, Montreal, has been appointed Superintendent of Traffic, Eastern Lines, Montreal, vice W. D. Neil; J. G. Davies has been appointed chief operator, Montreal, vice W. M. Thompson; E. W. Clayton, heretofore Agent, Nelson, B.C., has been appointed Agent, Victoria, B.C.

Marine Department

Freight Steamships Being Built at Port Arthur.

As previously stated in Canadian Railway and Marine World, two steel freight steamships are being built at Port Arthur, Ont., one for the Great Lakes Transportation Co., of which Jas. Playfair, Midland, Ont., is President and General Manager; and the other for the British Sulphite Fibre Co., of Vancouver, B.C., in which Jas. Whalen, of Port Arthur, Ont., is interested. They are sister ships, with the following general dimensions:

Length over all	251 ft.
" between perp.	251 ft.
Breadth moulded	43½ ft.
Depth moulded	28 ft. 2 in.
Carrying capacity about	3,000 gross tons

They will be of the single deck type, with poop, bridge and forecastle, steel deckhouse on bridge deck and chart room on top of deckhouse, with navigating bridge, and will be built on the transverse system of construction. There will be two cargo holds with two hatches in each hold, no. 1 hold to extend from collision bulkhead to boiler room bulkhead, and no. 2 hold to extend from engine room bulkhead to after peak bulkhead. The propelling machinery is located amidships. The double bottom will be 3 ft. deep and extend from collision bulkhead to after peak bulkhead, divided by transverse water or oil tight floors into a suitable number of compartments. Part of the double bottom will be utilized to carry fuel oil, the remainder of the fuel to be carried in wing tanks, which can also be used for coal. The officers and crew will be berthed amidships on bridge deck, where the mess rooms, galley, pantry, water closets, etc., will be situated. The firemen and sailors will have their quarters aft on main deck.

The main boilers will be of the Scotch marine type, single ended, arranged abreast. They will be 14½ diam. by 11 ft. long and have a combined grate area of 126 sq. ft. Each boiler will have three corrugated furnaces, of the suspension type, 42 ins. inside diam. The boilers will be fitted for natural draught.

The propelling machinery will consist of triple expansion engine, with surface condensers, built-in type, 3-cylinders each, working each on a separate crank placed at an angle of 120 degrees. Slide motion to be of Stephenson link type. Cylinders 20, 33 and 54 in., with a stroke of 40 in. The average working horse power to be 1200, maximum 1300. The high pressure cylinder will have piston valve, and the low and intermediate double ported slide valves, with relief frames, and the low pressure cylinder will have a Lovekin assistant cylinder. The high pressure cylinder will be supplied with a loose bushing of hard cast iron. All cylinders will have relief valves, top and bottom, discharging into the atmosphere. The turning gear will consist of a single cylinder engine, driving through worm gearing a shaft mounted on sliding cast steel worm.

The propeller will be of cast iron, solid section, with four blades. The air pump will be of the Edwards type, bolted to the back column of the engine. The steam steering gear will be placed on the main deck in engine room. There will also be a hand steering gear aft, and an 8x2 in. steam windlass fitted with hand attachment and friction brakes. All anchors

will be of the stockless type, of size in accordance with Lloyd's requirements. To facilitate the handling of the cargo there will be six 7x12 in. reversible steam winches, and 6 derrick booms to lift 4 tons each.

The vessels will be fitted throughout with electric light. One 7½ k.w. generator will be fitted in engine room. All wires, with the exception of those in cabins, will be enclosed in conduit, with outlets terminating in watertight fixtures. In the cabins the wire will be run in wood mouldings.

The vessels are being built by the Western Drydock & Shipbuilding Co. to take the highest class in Lloyd's Registry and under their special survey.

Steel Shipbuilding in Nova Scotia.

As stated in Canadian Railway and Marine World for April, the Nova Scotia Steel and Coal Co. is commencing building a steel steamship for its coal trade along the coast. She will be of about 2,000 tons dead weight capacity, 220 ft. long, 35 ft. beam and 20 ft. moulded depth. She will be built to Lloyd's classification, with all scantlings 10% in excess of classification requirements. It was expected that the keel would be laid during June, and the launching, depending on labor conditions and the delivery of material, will probably take place late in the autumn. The stem, stern post and rudder forgings, all propelling shafting, propeller and all fittings, all the frame angles, floor plates, etc., are to be made by the Nova Scotia Steel and Coal Co., at its New Glasgow works.

The propelling machinery will consist of a 1,000 shaft h.p. De Laval geared turbine, geared to the propeller shaft through two sets of gears. This will, it is said, be the first vessel built in Canada with a geared turbine, and it will also be the first vessel to be equipped with a De Laval geared turbine for driving the propellers. The equipment will also be unique in regard to the auxiliaries, having a rotary pump and centrifugal circulating pump, driven by a single engine.

Work is in progress on the building yard, which is located on the East River, near the Eastern Car Co.'s plant, which is also subsidiary to the Nova Scotia Steel and Coal Co. Thomas Cantley, President and General Manager, in writings us, says: "This is the initial venture, which may lead to far reaching results in the development of a naval and commercial steel shipbuilding industry."

Investigation into Stranding of s.s. Ennisbrook.

An investigation into the cause of the stranding of the Brook Steamship Co.'s s.s. Ennisbrook, off Glace Bay, N.S., May 15, was held recently before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. R. MacDonald and A. J. Morrison as nautical assessors. After weighing the evidence, which was short while covering the facts, the court found that the master, H. J. Vickers, showed lack of judgment in navigating his vessel from Cape North to the place of grounding. He had clear weather, with light northerly winds, from the time of passing Cape North, with clear water on his port side, and on his starboard side ice

was bordering the Cape Breton coast, and the current, if the trouble had been taken to ascertain it, would have been found running southwesterly, and both current and wind were influencing the ice. His intention at first was to make Sydney for bunkering, but on the way from Cape North, when he found so much ice in shore, he changed his mind and decided to go to Louisburg, as there was a clear passage there, but when in the neighborhood of Flint Island, when the ice was all on his starboard in masses, with clear water in shore, he thought he could make Sydney, and retraced his way to reach it. The court considered that in view of the fact that the master and mate were strangers to the locality, and owing to the masses of ice on the weather side and closing down gradually, it was most unwise and careless navigation to bring the vessel so near land, even after observations were made to ascertain the position of the vessel, which were not, however, plotted on the chart produced. After the grounding, every method possible was adopted to release the vessel, and there was no criticism on that point. Not wishing to cause delay to the dispatch of the vessel, which was only very slightly damaged, the court did not deal with the master's certificate, but severely censured him and reprimanded him for his lack of judgment, both in entering the ice and for careless navigation in approaching so near to land which was unknown to him, especially under the difficulties which would have been apparent even to those not accustomed to the sea.

Vessel Casualties on the Great Lakes.

The Canadian Lake Protective Association has issued its second casualty report for the season.

In view of the risk of damage and delay from fire, exemplified by one of the casualties reported, it has been resolved by the Association's committee that smoking be prohibited in sleeping quarters on all steamships. Instructions have been given accordingly to all members, and all masters are asked to see that the rule is strictly observed.

It has also been resolved to adopt a recommendation of the Great Lakes Protective Association that no vessel should attempt to pass another in the shallow and narrow channels between the lower end of Port Huron middle ground and Corsica Shoals lightship, and between the upper end of Russell Island and the lower end of St. Clair Flats Canal.

The committee will hereafter withhold from publication all reported casualties which in its opinion are not sufficiently serious or culpable to be of general interest. Masters will understand that they should report all casualties and it will be for the committee to determine which of these will be mentioned in the bulletin. Under this rule the present bulletin omits several reported casualties.

Danger of vessel collisions during darkness and fog will, according to a press dispatch from London, Eng., be practically eliminated very shortly, owing to a new device invented by W. Marconi, of wireless telegraph fame. It is said that the device is easily installed on vessels, and is operated from the bridge.

Proposed Further Diversion of Water from the Great Lakes.

The State of Illinois is proposing to divert water from the Great Lakes for a traffic canal from Chicago to the Illinois and Mississippi Rivers, and the Governor of the State and a number of congressmen recently waited on the Secretary for War asking for the approval of plans for the construction of the canal at an expenditure of about \$5,000,000. The Dominion Marine Association has filed a protest and asked for an opportunity to present the views of the Canadian navigation interests, and has been advised by the Secretary for War that the matter is being held for further consideration, and that if further hearings take place the Association will be given an opportunity to express its opinion.

A bill is at present passing through Congress to sanction the Illinois Legislature's action in authorizing this expenditure. The Senate has added an amendment to the bill limiting the amount of water to be withdrawn to 250,000 cub. ft. a minute, being the limitation in force in 1912, when an application was made unsuccessfully to increase the amount of water which may be withdrawn. This amendment is being discussed in the lower house, and the matter has become the subject of representations from the Dominion Government with reference to Canadian interests in the waters of the Great Lakes. At a conference with the Dominion Government on the subject, at which F. King, Counsel, Dominion Marine Association; A. A. Allan, President, and T. Robb, Secretary, Shipping Federation of Canada; W. G. Ross, Chairman, Sir John Kennedy, Consulting Engineer, F. W. Cowie, Chief Engineer, and D. Seath, Secretary, Montreal Harbor Commissioners; J. G. Sing, C.E., representing the Toronto Harbor Commission; C. A. McGrath, of the International Joint Waterways Commission; the Deputy Minister, and Assistant Deputy Minister of Public Works, the Deputy Minister of Marine, and W. J. Stewart, Chief Hydrographer, were present, it was strongly

urged that the conservation of the waters of the Great Lakes and St. Lawrence River is essential to the trade and commerce of the Dominion. The conclusion arrived at was to reaffirm the position previously taken by the Dominion Government against any further diversion of water from Lake Michigan.

The Davidson & Smith Elevator Co. Ltd., is reported to have purchased the s.s. Panther from the Massey Steamship Co., Duluth, Minn., for operation in the Canadian lake trade. She is a wooden vessel with diagonal strapping on frames, steel arches, bow sheathed for ice, steel boiler house, steam pump wells. She was built at West Bay City, Mich., in 1890, and was practically rebuilt there in 1912. She is equipped with fore and aft compound engines with cylinders 24 and 4 6ins. diam. by 42 ins. stroke, 600 i.h.p. at 86 r.p.m., supplied with steam by one Scotch boiler 12 by 13 ft. at 120 lbs. Her dimensions are, length 236 ft., breadth 36 ft., depth 24 ft.; tonnage, 1634 gross, 1140 register.

Canadian Pacific Ocean Service Flag.—Since the C.P.R. first entered the steamship business its red and white checkered flag has become well known on both the Atlantic and Pacific oceans, and in most ports of importance on both sides of both oceans. A slight alteration has been made in flag, owing to the transfer of the steamships to Canadian Pacific Ocean Services, Ltd. It consists of the addition of the monogram letters C.P.O.S. placed in the centre.

The Chatham Steamship Co., Ltd., has been incorporated under the Quebec Companies Act, with \$10,000 authorized capital and office at Quebec, to own and operate steam and other vessels, and to carry on a general trading and navigation business. W. Q. Stobo, H. C. Thorn, C. J. Griffis, J. Graham and L. H. Cote, Quebec, are the incorporators.

The use of magnetic chucks in machining steel and iron parts is now fairly common in up to date plants, especially for thin parts where the use of clamps is apt to spring them out of shape.

Shipbuilding in British Columbia.

The passing of the British Columbia Shipping Act, providing for aid to the shipbuilding industry in the province, has given considerable impetus to a number of schemes to increase the coast shipping trade, as well as to relieve the general congestion, chiefly in the lumber trade, resulting from the shortage of tonnage due to war conditions. A company is in process of organization, in which Jas. Carruthers, J. W. Norcross, Sir Trevor Dawson, and M. J. Haney, all connected with Canada Steamship Lines; Jas. Whalen, Port Arthur, Ont.; R. M. Wolvin, Winnipeg, and H. W. Brown, formerly associated with the Pittsburgh Steamship Co., a subsidiary of the U.S. Steel Corporation, are interested, and orders have been placed with the Wallace Shipyards Ltd., Vancouver, for three steel vessels of about 2,500 tons capacity each, of the five masted type with auxiliary power. Other vessels will be ordered, and it is expected to have ten such ships completed by the end of the year. H. W. Brown, who is to be General Manager of the new company, was formerly located at Duluth, Minn., but has removed to Vancouver, where he will remain in his new capacity.

St. John Dry Dock & Shipbuilding Co. Ltd. has been incorporated under the Dominion Companies Act, with an authorized capital of \$1,000,000, and office at St. John, N.B., to carry on a general building and contracting business, and to build, own and operate all kinds of transportation equipment, including railways, railway material, rolling stock, steam and other vessels, wharves, docks, etc., and to carry on a general transportation and navigation business.

Sorel Shipbuilding and Coal Co., Ltd., has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital and office at Montreal, to carry on the businesses of shipbuilders and repairers, to own and operate steam and other vessels, docks, and wharves, and to deal in fuel, coal and general merchandise, etc.

(b) Foreign name, Pioneer Sand and Gravel Co.

Atlantic and Pacific Ocean Marine.

A movement is on foot in Vancouver to make that port the headquarters for the chartering and management of British vessels engaged in the Pacific Ocean trade.

The Robert Dollar Steamship Co. has leased the Great Northern dock at Vancouver, B.C., for handling its trans-Pacific vessels. It has been using the dock for some time.

The Norwegian s.s. Lyngfjord, which ran ashore at Holyrood, St. Mary's Bay, Nfld., June 1, during a dense fog, was towed off by the s.s. Portia on the following day, and taken to St. Vincent's Harbor. She is owned by O. M. Milberg & Co., Christiania, and was formerly the Evangelos, owned by a Greek firm, and built at Sunderland, Eng., in 1890.

The steamships Korea and Siberia, formerly a part of the Pacific Mail Steamship Co.'s fleet, which was sold on that company ceasing business last year, to the Atlantic Transport Line, New York, are now reported to have been sold to the Toyo Kisen Kaisha of Japan. They were built at Newport News, Va., in 1902 and cost \$3,975,114. The price paid for them both, by the Atlantic Transport Line, which is a constituent of the International Mercantile Marine Co., was \$2,000,000. It is stated that the Japanese company first offered \$3,000,000 for them, but eventually purchased them for \$4,000,000. Since their first purchase they have been running between New York and London.

Maritime Provinces and Newfoundland.

The name of the s.s. Elizabeth, registered at St. John, N.B., and owned by the Marine Department, has been changed to Thos. Mason.

Annapolis Shipping Co., Ltd., has been incorporated under the Nova Scotia Companies Act, with \$50,000 authorized capital and office at Annapolis Royal, to own and operate steam and other vessels, etc. D. Owen, F. W. Pickels and H. Edwards are interested.

Hillcrest Shipping Co., Ltd., has been incorporated under the Nova Scotia Companies Act, with \$24,000 authorized capital and office at Lunenburg, to purchase the schooner Hillcrest, and to carry on a general carrying business. The incorporators are A. H. and E. F. Zwicker and W. E. Knock, Lunenburg.

Press reports from Halifax, N.S., state that the Board of Trade has received three enquiries as to available sites and possible bonuses for shipbuilding plants in the neighborhood. It is stated that all of the enquiries are from Great Britain, and are the outcome of an advertising campaign carried out by the board.

Tug Atlantic Ltd., Tug Anticosti, Ltd., Tug Mouton, Ltd., Tug Anita, Ltd., Tug Nora J., Ltd., Tug Ralph E. S., Ltd., and Tug Rosemary, Ltd., have been incorporated under the Nova Scotia Companies Act, each with \$10,000 authorized capital. These tugs are all registered as owned by interests associated with Neville Canneries, Ltd., Halifax.

The Reid Newfoundland Co.'s s.s. Kyle was taken off her route on the Cabot Strait for her annual overhaul early in June. She was relieved by the s.s. Sagona, from the Battle Harbor route, which, in turn, was relieved by the s.s. Ethie from Cabot Strait. On the return of the s.s. Kyle to service, June 12, the

s.s. Sagona was placed on the mail route to Labrador.

The s.s. Empress, which the C.P.R. acquired recently from the Charlottetown Steam Navigation Co. for operation in its Bay of Fundy service, was placed on the route between St. John, N.B., and Digby, N.S., May 30. Her captain and chief engineer are A. MacDonald and J. A. Ledingham respectively. The s.s. Yarmouth, on the same route, is in charge of A. G. Potter, captain, and J. M. Pendrigh, chief engineer.

Province of Quebec Marine.

The Quebec and St. Laurent Salvage and Wrecking Co. is being organized in Quebec for general salvage business. E. Tremblay, who is the chief person interested, was engaged in the examination of the wrecked s.s. Empress of Ireland in 1914. The schooner Tousignant is reported to have been purchased and to have been equipped with two gasoline engines.

Considerable progress is being made on the construction of the dry dock at Lauzon, where a large staff is working day and night. The power house is practically completed, as is also the foundation for the pumphouse. Most of the power house machinery was installed during June. About 300 ft. of excavation on the river side has been completed, together with the entrance.

The traffic through the Lachine Canal during May showed a slight decrease from May, 1915. The chief decrease was in grain, being 7,412,025 bush., and all other commodities showed decreases with the exception of coal, in which there was an increase of 100,890 tons. The total tonnage handled was 523,999 tons, against 616,505 tons in May, 1915. The number of vessel passages was 968, against 1,070 in May, 1915.

Work was started at the end of May on the landing shed along the new dock near the Harbor Commissioners' elevator at Quebec. The building is to be 600 x 102 ft., of structural steel, with concrete walls. Galleries are to be placed on the roof. The contract calls for completion by Sept. 15. The work is being carried out by J. Gosselin, under the supervision

of St. George Boswell, Chief Engineer, Quebec Harbor Commission.

Ontario and the Great Lakes.

Wrecking operations were undertaken during June on the s.s. Charles S. Price, which was overturned in the Nov., 1913, storm on the Great Lakes. The vessel was located in Lake Huron near the Fort Gratiot light.

The Dominion Government has decided, on the representations of interests at Chatham, to do some dredging in the Thames River, and has sent a dredge to dredge a 14 ft. channel from Chatham to Lake Ontario.

A verdict of \$2,000 damages was awarded to J. C. Freeman, a bridge keeper at Bolsover, against the Lake Simcoe Navigation Co., for injuries sustained by him when the company's s.s. Otonabee struck the bridge he was tending.

The Northern Navigation Co.'s s.s. City of Midland, which was burnt, and sank at her moorings, alongside the wharf at Collingwood, in March, was raised June 10, and placed in the dry dock there. It is reported that she will be converted into a tow barge or a scow.

The Montreal Coal & Dock Co. Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 capital and office at Toronto, to own and operate steam and other vessels, deal in coal and other merchandise and to carry on a general shipping business.

The Grain Growers' Grain Co. is reported to have arranged for the erection of a grain elevator on the north water front at Port Arthur, with capacity for 300,000 bush. This, it is stated, will be a hospital elevator, to replace the one burned there a few months ago.

The Hamilton Ship Building & Ferry Co. Ltd., which was incorporated recently with \$100,000 authorized capital and office at Hamilton, is said to be a subsidiary of Canada Steamship Lines Ltd., and will operate the ferry service at Hamilton. J. G. Gauld is President.

The Toronto Harbor Commissioners have deposited with the Public Works Department at Ottawa a description of the site and plans of the harbor head walls

Saulte Ste. Marie Canals Traffic.

to be built in Toronto Bay, from the eastern extremity of the old western channel to a point about 450 ft. east of Spadina Ave.

The Toronto Ferry Co. has equipped its ferry vessels with life saving floats, each 15 ft. long by 2 ft. wide by 15 ins. high, with accommodation for 16 persons. The casing of the float contains three air tight compartments. These are additional to the full equipment of lifebelts with which all vessels are equipped.

The Detroit and Windsor Ferry Co. has submitted to the Dominion Government plans for the construction of docks at the foot of Ouellette and Ferry Aves., Windsor, at an estimated cost of between \$125,000 and \$150,000. It is stated that work will be commenced about the beginning of July if the plans are passed.

The Toronto Harbor Commissioners, in conjunction with the city council, are considering the establishment of coal handling facilities in the harbor. During June, J. Laxton, one of the commissioners, and E. L. Cousins, Harbor Engineer, accompanied by the Mayor and Works Commissioner, visited a number of ports in the U.S. equipped with coal handling plants.

The Toronto, Hamilton & Buffalo Ry. has purchased a ferry steamship from the Great Lakes Engineering Works, Detroit, Mich., for operation between Port Maitland, Ont., and Ashtabula, Ohio. A ferry slip and dock is to be built on the Grand River at Port Maitland. It is expected that the service will be commenced in August.

The United States Lake Survey reports the levels of the Great Lakes in feet above tidewater for May as follows: Superior, 603; Michigan and Huron, 580.49; Erie, 572.87; and Ontario, 247.13. Compared with the average May levels for the past ten years, Superior was 1.14 ft. above; Michigan and Huron 0.08 ft. below; Erie, 0.14 ft. above, and Ontario 0.33 ft. above.

It is reported that the whole of the stock of the St. Lawrence and Chicago Steam Navigation Co. has been handed in under the agreement by which Canada Steamship Lines, Ltd., acquires it at 185, with the exception of three shares held in Dublin, Ireland. The final clearing up of the whole stock is therefore a little delayed, owing to the disturbances there, during which the post office was held by some of the rebels.

Manitoba, Saskatchewan and Alberta.

The Peace River Tramway & Navigation Co.'s s.s. D. A. Thomas, which, it was expected, would be launched about the end of May, as mentioned in our last issue, was launched at Peace River Crossing, Alta, June 6. She will ply on the Peace River from Hudson's Hope to Fort Vermilion, about 600 miles. The hull is of British Columbia fir, cedar and pine, and she is equipped with engine of 800 h.p. Oil tanks have been installed, so that liquid fuel may be used.

British Columbia and Pacific Coast.

The Alberta Pacific Elevator Co. is stated to be arranging for the reconstruction of its elevator at Vancouver, which was burned at the end of May.

Side Streams Navigation Co., which operates the s.s. Vidette, from Dawson, Yukon, has appointed W. Bailey, captain, and G. W. Watenbaugh, chief engineer, for this season.

Navigation on the Yukon River opened early in June, the first steamboats from White Horse for through trips sailing on June 5, the Yukon for Fairbanks, Alaska and the Casca for Dawson.

The Union Steamship Co. is reported to have purchased the s.s. British Columbia from the Coast Steamship Co., for operation in the coast freight trade. Her dimensions are, length 170.7 ft., breadth 21.7 ft., depth 10.5 ft.

The Imperial Oil Co. has built a wharf in Victoria harbor, extending 150 ft. from the shore. It is L shaped, 50 ft. long by 40 ft. wide, and there is a depth of 20 ft. of water at the end. The chief object is the supply of fuel oil to vessels.

Western Shipping Co., Ltd., has been incorporated under the B.C. Companies Act, with \$40,000 authorized capital and office at Victoria, to build, own and operate steam and other vessels and to carry on a general navigation and trading business.

D'Alton C. Coleman, Assistant General Manager, Western Lines, C.P.R., is credited with the statement that the company has under consideration the building of a new dock of the same type as pier A, at Vancouver, and that a decision will be made shortly so that construction may proceed.

The Marine Department received tenders recently for the construction of a lighthouse tower, fog alarm building and dwelling combined, at Triple Island, Brown Passage, the main entrance to Prince Rupert harbor from the open sea, to replace the old gas beacon at that point.

The C.P.R. s.s. Princess Charlotte has been equipped with a supply of buoyant rafts, each capable of carrying 26 persons. They are so arranged on the vessel that they will float off in case the vessel became submerged. By adopting this additional life saving equipment the vessel will be able to carry 1,000 passengers.

A press report from Victoria states that a syndicate headed by M. P. Cotton of Vancouver is negotiating for the lease of the G.T.P.R. dry dock completed recently at Prince Rupert for building of freight steamships. It is stated that possibly steel vessels will be built there, and that the syndicate is applying to the Government for assistance in building four such vessels of about 5,000 tons each.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince John was taken from the Alaska route June 13 and placed on the run from Vancouver and way ports to Prince Rupert and Queen Charlotte Islands, replacing the s.s. Prince Albert, which has been utilized for miscellaneous freighting purposes. The s.s. Prince Rupert was taken off her route between Seattle, Prince Rupert and Alaska June 5 for general overhaul at Victoria, the s.s. Prince George taking her place. The Prince Rupert was replaced in service June 13.

The Cameron & Genoa Mills Shipbuilders Ltd. is the name of a company which, it is reported, is commencing the construction of two shipways on the west side of the inner harbor at Victoria, south of the Point Ellice bridge. The interests comprising the company are associated with the Cameron Lumber Co. and the Genia Bay Lumber Co., and it is stated that they have secured a lease of land formerly a part of the Songhees Indian Reserve. Wooden ships with capacity for about 1,500,000 ft. of lumber are to be built.

An application has been made in B.C. courts for a winding up order against the

Dominion Shipbuilding, Engineering & Drydock Co., on the ground that it is insolvent and unable to meet its accounts, and an order is also asked for an enquiry into the condition of the company's affairs, the actions of its directors and the disposal of its assets. The company was incorporated in 1914 with an authorized capital of \$5,000,000. Among those interested in the company are Capt. H. Mowat, formerly Marine Superintendent, C.P.R., and F. F. Busted, formerly Engineer in charge of second tracking, Kamloops, B.C.

Water Pollution on the Great Lakes.—At a meeting of the International Joint Waterways Commission at Detroit, Mich., June 26, a report was made by the commissions' engineers on the pollution of the Great Lakes, with special reference to navigation, and a general discussion of the subject took place. Before any definite conclusion as to methods of dealing with it are reached the fullest consideration of the whole subject will be given and tests of proposed appliances made, more particularly as the larger problem requiring immediate solution is one with relation to land drainage from the various municipalities bordering on the lakes. Representatives of the Dominion Marine Association were present and took part in the discussion.

Claims re s.s. Empress of Ireland Disaster.—The Registrar of the Admiralty Court made his final award, at Montreal, June 2, re claims arising out of the sinking of the C.P.R. s.s. Empress of Ireland by the s.s. Storstad in the St. Lawrence River about two years ago. The claims totalled \$3,069,482, and the amount available to meet them was \$182,242, which was received from the sale of the s.s. Storstad. The costs were \$28,140, leaving \$154,202 for distribution amongst claimants, as follows: C.P.R., \$43,974; relatives of victims, \$110,128, in individual amounts from \$8,000 to \$3,000. All claims for personal loss were dismissed.

Discrepancies in Outturns of Grain Cargoes.—The Board of Grain Commissioners has again adopted for the current year the rules and regulations which were passed last year under the authority of the Dominion Parliament for the purpose of disposing of discrepancies and disputes in the outturn weights of grain cargoes. This renewal is in accordance with the Dominion Marine Association's recommendation, agreed to by the elevators, and discussed at a conference with the Commission at Montreal recently.

A combine of certain shipping and colliery interests, with a nominal capital of £100,000,000, is reported to have been completed in England, chiefly with the view of arranging mutual service and facilities, in order to make use of the maximum power of shipping and coal for the benefit of international customers at the close of the war.

The permitted draught of water through the Welland Canal has been increased from 14 ft. to 14 ft. 4 ins., in view of the present high levels. A similar increase has been asked for by the Dominion Marine Association for the St. Lawrence Canals, and the Marine Department has the matter under consideration.

The Great Lakes Transit Corporation, which was incorporated in the United States recent, to take over and operate a number of the lake steamships formerly owned by railway companies, which had been ordered to relinquish their interest in them, has filed its schedules of freight rates.

Progress of Toronto Harbor Work.

An official inspection of the Toronto harbor work was made June 13 by the acting Minister of Public Works, Hon. J. D. Reid, who was accompanied by the commissioners, members of the city council and a number of representative guests, who were much impressed with the satisfactory progress of the work. Leaving Yonge St. Wharf on one of the Toronto Ferry Co.'s steamboats the party went out through the new western entrance to the western end of the work, viewed the dredging on which three huge dredges, two of them rotary suction ones, were engaged; the land making work, the construction of crib work to provide a sheltered waterway from Humber Bay to the western entrance, and the preparations for boulevard and driveway construction. Returning through the same entrance they went east through the harbor to Ashbridge's Bay, where they disembarked and walked over a portion of the land which is being made for industrial sites, and on which several industries have been established already, viewed the 1400 ft. channel which is being made 400 ft. wide and 30 ft. deep, and the large turning basin at its eastern end, and on re-embarking went to the Royal Canadian Yacht Club on Centre Island, where they were entertained at luncheon.

Lionel H. Clarke, Chairman of the Commission, spoke enthusiastically of the successful way in which the work is being proceeded with and gave great credit to the Dominion Government for the liberal way in which it is assisting, it having given land worth over \$1,500,000 and only requiring in return the construction of a dock costing some \$75,000. He said that while the Commission's portion of the harbor work had been estimated to cost about \$5,000,000, it would be done for less than \$4,000,000, great savings having been found possible in the reclamation work. Over 230 acres of land have already been made. The commission have secured some 130 acres of water lots along the Bay front from Bathurst St. to Yonge St., without giving anything to the railway companies except undertaking to fill in their water lots to a common depth with those owned by the Commission and suitable for deep water vessels. He said that the work will undoubtedly be completed in three years. He warmly eulogized the Commission's Chief Engineer, E. L. Cousins, A.M. Can. Soc. C.E., and announced that following the resignation of the Secretary, A. C. Lewis, on undertaking military service, Mr. Cousins had also been appointed General Manager.

Government Aid to Shipbuilding in British Columbia.—In a recent discussion in the B.C. Legislature recently on the bill to aid shipbuilding in the province, it was decided that the number of vessels to be subsidized under the act be increased from 20 to 25. The matter of whether the bonus of \$5 a ton is to be figured on the registered tonnage or on the dead weight tonnage capacity was also discussed.

Asiatic Labor on Canadian Vessels.—The clause in the bill passed by the British Columbia Legislature recently to aid shipbuilding, which provided restrictions against the employment of any but white labor on any vessels coming under the act has been removed. It is stated that the Dominion Government intimated that the bill might be disallowed if a clause restricting Japanese labor were included.

Dominion Marine Association Appreciates Canadian Railway and Marine World.

Canadian Railway and Marine World has, in recognition of its service to the shipping interests, been appointed the Dominion Marine Association's official organ, as stated in the following letter, which is much appreciated by the publishers:

DOMINION MARINE ASSOCIATION. Executive Committee:

G. E. Fair, Toronto President.
A. E. Mathews, Toronto. . . 1st Vice President.
W. E. Burke, Montreal. . . 2nd Vice President.
H. W. Cowan, Toronto W. J. McCormack, Sault
L. Henderson, Montreal. . . Ste. Marie
D. Murphy, Ottawa. . . J. Playfair, Midland
W. L. Reed, Toronto. . . J. F. M. Stewart, Toronto
C. B. Harris, Toronto A. A. Wright, Toronto
Counsel Francis King, Kingston

Kingston, Ont., May 29, 1916.

Acton Burrows, Esq., Managing Director,
Canadian Railway and Marine World.

Dear Sir,—I have much pleasure in informing you that at a meeting of the Dominion Marine Association's Executive Committee in Toronto on the 26th inst., it was unanimously resolved:

"That in view of the thorough manner in which Canadian Railway and Marine World covers the marine field throughout Canada, the care which it exercises to secure accuracy, and the way in which its columns are freely at the Dominion Marine Association's disposal, it is hereby appointed the Association's official organ."

Yours truly,
FRANCIS KING,

Counsel, Dominion Marine Association.

Beeson's Marine Directory, for 1916 maintains the reputation attained by previous issues in the collection and notation of matter which is interesting as well as necessary to those whose business is concerned with navigation on the Great Lakes. In addition to the general information relating to vessels on the Canadian and U.S. registers, dry docks, shipbuilding and wrecking plants, etc., the resume of the details of lake traffic for the past year, is of exceptional interest, owing to the abnormal conditions existing on account of the war. This is the 30th year of publication, and the publisher announces that the next edition will be produced under the supervision of a committee of prominent vessel men who will choose, supply or approve its entire contents. The book consists of 288 pages, 10 by 7 ins., bound in cloth boards, and is published by Harvey C. Beeson, Chicago, Ill., at \$5.

Canada Steamship Lines' Dividends.—The directors announced, June 1, that a further payment of 1¼% will be made on Aug. 1 to shareholders of record on July 1, on account of deferred preference dividends. The announcement was made earlier than customary, as there are still a few remaining Richelieu and Ontario Navigation Co. shareholders who have not exchanged their holdings for C.S.L. scrip, and are therefore deprived of these payments. An opportunity is thus afforded them of making the transfer in time to participate in the payment to be made.

Longshoremen's Strike on Pacific Coast.—A strike of longshoremen at U.S. Pacific coast ports commenced June 1, the men demanding 55c an hour and \$1 an hour for overtime. The strike did not extend to British Columbia ports, the consequence being that a number of trans-Pacific vessels used B.C. ports considerably instead of U.S. ports.

Investigation Into the Grounding of the s.s. Rock Ferry.

In investigation into the grounding of the s.s. Rock Ferry on Main Duck Island, Lake Ontario, May 17, was held at Montreal, June 6 and 9, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and J. O. Grey, as nautical assessors. The court came to the conclusion that the master and mate both disregarded the most simple precautions in navigating the vessel. The master admitted that he kept full speed in a dense fog, and that no lookout was kept at any time. The fact that the vessel was floated off the rocks after two days, practically uninjured, does not palliate the offence. She is a wooden vessel, and had she been of iron, it is probable she would have been a total loss. In view of the good seamanship exercised by the master, A. Robineau, in getting the vessel off, the court exercised leniency, and suspended his certificate for two months from the time of the receipt of the certificate by the court, as it was not delivered at the time of the investigation. Regarding the mate, J. P. Dufour, the court found that he was left in full charge of the deck while the master had gone to rest, and it was his duty to reduce speed and place a lookout, and on feeling that he was near Main Duck Island, to have consulted the log which was apparently trailing, stop his vessel and take soundings if necessary, according to the rules, therefore the court found him equally to blame and suspended his certificate for two months from June 9.

Shipping employment offices have been opened at a number of lake ports recently, and the sailors' institutes at Kingston and Port Arthur have opened registers where both employers and employees may each make known their wants. These offices are under the Dominion Marine Association's auspices, and, in addition to these, Verity's Employment and Shipping Agency has been appointed to act in Toronto, and similar arrangements are being concluded at other lake ports. The facilities thus afforded should be of considerable benefit.

Grain Elevator for St. John, N.B.—In connection with the proposal to erect a Government grain elevator at St. John, F. P. Gutelius, General Manager, Canadian Government Railways, inspected three sites alongside the Government wharves there May 31. The site most favored is said to be on land now occupied by Harding's lumber yard, as from the location it is considered the conveyors could be fed better. If it is decided to proceed with the work, the cost will approximate \$1,000,000, and it will be urged that it be completed by Jan. 1.

The Plunkett Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with \$20,000 authorized capital and office at Cobourg, Ont., to own and operate steam and other vessels, and to carry on a general trading and navigation business. It is reported that the schooner, Charlie Marshall, owned by D. Plunkett and D. Rooney, Jr., Cobourg; the Ford River, owned by J. Richardson & Sons, Ltd., Kingston, and the Kee-watin, owned by Jas. Doherty, Belleville, have been acquired, and that these will be used for Atlantic coasting service. We have been unable to get any confirmation of this, and are advised that the Ford City is still being operated by J. Richardson & Sons Ltd.

Mainly About Marine People.

T. M. Nairn, formerly Superintendent, Donaldson Line, Montreal, died at Notre Dame de Grace, Que., June 6.

L. A. W. Doherty, Freight Traffic Manager, Canada Steamship Lines Ltd., made a business trip to the Pacific coast in June.

F. S. Isard, Comptroller, and **H. W. Cowan**, Operating Manager, Canada Steamship Lines, Ltd., are both going to build houses in Montreal.

Thos. Henry, heretofore Passenger Traffic Manager, Canada Steamship Lines, Ltd., has been appointed Superintendent of the Hotel Department. Office, Montreal.

E. L. Cousins, A.M.Can.Soc.C.E., heretofore Chief Engineer, Toronto Harbor Commission, has been appointed Chief Engineer and General Manager of the whole works.

F. H. Walker, of Walkerville, Ont., who died at Detroit, Mich., June 17, was associated with a number of local business concerns, among which is the Walkerville and Detroit Ferry Co.

Lieutenant **T. L. Harling**, who has died in Belgium from wounds received in action, was son of **R. D. Harling**, Toronto, Canadian representative of the Manchester Ship Canal Co. of England.

Capt. W. D. Shepherd, who was in command of the s.s. Empress of Fort William, which was sunk near Dover, Eng., early in the year, when going to the rescue of passengers and crew of the s.s. Maloja after she had been torpedoed, has been presented with a gold watch by her owners, the Peninsular and Oriental Steam Navigation Co.

Sir William Price, Chairman, Quebec Harbor Commissioners, has resigned, in order to devote more time to military duties. It is stated that the resignation of Commissioners Gravel and Letellier will be announced shortly. The names of **D. O. l'Esperance**, as Chairman, and **J. G. Scott**, formerly General Manager, Quebec and Lake St. John Ry., are mentioned in connection with the new commission.

James H. Mancor, who retired recently from the position of Principal Surveyor of Lloyd's Register of Shipping for the United States and Canada, was entertained to dinner at New York, at the end of May, by a number of friends connected with shipping and shipbuilding. He was presented with a silver tea and coffee service. Among those present was **G. T. Davie**, of **G. T. Davie & Sons, Ltd.**, shipbuilders, Levis, Que.

E. T. Stebbing, whose appointment as General Agent, Passenger Department, Trans-Pacific and Trans-Atlantic Lines, Canadian Pacific Ocean Services, Ltd., New York, was mentioned in our last issue, has been connected with the steamship and tourist business during his whole business life, having been, for about 20 years, with **Thos. Cook & Sons**, during the last seven of which he was Superintendent of their New York offices.

Capt. John Simpson, who died at Owen Sound, Ont., June 3, aged 91, was born near Belleville, Ont., and went to sea at 12 years old. He was for some time a master of sailing vessels on the Great Lakes, and learned shipbuilding at Oakville. He went to Owen Sound in 1874 to build the s.s. City of Owen Sound for **A. M. Smith & Co.** This vessel was equipped with the machinery from the s.s. City of London, which had been burned. In conjunction with some local people, he built at Owen Sound the first dry dock and shipbuilding plant above the Welland

Canal, and built many of the wooden vessels which navigated the Upper Lakes in the early days.

Navigation in the White Sea and Arctic Ocean.—The Russian Government, in consequence of the dangers in navigation due to the laying of mines in the White Sea and Arctic Ocean, announces that trading and merchant vessels, and all other types of vessel under any flag, except those which have received special permission, are prohibited from navigating in the White Sea and approaches thereto southward of a line joining Cape Kanin and Kharlov lighthouse, as well as in all waters of the Russian coasts of the Arctic Ocean within 12 miles of the coast line, rocks awash or off-lying islands. Vessels passing without permission into the prohibited areas are exposed to the danger of destruction by mines and are liable to be stopped by guardships for search and necessary orders. Vessels which have obtained permission to pass through the prohibited areas must observe all regulations. Permission for such navigation is arranged by the Director General of Arkhangel and the Jurisdiction of the White Sea.

Shipbuilding in Canada. At the Merchants Bank annual meeting in Montreal recently, General Manager **Hebden**, in the course of his remarks, said that shipbuilding, particularly steamship building, was a matter that required looking into. He compared facilities for building steel ships in Canada with those of the United States, much to the Dominion's benefit, saying that British Columbia had already begun the work and that such an industry would enable Canadians to make use of the wonderful resources of their country.

The American Society for Testing Materials held its annual meeting at Atlantic City, N.J., June 27 to 30, when various committee reports were dealt with.

Canada Steamship Lines Notes.

The s.s. Toronto arrived in Toronto at the end of May, after having been in the dry dock at Kingston, for a thorough overhaul. The interior furnishings have been completely transformed, and the decorations done in the various colors of the allies. She commenced her service on the Toronto-Charlotte-Prescott route, June 3.

The company is installing moving picture apparatus on its tourist vessels, for the amusement and instruction of passengers, and certain of the vessels will also be supplied with latest news of the war, etc., by wireless telegraphy. The pictures will chiefly be of scenes with which the company's steamships come in touch, and they will be shown on the upper deck in the evenings. The steamships Toronto and Kingston, running between Toronto, Charlotte and Prescott were equipped during June.

The s.s. William C. Moreland, the recovered wreck, which was purchased by the company a short while ago, was towed into Duluth recently. As mentioned in our last issue, the wreck was in such a condition that it was not possible to save the whole of her, she having broken in three pieces. The greater portion, the stern end, is in good condition, and it is stated that a new forward end is to be built on and the whole vessel overhauled and re-equipped. The recovered vessel was in charge of two tugs and, after being floated and bulkheaded, commenced her trip from Detroit, May 10, arriving at Duluth, May 21, after experiencing very rough weather.

Duluth, South Shore and Atlantic Ry. operators and agents have been granted increases in pay averaging a little over 10%, dating from June 1.

Among the Express Companies.

F. Pearce, heretofore cashier, Canadian Northern Ex. Co., Saskatoon, Sask., has been appointed agent at Elrose, Sask.

The Canadian Ex. Co. has opened an office at Camp Borden, the military camp near Angus, Ont., with A. E. Stone as agent.

A. E. Stone has been appointed agent, Canadian Ex. Co. at Camp Borden, the Dominion Government military camp established recently near Angus, Ont.

The Dominion Ex. Co. has opened offices at Blumenhof, Cantaur, Estuary, Kirriemuir, Loyalist, Regina Beach and Supurb, Sask.

The Canadian Northern Ex. Co. has opened offices at St. Norbert, Que.; Gogoma, Kashbaw, Longuelac and Ruel, Ont.; Ericksdale, Man.; Birdview, Mervin and Richlea, Sask., and Excel, Lavoy and Stanmore, Alta.

The Association of Express Accountants, at its annual convention at Chattanooga, Tenn., recently, elected H. A. Kropp, General Auditor, Southern Ex. Co., President for the current year, and R. Mundle, Comptroller, American Ex. Co., Vice President. It was decided to hold the next annual convention at Toronto. Among the Canadian members of the association, are, W. W. Williamson, General Auditor, and W. H. Bryce, Superintendent Money Orders, Canadian Ex. Co., Montreal; W. H. Plant, General Auditor; D. Barron, Auditor of Transportation; C. E. Foote, Auditor of Receipts, and H. H. Wheeler, Auditor Money Orders, Dominion Ex. Co., Toronto.

The United States Ex. Co., in liquidation, has made a further payment of \$15 a share, thus totalling payments of about 40% since the commencement of the liquidations. The first payment was \$25 a share, and it is expected that a third payment will be made before the end of this year. D. E. Roberts, formerly General Manager, Quebec, Montreal & Southern Ry. and Napierville Jct. Ry., Montreal, is the liquidator. He stated recently that none of the company's assets would be sold at a loss, and though some of those connected with the proceedings are anxious for a speedy closing of the accounts, it has been decided to adhere to that policy, and not to hurry things unduly.

Transportation Conventions in 1916.

- Aug. 15-17.—International Railroad Blacksmiths' Association, Chicago, Ill.
- Aug. 16 to 18.—American Association of Railroad Superintendents, Memphis, Tenn.
- Aug. 24-26.—American Railway Tool Foremen's Association, Chicago, Ill.
- August 29.—International Railway General Foremen's Association, Chicago, Ill.
- Sept. 5 to 8.—Traveling Engineers' Association, Chicago, Ill.
- Sept. 12-14.—Master Car and Locomotive Painters' Association of United States and Canada, Atlantic City, N.Y.
- Sept. 12-14.—Railway Signal Association, Mackinac Island, Mich.
- Sept. 19-22.—Roadmasters and Maintenance of Way Association, New York.
- October 3-5.—Railway Fire Protection Association, New York.
- Oct. 9-13.—American Electric Railway Association, Atlantic City, N.J.
- October 10.—Association of Manufacturers of Chilled Car Wheels, New York.
- Oct. 17, 18.—American Association of Passenger Traffic Officers, Washington, D.C.
- October 17-19.—American Railway Bridge and Building Association, New Orleans, La.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Standard Underground Cable Co. of Canada, Ltd., has removed its Montreal branch office to the McGill Building, from the New Birks Building.

B. J. Arnold, of the Arnold Co., Chicago, Ill., has been engaged by the Rochester, N.Y., Chamber of Commerce to survey and report on the needs of the city regarding local transportation facilities.

M. Beatty & Sons Ltd., Welland, Ont., have received an order from the St. Maurice Construction Co. for an 8 x 12 triple drum hoisting engine with boom swinger, and for a 37 h.p. double firm electric hoist, for use on construction of the St. Maurice River dam near Sanmaur, Que.

Roberts & Schaefer Co., engineers and contractors, Chicago, have issued bulletin 31, 8 pages, 9 x 11½ in. describing and illustrating Rands measuring coal loader for locomotives, patent for which has been applied for.

M. Beatty & Sons, Ltd., Welland, Ont., have received an order from the Dominion Bridge Co. for two 9 x 12 link motion hoisting engines, with cut steel gears, and two 60 x 156 in. vertical boilers, to be built under Ontario inspection, for use on the Canadian Government Railways car ferry terminals at Carleton Point, P.E.I., and Cape Tormentine, N.B.

The Du Pont Fabrikoid Co., Wilmington Del., and Toronto, has issued a booklet, Du Pont Fabrikoid Book Finish, dealing with its artificial leather, which has proved especially satisfactory for railway car, automobile and furniture upholstery, and is being extensively used for book binding. The company claims that "some of its advantages and features are, that it has the leather effect in any grain or color, and costs less, comes in rolls and thus eliminates waste in cutting, no unused corners or edges. It has just the needed degree of pliability, not too soft to work well in a case-making machine, nor too hard to stand the bending of the joints. It is waterproof and washable. This is a strong point, for books naturally get dirty, but if bound in Fabrikoid the covers can be washed. Besides it is vermin proof, and cannot be destroyed in that manner."

Transportation Associations, Clubs, Etc.

NOTICE.

Re. Canadian Patent No. 156,598, of June 30, 1914, on Furnace Grates.

The undersigned is ready and willing to negotiate with all persons desiring to manufacture under the above patent in Canada.

Marcus E. Hansell,

c/o Canadian Railway and Marine World, 70 Bond Street, Toronto.

CANADIAN GOVERNMENT RAILWAYS.

TENDERS.

SEALED TENDERS, addressed to J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., and marked on the outside "Tender for Elevator Foundations, Transcona," will be received up to and including Twelve O'Clock Noon, Tuesday, July the 4th, 1916, for the construction of reinforced concrete foundations on wood piles or concrete piles, for 1,000,000 bushel storage capacity Grain Elevator, Working House and Track Shed at Transcona, Manitoba; separate tenders to be submitted for the foundations with concrete piles and foundations with wooden piles, and tenders may be submitted on either or both designs.

Plans, Specifications and blank form of contract may be seen at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, at the Office of the Chief Engineer, Moncton, N. B.; at the Office of the General Superintendent, Winnipeg, Manitoba; at the Office of the Resident Engineer, Fort William, Ont.; and at the Office of the J. S. Metcalf Co., Ltd., Engineers, Montreal, P. Q.

All the conditions of the Specifications and Contract form must be complied with.

Tenders must be put in on the blank form of tender, which may be obtained from any of the offices at which plans are on exhibition. Each tender must be accompanied by a certified bank cheque, payable to the Honourable the Minister of Railways and Canals, for the sum of \$15,000.00.

The lowest or any tender not necessarily accepted.

F. P. GUTELIUS,

General Manager,

Canadian Government Railways.

Dated at Moncton, N.B.,
June 17th, 1916.

Steel need not rust!

Technical men know this, of course—but judging by the size of the junk heaps each year in this country alone, the fact is thrust upon us that Steel Does Rust.

But it need not. Not since the invention of

TOCKOLITH

THE PATENTED CEMENT PAINT

Since 1848 the great scientific laboratories of Toch Brothers, with all the skill, craftsmanship and resourcefulness at their command, have been arrayed against rust, the enemy of steel, iron and other metal. And they have conquered it absolutely.

Their great preservatives, Tockolith and R. I. W., have been used 'round the world, and are specified continually by leading architects and engineers.

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

No Hill Too Steep No Fill Too Deep

Every Engineering difficulty is approached with eager efficiency when Pedlar's Culverts are at your disposal. Steep hills, deep fills, resiliency, wear, durability, lighter time and labor costs.

Pedlar's "Perfect" TONGAN METAL Culverts

come to you in sizes and weights to suit any requirements. Stock sizes up to 84 inches, and in lengths up to 40 feet, ready to roll into position. If unusual lengths are required, coupling bands are provided free for joining up sections. The **TONGAN** of which they are made cannot rust, rot or corrode, nor crack from frost or expansion. You should certainly have the valuable data and drainage tables contained in the free Culvert Reference Book R. M. Tell us to-day where to send it.

**"Don't tell me
you never had a chance!"**

"Four years ago you and I worked at the same bench. I realized that to get ahead I needed special training, and decided to let the International Correspondence Schools help me. I wanted you to do the same, but you said, 'Aw, forget it!' You had the same chance I had, but you turned it down. No, Jim, you can't expect more money until you've trained yourself to handle bigger work."

There are lots of "Jims" in the world—in stores, factories, offices, everywhere. Are you one of them? Wake up! Every time you see an I. C. S. coupon your chance is staring you in the face. Don't turn it down.

Right now over one hundred thousand men are preparing themselves for bigger jobs and better pay through I. C. S. courses.

You can join them and get in line for promotion. Mark and mail this coupon, and find out how.

I. C. S., Box 8406, Scranton, Pa.

INTERNATIONAL CORRESPONDENCE SCHOOLS Box 8406, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

Formerly Fairmont Machine Co.

445 N. MAIN ST., FAIRMONT, MINNESOTA, U.S.A.

Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

Capital and Surplus, \$1,500,000.
Offices throughout the Civilized World.

Executive Offices:
NOS. 346 and 348 BROADWAY,
N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished and are available only by reputable wholesale jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

*Advertisements marked with an asterisk appear in alternate issues.

Money paid for these Brake Shoes was largely money wasted

Why?

Because these unreinforced brake shoes did not give equivalent service for their cost, having broken in service before their life had barely commenced.

And the remedy?

Use only Reinforced Brake Shoes—then you will get your brake shoe money's worth in long and safe service.

Manufactured in Canada.

for use in Switch and Semaphore Lamps, and all lamps for long time burning, to avoid smoked and cracked chimneys and crusted wicks.

Tests and Correspondence Solicited.

S. A. MEGEATH,
PRESIDENT.

NATIONAL DUMP CARS

THIS is the sturdiest type of Dump Car Ever designed. Our engineers had instructions to make a Dump Car that would "stand up" under every-day use. The large number of these cars now in use and giving complete satisfaction is the best proof of the quality of the materials and the correctness of the design that is employed.

National Dump Cars are made in 4, 5, 6 and 8 cubic yard capacities, in the hand dump type. With power dump the capacities are 10, 12, 16 and 20 cubic yards.

Engineers and Contractors interested in securing the best type of dump car for construction works are invited to enquire for full specifications and prices on stock or special dump cars.

It is an Established Fact

That fireboxes of all types equipped with the Tate Flexible Staybolt show the lowest maintenance cost and highest earnings.

The Flexibility in the bolt serves to accommodate the relative expansion of plates under working operations of the fire box and boiler in a manner that has afforded less destruction to the sheets and seams than were found under conditions where fireboxes were rigidly stayed.

The Tate Flexible Staybolt is designed and made to give satisfactory results in the final measure of its usefulness, as an economic, safe and reliable factor in reducing the costs of firebox repairs and maintenance.

In use on all the prominent railroad systems of Canada.

Absolute Permissive Block-

is the title of a new bulletin on a thoroughly tried-out single-track signal-system which has been installed on 21 steam and electric railways, totaling 2,323 miles of Absolute-Permissive Signaling.

The cost of installation per mile of the A-P-B System is less than one-half the cost per mile of the steel in your tracks. The maintenance and operation is close to 50 cents per mile per day. An increase in your track capacity of only about 4 per cent. will pay for the investment. In addition to increasing your track capacity, the A-P-B System provides "protection" and eliminates numerous delays. If you are contemplating double-tracking your line, the Absolute Permissive Block System will save you approximately 9/10 of the cost and give you the signal protection you need.

Mr. W. J. Eck, President of the Railway Signal Association, in a report on the "Progress of Signaling" which appeared in the December 31, 1915, issue of the Railway Age Gazette, wrote in part as follows:

"Single-track automatic signaling is receiving an increasing amount of attention and the mileage in-

stalled during the year greatly exceeds that on double track. It has been only a few years since railway officers believed that automatic signals on single track would hinder instead of facilitate movements. Particularly since the so-called 'absolute permissive block' has been developed has this idea given way to a realization of the safety and aid that the system affords. In the A-P-B System for single-track signaling the trains are given an absolute block from passing siding to passing siding for opposing trains and a permissive block for following trains. This system has been almost exclusively installed during the past year."

Ask for a copy of Bulletin 128A and learn more fully of the desirable features of this System.

Manufacturers of Steel for Shrapnel Shells and Admiralty Forgings

Only Company in Canada producing Steel Ingots by the "Harmet" liquid process

Can supply Forgings up to 40 Tons in weight to all Admiralty and Lloyd's Tests and Specifications

FORGING A RUDDER FRAME

Why "Harmet" Liquid Process Steel Ingots are Superior to Ordinary Steel Ingots:—

1. Prevention of cracks due to shrinkage; of internal stresses and resulting cracks and fissures.
2. Early cessation in the crystallization of the metal, and the production of fine crystallization without cleavage planes.
3. Lessening of segregation, i.e., reduction of tendency of carbon and other impurities to concentrate in the central and upper parts of the ingot.
4. Prevention of "pipes" or interior cavities, and thus preservation of absolute solidity in the ingot.
5. Improvement in physical properties.
6. Reduction in waste of ingot.

OUR modern Steam Hydraulic Forge Shop at New Glasgow, N.S., part of which is shown above, and our large Steel Plant at Sydney Mines, N.S., equal the very best in America.

On the shortest notice, we can supply forgings of all shapes and sizes, made of ordinary or "Harmet" fluid compressed open-hearth steel, and satisfying the most severe specifications.

Our forges are modern in every respect—designed and installed after close study of the latest developments in all countries. Moreover, we produce the highest grades of steel by the most approved methods. It has always been the policy of "Scotia" to hold a position in the front rank of trade, and by the recent additions to plant, this policy has been maintained in a practical manner, bringing "Scotia's" equipment abreast of the best foreign forges.

For prices and full particulars, write to

Head Office, NEW GLASGOW, N.S.

"ALL-STEEL" CAR (SPECIAL DESIGN) OF 100,000 LBS. CAPACITY.

"ALL-STEEL" CARS

We have recently installed three additional hydraulic presses, and are now in a position to manufacture "All-Steel" Cars to fill the most exacting specification requirements.

40 METRIC TON CAR BELONGING TO AN ORDER RECENTLY COMPLETED FOR 2,000 CARS FROM THE IMPERIAL RUSSIAN GOVERNMENT.

FREIGHT CARS TO ALL GAUGES

The Russian type car illustrated is exceptionally large, resembling the C.P.R. type box car. It is unusually long—43 ft., and has a carrying capacity of 40 tons of grain. The track gauge is 5 ft., being $31\frac{1}{2}$ inches wider than Canadian railroad standard. The wheels are of cast iron, $41\frac{3}{8}$ inches in diameter. Steel frame construction is employed throughout. The design provides for "knock-down" shipment.

Eastern Car Company, Limited

General Offices and Works, New Glasgow, N.S.

Montreal Office. Room 14 Windsor Hotel

The Wonderful Single Service Chilled Iron Wheel

When we consider the universal use of the Chilled Iron Car Wheel it is not surprising that we use the word WONDERFUL in designating its character.

According to the Interstate Commerce Commission report for the year ended 1914, there were 2,508,322 Freight Cars running on 250,000 miles of track representing about 10,000 Freight Cars for every 1,000 miles of line operated.

We believe that a careful analysis of this equipment would prove that ninety-seven per cent. of the wheels under these cars are Chilled Iron Car Wheels, which is abundant proof of their reliability.

The Nation's commerce, therefore, is dependent upon the Chilled Iron Wheel, and in addition thereto there are hundreds of thousands running under passenger cars, engine tenders, private car lines, street car lines and switching and terminal companies.

25,000,000 now running.

Association of Manufacturers of Chilled Car Wheels
 1228 McCormick Building, Chicago

Representing Forty-eight Wheel Foundries Throughout the United States and Canada. Capacity 20,000 Chilled Iron Wheels Per Day.

Engine Frame Welded by the Grand Trunk Pacific Ry., Transcona, Man.

Two Thermit Welds on Left Frame of Engine No. 43, of the Sydney & Louisburg Ry., Glace Bay, N.S.

RESULTS COUNT

That's Why 480 Railroad Shops Are Using Thermit

Thermit offers the only sure and reliable repair for locomotive frames and other heavy sections.

The superheated liquid Thermit steel is produced in bulk and poured all at once into a mold surrounding a broken section, resulting in the perfect amalgamation of the Thermit Steel with the parts with which it comes in contact. The fact that those parts are first preheated, makes the weld doubly sure.

The operation of welding locomotive frames is easily accomplished, without removing the frame from position, and with very little dismantling, no matter if the frame be broken in the splice, jaw, next to the cylinder saddle, or at any other point. The engine is returned to service in from ten to twelve hours.

Hundreds of thousands of pounds of Thermit are being used annually by railroad companies in the United States and Canada.

There is only one reason for this, and that is that Thermit produces results and we all know that "results count."

Our pamphlet No. 2159 will be of interest.

All Thermit and Thermit appliances are made in our Canadian Shops.

GOLDSCHMIDT THERMIT COMPANY

103 Richmond St., W., Toronto, Ont.

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

How Many Hides Has a Cow?

For shoe soles, one.

But a cow's hide being too thick and stiff for upholstery, is split into at least three sheets, only in the top one of which is natural leather. The lower, fleshy splits, after being coated and embossed to look like leather, and which make up 75 per cent. of all so-called leather upholstery, are really artificial leather of quality inferior to

How Many Hides
Has A Cow?

Use FABRIKOID for: car seat upholstery, curtain bindings, cab cushions and vestibule curtains.

F DU PONT FABRIKOID

REG. U. S. PAT. OFF.

FOR UPHOLSTERING CAR SEATS

It Is Guaranteed Superior to Coated Splits

Its base is a specially woven, very strong cotton cloth. The base of coated splits is a thick, pulpy piece of flesh, much weaker than the cloth. Both are coated with practically the same materials. Both are embossed or grained in the same way.

FABRIKOID is fully guaranteed.

Coated splits are never guaranteed.

If you doubt which is better, compare the "split" upholstery in actual service with the FABRIKOID upholstery, after six months' wear. The proof will be conclusive. Write for Samples and Convince Yourself

Berry Brothers' Railway Varnishes

Need no introduction to experienced railway men. For nearly 60 years they have been the standard of railway varnish quality and their constantly increasing sale is undisputable testimony of their great efficiency.

Here are a few valuable finishes for railway use.

Inside Coach Finishing

A high grade varnish, very pale, heavy bodied and well matured. It is an easy working, free flowing varnish and dries quickly and hard with an attractive lustre.

Outside Coach Rubbing

A very pale, easy working varnish, dries quickly and can be rubbed in two days.

Inside Coach Rubbing

A superior rubbing varnish, is light in color, dries and hardens quickly, rubs easily and makes an ideal surface for the finishing coats.

Luxeberry Wood Finish

A high grade interior varnish for Stations, etc. Can be rubbed and polished if desired.

Outside Coach Finishing

A pale full-bodied varnish that dries dust free quickly. It is very durable, resisting wear and tear and dries with an attractive lustre.

If you have not already received a copy of our new catalog of Railway Varnishes, write us today, for the best catalog of its kind ever published.

Scientific Treatment of Boiler Waters Dearborn Service to Railroads

Twenty-five years devoted to the subject of water chemistry, embracing the analysis and successful treatment of waters in all parts of America, and in many countries of the eastern continent as well, including supplies used in locomotive, stationary and marine boilers of every type and size, and operated under the varying conditions that obtain in different industries, gives us a background of experience which is of value in handling new problems, and an assurance to our customers that only expert, efficient service will be offered them.

Scores of Railroads are using Water Treating Preparations compounded by us to meet their requirements, with great benefit to the railroad companies, in the increased life of the boilers, reduced consumption of fuel and lubricating oil, ability to haul greater tonnage, increased mileage between boiler washings, and generally improved operating conditions.

We would be glad to analyze the waters on districts where you are having trouble, and advise with you regarding treatment.

Ever Shaved by a Blunt Razor?

Remember how long it took; how you scraped away, and were finally disgusted with the shave?

Well, that is how a workman feels when using a file that has reached its "inefficient point." He gets irritated—does not take the same pleasure in his work.

The foreman thinks he is slow. There is no satisfaction anywhere.

But, give that man a new file and he puts new enthusiasm and new energy into the job.

This is a homely illustration, but it is true, for it is human nature.

The line of least resistance and greatest efficiency in shop practice to-day is to give men new files to work with when their files reach the "inefficient point."

Manufacturers, suggest to your superintendents,

Superintendents, instruct your foremen,

Foremen, tell your men

to turn in old files the moment they reach their "inefficient point." It costs less for a new file than it does to have a man slowed down and irritated by an old file.

Pedlar's "Perfect" Culverts

are the unquestioned choice of
most railroad boards

BACK of most Pedlar Culvert installations is an interesting story. The need of Culvert strength, culvert resistance, culvert economy have urged men to seek the one most suitable culvert for railroad use.

Pedlar Culverts disclosed the fact that in most cases Culvert repairs are a needless expense.

Made of heavy gauge, anti-corrosive, galvanized  they possess wonderful strength, ductibility and malleability.

Supplied in sizes from 8 in. to 84 in. in diameter and in lengths up to 40 feet—special sizes to order. Coupling bands supplied free for greater lengths.

You should have a copy of the complete Culvert Reference Book No. 4 R.M.

It contains much important data and valuable drainage tables.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

Have You a Columbia Hot-Shot Battery on Your Speeder and Motor Car?

For absolute reliability and battery economy every railway motor car should be equipped with a Columbia Hot-Shot.

This compact, moisture-proof unit battery is the most convenient and economical arrangement of dry batteries yet devised.

No loose cells to handle—only two connections to make.

Thousands used on railroads everywhere.

Handy, reliable, and economical. The most satisfactory source of ignition current available.

Well adapted also for every other class of battery service.

Made by the largest manufacturers of batteries in the world.

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

August, 1916.

The Board of Railway Commissioners' Judgment in the Eastern Rates Case.

The Board of Railway Commissioners' judgment in the Eastern Rates Case which was promulgated July 6, sanctions increases in freight rates in Eastern Canada, but does not allow all the increases asked for. Each rate has been considered on its merits. Following is a summary: It was not until May 11 of this year that the increases in grain and grain products rates were withdrawn by the railways, after negotiations resulting from the Board being impressed by the effect of the short mileage of the National Transcontinental, and competitive conditions between that line and the Canadian Northern north of the Ottawa. This affects a large item.

Operating expenses have increased generally. While from 1899 to 1914 train mile earnings increased 89%, the cost of service per train mile increased 112%, notwithstanding economies attributable to increased locomotive power, lower grades, better loading and increased traffic. In the period 1910 to 1914, earnings increased 10.6%, expenses 17.7%. In 1915, earnings increased 5.3% expenses 12.4%. Railway ties cost 38% more in 1914 than in 1907; in 1915 they were 45% higher. The cost of fuel to operate 100 miles was 30% higher in 1914 and 1915 than in 1907. The average cost of fuel increased 21.8% in the period 1909 to 1914. Salaries and wages represent three-fifths of the total railway expenses. This item has increased rapidly. The wage bill of the Grand Trunk alone increased in the period 1909 to 1914 by 52%, and for 1915 the increase was 50%. The increase in labor cost is mainly due to increases in wages, as there have been economies in the number of men employed per 100 miles of track. Decreases in wages are not a feasible means of economizing. The wages on the Grand Trunk have increased by 4.3% since the hearing.

The Canadian Pacific divisions in Eastern Canada are the Atlantic, Eastern, Ontario and Lake Superior. The Atlantic Division is operated at a loss. There is but little local traffic on the Lake Superior Division. The Canadian Pacific and the Grand Trunk are both engaged in business in the Eastern and Ontario Divisions, and here the freight business of the Canadian Pacific gives only 20% of its total freight revenue, and represents only three-fifths of the business done by the Grand Trunk. The Grand Trunk was built to meet the needs of Eastern Canada. It runs into all the large producing centres; it has a well established and well worked up business. In Eastern Canada it does the largest business and obtains the greatest earnings.

It is fair to accept for primary consideration the actual results of the Grand Trunk's earnings as a basis of rates. The rates cannot be based on the total capital cost of the Grand Trunk as carried on the company's books, which would represent a cost of \$131,000 a mile. The Canadian Pacific's new lines from Glen Tay to Agincourt and from Toronto to Sudbury cost respectively \$71,000 and \$56,000 a mile. This includes nothing for terminals. The Intercolonial cost,

including equipment and terminals, \$75,000 a mile. The Hydro-Electric Power Commission of Ontario has recently made an estimate that 138 miles between Toronto and London would cost \$100,000 a mile, including terminals and equipment.

The net earnings per mile of line of the Grand Trunk at their highest in 1913 were \$3,500 a mile. In 1914, they were \$3,059, and in 1915 \$2,477. The financial relations of the Grand Trunk to the Grand Trunk Pacific, as well as to its United States lines, are analyzed, and it is rule that outside investments cannot be considered as bearing on the reasonableness of freight rates. Economical financing of the Grand Trunk has been rendered extremely difficult, if not impossible. Appropriations of all kinds have been cut and repairs have been postponed. On Dec. 31, 1915, over 4000 cars were held for repairs, notwithstanding the lighter traffic of the year. In order to keep the equipment in proper shape, it will be necessary to obtain 1,249 new freight cars at an expenditure of \$2,238,000. Normal track renewals would require 431 miles; for the period 1913 to 1915, inclusive, the track renewals were only 45% of this standard; and for the year 1915 the renewals fell to 67 miles. The renewal work on bridges and culverts during 1915 is \$20,000 below the average yearly expenditure of the period of 1906 to 1915. The economies so made cannot continue indefinitely without great loss and inconvenience to the public.

In the Western Rates Case, the Government expert computed that 6% should be allowed so as to provide 4% for interest charges and 2% for surplus. Money is now more expensive. Taking the cost of the Glen Tay-Agincourt line and adding \$10,000 a mile for equipment, the net earnings would have to be \$4,800. If the Toronto-Sudbury line is taken as a basis, net earnings per mile would have to be \$4,001; while if the Intercolonial is taken they would have to be \$4,500. Aside entirely from the terminal expenses, the Grand Trunk net earnings in the best year are far short of these figures.

The proposed increases on fruits are postponed until they can be considered along with proposed increases in icing and salt for refrigeration, which are now under suspension.

The Western Rates Case pointed out the differences between conditions in Eastern and Western Canada; and, notwithstanding material reductions, the general schedule in the west is higher. The Railway Act requires and the general public interest of the country demands that, if practicable, eastern rates should be advanced so that the different schedules may more nearly approach a parity. The effect of new competing lines, e.g., the Canadian Northern, constructed recently, is not considered in striking a reasonable basis. The increases made are justifiable entirely on the mere fact of the increases in Grand Trunk expenses, and having regard to traffic of normal years.

Besides the class tariffs of general application, meaning the rate scales used

everywhere in connection with the Freight Classification, the application of the railway companies comprises over 150 exceptional or special single rates and more or less comprehensive schedules of exceptional rates, lower than the class rates, applicable to various commodities. To quote the judgment: "No flat increase of 5, 10 or other percentage could be applied simply to augment railway revenue. Each rate of necessity has to be considered, having regard to its reasonableness for the service performed." As each of these items has thus been separately dealt with on its merits, it is impossible within the limits of a newspaper article to give any clear synopsis of the Board's conclusions. A selection of two or three commodities, by way of illustration, would convey no true conception of the general result and might prove misleading. The shippers interested in the several lines of trade represented in the application will arrive at their own conclusions from a study of this section of the judgment. The application with respect to some of the commodity items has been declined, and in numerous instances less has been granted them than asked for by the railway companies.

The findings regarding the class tariffs may however, briefly be summarized. In the territory bounded on the west by, but not including, Port Arthur, and by the Georgian Bay, Lake Huron and Detroit river, and on the east by Quebec and Megantic, also between C.P.R. stations in New Brunswick, the class rates, provided they are now lower than the standard or maximum mileage tariff, may be increased by 2c. in the 1st and 1c. in the 5th classes, the rates for the other classes to be properly proportioned in accordance with the standardized scale. An exception is made of the Canadian Pacific and Canadian Northern lines between Parry Sound and Sudbury, on which no increases are allowed.

Because of the comparatively lower level of the rates to the Maritime Provinces, greater increases are permitted. Between points in the provinces of New Brunswick and Nova Scotia and points west of Quebec, Levis and Megantic as far as Montreal and Valleyfield, and north of the Ottawa river, the 1st class will be advanced 4c. and the 5th class 2c.; the other classes in proportion. Between the same maritime sections and points west of Montreal the carriers are authorized to increase their rates by 6c. for the 1st class and 5c. for the 5th, the remaining rates fitting in from the standardized scale. Here, again, an exception is made of the C.P.R. line in the St. John river valley, where the rates, instead of being advanced, will be lowered by the company so as not to exceed the St. John rates; this relief being due to the opening of the National Transcontinental south of Edmundston, N.B. As the government railways are not subject to the Board's jurisdiction, the Intercolonial and National Transcontinental management is, of course, free to fix its own rates; nevertheless, the judgment provides that the through rates of the Grand Trunk, Cana-

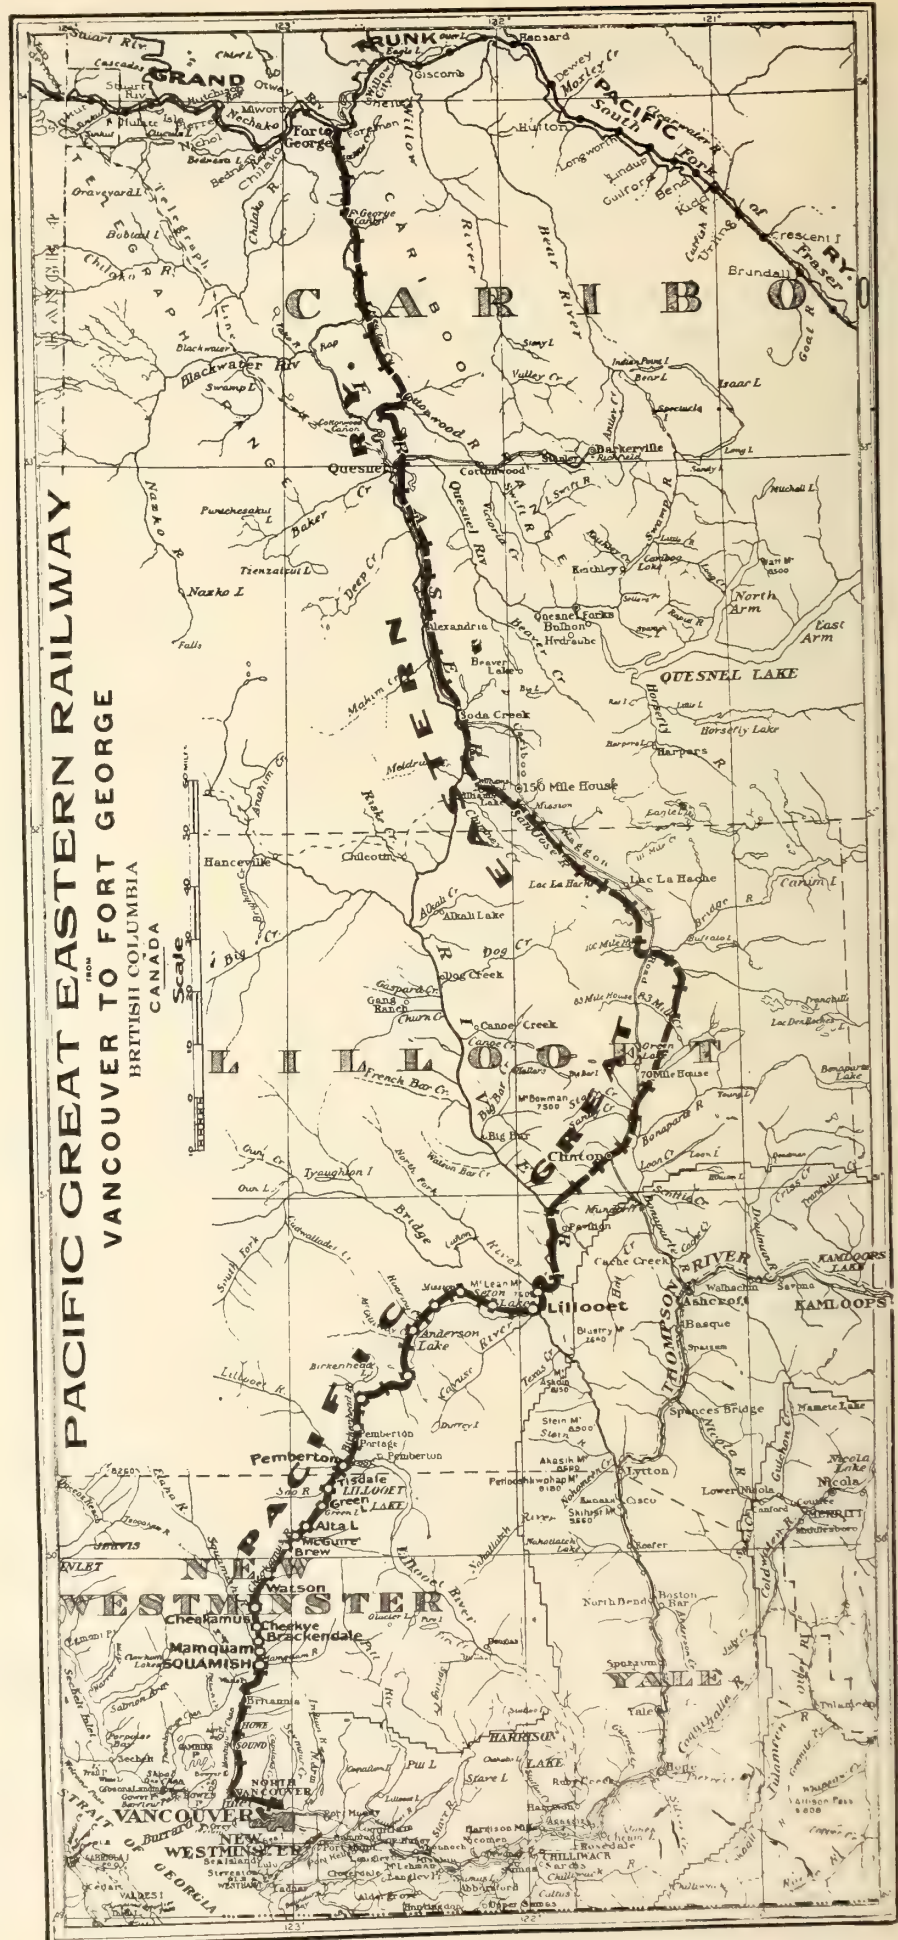

dian Pacific, and other independent companies in Quebec and Ontario, to Intercolonial points east of St. John to Halifax and Sydney are to preserve the same differences, if any, over the St. John rates as at present.

The Board's judgment and order occupies 256 pages 5 x 8 in. of closely printed matter.

The Pacific Great Eastern Railway's Location and Construction.

The Pacific Great Eastern Ry., which was projected to form the connecting link between the Grand Trunk Pacific Ry.'s transcontinental line and the city of Vancouver, will upon completion serve a vast extent of local territory adapted to agricultural, mineral and other development; and while providing a convenient through route to Vancouver and other southern cities will constitute an avenue of traffic to market for the products of the interior.

From Vancouver the line follows the north shore of Burrard Inlet and English Bay, and the east shore of Howe Sound, to its head, about 44 miles from Vancouver. At the head of Howe Sound is Squamish, the company's ocean terminus. Howe Sound forms a magnificent land locked harbor 25 miles long and at its narrowest point not less than a mile wide. The harbor is claimed to be the most commodious on the Pacific coast, having regard to freedom from currents and winds and the safe anchorage that it affords, there being no obstruction of any kind to navigation throughout its entire length. The Pacific Great Eastern management believes that Squamish will be one of the most active ports on the western coast, as it will form the virtual Pacific terminus of the G.T.P.R. transcontinental line (the other Pacific terminus of that line at Prince Rupert serving more as a link in transpacific traffic to the Orient); and from the local traffic that will be developed along the Pacific Great Eastern Ry., which, passing in a north and south direction through the central part of the province, will render commercially available the vast natural resources of the territory adjacent to it, agricultural, mineral, and industrial, including lumber. The mineral tonnage alone is expected to prove an important source of revenue to the company. With the extension of the present dock and the construction of grain elevators, the company expects to handle at Squamish a large volume of Prairie wheat, which it is becoming increasingly evident must find western outlets, partly to meet the growing Oriental demand for Canadian wheat, and to shorten the rail haul. It is contended that in the near future the bulk of the wheat crop produced west of the 110th meridian of west longitude (the eastern boundary of Alberta) will reach its markets through Pacific rather than Atlantic ports. That this is possible is due to several important factors of which the following three are perhaps the most worthy of mention: 1, the favorable grades obtained by the Grand Trunk Pacific, the Canadian Northern and Pacific Great Eastern through British Columbia, and the improvements recently effected in the Canadian Pacific grades across the Rockies; 2, the construction of the Panama Canal; 3, refrigeration in grain carrying ships, preventing the sweating of wheat while passing through tropical waters. Steamships now ply regularly between Vancouver and

Squamish, connecting with the P.G.E.'s trains at the latter point.

Leaving Squamish, the line passes for a short distance through the extremely fertile Squamish River Valley, an interesting and valuable product of which is the hop crop. Flowing into the Squamish River is the Cheakamus, which the railway follows through some of the best timber lands in the province, which investigators state are also highly mineralized. Scenically this is a beautiful section, of river, waterfall, forest and mountain heights. It has also excellent shooting and fishing. From the Cheakamus Valley the line follows a chain of lakes and rivers, and passes through Pemberton meadows, comprising stretches of beautiful farm land. An experiment is being made there, under the direction of the British Columbia Government, in the raising of sugar beet, as it is believed that the soil and favorable climate are well adapted for the industry. Leaving Pemberton meadows the line follows the Birkenhead River through country very similar to that adjacent to the Cheakamus River. It thence continues northerly around the west shores of Anderson and Seton Lakes, and enters Lillooet, celebrated in the early days of the province for the rich gold washings along the banks of the Fraser River at that point, but now more justly renowned for its fine quality of fruit and melons. At Lillooet the line crosses to the east bank of the Fraser River, which it follows northerly to Kelly Lake, and thence runs in a more northeasterly direction to Clinton, the present (July, 1916) end of track, 167 miles from Squamish. From Clinton northerly until the line again approaches and follows the Fraser River the country is open, and adapted to mixed farming and ranching. Most of the land, however, requires irrigation, although dry farming has been successfully carried on. From Soda Creek the line follows the Fraser River to Prince George, where it will connect with the Grand Trunk Pacific main line. Grading is practically finished over the whole line, and although no portion of the line north of Clinton is being operated, track-laying is proceeding as rapidly as possible. Owing to the great number of bridges and the amount of trestle work in the first 8 miles, progress is necessarily slow, and it is not expected that track will be laid to Prince George until the end of 1917.

From Prince George the company's next objective is the Peace River country, where it is estimated there are 7,500,000 acres available for settlement, with excellent climate and fertile soil, adapted both for raising grain and mixed farming. It is not likely, however, on account of present economic conditions, that work will be started on this extension before next year or probably later.

The location of the Pacific Great Eastern was determined after the company's engineers had studied all previous surveys through the territory, had exhausted all other available sources of information as to possible routes, and had carefully investigated the country by actual survey. In deciding upon the route adopted, the engineers were guided by considerations of probable future operating expense and revenue; as well as the initial cost of construction. The line adopted is suitable to the character of country traversed. The gradients and curvature, while not as low as those on the Canadian Northern and Grand Trunk Pacific, are said to be more favorable than on the Canadian Pacific's main line through British Columbia, and are greatly superior to those of the Santa

Fe, over which a tremendous volume of business is handled.

A high standard of construction was set and is being maintained throughout the entire work. The embankments are wide; drainage has been well provided for; all structures in the roadbed are designed to carry the heaviest rolling stock; and the few short tunnels have been well taken out to standard dimensions. The rails on level ground and light grades are 60 lb. to the yard, but 70 lb. steel is used on the heavier grades. A good quality of ballast is generally available conveniently near to the line and is being well distributed under the track, so that in every essential detail the road is a good one.

At Squamish a terminal yard has been laid out and a 6 stall locomotive house constructed to meet present requirements, and an oil fuel station installed. At Lillooet, the next division point, similar facilities are being furnished. Oil fuel is to be burned in the locomotives. An abundant supply of good water is available, so that with the oil fuel and suitable water the railway should be singularly free from boiler trouble.

J. W. Stewart, of Vancouver, a member of the firm of Foley Bros., Welch and Stewart, and D'Arcy Tate, K.C., of Victoria, are the President and Vice President respectively of the company. John Callaghan is its Chief Engineer.

Birthdays of Transportation Men in August.

Many happy returns of the day to:—

V. T. Bartram, ex-Purchasing Agent, Timiskaming & Northern Ontario Ry., now of Toronto, born at Ottawa, Aug. 2, 1880.

J. C. Beckwith, Engineer of Construction, Canadian Government Railways, Moncton, N.B., born at Fredericton, N.B., Aug. 1, 1875.

C. B. Brown, M.Can.Soc.C.E., Chief Engineer, Canadian Government Railways, Moncton, N.B., born at Ithaca, N.Y., Aug. 27, 1879.

J. S. Carter, District Passenger Agent, C.P.R., Nelson, B.C., born at Aurora, Ill., Aug. 14, 1864.

A. E. H. Chesley, General Accountant, Dominion Atlantic Ry., Kentville, N.S., born near Annapolis Royal, N.S., Aug. 27, 1877.

A. B. Chown, Travelling Passenger Agent, G.T.R., Pittsburg, Pa., born at Belleville, Ont., Aug. 4, 1887.

G. T. Coleman, Car Service Agent, Ontario Division, C.P.R., Toronto, born at Carleton Place, Ont., Aug. 25, 1875.

C. H. N. Connell, Engineer Maintenance of Way, Quebec Grand Division, Canadian Northern Ry., Montreal, born at Woodstock, N.B., Aug. 26, 1876.

C. E. Croft, Chief of Commissary Department, Canada Steamship Lines Ltd., Toronto, born at Cobourg, Ont., Aug. 26, 1882.

E. L. Desjardins, Assistant Superintendent, Montreal and Ste. Flavie District, Intercolonial Ry., Riviere du Loup, Que., born at St. Jean Port Joli, Que., Aug. 1, 1859.

L. C. Frith, General Manager, Eastern Lines and Assistant to President, Canadian Northern Ry., Toronto, born at Springfield, Ill., Aug. 11, 1869.

G. H. Ham, Head Office Department, C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

W. P. Hinton, Traffic Manager, Grand Trunk Pacific Ry., Grand Trunk Pacific Coast Steamship Co., and Western Traffic Manager, Canadian Government Railways, Winnipeg, born at Hintonburg, Ont., Aug. 30, 1871.

R. Kerr, ex-Passenger Traffic Manager, C.P.R., born at Toronto, Aug., 1845.

C. T. Knowlton, Superintendent of Ferries, Canadian Government Railways, Moncton, N.B., born at Advocate Harbor, N.S., Aug. 26, 1849.

J. D. McDonald, Assistant General Passenger Agent, G.T.R., Chicago, Ill., born at Toronto, Aug. 27, 1855.

T. McHattie, Master Mechanic, Eastern Lines, G.T.R., Montreal, born at Dufftown, Banffshire, Scotland, Aug. 8, 1854.

M. K. McQuarrie, Resident Engineer, District 1, British Columbia Division,

C.P.R., Revelstoke, born at Sault Ste. Marie, Ont., Aug. 17, 1884.

A. H. Mahon, District Locomotive Foreman, Grand Trunk Pacific Ry., Edson, Alta., born north of Ottawa, Ont., Aug. 27, 1874.

W. J. Meakin, Car Foreman, C.P.R., Wetaskiwin, Alta., born at Toronto, Aug. 22, 1872.

C. Montgomery, Master Mechanic, Pere Marquette Rd., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

W. E. Mullins, General Manager, (Freight), United Fruit Co., New York, born at Stratford, Ont., Aug. 13, 1870.

H. R. Naylor, Division Car Foreman, Eastern Division, C.P.R., Montreal, born at Hull, Eng., Aug. 30, 1885.

F. H. Phippen, K.C., General Counsel, C.N.R., Toronto, born at Belleville, Ont., Aug. 26, 1862.

W. M. Porteous, District Freight Agent, C.P.R., St. Louis, Mo., born at Edinburgh, Scotland, Aug. 3, 1857.

J. F. Richardson, ex-Superintendent Telegraphs, Saskatchewan Division C.P.R., born at Granby, Que., Aug. 23, 1861.

W. G. Ross, Chairman, Montreal Harbor Commissioners, born at Montreal, Aug. 6, 1873.

W. Le B. Ross, Local Treasurer, G.T. Pacific Ry., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

F. C. Salter, European Traffic Manager, G.T.R., and Canadian Ex. Co., London, Eng., born at Sarnia, Ont., Aug. 31, 1863.

A. O. Seymour, General Tourist Agent, C.P.R., Montreal, born at Ogdensburg, N.Y., Aug. 14, 1887.

S. A. Simpson, Superintendent, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Winnipeg, born at Toronto, Aug. 22, 1880.

J. F. Sweeting, Industrial Agent, Natural Resources Department, C.P.R., Calgary, Alta., born at Worthing, Eng., Aug. 20, 1872.

F. E. Warren, General Car Foreman, C.P.R., Winnipeg, born at Chelsea, Que., Aug. 29, 1872.

W. B. Way, Superintendent, District 2, National Transcontinental Ry., Cochrane, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

E. H. Williams, Locomotive Foreman, Canadian Northern Ry., Brandon, Man., born at West Toronto, Ont., Aug. 26, 1884.

The G.T.R. tunnel under the St. Clair River at Sarnia, Ont., was flooded July 21, owing to very heavy rains, there being a depth of 4 ft. in it. Traffic was interrupted and a number of trains were dispatched via Windsor.

Railway Mechanical Methods and Devices.

Stripping Spring Buckles at Grand Trunk Railway Shops.

The accompanying illustration shows a spring buckle stripping press in use in the G.T.R. shops, Stratford, Ont., which has a capacity of about 6 springs an hour, and is, in consequence, a big im-

Machine for Stripping Buckles from Locomotive Leaf Springs.

provement on many of the generally accepted methods of stripping buckles. It consists of a heavy base and cylinder cast integral, the cylinder operating with an air pressure. At the end opposite to the cylinder there is a heavy vertical flange from the base, against which the springs rest. A crosshead, guided on ways along the upper face of the base, carries two heavy bars, which may be adjusted laterally for different widths of springs, these bars spanning the spring. They are kept close against the side of the spring, during operation, by a clamp. Spanning the base beyond these arms is a heavy forged bridge, with a heavy square threaded screw centrally in the cross arm, set at a slight angle away from the cylinder. This cross arm moves in ways along the side of the base, for adjustment for various sizes of springs, preventing the spring from vertical buckling.

The spring to be stripped is placed on the table of the base, the side arms placed against the buckle and clamped together, and the screw in the top of the cross arm tightened down. The air pressure in the cylinder then forces the band off the spring in one movement. Most of the time is consumed in setting up the spring for operation, but, even with that, the high rate of production mentioned above is easily maintained.

Locomotive Washing at Lambton Yard, Canadian Pacific Railway.

Outside of the locomotive house at Lambton, near Toronto, about 50 ft. from the approach to the turntable, a washing floor is constructed, as shown in the accompanying plan. The ordinary practice of using a mixture of air, water and oil is followed, from a tank and hydrant, situated about the centre of the washing floor, between the two parallel tracks which run through the floor. Water and air pressure are supplied at about 60 lb. pressure, so that the nozzle throws a fine spray, which cuts off the

dirt and grease and leaves a coating of oil all over the sprayed portion.

The track bed is drained from the centre, between the rails to the outside, and a parallel trough about 6 in. deep carries the surplus water and oil to a point about 20 ft. away, where a concrete trap tank is located. This tank is 2½ ft. wide by 4 ft. deep, and is drained from the bot-

Savings Effectuated by Welding in Railway Shops.

The following information has been received in response to requests from Canadian Railway and Marine World:—

G.T.R. Shops, Point St. Charles, Montreal.—A. A. Maver, Master Mechanic, writes: When we first started to use Thermit welding, about the time when it was first introduced, we were told that the parts to be welded did not require to be heated. We were also restricted to the amount of Thermit to be used; but, after having had some experience, we find that to obtain the best results plenty of Thermit had to be used, in order to give a good flow through the mould. We also found pre-heating to be necessary for successful Thermit welding, as the hotter the parts to be welded the more successful will the weld be.

For relining crucibles, magnesia tar should always be used. In some cases, when we did not have magnesia tar on hand, we have lined our crucibles with old brass crucibles, fire clay, and sand, but found the sand would mix with the metal, making a silicon, thus causing the steel to become very hard and brittle, and liable to break. In Thermit welding the most important things to be seen to are to have the crucible properly lined, to use plenty of Thermit, and to have the parts to be welded as hot as possible.

Oxy-acetylene welding has been used very extensively in the Point St. Charles shops for a large variety of work during the past seven years, motion plates, spectacle plates, etc., and locomotive frames being built up where worn away by stays or brake hangers. Flat spots on tires are successfully welded in their place, mis-drilled holes filled up, faulty castings re-

Track Troughs for Locomotive Washing.

reservoir to the washing machine, allowing the oil to run right into the machine over and over again.

It is estimated that this process reclaims 66% of the oil used for washing down, and keeps a yard much cleaner than when the oil and water are allowed to soak into the ground. We are indebted for the above information to E. J. Murphy, Locomotive Foreman, C.P.R., Lambton, Ont.

claimed, and shop machinery repaired. We have also repaired cast iron parts of machines and welded lugs on steam shovel cylinders, etc. A large percentage of the above material would have been scrapped but for our ability to reclaim it by this welding method.

All cast iron articles to be welded should have the cracks or broken parts chamfered to a 45° V, leaving just about ¼ in. fitting edge, according to the size

of the castings, and then be heated up slowly in a charcoal fire to a red heat, and as soon as the welding is done the article should be buried in ashes till it has cooled right down. We find this to be the only way to make a reliable job.

Three years ago the water chamber of a hydraulic pump (steel casting), subjected to a pressure of 3,000 lb. a sq. in., opened up pores, and part of the valve face was cracked. It was successfully welded, and has been in constant use ever since.

Whenever possible all heavy parts to be welded should be pre-heated, as it saves time and gas, and makes a more homogeneous joint.

In boiler work, all sorts of patches and cracks, also half and side sheets, are successfully welded, and metal built upon wasted foundation rings, dry pipe joints, etc., all patches, cracks, and side sheets being chamfered to a 45° V.

Cutting by the oxy-acetylene process on steel or wrought iron saves many hours of labor. For example, a fire box side sheet can be cut across and down the centre in twenty minutes, and a fire hole patch measuring nine feet can be cut in the same time.

G.T.R. Shops, Battle Creek, Mich.—J. C. Garden, Master Mechanic, writes: We have used Thermit for a number of years, with very good results. When we first got the machine our welds were not satisfactory, although we followed closely the instructions issued by the Thermit representative. The material at the weld was hard and brittle, and, with very few exceptions, the welds broke before they had been any length of time in service. I explained this to one of their representatives who called on me, and he asked to be allowed to watch us make a weld, which I permitted him to do. Before we got well started he said that it would be impossible for us to make a proper weld under the conditions we were using; that the material with which we were lining our crucibles would destroy any weld, the crucible being lined with carborundum and silicate of soda, the metal passing through this carborundum would pick up sufficient carbon to make it as hard as glass. We asked him what was required, and he told us to line the crucible with a special preparation of tar. He also advised that the Thermit mixture we were using was not suitable, as it was put up in a big can and the matter separated, the lighter portion coming to the top so that the mixture would not be correct. He advised that we should stir the whole body of this mixture every time we used it, but recommended that we procure the mixture in small cans, which should be freely shaken before being used. We followed his instructions and our Thermit welds afterwards were perfectly satisfactory, the metal being soft enough to machine or cut with a hammer and chisel, and since adopting this system we have never had a weld break.

We are also getting very good results with electric welding, especially on locomotive frames, but the success of this welding also depends on using the proper material. If the proper grade of iron is not used it will be hard and break. We use the Thermit machine for very little except locomotive frames, but on one or two occasions we welded cast steel wheels which were broken in the spokes, to save time in procuring the wheel. The results in both cases are equally satisfactory.

With the electric welder we weld broken cylinders, if they are broken in the cavity, which takes only exhaust steam, but we have not been able to weld satis-

factory on the high pressure cavities. We weld frames and all iron and steel parts on locomotives, cracked bridges in tube sheets, patch in fireboxes, and fill staybolt holes, which have been worn large, for retapping. We have also been very successful in repairing high speed milling cutters—in fact, the number of purposes for which this machine can be used is unlimited.

Canadian Northern Railway, Winnipeg Shops.—L. Wedge, General Locomotive Foreman, writes as follows: Four men are continuously employed by us on oxy-acetylene welding, which we find very satisfactory, two men doing the boiler work and two doing machine work. With this

greater saving was made in material than if the cylinder had pieces broken out of the front 12 in. long and 16 in. wide, U shape.

Welding flat spots on driving tires is a practice which is also a great saving in both time and material, as it is not necessary to lift the locomotive off the wheels or to turn the tires, which necessarily shortens their life by some 12 months or more, depending on the size of the socket.

The above are only a few of the important jobs done by welding in this shop, but the fact that we keep four men continuously on this work will give an idea of how much we accomplish by this process of welding.

Long Arm Grinder

Long Arm Grinder on Grand Trunk Pacific Railway.

A useful attachment for motion and general grinding is shown by the accompanying illustration. The saddle block is formed to suit the tool post opening in carriage on lathe, to which are attached two hollow spindles, one operating in babbited bearings and saddle block and fitted with drum, which is belt connected to an operating shaft above the tool carriage. The main spindle carries a 2 in. arbor for an emery wheel, and is locked firmly by the extension spindle, which is screwed into place as shown, being further held by a long rod carrying small outer wheel on right hand end and terminating at left hand face of saddle block. The device has been found of great convenience for roundhouse work in grinding taper pins and holes, piston rings, joint rings, etc. It is in operation at the Grand Trunk Pacific shop, at Wainwright, Sask., and we are indebted to W. W. Yeager, formerly Locomotive Foreman there and now at Biggar, Sask., for the above data.

process of welding we effect a great saving in time and material. A breakdown occurred in our pumping station a short time ago which was very serious. Two of the water cylinders were broken, and it would have taken considerable time to make patterns and have castings made from them and machined. Instead, the broken cylinders were welded by acetylene, and were in working order again in three or four days, which was a saving of at least ten days against having new castings made and machined.

A great saving is also effected by welding lugs on air pumps which have been broken off; also by welding split pipes. An equally great saving is effected in our superheater work, welding headers and welding in side sheets, cracks in fire boxes, side fire boxes where worn by driving wheel rubbing same, and welding broken cylinders on locomotives.

Two locomotives which were just out of the shop had their cylinders badly broken. These, of course, could be patched, but by welding they were made as good as new. They were repaired by acetylene welding in a shorter time, and a

Steam Railway Statistics for Year Ended June 30, 1915

The table given in our June issue showed the financial results of the operations of steam railways for the year ended June 30, 1915. The following table gives the percentages and the principal statistical information compiled by the companies. The table published in June and the one given below contain all the information given prior to 1910 in our compilation of these statistics, but the columns have been rearranged so as to combine in the first table the financial and in the second the statistical information:

Name of Railway	Ratio of Operating Expenses to Operating Revenue	Proportion of total Passenger service train revenue to total earnings	Proportion of freight plus switching revenue to total earnings	Revenue Train Mileage	Mileage of Non Revenue Trains	Earnings per Train Mile	Passengers Carried	Passengers Carried One Mile	Passenger Earnings per Train Mile	Tons of Freight Carried	Tons of Freight Carried One Mile	Freight Earnings per Train Mile

Canadian Government Railways' General Manager at Fort William.

F. P. Gutelius, General Manager, and other Canadian Government Railways officers were entertained at luncheon by the Fort William, Ont., Board of Trade, July 6. Mr. Gutelius outlined what the government railways had done, were doing, and what they proposed to do for the country. He gave a description of the foundation laying of this work in the construction of the Intercolonial in the Maritime Provinces and told how private lines had been purchased in that district to perfect the service there and improve the railway situation generally. During the past six or eight months the road has been worked to capacity and there has been an average of 300 car loads one way each day. During the past few weeks there have been 200 cars a day handled from Winnipeg east. Seventy-five of these came from the C.N.R. on account of the high water at Fort Frances and the remainder from the G.T. Pacific lines. By the lease acquired recently of the branch line which links Fort William with Winnipeg, Halifax and Winnipeg, have been connected so that there is a through passenger service, which has been recently installed, which makes 16 hours better time than any competitor. Mr. Gutelius stated that during the past year the earnings of the road have paid all the operating expenses and left a surplus of \$1,000,000.

He then went on: "A suggestion has been made this morning that some terminal company take charge of the shipping at Fort William the same as is done in Montreal where the Harbor Commission has charge of the docks and the tracks. I am in favor of this, as it would enable us to serve many elevators from which we are now barred and would enable us to economize in operating expenses. I expect, however, we will get some relief by obtaining direct connection with the government elevator at Port Arthur or possibly obtaining absolute control of this. If this occurs the elevator capacity which we will then have will be almost sufficient for our needs. The building of the new elevator at Transcona will not seriously diminish the quantity of grain to be handled at the head of the lakes, as it will merely handle new business coming from the opening up of new branches, traffic which never came by this route in the past."

He concluded by remarking that on

looking over conditions at Fort William he was ashamed of the freight accommodation and situation. For many years the G.T.P., which owned the triangle west of the union station, had wanted them to take it over. The proposition did not impress them favorably, as it appeared that the investment would be too great for the amount of business received by it. If, however, Fort William shippers would sign an agreement to give the C.G.R. a fair share of their patronage he was of the opinion that the deal might be put through and the necessary improvements made.

Canadian Northern Ry. \$6,000,000 Loan.

W. A. Read & Co. offered in New York recently a new C.N.R. loan of \$6,000,000 six per cent. secured gold notes, dated June 10, 1916, \$3,000,000 due July 10, 1917, and \$3,000,000 due July 10, 1918, principal and interest payable in U.S. gold in New York. The prices were, for notes due 1917, 100½; for notes due 1918, 100. It is stated that the issue was subscribed in one day. The prospectus was as follows:

"These notes are the direct obligation of the Canadian Northern Ry. Co., specifically secured by pledge with the trustee in New York, of \$9,115,140 par value of Canadian Northern Ry. System underlying 1st mortgage bonds unconditionally guaranteed as to both principal and interest by the Dominion of Canada, the Province of Saskatchewan, or the Province of British Columbia. The collateral pledged with the trustee is as follows: \$3,569,947 Canadian Northern Alberta Ry. Co. 3½% 50-year debenture stock, due April 1, 1962, principal and interest guaranteed by Dominion of Canada. \$1,539,982 Canadian Northern Ontario Ry. Co. 3½% 50-year debenture stock, due May 19, 1961, principal and interest guaranteed by Dominion of Canada. \$1,975,839 Canadian Northern Ry. Co. 4% stock, due Jan. 23, 1939, principal and interest guaranteed by Province of Saskatchewan. \$2,029,372 Canadian Northern Pacific Ry. Co. Branch Lines 4½% debenture stock, due April 2, 1950, principal and interest guaranteed by Province of British Columbia. The pledged collateral shows a substantial equity in value figured on a 6% income basis, which is well below current market prices. The bonds securing these notes are prior in lien to the following outstanding securities: \$61,679,000 4% perpetual con-

solidated debenture stock. \$25,000,000 5% income bonds. \$45,000,000 4% general mortgage bonds, guaranteed by Dominion of Canada. \$15,000,000 cash advances by Dominion of Canada, secured by mortgage for that amount. The Dominion of Canada owns \$40,000,000 of the outstanding \$100,000,000 C.N.R. capital stock."

Express Rates on Fruits from Oregon to Manitoba.

The Interstate Commerce Commission gave judgment at Washington, D.C., recently in the case of C. H. Robinson Co. vs. American Express Co., et al, as follows: Complainant is a corporation engaged in buying and selling fruits and berries, with its principal place of business at Grand Forks, N.D. It alleges that the rate of \$2.50 per 100 lbs. charged by defendants for transportation of fruits and berries in carloads from Hood River, Ore., to Winnipeg, Brandon, and Portage la Prairie, Man., is unreasonable and unjustly discriminatory to the extent that it exceeds the rate of \$2 per 100 lbs. applicable on like traffic to the same destination from White Salmon, Wash. Reparation is asked on 9 shipments that moved from Hood River to Winnipeg or Brandon during June, 1914.

Hood River is on the south bank of the Columbia River, 63 miles east of Portland, Ore.; White Salmon, on the north bank of the Columbia River, directly opposite. Hood River is served exclusively by the American Express Co., which does not reach White Salmon or points in Manitoba, shipments from Hood River to points in Manitoba being carried by the American Express Co. to Spokane, Wash., and by the Northern Express Co., or the Great Northern Express Co. beyond. White Salmon is served by the Northern Express Co., which operates from that point into Manitoba.

Six of the shipments involved moved: American Express from Hood River to Spokane; Northern Express from Spokane to Winnipeg. Two shipments moved: American Express from Hood River to Spokane; Great Northern Express from Spokane to Winnipeg. One shipment moved: American Express from Hood River to Spokane; Great Northern Express to Brandon. Charges collected on the first six shipments were \$2,347.08 on 93,883 lbs., at a carload rate of \$2.50 per 100 lbs., minimum 15,000 lbs.; on the next two shipments, \$816.92 on 32,717 lbs.; on the last shipment \$385 on 15,400 lbs. The

following statement offered by defendants shows the rates in effect on fruits and berries in carloads from Hood River to Winnipeg and Brandon during the period from 1912 to the time of the hearing:

TO WINNIPEG.	
Apr. 22, 1912	\$2.25
Mar. 8, 1914	2.50
July 2, 1914	2.25
Jan. 1, 1915	2.50
TO BRANDON.	
May 22, 1912	\$2.25
Feb. 1, 1914	3.60
May 23, 1914	3.10
June 4, 1914	2.50
July 2, 1914	2.25
Jan. 1, 1915	2.50

The \$3.60 rate to Brandon, effective Feb. 1, 1914, and the \$3.10 rate, effective May 23, 1914, were based on the rates to and from Spokane, but the other rates shown were joint through rates. Prior to June 20, 1914, there were no carload rates on fruits and berries from Hood River to Portage la Prairie. A carload rate of \$2.50 was established on that date, which was reduced to \$2.25 July 2, 1914, but which was restored Jan. 1, 1915. The rate applicable on fruits and berries in carloads from White Salmon to the points of destination involved and other points in Manitoba when the shipments in controversy moved was \$2, which rate was applicable to Winnipeg by way of the Northern Express or by way of the Northern Express to Spokane and the Great Northern Express beyond.

Defendants state that the lower rates applicable from Hood River prior to the establishment of the rate attacked were unreasonably low; that the traffic from Hood River had not been bearing its proportionate share of expense; and that it was necessary, in attempting to recoup the losses sustained by reason of our decision in re Express Rates, Practices, Accounts, and Revenues, 24 I.C.C., 380, relative to less than carload rates, to raise rates not found unreasonable in that case to a reasonable level. The traffic from White Salmon can reach points in Manitoba over a single line, and in practically all instances moves over but one line, whereas like traffic from Hood River to the same points must move over two lines, and entails besides switching and inspection costs at Spokane.

Subsequently to the hearing on April 20, 1915, the rate from Hood River to Brandon was reduced to \$2.25, while the rate from White Salmon for a two line haul was increased to \$2.25. On May 22, 1915, the rate from Hood River to Winnipeg and Portage la Prairie was also reduced to \$2.25 at the same time that the rate from White Salmon for a two line haul was increased to \$2.25. All of these rates are still in effect, as is also the Northern Express Co.'s \$2 rate to Winnipeg and other points in Manitoba. The rates to Chicago from Hood River and White Salmon are the same, whether the

hauls involved are single or multiple line. Complexity of route is also disregarded in the rates from Hood River to numerous other points both in the East and in the West and in the rates from White Salmon to numerous destinations.

We find that the rate assailed was, and for the future will be, unreasonable to the extent that it exceeded a rate of \$2 per 100 lbs.; that the shipments were made as described and paid for at the rate herein found to have been unreasonable; that all of the shipments were made by the Fruit Growers' Association of Hood River, Ore., and that the charges collected on the shipments to Winnipeg were paid by the Bright & Emery Co., the consignee, while the charges on the shipment to Brandon were paid by the Pioneer Fruit Co., the consignee at that point, and that both consignees have assigned their interest in the claims to complainant.

Conference rule 362 provides as follows: "In awarding reparation the commission will recognize an assignment by a consignor to a consignee or by a consignee to a consignor, but will not recognize an assignment to a stranger to the transportation records."

So far as appears, complainant was a stranger to defendants' transportation records relative to the shipments, and therefore is not entitled to any reparation that may be due. An appropriate order will be entered.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates of orders, immediately following the numbers, are those on which they were drawn.

25079. June 16.—Authorizing C.P.R. to build spur for Baker & Betcherman, Gloucester Tp., Ont.

25080. June 17.—Authorizing C.P.R. to build undercrossing of highway on regular road allowance on east boundary sec. 36-8-4, w.3.m. mileage 19.9, Shaunavon Subdivision, Alta., and amending order 18266, Dec. 9, 1912.

25081. June 17.—Authorizing C.P.R. to build its Gleichen Subdivision across road allowance on east boundary of Sec. 21-22-25, w.4.m. Alta., at mileage 14.75, and amending order 18669, Feb. 12, 1913.

25082. June 17.—Suspending proposed cancellation of rates on copper commodities from Smelter, Grand Forks, and Greenwood, B.C., to points in Eastern Canada, as shown in C.P.R. tariff, C.R.C. no. W2147, effective June 18, and ordering C.P.R. to continue rates as contained in its tariff C.R.C. no. W2056, until further notice.

25083. June 17.—Authorizing City of Toronto to build overhead crossing of C.P.R. Queen's Wharf Branch, east of Strachan Ave.

25084. June 19.—Authorizing C.P.R. to build spur from mileage 28.5 Kootenay Central Subdivision, B.C., northeasterly into Lot 129, 770 ft.

25085. June 19.—Authorizing C.P.R. to build spur connecting its Lac du Bonnet and Bergen Northeast branches in Lots 56 to 58, Kildonan Parish, Man.

25086. June 20.—Amending order no. 25015, May 29, 1916, re Canadian Northern Ry. road diversion between Secs. 22 and 23-9-21, w.p.m.

25087 to 25089. June 19.—Approving agreements between Bell Telephone Co. and three telephone companies.

25090. June 19.—Approving bylaw 11 of the Brandon, Saskatchewan and Hudson Bay Ry.

25091. June 21.—Relieving Toronto, Hamilton & Buffalo Ry. from maintaining watchman at crossing of Ancaster Road, Ancaster Tp., Ont.

25092. June 20.—Approving Canadian Northern Ry. plan 291-0, Montreal, March 1, showing station building to be erected at Charlesbourg West, Que.

25093. June 21.—Ordering C.P.R. to lower culvert at public road at east side of track 18 ins., clean out borrow ditch, and repair farm crossing through Lot 5, Con. 3, Ops Tp., Ont.

25094. June 21.—Approving Nelson & Fort Sheppard Ry. bylaw 16, May 16.

25095. June 23.—Authorizing Esquimalt & Nanaimo Ry. to rebuild subway at mileage 6.

25096. June 22.—Authorizing C.P.R. to build spur at mileage 4.8 Smiths Falls Subdivision, Ont., for W. Fraser, Dorval, Que.

25097. June 20.—Approving plan, etc., of Cahill drain, to be built under Michigan Central

and Pere Marquette Rds., in Aldborough Tp., Ont.

25098. June 23.—Approving agreement between Bell Telephone Co. and Mink Rural Telephone Co., June 9.

25099. June 23.—Authorizing Canadian Northern Ry. to rebuild bridge over Vermilion River, at Dauphin, Man.

25100. June 23.—Authorizing C.P.R. to build road diversion in s.w.¼ Sec. 4-18-18, w.2.m., and builds its Pilot Butte ballast pit spur across same at grade.

25101. June 24.—Approving Bedlington & Nelson Ry. bylaws 42 and 43, June 12, and rescinding orders 15437 and 3286, Nov. 22, 1911, and July 16, 1907, respectively.

25102. June 26.—Authorizing Canadian Northern Ontario Ry. to build spur for Lauder, Spears & Howland, at mileage 198.69 from Toronto, in part of Lots 21 and 22, Cons. 5 and 6, Mowat Tp.

25103. June 26.—Authorizing Canadian Northern Ry. to cross and divert highway in s.e.¼ Sec. 29-30-3, w.3.m., Sask.

25104. June 26.—Authorizing Saskatchewan Highway Commissioners to build highway over C.P.R. at Belbeck Siding, on blind line north of Sec. 30-17-26, w.2.m., Sask.

25105. June 26.—Authorizing James Bay & Eastern Ry. to build spur for New York and Dominion Corporation at mileage 3.67 from Roberval, Que.

25106. June 26.—Approving agreement between Bell Telephone Co. and Rosedale Rural Telephone Co., June 15.

25107. June 27.—Authorizing G.T.R. to build siding across Hanna and Atlantic Aves., Toronto.

25108. June 24.—Approving Red Mountain Ry. bylaws 14 and 13, June 12, and rescinding order 3288, July 16, 1907.

25109. June 24.—Ordering Grand Trunk Pacific Ry. to fence certain portions of its right of way between Tete Jaune and Legrand, B.C., by Aug. 31, and rescinding order 24386, Oct. 25, 1915, in so far as it exempts company from fencing its line between mileage 1140.2 and 1142.5.

25110. June 27.—Approving character of work to be done by Minto Tp., Ont., on drain under G.T.R. on Lot 11, Con. 9.

25111. Authorizing Canadian Northern Ontario Ry. to connect with C.P.R. near Chaudiere Jct., Ont., and rescinding order 7490, July 6, 1909, in so far as it refers to connection with Ottawa & Prescott Ry. at mileage 56.6 west of Hawkesbury.

25112. June 30.—Authorizing C.P.R. to open for traffic its line from Simcoe to G.T.R. right of way in Port Dover, Ont., mileage 43.3 to 50.15.

25113. June 30.—Relieving C.P.R. from providing further protection at Thurlow crossing, near mileage 89, Trenton Subdivision, Ont.

25114. June 27.—Authorizing G.T.R. to build additional railway siding and spur for the city's John St. pumping station, Toronto.

25115. June 28.—Approving revised layout of C.P.R. mechanical interlocking plant at crossing at Murdock, Man.

25116. June 28.—Authorizing C.P.R. to build extension to Boake Mfg. Co.'s siding for Harry Webb Co. Ltd., Toronto.

25117. July 3.—Approving location Edmonton, Dunvegan & British Columbia Ry. through Tps. 74 to 71, R. 5 and 6, w. 6 m., Alta., mileage 25.51 to 50.19.

25118, 25119. June 30.—Approving Atlantic, Quebec & Western Ry. bylaw, May 24; and Quebec Oriental Ry. bylaw, May 22.

25120. July 3.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to open for traffic from mileage 287 to 357, Alta., speed of trains limited to 15 miles an hour.

25121. June 28.—Authorizing Canadian Northern Ontario Ry. to build spur for Hawkins Bros., Parry Sound, Ont.

25122. June 30.—Ordering G.T.R. to stop Delaware & Hudson Co.'s train 209 at Stottsville, Girard and Grande Ligne, Que., on Sundays; shipments of milk for Montreal to be picked up and carried by it.

25123. June 30.—Authorizing C.P.R. to build spur for Canada Cycle & Motor Co. in York Tp., Ont.

25124. July 3.—Approving Edmonton, Dunvegan & British Columbia Ry. standard mileage freight tariff, C.R.C. 20.

25125. June 30.—Authorizing Point Grey municipality to extend Oak St. across Vancouver & Lulu Island Ry. and Cedar Lumber Co.'s spur.

25126. July 3.—Ordering G.T.R. for 3 months from July 8, to stop local trains in and out of Montreal at Brussy's crossing, and to keep count and report to Board at end of each month, number of passengers using trains each way.

25127. June 7.—Authorizing C.P.R. to build spurs for Morrison Quarry Co., near Angus shops, Montreal.

25128. June 29.—Authorizing Quebec Government to build public highway over Canadian Northern Ry. on Lot 3, Deschambault Cadastral.

25129. Ordering that Dorchester St., Quebec, Que., be protected by gates, operated by day and night watchman; gates to be installed by Sept. 1, 1912, re special rates for mining students, etc. grade crossing fund, balance and cost of maintenance equally by C.P.R. and Quebec City.

25130. June 29.—Dismissing City of Montreal's application for order modifying profile of Lachine, Jacques Cartier & Maisonneuve Ry. between Hochelaga St. and Cote St. Michel Road, and amending orders 13993 and 15776 to embody modifications asked for.

25131. July 4.—Rescinding order 16056, March 1, 1912, re special rates for mining shipments, etc.

25132. July 4.—Authorizing Harrison, Man., to make highway over C.P.R. at point A in s.e. ¼ Sec. 8-16-20 w.p.m.

25133. July 4.—Approving Yarmouth Tp., Ont., plans and specifications of Copeland Drain under London & Port Stanley Ry.

25134. July 4.—Authorizing G.T.R. to build addition to bridge at Margaret St., Berlin, Ont.

25135. July 4.—Authorizing local improvement district 396, Alta., to make highway over Canadian Northern Ry. between secs 18 and 19-40-18, w. 4. m.

25136. July 7.—Authorizing Canadian Northern Ry. to build spur for Turner Lumber & Pulpwood Co., at mileage 125.93, Chicoutimi Subdivision, Que.

25137. July 7.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build across certain highways on its Grand Prairie Branch, mileage 25.51 to 50.19, Alberta.

25138. July 7.—Approving proposed connection between new switching lead to be built by Canadian Car & Foundry Co., Ltd., on Montreal Park & Island Ry. property, north of River St. Pierre and G.T.R., at Turcot, Que.

25139. July 8.—Relieving Quebec, Montreal, & Southern Ry. from providing further protection at Grand Caroline crossing, between Rougemont and St. Dumas stations.

25140. July 7.—Ordering Grand Trunk Pacific Ry. to install at Peterson, Sask., a box car body for waiting room and freight shed; and to make small cinder platform; work to be done by Aug. 5.

25141. July 8.—Extending to June 15, 1917, time within which half-interlockers are to be installed at Victoria Ave. and Franklin St., Fort William, Ont., conductors to flag cars over crossings.

25142. July 7.—Approving Montreal Tramways Co.'s plan of additions to interlocking plant at crossing of G.T.R. at Little St. James St., Montreal.

25143. July 7.—Amending item on page 9 of Supplement 5 to Canadian Freight Classification 16, giving specifications for cheese boxes as follows,—paragraph (a): Add at end of paragraph the words, "or four pieces if tongued and grooved."

25144. July 10.—Authorizing C.P.R. to open for traffic its Stirling-Weyburn Line from Foremost to Pokowki, mileage 49.2 to 71.7; speed of train not to exceed 20 miles an hour.

25145. July 7.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur, with offshoot for Dominion Steel Foundry Co., Hamilton, Ont., and approving clearances.

25146. July 7.—Approving plans and specifications of Logan-Maitland drain, to be built under C.P.R. on Lots 18 and 19, Con. 18, Elma Tp., Ont.

25147. July 11.—Authorizing C.P.R. to build two spurs for Energite Explosives Co., Lot 10, Con. 2, Horton Tp., Ont.

25148. July 12.—Authorizing G.T.R. to build extension to spur for Toronto Harbor Commissioners, in industrial district at dock 1.

25149. July 12.—Authorizing G.T.R. to build two spurs for The Ham & Nott Co., Brantford, Ont.

25150. July 10.—Exempting Esquimalt & Nanaimo Ry. from fencing certain portions of its right-of-way from mileage 2.5 to 31.8, Port Alberni Branch, B.C.

25151. July 12.—Relieving G.T.R. from providing further protection at first public highway crossing just east of Bothwell station, Ont.

25152. July 12.—Authorizing G.T.R. to build extension to spur for Canadian Bag Co., Toronto.

25153. July 13.—Authorizing C.P.R. to build switching track for Wayagamack Pulp & Paper Co., Bellerive Island, Que.

25154. July 13.—Ordering Canadian Northern Ry. to appoint station agent at Dropmore, Man., during Sept., Oct., Nov. and Dec.; if agent is not retained after that C.N.R. to arrange to keep building clean and heated for arrival and departure of passenger trains.

25155. July 13.—Authorizing Canadian Northern Ry. to rebuild bridge at crossing of Ste. Anne River at St. Raymond, Que.

25156. July 13.—Approving agreement between Bell Telephone Co. and Horton & McNab Telephone Association, June 9.

25157. July 14.—Declaring that crossing of highway known as Double Road, or French Road, by G.T.R., west of Vaudreuil station, Que., is protected to Board's satisfaction.

25158. July 13.—Extending 60 days from date time within which C.P.R. shall install bell at crossing two miles south of Brampton, Ont., known as second line west.

25159. July 13.—Authorizing Canadian Northern Ry. to build spur for Vegreville Milling Co. & Imperial Oil Co. Ltd., Vegreville, Alta.

25160. July 14.—Authorizing G.T.R. to build siding for Canada Forge Co., Welland, Ont.

25161 to 25163. July 13.—Approving agreements between Bell Telephone Co. and three telephone companies in Ontario.

25164. July 13.—Authorizing Kettle Valley Ry. to cross Canadian Northern Pacific Ry., pending installation of interlocking plant at Hope, B.C., all trains to be flagged over crossing by flagman appointed by C.N.P.R. at expense of K.V.R.; interlocking plant to be installed by Sept. 1.

25165. July 13.—Approving clearances on C.P.R. spur track 3 to North Pacific Lumber Co. on a trestle built through part of Burrard Inlet at Barnett, B.C.

25166. July 7.—Authorizing G.T.R. to build siding across Redan St., St. Thomas, Ont.

25167. June 25.—Authorizing Canadian Northern Ry. to extend spur across Avenues 106 to 112, north of Portage Ave., Edmonton, Alta., until Nov. 1.

25168. July 13.—Ordering Campbellford Lake Ontario Western Ry. (C.P.R.) to build farm crossing at station 1570, Hinchinbrooke Tp., in accordance with regulations, by Aug. 15.

25169. July 18.—Authorizing Canadian Northern Ontario Ry. to open for traffic its line from junction with Mount Royal Tunnel & Terminal Co.'s tracks, near St. Laurent, Que., to junction with C.N.O.R. near Grenville, Ont.

25170. July 18.—Authorizing Lake Erie & Northern and G.T.R. to operate over crossing at Simcoe, Ont., without first stopping; man in charge of interlocking plant to be appointed and paid by L. E. & N.R.

General order 168. July 11.—Ordering railway companies west of Montreal, subject to Board's jurisdiction, to carry desiccated vegetables in carloads to Montreal for export at domestic rates to Montreal, with addition of terminal charge at Montreal not to exceed 6/10 of 1c per 100 lbs., whenever said combination is less than rate of published export tariff.

Government Directors of Railways.

In accordance with legislation passed at the Dominion Parliament's last session, the Dominion Government has appointed the following directors for the Canadian Northern and Grand Trunk Pacific Railways respectively.

Canadian Northern—W. J. Christie, Winnipeg; W. K. George, Toronto; H. W. Richardson, Kingston.

Grand Trunk Pacific—J. B. Fraser, Ottawa; Jules Hone, Montreal; Peter McAra, Regina.

W. J. Christie is a Winnipeg real estate dealer.

W. K. George, of Toronto, was born at Kingston, Ont., in 1861, the son of the late Rev. Dr. James George, Principal of Queen's University, and was educated at Galt Collegiate Institute and Toronto University. He began business in Manitoba in 1882, and later went to Chicago, where he engaged in manufacturing. He returned to Toronto after seven years, and has been actively engaged in business there ever since. He is President of the Standard Silver Company, President of the Canada Bond Corporation and President of the London and Lake Erie Transportation Co., Vice President of the Sterling Bank and a director in a number of other corporations. He has been President of the Canadian Manufacturers' Association, President of the Canadian National Exhibition Association, and is a governor of Toronto University, Commissioner for Ontario of the Boy Scouts and an esquire of the Order of St. John of Jerusalem.

H. W. Richardson, of Kingston, Ont., is head of the firm of James Richardson & Sons, grain merchants and ship owners, Vice President of the Great Lakes Transportation Co., and is a member of the Montreal, Toronto, Winnipeg, and Calgary Boards of Trade. He has served as an alderman, and as President of the Board of Trade. He was the first President of the Kingston Canadian Club.

J. B. Fraser is an Ottawa lumber merchant.

Jules Hone was born at Montreal, Sept. 8, 1874, and entered C.P.R. service in the Car Accountant's office, Montreal, Mar. 14, 1889, and from July, 1890, to Aug., 1891, was secretary to the Manager of Transportation, Montreal; Aug., 1891, to the summer of 1892, in city ticket office, Montreal; 1892 to July 4, 1893, chief clerk, city ticket office, Montreal; June 21, 1896, to Nov. 1, 1903, ticket agent, Windsor Hotel, Montreal; Nov. 1, 1903, to 1906, city passenger, freight and steamship agent, Quebec, Que.; 1906 to Apr., 1911, City Passenger and Ticket Agent, Quebec.

On leaving the C.P.R. service he opened a steamship and general ticket agency, in partnership with L. J. Rivet, in Montreal, with a branch office in Quebec.

Peter McAra is head of the firm of McAra Bros. & Wallace, financial, insurance and real estate agents, Regina, Sask.

Railway Finance Meetings, Etc.

Central Ry. of Canada.—A meeting of bondholders has been called to be held in London, Aug. 17, to consider the scheme of arrangements between the Central Ry. Co., of Canada and its creditors which was filed by the company in the Exchequer Court of Canada in May, 1916, and to consider what steps should be taken for protecting and enforcing the security for the bonds, and if thought fit to pass all necessary resolutions requesting the trustees for the bondholders to declare the principal of the bonds to be due and to enforce the security for the bonds by the appointment of a receiver or otherwise, and to appoint a committee to represent the bondholders and to confer on such committee all such powers and authorities as may be thought expedient. The meeting is called by the City Safe Deposit and Agency Co., as trustee under the provisions of the trust deed and at the request of the bondholders.

Central Ry. of Canada. It is proposed that bondholders shall hold all interest coupons overdue and those to become due, until Jan. 21, 1921, when they will receive first mortgage bonds for the total amount of the coupons. The creditors will be paid in 6% income bonds, interest being dependent on earnings after meeting interest on the first mortgage bonds. Shareholders will receive no dividends until the holders of the first mortgage bonds have received full payment of their interest for three consecutive years. All cash subsidies received up to Jan. 1, 1921, will be used for construction and equipment of the line, and all subsidies received after that date will go to meet interest on the first mortgage bonds.

Great Northern Ry. and Mining Co.—The Nova Scotia Government has cancelled this company's certificate of registration. The company's property was sold in January, under a judgment to the Banque Nationale's General Manager, who was said to be acting on the bondholders' behalf. The company carried on some mining operations on Cape Breton Island, N.S., and had power among other things to build a railway, but it did not exercise it.

Temiscouata Ry. Net earnings for April, \$3,797, and aggregate net earnings from July 1, 1915, to Apr. 30, \$28,143.

Rogers Pass Tunnel, Canadian Pacific Railway.

We are advised by J. G. Sullivan, M. Can.Soc.C.E., Chief Engineer, Western Lines, C.P.R., Winnipeg, that the progress in connection with the Rogers Pass tunnel from Mar. 30, was 5,547 ft., and the total progress 5 miles, the drilling being completed on July 6.

The Duke of Connaught, Governor General, accompanied by the Duchess and Princess Patricia, were taken through the tunnel, which is rapidly approaching completion, on a special car, July 18. On the car reaching the western portal, the Duke named the tunnel "The Selkirk." The C.P.R. was represented by Grant Hall, Vice President and General Manager, Western Lines, and J. G. Sullivan, Chief Engineer, Western Lines; A. C. Dennis, M. Can.Soc.C.E., Superintendent for the contractors, Foley, Welch & Stewart, represented them.

Locomotives for Canadian Government Railway.

The Canadian Government Railways have received recently 15 heavy 2-8-0 class locomotives from Canadian Locomotive Co., Kingston, Ont. No special feature are comprised in them, outside the railways' standard practice. The boiler is of the extended wagon top type, and is 72 in. in diameter at the front end, and 79 in. at the largest course. The barrel is fitted with 2 in. and 5% dia. tubes, 15 1/4 ft. over tube sheets, and has a 30 unit. Locomotive Superheater Co.'s head-

from Canadian Locomotive Co., for delivery in time for handling the autumn crop movement. They will comprise many features which are new to Canadian railways, the specialties including: Tate flexible staybolts, Locomotive Superheater Co.'s latest type of superheater, two 5,000 gallon capacity injectors, four 3 in. safety valves, fire brick arch, vanadium cast steel frames, metallic packing, crossheads of two bar alligator type, Walschaert valve gear, Casey-Cavin power reverse gear, relief valves, Franklin hard grease driving box cellars, Franklin automatic fire door, trailing truck of radial bar type with outside

Combined Railway and Steamship Bill of Lading.

D. H. Ross, Canadian Trade Commissioner at Melbourne, Australia, in reporting to the Trade and Commerce Department at Ottawa recently, said: "Of all the objectionable shipping documents transmitted to Australian importers by Canadian exporters of goods and products, the combined Railway and Steamship Bill of Lading easily takes first place. Prior to the war, the use of such documents was not general, but in recent months it has been the rule rather than

Consolidation Locomotive, Canadian Government Railways.

er. The fire box is 64 1/4 x 109 in., and there are power operating grate shaker, radial buffers between engine and tender, self centering valve stem guides and extended piston rods. The general dimensions, etc., are as follows:

Weight on drivers	203,700 lbs.
Weight in working order, total	231,800 lbs.
Wheel base, rigid	16 ft. 6 ins.
Wheel base, total	25 ft. 5 ins.
Wheel base, engine and tender	69 ft. 11 ins.
Heating surface, firebox	189.51 sq. ft.
Heating surface, tubes	2,436 sq. ft.
Heating surface, total	2,625.5 sq. ft.
Driving wheels, diam.	63 ins.
Driving wheels, material	Cast steel.
Driving journals	10 by 14 ins.
Cylinders, diam. and stroke	24 by 32 ins.

beams, vestibule type of cab, Detroit 5-feed lubricators, incandescent headlight with latest type of turbo-generator, radial buffers between engine and tender, cast steel cradle at rear end of frame, Canadian Locomotive Co.'s injector checks on top of boiler, pedestal type of tender box, Westinghouse special strainer and 8 1/2 in. cross compound air pump. The principal dimensions are as follows:

Weight in working order on drivers	213,500 lbs.
Weight in working order, total	283,000 lbs.
Wheel base of engine, rigid	16 ft. 6 ins.
Wheel base of engine, total	35 ft. 1 in.
Wheel base of engine and tender	68 ft.
Heating surface, firebox	242 sq. ft.
Heating surface, tubes	3,398 sq. ft.

the exception. So grievous is the discontent, amongst importers of made in Canada goods, that representations have been made to the effect that the Canadian Government should be approached with the view of enacting legislation to make it an offence for railways in the Dominion to issue a document so detrimental to the material interests of manufacturers and exporters, as the combined bill of lading."

Enquiry goes to show that the Trade Commissioner has got unduly excited or does not understand the subject. Canadian Railway and Marine World is officially advised that the Trade and Commerce Department has done nothing in

Mikado Locomotive, Canadian Government Railways.

Boiler, type	Extended wagon top, radial stay.
Boiler pressure	180 lbs.
Tubes, no. and diam.	227, 2 ins.; 30, 5% ins.
Tubes, length	15 ft. 2 1/2 ins.
Injectors and safety valve	Locomotive type.
Brakes	Westinghouse American.
Packing	Metallic.
Superheater	Locomotive Superheater Co., Schmidt Type A.
Valve gear	Walschaert.
Weight of tender, loaded	140,000 lbs.
Tank capacity	6,500 Imp. gals.
Tank, type	Water bottom.
Coal capacity	10 tons.
Tender truck	Outside equalized.
Tender wheels	34 ins. diam.
Wheels, type	Cast steel centre, steel tired.
Truck journals	5 1/2 by 10 ins.
Brake beams	Steel I section.

Canadian Government Railways have ordered 30 Mikado (2-8-2) locomotives

Heating surface, total	3,640 sq. ft.
Driving wheels, diam.	63 ins.
Driving wheel centres	Cast steel.
Driving journals, diam. and length	Main 11 by 20 ins.; others, 10 by 20 ins.
Cylinders, diam. and stroke	27 by 30 ins.
Boiler, type	Extended wagon top, radial stay.
Boiler pressure	180 lbs.
Tubes, no. and diam.	240, 2 ins.; 32, 5% ins.
Tubes, length	20 ft.
Grate area	56.5 sq. ft.
Weight of tender loaded	166,000 lbs.
Tank capacity, water	9,000 U.S. gals.
Coal capacity	12 tons.
Tank, type	Water bottom, with vestibule connections.
Truck, type	Pedestal equalizer.
Wheel, outside diam.	34 ins.
Wheel, type	Cast steel centre, retaining ring and steel tires.
Journals, diam. and length	M.C.B., 6 by 11 ins.
Brake beam	High speed, with M.C.B. heads.

the matter except to try and ascertain the facts. The Department has been told by some Canadian manufacturers that they prefer the combined railway and steamship bill of lading. The C.P.R. traffic management states that it is quite immaterial to the railway companies whether through bills of lading or local bills of lading are issued. The through bills are issued on shippers' demand.

The G.T.R. was reported recently to be enquiring for about 50,000 tons of steel rails for 1917 delivery. We are officially advised that the management has not decided on 1917 requirements and that no enquiries are out.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

The Bras d'Or Coal Co. has been incorporated under the Dominion Companies Act to carry on coal mining operations, and to own and operate railways, switches, wharves, docks, etc. The company's authorized capital is \$45,000, and its office is in Montreal. The provisional directors are: H. A. Lovett, K.C.; G. W. Cole, N. Scheach, and P. F. Brown, all of Montreal.

Burrard Inlet Tunnel and Bridge Co.—At a meeting of directors in North Vancouver, July 9, it was reported that everything was being done to keep matters in such a condition that as soon as a favorable opportunity arrived for financing construction, advantage might be taken of it. The annual meeting of the shareholders—who represent various municipalities—will be held Sept. 4. (Feb., pg. 51.)

The directors have sent a letter to all the cities and municipalities which hold stock in the company asking them to ascertain from their solicitors whether it would be legal to rescind a resolution passed by the directors in Feb., 1915, by which a contract for the construction of the Second Narrows bridge was let to C. A. P. Turner and the Western Foundation Co.

Edmonton, Dunvegan & British Columbia Ry.—A press report states that the general contract for the 54 mile extension of the main line from Spirit River to the B.C. Block, Alta., has been let to McPherson & Quigley, Edmonton, who have let subcontracts to W. T. Craig, G. Webster, T. Timothy, F. V. Riley and A. McGregor. The general contractors will do part of the grading themselves. This mileage is expected to be completed this year. (July, pg. 281.)

We are officially advised that a subsidy contract has been entered into between the Railway Department and the Company for the construction of a branch line from near Spirit River to and through the Grande Prairie district, Alta., not to exceed 60 miles. Track laying was completed on this branch Mar. 29, and ballasting and finishing up work is nearly done.

The Grand Trunk Ry. started July 1 relaying sections of the line between Toronto and Hamilton with new 100 lb. steel rails. The gangs are working from the Hamilton end.

We are advised that nothing will be done at present regarding the erection of new coal chutes at London, Ont.

A press report states that the company contemplates carrying out some extensive improvements at its Detroit, Mich., freight terminals. The plans are said to call for the building of an inbound freight house, 60 x 731 ft.; an outward freight house, 38 x 160 ft.; with house tracks and paved team tracks, cost \$328,000; new classification yard in Hamtramck district, \$281,000; second passing track eastward in Milwaukee district, \$85,000; rehabilitating of Avery Ave. team tracks and pavements, paving of Twombly Ave. team tracks, paving of team tracks at Ferry Ave., Farnsworth and Dequindre St., north of Gratiot Ave., \$120,000; constructing grades on line leading to West Detroit west of Woodward Ave., \$116,000. (July, pg. 281.)

Great Northern Ry.—A contract has been let, a press report states, to A. Guthrie & Co., St. Paul, Minn., for the completion of the line between Kingard, B.C., and Sumas Landing. This is an

extension of the company's Abbotsford line, and is being built to secure better connections between sections of the company's lines. (July, pg. 281.)

Intercolonial Ry.—In connection with the new terminal railway under construction at Halifax, N.S., a new traffic bridge has been constructed over the cut where it crosses South St. It is a timber structure, and will remain in use until the permanent concrete structure has been erected. Satisfactory progress is reported to have been made on other parts of this line.

Tenders will be received to Aug. 7 for the construction and erection of a passenger station at Halifax, N.S., as part of the Halifax ocean terminals.

The flour shed at Smythe St., St. John, N.B., was destroyed by fire July 1, the loss being estimated at \$75,000. It is reported that the shed will be rebuilt at an early date. (July, pg. 281.)

Kettle Valley Lines.—The section of the line through to Hope, B.C., where a junction is effected across the Fraser River with the C.P.R. transcontinental line, has been completed, and a through train service was put in operation July 31 by the C.P.R., which has leased the line, extending from Midway to Hope, with a number of branches, one running into Republic, Wash., the others serving Grand Forks and Merrit, by the latter of which connection is made with the C.P.R. at Spence's Bridge. By a joint arrangement with the Vancouver, Victoria & Eastern Ry. (Great Northern), that company's tracks are operated over through Princeton to the Coquihalla summit, and the V. V. & E. Ry. operates over the K. V. Lines' tracks, down the valley to Hope. About the last piece of construction completed on the line was the bridge at Ladner Creek, 20 miles west of the Coquihalla summit, and 38 miles east of Hope. It is about 600 ft. long, and the rail level is 230 ft. above water level. (June, pg. 223.)

Michigan Central Rd.—With reference to press reports as to a probable removal of the company's terminals from Courtright to Sarnia, mentioned in our last issue, we are officially advised that there is no intention to make any such change.

Respecting the bridge work being done at Bear Creek, we are officially advised that the company is taking out an old truss span structure at mileage 1.25 on the Petrolea Branch, and replacing it with steel girders on concrete piers. The work is being done by the company's own forces, and will not cost anything like the \$60,000 which, according to the report, was the estimated cost. (July, pg. 281.)

National Transcontinental Ry.—Tenders are under consideration for the construction of reinforced concrete foundations on wood or concrete piles for a 1,000,000 bushel storage grain elevator, working house and track shed at Transcona, Man. (July, pg. 281.)

Pacific Great Eastern Ry.—A press report states that \$2,000,000 of the British Columbia Government loan of \$6,000,000 to the company, authorized by the act passed last session, have been sold at 91½, and that the money is in hand for construction purposes.

A press report states that construction has been resumed on various portions of the line between Clinton and Fort George. There is about 26 miles of grading to be completed to connect up the already finished sections, the heaviest work being

near the Horse Lake Summit, and there are three large bridges to be built over Deep Creek. The question of labor is bothering the contractors, who require 1,500 men to carry out the work planned for the year, viz., to complete grading and track laying from Clinton to Quesnel, 185 miles. (July, pg. 282.)

The North Vancouver City Council on July 12 decided to renew the lease of the Y at Chesterfield Ave., to the P.G.E. Ry. for 5 years, from Mar. 1915, when the former lease expired. The company's representative stated that it is proposed to establish a car ferry service between North Vancouver and Vancouver, and between North Vancouver and Squamish.

Quebec Bridge.—It is reported that Sept. 26 is the day set for the floating into position of the span to connect the ends of the north and south cantilevers of the bridge across the St. Lawrence River at Quebec. The span is being built on specially constructed scows, which will be floated into position on the rise of the tide, reaching the bridge at high water. The operation of settling the span in position is expected to occupy about an hour. The operation, at any time, is a difficult one, but with a span of the size of the present one, to be put in place where there is such a current as in the St. Lawrence, it is an operation of the utmost delicacy and difficulty. The failure of one man to do his appointed work at the exact time may mean the failure of the job, and its postponement until suitable tidal conditions again prevail. (July, pg. 282.)

A press report, July 18, stated that work was temporarily suspended on this structure owing to the discovery that the cables supporting a part of the structure on the south side had been cut. This has not been confirmed.

A Montreal press dispatch says that the St. Lawrence Bridge Co., a subsidiary company of the Dominion Bridge Co., and of the Canadian Bridge Co., formed for the construction of the Quebec Bridge, is running nearly a year ahead of contract time on the work, which will be concluded this year. In this running ahead of contract, the company is able to save a large amount of money in keeping down overhead expenses. It also means it will be able to redeem the large deposit made to the Government on the work and thus secure a year's interest upon it. Dominion Bridge's share of the profits, it is said, will run between \$2,000,000 and \$2,400,000, as against previous estimates of slightly over \$1,000,000. The working company will be dissolved upon conclusion of the work, which has already extended over the better part of four years.

Quebec & Saguenay Ry.—A press report July 4 quotes Sir Rodolphe Forget as stating that this line will be completed to Murray Bay by November, and that construction would be gone on with at once.

We are officially advised that even if the line were to be transferred to the Government at once it is scarcely possible that it could be completed to Murray Bay by November. The whole matter as to when work will be started, what will be done, and everything else about the line is under consideration. It is impossible to say when the line will be transferred, and nothing can be said about the cost until the matter has been before the Court of Exchequer. (June, pg. 227.)

St. John & Quebec Ry.—Work has been started on the extension from Gagetown to Westfield, N.B., gangs of men being placed at work at Woodman's Point, and at the Westfield end of the Nerepis bridge.

The work on the section for which Poupore Bros. have the contract, was reported July 12 to be well in hand, several gangs being at work between Evandale and Oak Point. The work is reported to be about the heaviest on the extension. Progress is being made in seven large cuts. The firm's plant consists of 1 steam shovel, 2 donkey engines, 62 dump cars, and 85 tons of light railway track. (July pg. 280.)

Toronto, Hamilton & Buffalo Ry.—We are officially advised, in respect to the company's plans for the development at

Port Maitland, the terminus of the branch line from Smithville, the five mile section of which from Dunnville to Port Maitland is under construction, as follows: The ferry slip is located on the east side of the Grand River about 2,500 ft. from the piers, the yard tracks running parallel with what is known as the discharge of the Welland Canal feeder. Abreast the slip dock a turning basin is being dredged out this year. The slip dock is being constructed with two rows of 60 ft. piles, backed with 40 ft. arch webb steel sheet piling. A 50 ft. apron resting on a pile foundation is to be used as a bridge between the shore tracks and the ferry. The work of building the slip dock is being performed by the company's forces and will be completed about Sept. 1. (July, pg. 28.)

Freight and Passenger Traffic Notes.

The Grand Trunk Pacific Ry. has opened a passenger office at Skagway, Alaska.

The G.T.R. city passenger and ticket offices in Buffalo, N.Y., have been moved from 285 Main St., Elliott Square Building, to 5 South Division, Elliott Square Building.

The Board of Railway Commissioners, on July 3, approved standard mileage freight tariff C.R.C. 20 for the Edmonton, Dunvegan & British Columbia Ry., cancelling C.R.C. 1.

The Kent Northern Ry., under orders by the New Brunswick Government, has resumed a regular daily train service on its line from Kent Jct. on the Intercolonial Ry. to Richibucto. For some time the service had been restricted to four trains a week.

The Canadian Government Railways Passenger Department has issued a circular giving details of steamship services in Nova Scotia, New Brunswick, Prince Edward Island, Quebec and Ontario, connecting with its lines, for the current season. Particulars are given of 60 different routes.

The C.P.R. early in July started operating special trains for observation purposes between Banff and Field, on the Rocky and Selkirk Mountains. The trains have open top observation cars and are drawn by oil burning engines. They will be continued during August.

The Grand Trunk Pacific Ry. has opened passenger, freight and telegraph offices in the Grain Exchange Building, Calgary, Alta. H. Merritt, heretofore of Victoria, B.C., is city passenger and ticket agent, and W. Mewing is in charge of the freight business. Heretofore the company's business in Calgary has been attended to by Niblock & Tull.

The Esquimalt & Nanaimo Ry. has decided to grant the request of residents along the line for an additional Sunday train, but has altered the time of the return trip of the one train each way from Nanaimo, from 2.20 to 3.50 p.m., making the arrival at Victoria, 7.35 instead of 6.00 p.m.. This will be in effect until Aug. 13 only, after which the train will run as heretofore.

The G.T.R. is operating an autobus service from Port Hope to Cobourg, Ont., starting from the former place at 2 p.m., after the arrival of the train from the Kawartha Lakes district, and arriving in Cobourg, a distance of seven miles, in time for passengers to take the car ferry across Lake Ontario. The service will be continued daily except Sundays, until Sept. 4, after which it will be continued

to Sept 30 on Mondays, Thursdays, and Saturdays only.

The Grand Trunk Pacific Ry. has placed couriers on its steamships Prince Rupert and Prince George, on their Alaska route. Their special duties are the entertainment of passengers on the trips, the explanation of points of interest, historically and geographically, and the giving of information as to the manners, customs, and folk lore of the Indian population. The couriers accompany parties from the steamships who make trips over the White Pass and Yukon Ry.

The Lake Erie & Northern Ry. is in operation as an electric railway from Galt via Brantford to Port Dover, Ont., there being 10 trains a day each way on week days, and 7 trains each way on Sundays. The Sunday trains run to and from Concession St., Galt, only, instead of to and from Main St., the distance between these two points being a third of a mile. The C.P.R. short line fares from Toronto and points east, apply to Port Dover via Galt and all points on the L. E. & N. R.

The Kettle Valley Ry. was open for through traffic July 31, a train service being run from Nelson, B.C., on the C.P.R. to Vancouver, 511.9 miles. One train a day each way is being run, the mileage being as follows:—Nelson to Midway, C.P.R., 126.6 miles; Midway to Hope, K.V.Ry., 296.3 miles; Hope to Vancouver, C.P.R., 89 miles. A standard sleeping car is run between Nelson and Vancouver, a cafe car between Nelson and Penticton, and a dining car between Hope and Vancouver. Trains are also being run daily, except Sundays, between Brookmere and Merrit, Nicola and Merrit, and Merrit and Spences Bridge, at which point connection is made with the C.P.R. transcontinental line. By the opening of this new route the time occupied in making the trip between Nelson and Vancouver is reduced by 4½ hours.

130-lb. Rails.—The Pennsylvania Rd. has ordered more than 100,000 tons of 130-lb rails. The only difference between the new section and the 125-lb. standard adopted by this road some time ago is in the addition of ½ in. of metal on the top of the head and 1-31 in. in the thickness of the web. This makes a total height of 6½ in., base width of 5½ in., width of head of 3 in., depth of head of 2 in., and web thickness of 11-16 in., as compared with the corresponding figures of 6¼, 6, 2 15-16, 1 27-32 and 21-32 in. for the 130-lb. section of the American Railway Engineering Association.

Enormous Damages Awarded in the Rogers Pass Tunnel Suit.

Judgment was given at Vancouver, June 30, fixing the damages to be paid McIlwee & Sons, Denver, Col., in the action brought against Foley, Welch & Stewart for breach of contract in connection with the boring of the Rogers Pass tunnel on the C.P.R. The matter came before Mr. Justice Morrison, in the Supreme Court, the sole question to be considered being the amount of damages to be assessed in McIlwee's favor. All the other questions were decided in the Imperial Privy Council's decision which was given in full in Canadian Railway & Marine World for July. This decision settled the principles upon which the damage was to be ascertained.

The Judge began to hear evidence June 21. It was principally of a scientific character, and the various points were illustrated with plans and sections, and models of Mount Sir Donald, and of the tunnel, as well as with specimens of rock. The plaintiffs set their damages at about \$800,000, and after the hearing the Judge placed them at \$576,155.98. This figure was given in evidence by S. W. Brunton, a mining engineer of Denver, Col.

Application was made to Justice Morrison in Chambers July 12, on behalf of defendants, Foley, Welch and Stewart, for leave to appeal against the amount of damages awarded McIlwee & Sons. Leave was granted, the appellants to pay \$600,000 into court, as security for damages and costs.

United States Railway Earnings and Expenses.

Net operating income of United States railways for April increased \$102 a mile, or 42.3%, compared with April, 1910. Comparing April, 1916, with the average April of the preceding five years, the increase was 52.5%. Total operating revenues were \$280,987,306, an increase over 1915 of \$50,008,959. Operating expenses were \$189,923,465, an increase of \$24,928,514. Net operating revenue was \$91,063,841, an increase of \$25,080,445. Taxes were \$12,495,265, an increase of \$1,315,922. This left \$78,507,780 net operating income, available for rentals, interest on bonds, appropriations for improvements and new construction, and dividends. Operating revenues per mile averaged \$1,223, an increase of 20.8%; operating expenses per mile averaged \$827, an increase of 14.3%, net operating revenue per mile averaged \$396, an increase of 37% while net operating income per mile was \$342, an increase of 42.3%. Taxes per mile increased 10.9%. Railways operating 229,621 miles of line are covered by this summary, or about 90% of the steam railway mileage in the U.S.

April operating income per mile was 42.3% greater in 1916 than in 1915, 66.1% greater than in 1914, 59.7% greater than in 1913, and 61.2% greater than in 1912.

The ten months of the current fiscal year, compared with the corresponding period of the preceding year, show changes per mile of line as follows: operating revenues increased 15.8%, operating expenses increased 7.1%, net operating revenue increased 36.9%, taxes increased 7.4% and operating income increased 42.4%.

The rails exported from the United Kingdom in March were 3,368 tons against 17,572 in Mar. 1915.

Board to Enquire into Canadian Railway Situation.

A. H. Smith, President New York Central Rd., New York; Sir Henry Drayton, Chief Railway Commissioner for Canada, and Sir Geo. Paish, of London, Eng., have been appointed to enquire into the whole Canadian railway situation, as foreshadowed during the Dominion Parliament's last session. The order in council is as follows:

The committee of the Privy Council have had before them a report, dated June 12, 1916, from the Prime Minister, submitting that it became necessary at the recent session of Parliament to make provision for assistance by loan to the Grand Trunk Pacific and Canadian Northern Railway Companies in order that they might be enabled to meet current obligations and to provide for payment of interest on outstanding securities.

Having regard to the conditions and necessities of railway development in Canada the Prime Minister is of opinion that the situation should be considered in a comprehensive way and that a thorough enquiry should be made by a board of the highest ability and experience.

The Prime Minister further submits that the inquiry should have reference to the following matters: 1. The general problem of transportation in Canada. 2. The status of each of the three trans-continental railway systems, the C.P.R., the Grand Trunk Ry. System (including the Grand Trunk Pacific Ry. and the Grand Trunk Ry. and their several branches) and the Canadian Northern Ry. having special reference to the following considerations: (a) The territories served by each system and the service which it is capable of performing in the general scheme of transportation; (b) Physical conditions, equipment and capacity for handling business; (c) Methods of operation; (d) Branch lines, feeders and connections in Canada; (e) Connections in the United States; (f) Steamship connections on both oceans; (g) Capitalization, fixed charges and net earnings having regard to (i) present conditions, and (ii) probable future development with increase of population. 3. The reorganization of any of the said railway systems, or the acquisition thereof by the state; and in the latter case the most effective system of operation whether in connection with the Intercolonial Ry. or otherwise. 4. Generally speaking all matters which the members of the Board may consider pertinent or relevant to the general scope of the inquiry.

The Prime Minister therefore recommends as follows: That A. H. Smith, of New York, N.Y.; Sir Henry L. Drayton, of Ottawa; and Sir George Paish, of London, Eng., be the members of the said Board; A. H. Smith to be Chairman. That the Board be constituted under part 1 of the Inquiries Act, and that it shall have all powers and authorities which could be conferred under the authority of that Act as amended by chap. 28 of the Statutes of 1912, an Act to amend the Inquiries Act. That the provincial governments be respectfully requested to afford to the Board any necessary information and co-operation in the enquiry. That all the departments of the Government shall afford to the Board and to all persons acting under its authority and by its direction all such assistance and co-operation in the inquiry as the Board may desire; That the Board of Railway Commissioners for Canada, the Commission of Conservation, and all other bodies of a

like character under the jurisdiction of the Parliament of Canada, shall co-operate with and assist the Board in the proposed inquiry; That the Board shall report its findings and conclusions with the least possible delay; That a commission

A. H. Smith.
President New York Central Railroad.

Sir Henry L. Drayton.
Chief Railway Commissioner for Canada.

for the purposes aforesaid shall issue to the members of the Board above designated.

The committee concur in the foregoing and submit the same for approval.

Alfred H. Smith, who is 51 years of age, began his railroad career, in 1879,

as a messenger boy for the Lake Shore & Michigan Southern Ry., at Cleveland, Ohio, worked in the Purchasing Agent's office for a time; then resigned to go in a construction gang engaged in the change of grade and reconstruction of the Lake Shore west of Toledo; worked several years there, becoming foreman and general foreman on construction work. In 1890 he was made Superintendent, Kalamazoo Division, and successively was made Superintendent of the Lansing, Franklin and Michigan Divisions. In 1901 he was appointed Assistant General Superintendent of the Lake Shore, and then General Superintendent; and was transferred in 1902 to the New York Central as General Superintendent. In 1903 he was appointed General Manager of that line, and in 1906 was made Vice President & General Manager. On April 15, 1912, he was made Vice President of the lines west of Buffalo, with jurisdiction over operation, maintenance, and construction of all lines in the New York Central system, east and west of Buffalo. On April 1, 1913, he was appointed Senior Vice President with jurisdiction over all the roads included in the New York Central System Lines, and over all departments. He was elected President of all the New York Central Lines Jan. 1, 1914.

Sir Henry Lumley Drayton was born at Kingston, Ont., Apr. 27, 1869, and educated in England and Canada, commencing his legal career in 1886 as a law student at Toronto. He was admitted to the Ontario bar in 1891 and commenced practice in Toronto, being appointed Assistant City Solicitor in 1895, resigning in Sept. 1900 to re-engage in private practice. On Jan. 29, 1904, he was appointed Crown Attorney for the County of York, Ont., resigning in Nov. 1909 to resume private practice. He was appointed a K.C., Jan. 20, 1908, and on Apr. 25, 1910, was appointed Counsel for the City of Toronto, and subsequently was one of Toronto's representatives on the Ontario Hydro Electric Power Commission. In July, 1912, he was appointed Chief Railway Commissioner, following the death of J. P. Mabee. On the outbreak of war he was in London, Eng., and under the acting High Commissioner rendered good service in connection with the aiding of Canadians who were stranded at various points on the continent on account of the war. He was created a knight bachelor on the King's birthday, June 3, 1915.

Sir George Paish was born in England in 1867, and was from 1881 to 1900, successively, secretary to the editor, sub-editor, and assistant editor of The Statist, London, Eng., and since 1900 joint editor. From 1906 to 1908 he was governor of the London School of Economics, member of the departmental committee of the Board of Trade on Railway Accounts and Statistics; 1914 to 1915, adviser to the Chancellor of the Exchequer and the British Treasury on financial and economic questions. Among the works of which he is the author, are, The British Railway Position, Railways of Great Britain, Railroads of the United States, Capital Investments in other Lands, and Savings and Social Welfare. He was created a knight bachelor in 1912.

An Ottawa press dispatch says that the board will probably begin work at once, that the enquiry will be conducted from a central office which will most likely be located at Ottawa, and that the board will travel over the main and larger branch lines. An expert clerical staff

will be employed and steps will be taken to secure full information as to the physical value and financial condition of the roads. It is hoped to have the report ready for the next session of Parliament.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$921,000	\$285,100	x\$145,400
Aug.	1,192,800	954,000	238,800	x5,900
Sept.	2,014,500	1,358,000	661,600	1,900
	\$4,413,600	\$3,227,000	\$1,186,600	x\$79,300
Decr.	\$658,300	\$579,000	\$79,300
	x Decrease.			

Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with October, the figures show the earnings of the entire system, both eastern and western lines.

	Gross Earnings	Expenses	Net Earnings	Increase
Oct.	\$3,678,500	\$2,421,500	\$1,257,000	\$537,800
Nov.	3,535,200	2,323,800	1,211,400	618,400
Dec.	3,435,600	2,233,500	1,202,100	768,900
Jan.	2,086,800	1,831,400	255,400	88,100
Feb.	2,089,200	1,959,800	129,400	x193,500
Mar.	2,607,000	2,240,600	366,400	x134,800
Apr.	2,824,300	2,274,400	549,900	5,500
May	3,088,900	2,361,700	727,200	368,600
	\$30,047,800	\$22,495,000	\$7,552,800	\$2,216,300
Inc.	\$7,273,700	\$5,057,400	\$2,216,300
	x Decrease.			

Average mileage operated for period ended May 31, 7,935, against 7,001 for same period in the previous year.

Approximate earnings for June, \$3,377,200 against \$1,779,600 for June, 1915, and for two weeks ended July 14, \$1,760,000, against \$879,100 for same period 1915.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$7,895,375.47	\$5,094,972.35	\$2,800,403.12	\$978,042.71
Aug.	8,801,451.52	5,359,136.80	3,442,314.72	79,157.02
Sept.	10,273,165.45	5,527,864.81	4,745,300.64	378,252.25
Oct.	13,433,206.88	6,863,780.29	6,579,424.15	3,258,105.79
Nov.	13,351,283.51	6,996,870.48	6,354,413.03	3,710,340.86
Dec.	12,705,673.45	7,003,351.97	5,702,321.48	3,502,797.67
Jan.	8,588,826.04	6,498,417.81	2,090,408.23	954,174.93
Feb.	8,795,830.30	6,501,487.56	2,294,342.74	315,328.12
Mar.	10,380,981.98	6,959,651.62	3,421,330.36	448,315.63
Apr.	10,881,306.37	7,147,570.40	3,733,735.97	1,045,980.76
May	12,472,167.46	8,099,884.55	4,372,282.91	1,929,280.72

\$117,589,275.99 \$72,052,988.64 \$45,536,287.35 \$14,639,691.04
Inc. \$26,236,100.14 \$11,596,409.10 \$14,639,691.04

Approximate earnings for June, \$11,343,000, against \$6,990,000 for June, 1915, and for two weeks ended July 14, \$5,354,000, against \$3,301,000 for same period 1915.

Grand Trunk Railway Earnings.

Following are the earnings and expenses for the G.T.R., including the Canada Atlantic Ry., the G.T.W.R. and D.G.H. and M.R., for May, compared with those for May, 1915:—

Grand Trunk Railway.				
	1916.	1915.		
Earnings	\$3,548,400	\$3,234,900		
Expenses	2,465,600	2,183,900		
Net earnings	\$1,082,800	\$1,051,000		
Grand Trunk Western Railway.				
	1916.	1915.		
Earnings	\$ 822,100	\$ 576,400		
Expenses	581,500	570,400		
Net earnings	\$ 240,600	\$ 6,000		
Detroit, Grand Haven and Milwaukee Ry.				
	1916.	1915.		
Earnings	\$ 307,400	\$ 204,000		
Expenses	264,100	239,700		
Net earnings	\$ 43,300	Def. \$35,000		

Approximate net earnings for June, \$5,109,033, against \$4,403,613 for June, 1915, and for two weeks ended July 14, \$2,366,422, against \$1,979,907 for same period 1915.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to June 30:—

	1916.	1915.	Increase.
G.T.R.	\$21,061,761	\$18,607,573	\$2,554,188
G.T.W.R.	4,597,519	3,479,230	1,118,289
D.G.H. & M.R.	1,631,250	1,103,806	527,444
Totals	\$27,290,530	\$23,090,609	\$4,199,921

Grand Trunk Pacific Railway Earnings.

Approximate earnings of the Prairie Section, 916 miles, for June, were \$398,405, against \$215,357 for June 1915, and the aggregate earnings for six months ended June 30, were \$2,339,991 against \$1,350,802 for same period 1915.

Railway Rolling Stock Notes.

Imperial Oil Co., Sarnia, Ont., has received 100 tank car underframes from Canadian Car and Foundry Co.

The French Government is reported to have ordered 100 small field locomotives, valued at about \$750,000, from Baldwin Locomotive Works, Philadelphia.

The Canadian Northern Ry. has received 2 compartment observation cars, nos. 9950 and 9951 from Canadian Car and Foundry Co.

The Russian Government, it is stated, is arranging to place orders in Canada and the United States, for 40,000 freight cars.

The Acadia Coal Co. has ordered 150 small all steel mining cars from the Canadian Car and Foundry Co., to be built at its Amherst Works.

Canadian Government Railways have received 200 stock cars, 30 tons capacity, from Canadian Car and Foundry Co. They were described and illustrated in our last issue, pg. 276.

The Canadian Car and Foundry Co. has completed delivery of the 1,200 Belgian box cars, which were ordered by the British Government in June 1915, and which were fully described and illustrated in our issue of September 1915.

It is reported that the Madrid, Alicante & Zaragoza Ry. of Spain has ordered 25 locomotives of the most modern type from the United States. No confirmation of this report has been obtained up to the time of writing.

The Grand Trunk Pacific Ry. has purchased 80 second hand dump cars, nos. 393541 to 393620, from Siems-Carey Co., contractors, St. Paul, Minn., and 43 tank cars, nos. 396900 to 396906, 396920 to 396932 and 396940 to 396962, from the G.T.R.

The Duluth, Winnipeg & Pacific Ry. (C.N.R.) has ordered 750 box cars from Haskell & Barker Car Co., one snow plough from Montreal Locomotive Co., and 10 locomotives from American Locomotive Co.

The C.P.R. is changing the lighting system from gas to electricity, on 141 passenger cars, as follows:—49 sleeping, 12 straight parlor, 15 cafe parlor, 23 dining, 7 compartment sleeping, and 35 observation. In addition to this work, all of which is being carried out at the Angus Shops, the smoking rooms of 11 Glen observation cars are being converted to the same type as those on the Mount observation cars.

Following are the chief details of the 750 box cars which the Duluth, Winnipeg & Pacific Ry. (C.N.R.) has purchased from the Haskell & Barker Car Co., Michigan City, Mich.:—

Capacity	80,000 lbs.
Length over end sills	36 ft. 9 3/4 ins.
Width over side sills	9 ft. 9 3/4 ins.

Length inside	35 ft. 11 ins.
Width inside	8 ft. 6 1/4 ins.
Height inside, clear	8 ft.
Length over pulling faces of couplers	39 ft. 11 1/2 ins.

Following are the chief details of the 10 locomotives which the Duluth, Winnipeg & Pacific Ry. (C.N.R.) has ordered from the American Locomotive Co.:

Weight in working order on front truck	25,000 lbs.
Weight in working order on drivers	216,000 lbs.
Weight in working order, total	241,000 lbs.
Weight of tender, light	61,000 lbs.
Boiler, type	Extended wagon top
Boiler pressure	200 lbs.
Tubes, no. and diam.	227—2 ins., 30—5 3/8 ins.
Tubes, length	15 ft. 2 3/4 ins.

Toronto-Port Arthur Summer Passenger Fares Reduced.

For several years the summer all rail first class passenger fares between Toronto and Port Arthur have been, one way \$24.25, and round trip \$39.15. The lake and rail fare, that is, via Port McNicoll, and C.P.R. steamships, or via Sarnia and Northern Navigation Co., have been, one way \$23.25, round trip \$40.45. As the lake and rail fares include meals and berth on steamship, the lake and rail routes had a very substantial differential over the all rail fare and after giving the matter consideration the Canadian Northern Ry. management decided that the lake and rail routes were not entitled to the differential and established summer fares between Toronto and Port Arthur at the following figures: One way \$18.05, round trip \$34.80. The C.P.R. met the all rail fares established by the Canadian Northern and the new rates were put into effect by both lines on June 10 and will continue to Sept. 20.

Government Railways Small Claims Act—The amendment passed by the Dominion Parliament last year is in the following terms:—"The Government Railways Small Claims Act, chap. 26, statutes 1910, and the acts amending the same, chap. 20, statutes of 1913, and chap. 2 statutes of 1914, shall apply and extend to all claims arising out of the operating of all railways, and all branches and extension thereof, and ferries in connection therewith, under the control and management of the Minister of Railways and Canals, as fully as they now apply and extend to claims arising out of the operation of the International Ry." The apparent intention of the 1910 act was to give facilities for their prosecution in the ordinary courts of small claims against the railways operated by the Department of Railways, but it appears that the enacting clause was drawn in such a way that it included the Intercolonial Ry. only. It was first sought to make the provisions of the act apply to the Prince Edward Island Ry. only, in addition to the Intercolonial Ry., but after considerable discussion, the amendment was passed as above quoted.

Traffic Delays in British Columbia.—The C.P.R. and the Canadian Northern Ry. experienced considerable delays to traffic during the last few days of June and the first few days of July owing to washouts—the C.P.R. in the Kicking Horse Canyon, and the C.N.R. on the North Thompson River. The difficulty on the C.P.R. was considerably minimized by its being able to utilize its leased line—the Kettle Valley Ry. Through traffic was resumed on regular schedules in about a week.

Mainly About Railway People Throughout Canada.

Lieut. J. B. Heron, 2nd Field Company, Canadian Engineers, C.E.F., has been appointed a captain in No. 1 Construction Battalion, C.E.F.

Mrs. E. Tiffin, wife of the General Western Agent, Canadian Government Railways, Toronto, who has been ill, has gone to St. Andrews, N.B.

Jos. Ramsey, Jr., President, Lorain, Ashland & Southern Rd., and formerly President, Wabash Rd., died at East Orange, N.J., July 7, aged 66.

Hon. J. D. Reid, Minister of Customs, is again acting as Minister of Railways and Canals, during the absence through ill health of Hon. F. Cochrane.

M. A. Pigott, railway contractor, died suddenly at Hamilton, Ont., July 5, aged 66. One of his last contracts was a section of the Guelph and Goderich Ry., now part of the C.P.R.

R. M. Roy, Manager, Hamilton Bridge Works Co., who died at Hamilton, Ont., June 27, after a long illness, was, for a time, several years ago, in the G.T.R. engineering department.

Hon. Frank Cochrane, Minister of Railways and Canals, left Ottawa, July 12, for St. Andrews-by-the-Sea, N.B., where he is spending the summer, his health being again unsatisfactory.

J. E. McLeod, formerly Superintendent of the Railway Mail Service, Toronto, died there June 9, aged 62. He entered the railway mail service about 40 years ago, and retired in 1913.

Mrs. MacTier and Miss MacTier, wife and daughter of the General Manager, Eastern Lines, C.P.R., left Montreal at the end of June for Murray Bay, Que., where they are spending the summer.

W. C. Hunter, at one time Manager, New Brunswick Coal & Railway Co.'s railway, is now Assistant Superintendent of the Nova Scotia Steel & Coal Co.'s shell shops at New Glasgow, N.S.

Gunner Howard Brown, of the Canadian Field Artillery, son of M. H. Brown, Division Freight Agent, C.P.R., Toronto, who was reported missing, is a prisoner at Dulmen, Westphalia.

Sir Edmund B. Osler, director, C.P.R., and Lt. Col. R. W. Leonard, formerly Chairman National Transcontinental Ry. Commission, have each offered a fellowship in the University of Toronto, tenable for one year.

Lieut. S. H. Hannan, of the Field Artillery, who was killed in action recently, was on the staff of Sir John Jackson, Ltd., Canada, contractors, prior to the war. He was awarded the Military Cross in Sept. 1915.

F. P. Gutelius, M.Can.Soc.C.E., General Manager, Canadian Government Railways, Moncton, N.B., was operated on for appendicitis, at the Western Hospital, Montreal, July 12, and is progressing favorably.

Lt. Col. R. W. Leonard, M.Can.Soc.C.E., St. Catharines, Ont., of the Corps of Guides, and formerly Chairman, National Transcontinental Ry. Commission, has been appointed Assistant Adjutant General on the headquarters staff at London, Ont.

Major Thos. C. Irving, D.S.O., A.M.Can.Soc.C.E., Toronto, of the Canadian Engineers, and Vice President, Robert W. Hunt & Co. Ltd., consulting and inspecting engineers, was married at Hythe, Kent, Eng., July 10, to Miss J. E. Murray, of Toronto.

H. J. Cundall, who died at Charlottetown, P.E.I., July 16, aged 81, acted as land surveyor in connection with land expropriations for the construction of the Prince Edward Island Ry., and was President of the Prince Edward Island Telephone Company.

Sir Donald Mann, Vice President, Canadian Northern Ry., has been on a trip of inspection over the C.N.R. Western Lines, accompanied by E. E. Loomis, Vice President, Delaware, Lackawanna, & Western Ry., and two representatives of New York financial concerns interested in C. N. R. securities.

George Bury, Vice President C.P.R., returned to Montreal at the middle of July after going over the company's lines to the Pacific Coast. A. D. Little, who is organizing a research department for the C.P.R., accompanied him, and address-

F. Rioux,
Assistant to President, Reid Newfoundland Co.

sed a meeting of the Canadian Society of Civil Engineers in Vancouver; and of the Canadian Manufacturers' Association, at Winnipeg.

Albert Moore, private secretary to the General Manager for the Receivers, Pere Marquette Rd., Detroit, Mich., died at his home at St. Thomas, Ont., July 9, of typhoid-pneumonia, aged 23. He was born and educated at St. Thomas, and entered railway service with the G.T.R. and Wabash Rd. there, about six years ago, and transferred to P.M.R. service about three years ago.

Corporal A. M. Morrison, who has been awarded the distinguished conduct medal for conspicuous bravery in action, was, prior to enlistment, one of the engineers engaged on the construction of the Pacific Great Eastern Ry. in British Columbia. One of his brothers is on the Canadian Northern Ry. engineering staff at Toronto, and another is an engineer in the Dominion Department of Public Works at Halifax, N.S.

Edward Fitzgerald, Assistant General Purchasing Agent, C.P.R., who was "loaned" to the British War Office, shortly after the war's outbreak, to purchase in Canada for the Imperial Government, and who since early this year has also been purchasing for the Imperial Munitions Board, has been appointed Assistant to the Chairman, Imperial Munitions Board.

F. W. Peters, General Superintendent, British Columbia Division, C.P.R., Vancouver, has been appointed a member of the Military Hospitals Commission of Canada by the Dominion Government. The Commission's Bulletin says that he has rendered splendid service to returned Vancouver soldiers, and as President of the Vancouver Club has been largely instrumental in the establishment of a returned soldiers' club in Vancouver.

G. G. Ommanney, Special Engineer to the President, C.P.R., who is on leave of absence for military service, was given a commission in the Royal Engineers in August 1915 and is now in command, with the rank of Captain, of the 138th (A.T.) Co., R.E. (B.E.F.) having returned to the front for the second time after a brief leave in England. His work in the C.P.R. service has been absorbed by the company's engineering department.

C. H. Ostler, Engineer and Superintendent, Gas Department, Montreal Light, Heat & Power Co., who died suddenly at Montreal recently, was at one time an engineer on the Kingston & Pembroke Ry., subsequently was an engineer in charge of location surveys for the C.P.R. in Western Canada, and later was in Canadian Northern Ry. service. He was a member of the Canadian Society of Civil Engineers from its inception.

J. Dickson, who was appointed recently Superintendent of Motive Power, Spokane, Portland and Seattle, Oregon Trunk, Pacific and Eastern, Spokane and Inland Empire, Oregon Electric and United Rys., Portland, Ore., was born at Montreal, June 30, 1872, and educated there and at St. Paul, Minn. He entered railway service at St. Paul as a machinist apprentice with the Great Northern Ry., and has chiefly been associated with that road and its subsidiaries ever since.

John Hendry, President, Vancouver, Westminster, and Yukon Ry. Co., died at Victoria, B.C., July 18. He was born at Belledune, N.B., Jan. 20, 1843, and went west in 1872, when he identified himself with lumber and milling interests in British Columbia. He was at different times interested in the Kaslo & Slocan Ry., Nicola Valley Coal & Coke Ry. Co., and the Vancouver, Westminster & Yukon Ry. The last mentioned company's physical properties were sold to the Great Northern Ry. some years ago.

M. W. Bard, who was appointed Assistant Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que., recently, was born at Walnut, Bureau County, Ill., June 27, 1871, and entered railway service, Jan. 8, 1890, since when he has been, to Aug. 2, 1901, freight brakeman, Chicago, Burlington & Quincy Rd.; Aug. 2, 1901, to Aug. 1, 1913, freight conductor, same road; Aug. 1, 1913 to 1914, passenger conductor, same road; 1914 to Jan. 24, 1916, Trainmaster, Construction Department, same road.

R. D. Waugh, Mayor of Winnipeg, has been appointed Chairman of the Greater Winnipeg Waterways District Commis-

sion, succeeding the late S. H. Reynolds, who was also Treasurer; while according to the board's constitution the Mayor of Winnipeg is Chairman of the Administrative Board. J. H. Ashdown, the other Commissioner, was appointed Treasurer. The salary of Chairman of the Commission is \$5,000, and that of the Treasurer \$1,500. The Commission owns a railway extending from St. Boniface to the Shoal Lake, a tributary of Lake of the Woods.

O. M. Lavoie, who was appointed Chief Dispatcher, District 1, Eastern Division, C.P.R., Farnham, Que., recently, was born at St. Cyrille de Wendover, Que., Oct. 16, 1882, and entered railway service Mar. 1899, since when he has been, to Apr. 1900, telegraph operator, Intercolonial Ry.; Apr. 1900 to Sept. 1902, telegraph operator, Quebec, Montreal & Southern Ry.; Sept. 28, 1902, to July, 1909, operator, C.P.R.; July 19, 1909, to Jan. 15, 1916, dispatcher, C.P.R., Farnham, Que.

F. Rioux, Assistant to President, Reid Newfoundland Co., whose portrait is published in this issue, has received a commission as Second Lieutenant in the British Army Service Corps, and has left St. John's attached to a Newfoundland contingent, and will be transferred to the British service on arrival in England. He was born at Trois Pistoles, Que., Apr. 18, 1867, and entered railway service July, 1883, since when he has been, to 1885, operator on construction, C.P.R., Mattawa, Ont.; 1885 to 1888, in operating department; 1888 to 1889, dispatcher, North Bay, Ont.; 1889 to 1898, Assistant Chief Operator, Montreal; 1898 to 1900, Chief Dispatcher, Reid Newfoundland Co., 1900 to 1905, Assistant Superintendent; 1905 to Dec. 31, 1912, Superintendent; Jan. 1, 1913 to date, Assistant to President.

W. D. Robb, Superintendent Motive Power, G.T.R., and Mrs. Robb, left Montreal early in July for England, to see their son, Jas. Bruce Robb, who was wounded in action as mentioned in our last issue. He is a private, no. McG. 81, in the Princess Patricia's Canadian Light Infantry, having gone over with the first reinforcement sent by McGill University, and was in the trenches for nearly a year before being wounded. In a letter received in Montreal at the end of June he said that his back resembled a pepper shaker. He was blown clean out of the trench, and his chum, who was very severely wounded at the same time, wrote home that he did not know what had become of Robb, as when they were blown up they lost track of each other. Private Robb is reported progressing satisfactorily.

Reginald William Douglas Harris, whose appointment as Trainmaster, C.P.R., Ignace, Ont., was announced in our last issue, and whose portrait appears in this issue, was born at Victoria, B.C., Dec. 12, 1879. He is the elder son of Dennis R. Harris, M.Can.Soc.C.E., whose wife is the youngest daughter of the late Sir James Douglas, the first Lieutenant Governor of British Columbia, who founded and named the city of Victoria. He was from 1897 to 1904 with the Bank of British North America, in Victoria and Vancouver, and from 1904 to June 1905, was engaged in civil engineering as assistant to F. J. Ritchie, D.L.S., in British Columbia. He entered C.P.R. service in June 1905, since when he has been, to June 1906, wiper, Field, B.C.; June 1906 to June 1911, fireman, Revelstoke, B.C.; June 1911 to Apr. 1914, locomotive man, Revelstoke, B.C.; Apr. 1914 to May 1916, Trainmaster, Wilkie, Sask.

Andrew F. Macallum, who has been appointed city engineer of Ottawa, entered the railway engineering field after graduation from the University of Toronto. He served in the engineering departments of the Canadian Pacific, Grand Trunk, Toronto, Hamilton & Buffalo, and Minneapolis & St. Louis Railways. For three years he studied sewerage and waterworks systems in several Canadian cities. In 1905 he was placed in charge of 80 miles of construction for the National Transcontinental Ry. Two years later he opened a consulting office in Toronto and reported on the continuation of construction of the Alaska Central Ry. now being built by the United States government. He was also consulting and municipal engineer for West and North Toronto on development of water power, electric railway construction and municipal works. He was made city engineer of Hamilton in 1909.

Charles Hood, whose appointment as Local Freight Agent, C.P.R., Saskatoon, Sask., was announced in our last issue,

R. W. D. Harris,
Trainmaster, District 1, Manitoba Division,
Canadian Pacific Railway.

was born at Edinburgh, Scotland, Jan. 20, 1864, and entered C.P.R. service Aug. 15, 1895, since when he has been, to Sept. 6, 1895, section man, North Portal, Sask.; Sept. 7, 1895 to Oct. 20, 1896, assistant agent, Broadview, Sask.; Oct. 21, 1896, to Oct. 3, 1898, day operator, North Portal, Sask.; Oct. 4, 1898, to Oct. 7, 1899, night operator, Moose Jaw, Sask.; Oct. 8, 1899, to July 12, 1902, agent, Swift Current, Sask.; July 21 to Dec. 21, 1902, agent, North Portal, Sask.; Jan. 19 to Oct. 19, 1903, agent, Swift Current, Sask.; Oct. 21, 1903, to Apr. 30, 1905, agent, Maple Creek, Sask.; May 1, 1905, to Apr. 30, 1906, Supervisor of Agencies, Winnipeg; May 1, 1906, to Nov. 30, 1908, Freight Claims Agent, Central Division, Winnipeg; Dec. 1, 1908, to Dec. 28, 1910, General Fuel Agent, Western Lines, Winnipeg; Jan. 2, 1911, to Apr. 2, 1912, Terminal Trainmaster, Calgary, Alta.; Apr. 3, 1912, to Oct. 18, 1913, Trainmaster, Cranbrook, B.C.; Oct. 19, 1913, to Nov. 10, 1915, Trainmaster, Grand Forks, B.C.;

Nov. 11, 1915, to May 22, 1916, Trainmaster, Nelson, B.C.

William Marshall Thompson, who has been appointed Superintendent of Traffic, Eastern Lines, C.P.R. Telegraphs, Montreal, was born at Long Wharton, England, May 2, 1879, and commenced telegraph service Oct. 1, 1895, since when he has been, to Dec. 8, 1895, operator, C.P.R., Ingolf, Ont.; Jan. 1896 to Aug. 1, 1898, in other business in the United States; Aug. 1, 1898, to May 26, 1899, agent and operator, Manitoba and Northwestern Ry., Neepawa and Keyes, Man.; May 27, 1899, to July 31, 1900, operator, C.P.R., Medicine Hat and Calgary, Alta.; Aug. 15, 1900, to Dec. 15, 1902, operator, Great North Western Telegraph Co., Montreal; Dec. 16, 1902, to Mar. 5, 1904, operator and dispatcher, C.P.R., North Bay, Ont.; Mar. 7 to May 15, 1904, commercial operator, C.P.R., Montreal; Oct. 17, 1904, to Oct. 31, 1905, operator in broker's office, Montreal; Oct. 17, 1904, to Oct. 31, 1905, commercial operator, C.P.R., Winnipeg; Nov. 1, 1905, to July 1, 1910, agent, C.P.R. Telegraphs, Brandon, Man.; July 1, 1910, to July 11, 1911, manager, Grain Exchange Branch, same company, Winnipeg; July 12 to Dec. 31, 1911, agent, same company, Saskatoon, Sask.; Jan. 1, 1912, to Aug. 19, 1913, chief operator, same company, Winnipeg; Aug. 20, 1913, to Mar. 12, 1915, agent, same company, Winnipeg; Mar. 14, 1915, to May 31, 1916, chief operator, same company, Montreal.

Alexander D. Porter, who was recently appointed Mechanical Engineer, Dominion Government Railway to Hudson Bay, Winnipeg, was educated at Aberdeen, Scotland, and studied mechanical and electrical engineering and railway car building at the Robert Gordons Technical College there. He entered railway service in 1897 with the Great North of Scotland Ry., remaining there as mechanical apprentice until 1902, gaining experience in the erecting, machine, boiler, blacksmith and car shops; 1902 to 1905, Engineer in Charge, power plant and car electric lighting plant, same company; 1903 to 1905, draughtsman on locomotive shop and roundhouse design, same company; 1905 to 1906, draughtsman on railway and street cars, United Electric Car Co., Preston, England; 1905 to 1907, leading draughtsman on locomotives, Vulcan Locomotive Works, Lancashire, England; 1907 to 1908, material inspector, Construction Department, C.P.R.; 1908 to 1909, erecting shop foreman, Motive Power Department, same company, West Toronto, Ont.; 1909 to 1910, Foreman of Machine Shop and Air Brake Department, same company, West Toronto; 1910 to 1911, Assistant General Foreman of Shops, same company, West Toronto, and also in charge of investigation work into methods, time studies of locomotive repairs of all kinds and classes of machine work; 1910 to 1913, Assistant Mechanical Engineer, National Transcontinental Ry., in charge of installation of all plant equipment, Locomotive Shops, Transcona, Man., covering the supervision and erection of the whole equipment; 1913 to 1915, in charge of equipment of 13 locomotive houses at division points, same road. The work on the N.T.R. was completed in Oct. 1915, and after spending four months in Great Britain, he returned to Canada to take up his present position.

Hudson Bay Railway.—The Railways Department has ordered from the Algoma Steel Corporation 15,000 tons steel rails, A.S.C.E. standard sections, 80 lb., for the H.B.R., for 1917 delivery.

Terminal Facilities for Handling Grain at Fort William and Port Arthur.

The Fort William Board of Trade sent the following communication to the Board of Grain Commissioners recently:—We make application to your Board on the matter of terminal facilities for handling grain at Fort William and Port Arthur, because your Board has been empowered under a recent order in council to investigate the whole matter of the marketing of Canadian grain, and because the handling of grain at the terminal point appears to us to fall within the scope of the order in council. The situation is in outline as follows:

There are three transcontinental railway lines that carry grain to the head of the lakes. Each of them owns and operates its own terminal facilities, which were not built upon any prearranged plan, and a situation has developed that in our opinion and in the opinion of others leads to a very large amount of unnecessary expenditure, both upon the part of the Federal Government and the cities of Fort William and Port Arthur. In illustration of the unnecessary Dominion expenditure we point to the distance of about 12 miles between the Grand Trunk elevator and the elevator now being built by the Saskatchewan Co-operative Co. Over the whole of this distance there is money spent by the Dominion Government in dredging and various harbor facilities, a very large part of which would be unnecessary had there been a proper harbor planned which would have concentrated the terminal facilities for the handling of traffic upon a small area. It is our belief that millions of dollars have been wasted in this way alone. This diffusion over an unnecessarily large area of terminal facilities for handling traffic has involved waste, not only upon the Dominion Government, but also upon the cities of Fort William and Port Arthur. Houses are built for laborers to operate these facilities, streets laid and city utilities constructed over this unnecessarily large area. This involves an undue expenditure on the part of the cities of Fort William and Port Arthur and an unduly high rate of taxation. Further, it has been a potent factor in increasing the cost of living and thus in increasing the cost of labor, so that it involves not only waste but also an unduly high cost of terminal operation.

To handle all the traffic passing through the twin cities, although that traffic is large, a terminal scheme could have been devised, which would have avoided these undue expenditures. So far as the handling of grain is concerned, the policy hitherto has been that persons or companies building elevators at the head of the lakes erected them so that each elevator was connected with only one of the railway lines. At present only the Dominion Government elevator at Port Arthur has direct connection with two railway lines. All the other terminal elevators are restricted each to one railway line. Persons or firms building terminal elevators and owning and operating country elevators on two or three of the transcontinental systems, naturally desire to have their terminal elevators connected with all the railway lines. As intimated, hitherto this has been impossible. We understand that the Saskatchewan Co-operative Elevator Co. has secured connection with the Canadian Pacific and Canadian Northern Railways, but in order to do so has had to select a

site at the extreme end of Port Arthur, thus still further diffusing the terminal facilities and adding still more to the unnecessary expenditure, both Dominion and Municipal.

Yet owners and operators of terminal elevators desire connection with all the railway lines, and such connection having hitherto been impossible, there has resulted the necessity of either paying switching charges upon grain carried by the lines not directly connected with their elevator, or if they desire to avoid such switching charges, making arrangements with elevators on the other lines with which they themselves have no direct connection, arrangements which undoubtedly tend to minimize competition between the dealers of grain. For example, an elevator served by the Canadian Northern Ry. alone might be operated by a company operating country elevators upon the C.P.R. Such company buying grain along the C.P.R. would desire to consign it to their own terminal, but their terminal being situated on the Canadian Northern they could not consign the grain to their own terminal elevator without paying a switching charge at the head of the lakes. To avoid paying such switching charge they would therefore probably enter into a deal with one or more terminal elevators on the C.P.R. to the effect that they would consign their C.P.R. grain to those elevators, and those elevators would consign the same number of cars of grain to them over the Canadian Northern Ry. Such arrangements as this have been and are made and are now in effect, and while they may enable grain firms to avoid switching charges, they do not tend to strengthen or preserve that competition in the handling of grain which is necessary.

This argument would be much stronger if grain were traded upon sample as well as upon grade at the head of the lakes. Indeed, it may be asserted with confidence that one condition of a successful sample market at the head of the lakes would be securing for each terminal elevator direct connection with all the railway lines.

If your Board, under the order in council referred to, will, as it appears to us it is in duty bound to, give those interested an opportunity of presenting their opinions on this matter, the case can be presented in much greater detail and at much greater length. At present it is enough for us to make application, as we hereby do, to your Board to investigate this phase of the marketing of Canadian grain.

The Board met at Fort William, July 17, when representatives of that city and of Port Arthur were heard.

Negro Construction Battalion. The Militia Department has authorized Lt. Col. Daniel Sutherland, who is a graduate of McGill University, and a railway contractor, and whose address is Queen's Hotel, Halifax, N.S., to raise No. 2 Construction Battalion, C.E.F., the men to be recruited from Canadian negroes and to have white officers. The battalion will probably be called upon to do the same work as No. 1 Construction Battalion, that is, digging, road making, or any hasty military entrenchments or fortifications.

Toronto as a Railway Centre.

There was reprinted in the Toronto Globe recently a news item taken from the paper of the same date fifty years ago, to the effect that there had been held a meeting of the provisional directors of the projected Toronto, Grey & Bruce Ry. This project subsequently became an accomplished fact, and it is now, in a greatly improved form and condition, the Owen Sound Division of the C.P.R. Contemporary with it, and promoted by the same group of enterprising citizens, the Toronto & Nipissing Ry. was completed to Cobocok, and, together with the Victoria Ry. from Lindsay to Haliburton, it is now part of the Midland Division of the Grand Trunk. A very few years later the Credit Valley Ry. was similarly projected, to run from Toronto to St. Thomas and from Streetsville Jct. on that line, through Brampton towards Elora. Later it became a branch of the C.P.R., and it has since been extended to Detroit by way of London, and to Goderich by way of Guelph.

This group of lines was the outcome of the statesmanlike foresight, the persistent enthusiasm, and the tireless promotional work of the late George Laidlaw, to whom Toronto of today owes more of her material expansion than she owes to any other one of her citizens. This may easily be shown by reference to the facts of the railway situation as it was at the time when he began his propaganda and as it is at present. In 1866 there were in existence in local relation to Toronto as a centre the following lines: The main line of the Grand Trunk east through Montreal and west to Sarnia; the main line of the Great Western, now the Southern Division of the Grand Trunk, from Niagara Falls to Detroit, with a branch from Hamilton to Toronto; and the Northern, from Toronto to Collingwood, with a short branch from Allandale to Barrie. Toronto is now the radiating point of the following lines, in addition to those mentioned: Two C.P.R. lines eastward to Ottawa and Montreal; a C.P.R. line to Sudbury; a Canadian Northern line to Ottawa, Montreal, and Quebec; a Canadian Northern line northward through the districts of Muskoka and Parry Sound; and C.P.R. lines from Hamilton to Brantford and Buffalo, connecting with Toronto by a running franchise over the Grand Trunk from Hamilton.

This great expansion of the radiation of railways from Toronto was largely due to the impulse given to its development between 1866 and 1875, and to the later impulse due to the construction of the C.P.R. between 1881 and 1885. Few of the present citizens of Toronto know anything by personal recollection of what took place half a century ago, and it may interest those few and inform the younger generation to be afforded this glimpse of what was done by the stalwart pioneers, whose work of faith laid deep and permanent the foundations of the remarkable progress and permanent prosperity of the city.—Toronto Globe.

The Ontario License Board is reported as intending to prohibit the selling of intoxicating liquors on trains after Sept. 16, when the Ontario Temperance Act will go into force.

Foreign Steel Rail Orders. The Russian Government is reported to have placed orders with U. S. companies for 425,000 tons of steel rails, divided among four companies. During 1915, the same government ordered 400,000 tons of steel rails in the U. S.

Minimum Weight on Lumber Loaded on Flat Cars.

The Chief Railway Commissioner, Sir Henry Drayton, gave judgment on an application by Canadian Western Lumber Co., Ltd., recently as follows:—

In support of the application, the applicants submit,—“This is a very peculiar case. The car in question is a 32 ft. flat car, with a marked capacity of 40,000 lb. According to the tariff in question, this car would take a 40,000 lb. minimum, the same as a car 40 ft. long, and a capacity of anywhere up to 100,000 lb., which is of course unreasonable. The required minimum in this case is also the absolute maximum that can be loaded on the car. It is manifestly impossible in loading lumber to estimate exactly what the full load will weigh. Under the loading regulations, we are not permitted to put on the car more than 40,000 lb. If, in our efforts to put on 40,000 lb. we would exceed this figure by any small amount, it would necessitate stopping the car and unloading sufficient to bring the car down to 40,000 lb. weight. In the case of this particular shipment, it would mean that the lumber would be discharged from the car at the Delta, near Everett, Wash., which is nearly 100 miles from our shipping point. We are not presenting this in the usual form of a claim before the Commission, but to get a ruling on the point raised as to whether the minimum weight on a car can also be the maximum capacity of the car, which forces shippers to either weigh the material before loading (which is impossible), or take chances on underloading the car, thereby paying for dead weight; or, on the other hand, unloading the car and paying for labor of discharging part of the load, as well as the loss incidental thereto, as this work is generally done at some distance from the shipping point.”

The shipment in question consisted of fir. The Great Northern Ry. tariff covering the movement of fir and other lighter woods, contains an exception to the ordinary minimum of lumber loading, which amounts to 40,000 lb., by providing that in cars under 36 ft. in length, when loaded to the “full visible capacity” the minimum will be the actual weight but no less than 30,000 lb. The tariff gives the following definition: “The term ‘loaded to full visible capacity’ means that the entire space in the car shall be utilized to the fullest extent, and that no more lumber (or other material) in ordinary lengths can be loaded therein.”

The argument of the company's Assistant Traffic Manager Smitton, dated April 18, proceeds on the assumption that this provision as to the “full visible capacity” applies to the car in question. This car was, however, a flat car. I am at a loss to see how the loading of a flat car can in any way be covered by “visible capacity,” apart from further specifications or exact provision. How high may or should the loading go? Is it to go to such a height above the car level that any further additions would be either dangerous or create operating difficulties? If so, how can any shipper determine such questions? Apart from the consideration of common sense, this tariff itself would seem to exclude from flat cars the provision of “full visible capacity.” The tariff refers to space “in” the car, and loadings “therein.” Neither of these terms are usually, at any rate, applied to open cars, and are in marked contradistinction to the terms of “on” and “upon.” I am of the opinion that the

rule as to “visible capacity” cannot be applied to a car without a roof, unless the tariff itself supplies information as to the floor area to be occupied and the height to which the loading is to be carried.

It may be noted that the C.P.R. lumber tariff in British Columbia recognizes this difference by showing in addition to the exception made in the Great Northern's tariff a minimum of 30,000 lb. for short, open cars. In the absence of any such provision in the tariff in question, and as the rule of “visible capacity” cannot apply, the minimum must be left at 40,000 lb., that being the marked capacity of this flat car, which is a car of 34 ft. in length, as shown by the Equipment Register, where it is also shown as having a marked capacity of 40,000 lb.

The result is unfortunate, as the tariff certainly starts out to make an exception to the ordinary minimum loading, which as a matter of equity, should apply equally to flat cars carrying lumber of the lighter weights as it does to box cars. The tariff also says that when the marked capacity of the car is less than the minimum carload weight, as provided, the marked capacity will in all cases apply as the minimum. Other Great Northern tariffs recognize the difficulty as to “visible capacity” already noted as applied to open cars, as one of them C.R.C. 1129 provides as follows: “Open cars when compactly loaded with lumber, etc., to a height of 13 ft. above the top of the rail and to within 90% of the length or width of the floor space of the car will be considered loaded to the full visible capacity, and may, in such cases, be taken at actual weight.”

The company also contends that the shipper must state in the bill of lading

that the car had been loaded to its full visible capacity. There is no rule in the tariff requiring this declaration in the bill of lading; and, as a matter which is just as much within the knowledge of the railway company as it is within that of the shipper, such a provision in any event would seem unnecessary. The result is that the car in question under the tariff required the minimum loading of 40,000 lb.

On the question as to a minimum loading as great as the marked capacity of the car, in case of the necessity of getting as good loading as is reasonable, it would appear that there is no good reason why cars should not be loaded to capacity. It is, however, impossible to do this accurately for the reasons set out in the complaint; and it would occur to me that such a rule can only be allowed in cases where an overloading to the extent of 10% is safe and allowed by the railway company.

An interim or informal ruling was asked by the applicant. The whole question may be set down for hearing at Vancouver if the parties desire.

Utilization of Material from Old Freight Cars is being practiced systematically by the Baltimore & Ohio Rd., and the mechanical department estimates a salvage of \$20 a car in this way. The lumber is sawed and planed to remove defective portions and to give suitable sizes. It is then distributed for use in repair work and for building small structures, freight platforms, etc. Bolts, nuts, wheels, rods and other metal parts are sorted, trimmed and stored. The results have been so satisfactory that a reclamation plant has been established at Zanesville, Ohio, to which are sent all cars that are to be scrapped or destroyed. Reclamation work of a lighter character is carried on at division repair shops.

The Canadian Pacific Railway's Roll of Honor.

List 10 issued by C. H. Buell, Staff Registrar and Secretary Pension Department, prefaced by the following remarks: Several thousand officers and employees of this company enlisted for active military duty with the Canadian Expeditionary Forces, and the majority of them are now in Europe, bravely battling for Canada and the Empire. As particulars of army reservists are not available, these lists of those who have given up their lives for their country or been wounded are necessarily incomplete, and do not therefore indicate fully the extent to which the Company's officers and employees have participated in the great struggle.

Co-operation, a Means of Solving the Labor Problem.

By D. McCooe, Superintendent of Tracks, Grand Trunk Railway.

The demand for more economical and practical methods for handling maintenance of way work and forces is increasing each year, and, to meet this, the general practice on most railways is to select the track department for the first retrenchment in both men and material. Like everything else, however, there must be a limit, and some roads have already reached the point where no further reductions can be made along these lines without deteriorating from the set standards of efficiency required on their respective lines.

There is no doubt that, with increasing traffic and the demand for still heavier power and faster trains, the track will require more and closer supervision in the future, but this cannot be accomplished by overloading the camel, any more than the locomotive of 20 years ago could handle the train of the present day.

Without proper and competent supervision there can be no real economy obtained. This may mean some increases in the staff and pay rolls, but it would also mean more work and better service. The importance of this cannot be overestimated when it is considered that a roadmaster with 100 to 200 men under his charge may lose more than his whole month's salary through one day's bad management or by not being able properly to cover his territory and visit the different gangs as often as necessary, especially where new work is being done.

The maintenance of way department has come in for considerable criticism in recent years from men who have both technical training and practical experience. This has done much towards bringing about the present standards and the adapting of many new methods and devices, but very, very little has been done to educate or improve the track forces. In fact, it is said they are the least efficient of any large group in the entire railway organization. Supposing this to be true, who is responsible?

Why are the foreigners replacing the native laborers in track work? We are told it is on account of the higher wages being paid by other industries; and, while this may be true in some districts, it does not apply to all, and, therefore, is only one of several reasons. The foreigners get the same pay that the native laborers do, working together in the same gangs. As an extra inducement, free houses are being built, schools established, and teachers hired by some railways to instruct and educate them. However, if the same encouragement and recognition were given to the native laborers might not better results be obtained?

Several discussions have taken place and committees have been appointed with a view of drafting one standard of practical and scientific methods for handling maintenance work and forces that would be applicable to all railways. But the obstacles to this are that it would be necessary to standardize earnings, men, material and efficiency required by each road to suit the climate and other conditions which are entirely different in each case.

The Pennsylvania is said to be the best managed and maintained railroad in America, but how many other railways are there in the country that could finance or that have the business to justify them in adopting the Pennsylvania's standards, which themselves are subjected to changes? Then why trail along behind, sometimes for years, waiting to see what

some other fellow is going to do?

Some of the leading railways have organized their own maintenance of way association and appointed committees of their own men, who are given subjects with which they are most familiar, including standards, efficiency, and economy, as well as the best practical and technical methods of application, which are most suitable to the local conditions on their line. The merit of such organization and the results being obtained speak for themselves. This is not to be construed, as some may take it, to mean that we are to work in the same old rut. The members of these committees are allowed to visit other railways for the purpose of observation and also to attend the engineering and roadmasters' conventions annually. This gives them the opportunity to see and hear what others are doing.

The bonus or premium system has a tendency to cause dissatisfaction and make the men slight their work. As labor is a commodity governed by the demand, and is worthy of its hire, no further compensation should be necessary, under competent supervision, other than fair and just treatment with merited promotion when the opportunity occurs. All men are not equal, and no amount of drilling will ever make them so. Then why set a limit or expect 100% efficiency, or the equivalent thereof, from every man?

Authority to do the dictating, without being held to strict responsibility for the results, accounts for some of the shortcomings that the little fellows are so often blamed for. It is no excuse for a roadmaster or supervisor, whose track is going back on him, to say that the men are no good. They are generally not much better or worse than he makes them, and this same rule should apply on up to the top of the ladder.

There are no secrets in track or maintenance work that require such great science or skill but that any one with ordinary intelligence and common sense may learn from practical experience, but this cannot be picked up in a few months or a year, any more than a student can get a diploma to practice medicine in the same length of time. However, the man with both the technical and practical training has the advantage and can go higher.

There would be no economy in trying to improve the track by taking out a no. 1 tie and replacing it with a cull. Yet this is just what is being done with our forces. The good men are getting out and the culls are taking their places. What is required is more co-operation and less criticism, as no man or department knows it all. Locate the weak spots and remove the cause by placing the responsibility where it belongs. Then economy and efficiency will follow.—Maintenance of Way Bulletin.

The 239th Battalion Railway Construction Corps, has removed its headquarters from the corner of Hastings and Horner Streets, to 175 Cordova St. West, Vancouver. Recruiting is reported to be progressing at a good rate among railway men in British Columbia and Alberta under the charge of Lt. Col. J. W. Stewart.

To protect a Swiss railway from frequent avalanches numerous snow retaining walls have been built on a mountain side at points from which the slides start, to hold the snow until it melts.

Canadian Northern Railway Construction, Betterments, Etc.

Steel Rails.—The company is reported to have been asking quotations for 25,000 tons of steel rails for 1917 delivery. It is also said that the company is enquiring in the United States for 50,000 tons for next year's delivery.

Mount Royal Tunnel and Terminals.—A press report states that work on the tunnel and terminal facilities is being progressed with satisfactory, and that it is expected they will be ready for operation in the autumn.

Montreal-Ottawa-Port Arthur Line.—The section of the line connecting the Mount Royal terminals with the present line at Hawkesbury is rapidly approaching completion, and it is expected it will be ready for operation in the autumn.

Western Lines.—Six stalls are being added to the locomotive house at Port Arthur, Ont., the locomotive house at Fort William is being enlarged to hold 45 locomotives. Additions are also being made to the plant at Rainy River, Ont.; according to a press report.

We are officially advised that the extension of the freight car repair shop, now under construction in the west yard at Winnipeg, covers an area of 97 x 120 ft. The principal materials employed in the building are concrete, brick, structural steel, timber and skylight work. Four parallel tracks, 97 ft. long, will be laid, which will be extensions of the tracks in the existing freight car repair shop. The contract has been let to the Northern Construction Co., and the work is being carried out under the direction of J. Schofield, architect.

We are officially advised that no decision has been reached as to the suggested extension of the Rapid City Branch to Birtle, Man.

The extension of the company's station facilities at Saskatoon, Sask., is being rapidly proceeded with. The addition will provide new quarters for the dining and sleeping car department office staff.

A press report, July 15, states that a contract has been let to Nesbitt & Co., for the erection of a machine shop and stores building at the Edmonton terminals, at an estimated cost of \$65,000.

British Columbia.—Sir Donald Mann, Vice President, accompanied by M. H. MacLeod, General Manager and Chief Engineer, Western Lines, and a party of New York financial men, have completed a trip of inspection over the company's lines in the West. The party was in Vancouver July 10, and while there Sir Donald and Mr. MacLeod were in consultation with the city authorities respecting False Creek terminal matters. Sir Donald is reported to have said the company has \$5,000,000 on hand for the terminal construction, and there is no reason why the plans under the agreement should not be carried out. The company is building a 30-car ferry with passenger accommodation to run between the mainland and Patricia Bay, Vancouver Island. Arrangements will be made with the British Columbia Electric Ry. so that its cars will connect with the ferry service at both ends. The company's own track between Port Kells and New Westminster bridge is being ballasted, and new rails of the same standard as those on the main line will be laid. The company will ultimately have grain elevators at Port Mann and Vancouver. The plant at the Port Mann car shops, Sir Donald added is sufficient for the next five years, but it is proposed to add such a plant as will be able to turn out five cars a day. This is necessary,

as more freight originates there than is coming to the terminal, and this means that empty cars have to be hauled across the continent.

The contract for the erection of the company's station building on the False Creek site has been awarded to Carter, Halls, Aldinger and the Northern Construction Co., Winnipeg, who tendered jointly. A local press report on July 11 said: "Out of five bids received that of the Northern Construction Co. and Carter, Halls, Aldinger, Winnipeg and Vancouver, was the lowest, being \$574,929. Other tenders were Walter Hepburn, \$587,000; McDonald, Nettleton & Bruck, \$592,000; B.C. Construction & Engineering Co., \$620,956; Skene & Christie, \$699,276." Ac-

cording to the agreement with the city council, the company has to expend \$1,000,000 on the station, and on July 12, the city council's railway committee instructed the City Solicitor to write to the company's Toronto office asking how the \$400,000 difference between the contract price and the amount agreed to be spent is to be expended. The company's engineers have been marking out the site of the building and the contractors are getting the preliminary work done.

A suggestion was made to the New Westminster City Council, July 7, that the C.N.R. and the C.P.R. should be asked to build a union station in that city, as a solution of the difficulties in the way of the C.N.R. securing a right of way into the city. (July, pg. 278.)

A Railway Turnout Problem.

A problem that is not uncommon in detail location of railway tracks is treated by C. G. Edwards, Southern Pacific Co., San Francisco, by the following interesting method. The problem was to run in a curve from a given tangent to pass through a given point

Turnout Problem, Geometrical Solution.

and to pass at a prescribed distance from the corner of a building. The point and the corner of the building are supposed to be tied in to the tangent. In the sketch mn is the given tangent, p the given point and c the corner of the building. A circle rhf is drawn around c with

Combination Sleeping, Dining and Observation Cars, Canadian Northern Railway.

The Canadian Northern Ry. had three sleeping cars of the disappearing berth type built by the American Palace Car Co., which were introduced by that company several years ago, but which apparently failed to meet with success on the various roads on which they were operated. They were so arranged that the

ated that such a car would be capable of handling the sleeping car business under ordinary conditions, and in the event of the increase of the sleeping car business, a standard sleeping car might be added, the combination car affording ample dining accommodation for both cars.

The layout of the three converted cars

Combination Sleeping, Dining and Observation Car, Canadian Northern Railway.

berths were secured on vertical rods, which, on being turned, elevated the berths from storage box recesses under the floor for night use, the berths being lowered into the recesses during the day, so as to be entirely out of the way. As their operation was not attended with any sufficient degree of success to warrant continuing them in service, the three cars were in reality useless in their then form.

The idea was conceived of converting the cars to meet present day practice, by introducing the present type of folding berth. This necessitated the complete remodelling of the cars, and in consequence, it was decided to rebuild them as combination sleeping, dining and observation cars, at a cost of about \$6,000 a car. It was planned that they might be used as guard cafe parlor cars, be leased to a private party of from 10 to 12, be used as private cars to carry executive or official parties over the line, or be used over lines on which the night travel was too light to warrant the use of separate sleeping and dining cars. For the latter purpose, the line from Winnipeg to Prince Albert was considered, as it was estim-

is shown herewith. At one end there is a small observation compartment, back of which, in the order named, are the men's lavatory, a standard state room, women's lavatory, four standard berth sections, dining room with four tables, pantry and kitchen. The four tables in the dining room accommodate 16, but in the event of the car being used for private party work, these tables might be replaced by a central large table accommodating 12. The kitchen and pantry are standard for cafe parlor cars.

The principal expense in converting the cars resulted from the replacement of the substructure, which involved new sills and the removal of the heavy elevating screws and undergear pockets. The interior finish of the cars is cherry in the kitchen, and mahogany in the body. The curtains are of silk faced pantasote, and the trimmings of Persian brass, except in the vestibules, where they are of bronze. They are lighted by acetylene. The overall length is 72½ ft. The body weight is 100,650 lbs., and the truck weight, 36,100 lbs., making a total weight for each car of 136,750 lbs.

the prescribed clearance distance ch as radius. The required turnout is represented by the curve shp with centre at o. Join a and h. This line intersects the small circle at r, which is in the vertical line below c, as can readily be shown by similarity of the triangles chr and oha. Draw other construction lines as shown. The triangles asr and phr are similar, which gives the equation $sr \times rp = rh \times ar$. Also the triangles abr and rhf are similar, which gives the equation $rh \times ra = rb \times rf$, substituting which gives $sr \times rp = rb \times df$. In this equation all quantities except sr can be calculated from the known positions of points c and p with respect to the line mn. Then sr is computed, and from it se and sp can be found. As ae is a mean proportional between se and sp, the beginning of the curve is fixed. It is then a simple matter to find the radius.—Engineering News.

Saskatchewan University's School of Engineering will not re-open this year, the entire faculty and most of the students having volunteered for overseas service.

Toronto, Hamilton & Buffalo Railway Annual Report.

The annual report for the calendar year, 1915, shows that the company operates 106.51 miles, of which 4.36 miles is operated under trackage rights, 79.88 miles is main line and 22.27 is branch lines. This is an increase of 14.88 miles, due to the construction of the branch from Smithville to Dunnville, Ont. The report states that the cost of this branch was \$604,954.18 and that preliminary work had been done in connection with the extension of the branch from Dunnville to Port Maitland. "The company," the report says, "has succeeded in acquiring, from the government, the naval reserve lands located at Port Maitland and has purchased additional desirable lands for industrial development along or in the vicinity of the Grand River; the total mileage owned or controlled by the company and available for industrial development at Port Maitland and along the Grand River now approximating 300 acres. Negotiations for the location of manufacturing plants at or in the vicinity of Port Maitland on the land acquired by the company have been under way for some months and there is reasonable probability that during 1916 one or more extensive manufacturing plants will be located. Negotiations are in progress looking to the establishment of one or more car ferries between south shore ports and Port Maitland, and it seems likely that such car ferry service will be installed. Through the location of industrial plants and the establishment of car ferry service a large tonnage of traffic will be obtainable between Port Maitland and Hamilton, and, therefore, it has been decided to push to early completion the construction of the line from Dunnville to Port Maitland and to proceed with the construction of docks and other facilities to enable the company to economically and efficiently handle the contemplated traffic. Assurances have been given by the government that such dredging, in Port Maitland Harbor and in the Grand River, will be done as will ensure a depth of water sufficient for the handling of the largest vessels operating on Lake Erie."

On account of the amalgamation of the Erie and Ontario Ry. (under which charter the Smithville, Dunnville, Port Maitland line is being built), the authorized amount of capital stock was increased from \$5,000,000 to \$5,500,000 and the amount outstanding from \$3,500,000 to \$3,512,500. The funded debt had been reduced by \$150,000 and stood on Dec. 31, 1915, at \$5,405,000. An act of Parliament was assented to April 8, 1915 authorizing the issuance of consolidated mortgage bonds by the amalgamated companies (the T. H. & B. Ry. and the E. & O. Ry., not to exceed \$10,000,000. The directors determined that it would be unwise to issue bonds under the authority of the E. & O. Ry. charter, but decided instead to finance the present and future requirements of the company for capital through the issuance of consolidated mortgage bonds, secured by mortgage on all the company's property. A proposition was made to the owners of the second mortgage bonds, amounting to \$1,000,000, to accept stock of the company at par in exchange for such bonds at par, and arrangements to this end have been practically agreed upon. With this accomplished, it is proposed to reserve sufficient of the consolidated mortgage bonds to protect and provide for the outstanding first mortgage bonds

aggregating \$3,280,000, thus leaving available for sale, as and when the needs of the company shall require, approximately \$6,720,000 in amount of such consolidated mortgage bonds.

Following is a summary of operating results, etc., as compared with the year 1914:—

	1915	1914
Operating revenue	\$1,404,319.55	\$1,335,672.19
Operating expenses	899,636.37	972,110.26
Difference	\$504,683.18	\$363,561.93
Current expenses	12,498.43	8,172.43
Net operating income	\$492,184.75	\$355,389.50
Other income	132,093.92	149,957.15
Gross income	\$624,278.67	\$505,346.65
Deductions	301,466.47	284,054.35
Net income	\$322,812.20	\$221,292.30
Dividends		105,000.00

Transferred to credit of profit and loss

\$322,812.20 \$116,292.30

The profit and loss account, which stood at \$948,920.24 at Dec. 31, 1914, was increased to \$1,295,481.70 at Dec. 31, 1915.

The general balance sheet shows as follows:

LIABILITIES.	
Capital stock	\$3,512,000.00
Funded debt	5,405,000.00
Government and local aid	358,100.00
Working liabilities	1,474,224.26
Current liabilities	1,474,224.26
Deferred credits	23,278.97
Unadjusted credits	57,722.98

Special car mileage	9,567
Non revenue car mileage	74,485
Total revenue freight, tons	1,929,069
Total company freight, current tons.	8,098
Revenue freight current one mile tons.	69,901,665
Company freight current one mile tons	200,480
Freight current one mile per mile of track	656,292
Average distance of haul, miles	36
Average amount received, per ton	\$0.47
Amount received per ton per mile, cents	1.28
Interline passengers carried	347,736
Local passengers carried	164,553
Commutation passengers carried	73,956
No. of revenue passengers carried on lines	16,972,938
No. carried one mile, per mile of road	171,236
Average distance carried, miles	28.95
Average received per passenger	\$0.63
Average per passenger, per mile, cents	2.16
Passenger service train revenue per mile of road	\$1,061.59
Passenger service train revenue per train mile	\$1.32

C.P.R. "Family Gathering." Some 200 C.P.R. officials, from all over the system, representing the operating, mechanical, traffic, and other departments, met in Winnipeg, July 17 to 20 to discuss subjects relating to the various departments' work, the object being to secure even greater efficiency and to stimulate the whole staff. C. E. E. Ussher, Passenger Traffic Manager, Montreal, presided. Those attending were given a welcoming luncheon by A. M. Nanton, of Winnipeg, one of the company's directors, at which the Lieutenant Governor and the Premier of Manitoba and the Mayor of Winnipeg spoke.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Railways.—W. C. ROBERTS has been appointed Auditor of Stores and Mechanical Accounts. Office, Moncton, N.B. (See also National Transcontinental Ry.)

Canadian Northern Ry.—J. HAWKINS has been appointed Road Foreman of Locomotives, Rideau Jct., Ont.

Canadian Pacific Ry.—C. A. LANGEVIN, heretofore Travelling Passenger Agent, Canadian Northern Ry., Montreal, has been appointed City Passenger Agent, C.P.R., Quebec, Que., vice G. J. P. Moore, transferred.

W. F. HEFLIN, heretofore Yardmaster, Sudbury, Ont., has been appointed Inspector of Transportation, Eastern Lines, vice J. W. Wansbrough, whose appointment as Chief Dispatcher, Toronto, was announced in a recent issue. Office, Montreal.

R. G. AMIOT, heretofore chief clerk to First Assistant General Passenger Agent Montreal, has been appointed District Passenger Agent, Montreal.

I. ROTH, heretofore Travelling Passenger Agent, Canadian Pacific Ocean Services Ltd., has been appointed Terminal Passenger Agent, C.P.R., Montreal.

G. J. P. MOORE, heretofore City Passenger Agent, Quebec, Que., has been appointed chief clerk to First Assistant General Passenger Agent, Montreal, vice R. G. Amiot, promoted.

F. C. LYDON, heretofore City Ticket Agent, Montreal, has been appointed City Passenger Agent, Montreal, vice A. E. Lalonde, on leave of absence.

H. W. BOWDEN has been appointed City Ticket Agent, Montreal, vice F. C. Lydon, promoted.

R. JOHNSON has been appointed Excursion Agent, General Passenger Department, Montreal.

M. W. BARD, heretofore Trainmaster Chicago, Burlington & Quincy Rd., has been appointed Assistant Superintendent, District 1, Eastern Division, C.P.R. Office, Farnham, Que.

O. M. LAVOIE, heretofore dispatcher, Farnham, Que., has been appointed Chief Dispatcher, District 1, Eastern Division, Farnham, Que.

W. B. BROWN, heretofore Assistant Superintendent, District 2, Eastern Division, Montreal, has been appointed Chief Dispatcher, Ottawa.

J. A. MCGILL, heretofore Travelling Passenger Agent, Chicago, Ill., has been appointed City Passenger Agent, Ottawa, Ont., vice T. Mullins, whose appointment as City Passenger Agent, Toronto, was announced in our last issue.

T. A. WILSON, heretofore Assistant Superintendent, District 3, Lake Superior Division, Schreiber, Ont., has been appointed Assistant Superintendent, District 5, Eastern Division, vice W. Coulter, on leave of absence. Office, Smiths Falls, Ont.

N. BERGER, heretofore Roadmaster, Schreiber Subdivision, Lake Superior Division, Schreiber, Ont., has been appointed Roadmaster, Smiths Falls, Ont., in charge of construction work in connection with the enlargement of the yard there.

J. W. WANSBOROUGH, heretofore Inspector of Transportation, Eastern Lines, Montreal, has been appointed Chief Dispatcher, District 1, Ontario Division,

Toronto, vice J. E. Ryan, whose appointment as Car Service Agent, Eastern Lines, Montreal, was announced in our last issue.

In announcing the appointment of T. COLLINS as Superintendent, District 4, Ontario Division, vice Allan Purvis, recently, it was stated that his office is at Toronto. It is at London.

V. T. BOUGHTON, heretofore Resident Engineer, District 2, Lake Superior Division, Chapleau, Ont., has been appointed Resident Engineer, District 1, Lake Superior Division, vice H. R. Miles, transferred. Office, Sudbury, Ont.

A. O. WOLFF has been appointed Resident Engineer, District 2, Lake Superior Division, vice V. T. Boughton, transferred. Office, Chapleau, Ont.

M. W. Bard,
Assistant Superintendent, District 1, Eastern
Division, Canadian Pacific Railway.

W. J. STINSON, heretofore Trainmaster, District 5, Eastern Division, Smiths Falls, Ont., has been appointed Assistant Superintendent, District 3, Lake Superior Division, vice T. A. Wilson, transferred. Office, Schreiber, Ont.

D. WILSON, heretofore section foreman, District 1, Lake Superior Division, has been appointed Roadmaster Schreiber Subdivision, Lake Superior Division, vice N. Berger, transferred. Office, Schreiber, Ont.

A. J. IRONSIDES, heretofore District Master Mechanic, Edmonton, Alta., has been appointed District Master Mechanic, Winnipeg, vice G. Twist, transferred.

C. HOOD, heretofore Trainmaster, Nelson, B.C., has been appointed Trainmaster, Saskatoon, Sask.

G. TWIST, heretofore District Master Mechanic, Winnipeg, has been appointed District Master Mechanic, Medicine Hat, Alta., vice A. West, transferred.

A. WEST, heretofore District Master Mechanic, Medicine Hat, Alta., has been appointed District Master Mechanic, Ed-

monton, Alta., vice A. J. Ironsides, transferred.

J. D. FRAINE, heretofore conductor at Medicine Hat, Alta., has been appointed Trainmaster, Nelson, B.C., vice C. Hood, transferred.

G. C. MCKAY, heretofore City Passenger Agent, Chicago, Ill., has been appointed City Passenger Agent, Detroit, Mich. W. C. ELMER retains the position of City Ticket Agent at Detroit.

D. I. LISTER, heretofore chief clerk, Passenger Department, Chicago, Ill., has been appointed City Passenger Agent, Chicago, Ill., vice G. G. Mackay, transferred.

K. A. COOK has been appointed chief clerk, Passenger Department, Chicago, Ill., vice D. I. Lister, promoted.

Canadian Pacific Ocean Services, Ltd.—J. R. SHAW, heretofore Passenger Agent, Manila, has been appointed General Agent, Passenger Department, Shanghai, China, vice A. J. Blaisdell, deceased.

G. L. COURTNEY, heretofore of Greer, Courtney & Skene, Ltd., Shipping Agents, Vancouver, B.C., has been appointed to a position at Hong Kong, China.

Central Vermont Ry.—P. D. FITZPATRICK, Valuation Engineer, has also been appointed General Roadmaster, vice W. P. Elrod, resigned. Office, St. Albans, Vt.

H. P. BOYCE has been appointed Travelling Passenger Agent, St. Albans, Vt., vice S. M. Driscoll, resigned. (See also Grand Trunk Ry.)

Grand Trunk Ry.—R. E. ORR, heretofore acting Trainmaster, has been appointed Trainmaster, Districts 8, 9, and 10, Belleville Division, Ontario Lines. Office, Lindsay, Ont.

R. A. GILL, heretofore Soliciting Passenger Agent, Portland, Me., has been appointed Travelling Passenger Agent, Toronto, reporting to the District Passenger Agent there.

C. S. PROCTOR, heretofore Travelling Passenger Agent, Toronto, has been appointed as a special representative of the Passenger Department at Camp Borden, Ont., reporting to the District Passenger Agent, Toronto.

R. W. THOM, heretofore agent at Collingwood, Ont., has been appointed agent at Camp Borden station, Ont.

A. M. DURNFORD has been appointed agent at Collingwood, Ont., vice R. W. Thom, transferred.

G. L. BRYSON, heretofore chief clerk, City Office, Detroit, Mich., has been appointed Travelling Passenger Agent, Kansas City, Mo., vice C. N. Wilson, resigned.

W. GRANT, heretofore joint ticket agent, Central Vermont Ry., and New York, New Haven & Hartford Rd., New London, Conn., has been appointed Travelling Passenger Agent, G.T.R. and Central Vermont Ry., Boston, Mass., vice J. M. Shea, resigned.

Grand Trunk Pacific Ry.—W. P. HUTCHISON, heretofore Resident Manager, Macdonald Hotel, Edmonton, Alta., has been appointed Resident Manager, Fort Garry Hotel, Winnipeg.

J. V. HENDERSON has been appointed Resident Manager, Macdonald Hotel, Edmonton, Alta., vice W. P. Hutchison, transferred.

National Transcontinental Ry.—W. N. INGRAM has been appointed acting Mas-

ter Mechanic, District 5, Edmundston, N.B.

A. V. REDMOND, formerly in service of N.T.R. Commission, has been appointed Resident Engineer, District 2, Cochrane, Ont., vice H. J. Black, enlisted for overseas service with No. 1 Construction Battalion.

M. J. SHERIDAN, heretofore Roadmaster, Hearst Subdivision, Grant, Ont., has been appointed Roadmaster, Cochrane Subdivision, vice P. Houston, transferred. Office, Cochrane, Ont.

P. HOUSTON, heretofore Roadmaster, Cochrane Subdivision, Cochrane, Ont., has been appointed Roadmaster, O'Brien Subdivision, vice W. R. Murray, resigned. Office, Cochrane, Ont.

G. DUFF has been appointed Road-

master, Hearst Subdivision, vice M. J. Sheridan, transferred. Office, Grant, Ont.

Niagara, St. Catharines & Toronto Ry.—A. S. DAVIS has been appointed City Passenger Agent, for the summer, at Niagara Falls, N.Y.

Timiskaming & Northern Ontario Ry.—W. H. HARPER has been appointed acting Auditor of Receipts and Car Accountant, vice R. H. Mitchell, Auditor and Car Accountant, enlisted for active military service. Office, Toronto.

T. J. GRACEY, heretofore Accountant, has been appointed Auditor of Disbursements and Accountant. Office, Toronto.

H. W. TESKEY has been appointed Freight Claims Agent and Chief Clerk to Auditor of Receipts and Car Accountant. Office, North Bay, Ont.

Traffic Orders by the Board of Railway Commissioners.

Interswitching at London.

25050. June 10. Re application of London Railway Commission for an order requiring the G.T.R. to interswitch cars from the London & Port Stanley Ry. to the G.T.R. steam tracks under the provisions of an indenture dated April 25, made 1870, between The Great Western Ry. of Canada and The London & Port Stanley Ry. Upon hearing the applica-

der sec. 29 and 227 of the Railway Act, for authority to connect its tracks with the C.P.R. tracks near Chaudiere Jct., and for an order rescinding that portion of order 7490, July 6, 1909, in so far as it refers to a connection with the Ottawa & Prescott Ry. tracks at mileage 56.6 west from Hawkesbury, it is ordered that the applicant company be authorized to connect its tracks with the C.P.R. tracks

in Canada would no longer include peas. The matter as presented has a bearing on the general issue as involved in the classification, and the matter should stand until the classification is before the Board and dealt with. In view of the time the existing rate situation has existed, this disposition does not appear to be unfair to the parties.

Edmonton, Dunvegan & British Columbia Ry.'s Tariff.

25124. July 5. Re application of Edmonton, Dunvegan & British Columbia Ry., under sec. 327 of the Railway Act, for approval of its Standard Mileage Freight Tariff, C.R.C., 20, cancelling C.R.C. 1. Upon the report and recommendation of the Chief Traffic Officer, it is ordered that the said tariff be approved.

Specifications for Cheese Boxes.

25143. July 7. Re order 24188, Sept. 18, 1915, approving of proposed Supplement 5 to the Canadian Freight Classification 16; and the order 24837, Mar. 28, 1916, extending the effective date of the item on page 9 giving specifications for cheese boxes, until Aug. 1, 1916. Upon reading the submissions filed on behalf of the parties interested; and upon hearing a deputation of cheese manufacturers and cheese box manufacturers, also representatives of the Montreal Board of Trade, the Montreal Produce Merchants' Association, and the Canadian Freight Association, it is ordered that the said item be amended as follows, viz.:

Tool Car and Derrick, Michigan Central Railroad.

tion at London, Mar. 10, 1916, in the presence of counsel for the applicant and the G.T.R., and upon reading the further submissions filed, the G.T.R. offering no objection, it is ordered that the G.T.R. be required to interswitch cars as above stated; the interswitching service to become effective not later than July 10, 1916.

Copper Commodities, Rates.

25082. June 17. Re application of the Consolidated Mining and Smelting Co. of Smelter, B.C., for suspension of proposed cancellation of rates on copper commodities from Smelter to points in Eastern Canada, it is ordered that the proposed cancellation of rates on copper commodities from Smelter, Grand Forks, and Greenwood, B.C., to points in Eastern Canada, as shown in C.P.R. Tariff, C.R.C. no. W-2147, effective June 18, 1916, be suspended; and the C.P.R. is hereby required to continue in force the rates on the said commodities to points in Eastern Canada as contained in its Tariff C.R.C. no. W-2056, until further order.

Connection of C.P.R. and C.N.R. Tracks Near Ottawa.

25111. June 26. The application of the Canadian Northern Ontario Ry., un-

der sec. 29 and 227 of the Railway Act, for authority to connect its tracks with the C.P.R. tracks near Chaudiere Jct., and that order 7490, July 6, 1909, in so far as it refers to a connection with the Ottawa & Prescott Ry. tracks at mileage 56.6 west from Hawkesbury, be rescinded.

Rates on Split Peas.

Commissioner McLean gave the following judgment June 27: The application of Montreal Board of Trade for an order directing that the rates published for the carriage of grain products from Ontario to points in the eastern States be applied also on split peas, and re application of Montreal Board of Trade for disallowance and of the Toronto Board of Trade for suspension of the schedules removing whole peas from the list of articles which take grain rates from and to the aforesaid territories. In this matter, it appears that in the new Canadian Freight Classification which the railways are preparing it is proposed to remove dried peas, whole and split, from the grain section to the vegetable section, thus following the example of the American classifications. While the rating will, as proposed, remain the same as at present, viz., 8th class, the effect would be that tariffs for the movement of grain

Paragraph (a): Add at the end of the paragraph the words, "or four pieces if tongued and grooved."

Tool Car and Derrick, Michigan Central Railroad.

The Michigan Central Rd.'s Canada Southern Division Car Department at St. Thomas, Ont., E. R. Webb, Master Mechanic; N. Marple, General Foreman, have constructed a tool car and derrick for road work at outlying stations where no repair equipment is maintained. The car is a low flat 40 ft. 60,000 lb. capacity standard equipment, and is equipped with derrick and boom and triplex hoist of 2 ton capacity, occupying half the car. The opposite end is enclosed, giving sufficient room for 8 pairs of wheels, jacks, blocking and other necessary equipment, consisting of emergency first aid box, blue flags, lanterns, etc. The primary use for this car is prompt repairs to cars set out along the line, greatly facilitating the handling of wheels and material. We are indebted to J. Jackson, Foreman Repair Tracks, for the foregoing information.

Grand Trunk Station and Office Buildings at Black Rock, N.Y.

The G.T.R. has completed recently the construction of new passenger station and freight office buildings, at Black Rock, a suburb of Buffalo, N.Y., to replace the wooden buildings that had been in service for a number of years, and also to accommodate the increased business at that station. Black Rock is both a customs and immigration port of entry to the United States and in the erection of the new station, quarters were provided for the use of both departments of the government service. The passenger station, customs and immigration offices are combined in one building on the north side of the tracks, and a separate building has been provided, on the opposite side of the tracks, for the agent and his clerical staff. Both buildings are two story brick structures with concrete basements. The passenger station is 118 ft. 7 in. x 35 ft. 1 in., and the freight office building is 117½ ft. x 33 ft. Both have been designed in such a manner as to permit of an additional story being added to them should necessity arise for addi-

the street entrance and connect directly with the general freight offices. A large record room has been provided on the ground floor in the east wing. On the first floor above there is another general freight office 1,443 sq. ft. in area. Accommodation has been provided in the west wing for the Superintendent of Terminals, cashier and their staffs. In the east end a women's rest room and lavatory have been provided. In the basement the men's lavatory, cloak room, furnace room, coal storage and large record room.

The two buildings are precisely of the same construction and finish. The foundation walls are of concrete carried on wooden piles. The basement walls, to the height of the ground floor window sills, are of rock faced Medina sandstone, and the remainder of the exterior walls are of rough texture facing bricks, with sandstone trimmings. The floors in the basement, lavatories, staircases, halls and baggage rooms are of concrete with mastic finish. Tile floors have been laid in the entrance halls and general waiting

Election of Canadian Electric Railway Association's Officials.

After the report of the proceedings of the C. E. R. A. meeting appearing on page 340 had gone to press, the following officers were elected unanimously,—

President, E. P. Coleman, General Manager, Dominion Power & Transmission Co., Ltd., Hamilton, Ont.; Vice President, C. L. Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto; Honorary Secretary-Treasurer, Acton Burrows, Managing Director, Canadian Railway and Marine World, re-elected for the tenth consecutive year.

Executive Committee, The President, the Vice President, the immediate past President, J. D. Fraser, the Honorary Secretary-Treasurer, and the following,—A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont.; H. G. Matthews, General Manager, Quebec Ry., Light, Heat & Power Co., Quebec, Que.; G. Gordon Gale, General Manager, Hull Electric Co., Hull, Que.; A. Gaboury, Superintendent, Montreal Tramways Co., Montreal; J. F. Mackenzie, Purchasing Agent, Winnipeg Electric Ry., Winnipeg.

Passenger Station and Freight Office Buildings, Grand Trunk Railway, Black Rock, N.Y.

tional space in the future, and a reservation has been made for elevators to be installed in each whenever a third story is added.

The ground floor of the passenger station comprises a general waiting room the full width of the building, a women's waiting room connecting thereto, ticket office, entrance hall and staircase, all in the central portion of the building. The customs offices are confined to the west and with a separate entrance from the track frontage and a passageway connecting with the long entrance hall. The ground floor of the east wing has been entirely reserved for the handling of baggage. All of the first floor is assigned to the immigration department, each room communicating directly with one corridor in the axis of the building. In the basement is a men's lavatory, and a large space has been set aside as a record storage room.

There are three entrances to the freight office building on the opposite side of the tracks from the station, two from Parish St. and one from a side street. The entrances from Parish St. lead directly to staircases and entrance halls, each in turn opening into a general freight office having an area of 1,600 sq. feet. The agent's office, the yard master's office, and the room occupied by the car checkers and manifest clerks are located near

rooms. The balance of the floors throughout both buildings are finished in hard maple. The interior walls are plastered throughout and the roofs are of tile.

A passenger platform of paving brick, 310 x 14 ft. wide, has been laid along the track frontage of the station and extending beyond both ends of it. The space between the eastbound and westbound passenger main tracks has been planked in for 475 ft. parallel to the station platform. An umbrella shelter, 15 ft. wide, has been erected over the brick platform. This shelter is of timber, supported by 8 x 8 in. wooden posts, with cast iron bases 3½ ft. high. The roof of the shelter is hipped and of tile, except the portion immediately in front of the building, which is glazed.

Both the station and freight office buildings and the passenger station platforms are lit by electricity and heated by the furnace located in freight offices basement. The heat is carried from the furnace in the office building to the station by a conduit underneath the tracks. The pipes in the conduit are protected by a thick coating of asbestos, enclosed in terracotta lining and covered on the outside with reinforced concrete.

Both buildings were designed and erected under the supervision of H. R. Safford, Chief Engineer, Grand Trunk Ry., Montreal.

Assistant Secretary, A. A. Burrows, Secretary and Business Manager, Canadian Railway and Marine World.

Legislation Committee,—J. W. Crosby, General Manager, Halifax Electric Tramway Co.; H. M. Hopper, General Manager, St. John Ry.; H. G. Matthews, General Manager, Quebec Ry., Light, Heat & Power Co.; J. D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Ry.; Wilford Phillips, General Manager, Winnipeg Electric Ry.; George Kidd, General Manager, British Columbia Electric Ry.

Grain Inspection at Western Points.

The following figures compiled by the Department of Trade and Commerce, show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division for June, and for ten months ended June 30, with a comparison of the number of cars inspected for ten months ended June 30, 1915.

	June	Ten months to June 31 1916	Ten months to June 31, 1915
C.P.R.	13,367	166,079	58,839
C.P.R. Calgary	336	6,405	6,330
C.N.R.	9,282	89,521	37,320
G.N.R. Duluth	120	4,965	1,382
G.T.P.R.	1,967	37,441	14,414
Totals	25,072	304,411	118,285

Canadian Pacific Railway Construction, Betterments, Etc.

Steel Rails.—The company has ordered from Algoma Steel Corporation, 30,000 tons, 85 lb. rails, for 1917 delivery. The company is also said to be in the market for 30,000 tons, 100 lb. steel rails, for this year's delivery. As Canadian mills are unable to supply them, enquiries are said to have been made in the United States.

Atlantic Division.—We are officially advised that to facilitate the handling of winter port traffic a third track is being laid from the storage yard at Bay Shore to the docks at West St. John; that additional sidings are being laid at West St. John to accommodate 350 cars; that 98 switches, 56 and 60 lb., and 7.9 miles of 56 and 60 lb. rails are being replaced with 85 lb. rails and switches, and that in connection with this work a rearrangement of switching leads is being made. At West St. John a 4,000 gall. water tank is to be replaced by a steel tank of 20,000 galls. capacity.

All passing tracks between Brownville Jct. and McAdam Jct. are to be lengthened to 3,000 ft., and an 80 ft. steel girder at mileage 43.1, St. John Subdivision, is being replaced with an 8 ft. concrete arch and fill, which together with the reinforcement of bridge 25.25, St. John Subdivision, will permit of the use of heavier locomotives between McAdam and West St. John.

At Holeb, Me., the company will erect three dwellings for the U. S. customs officers, and at Jackman, Me., an office and detention building for the U. S. immigration officers.

Eastern Division.—We are officially advised that the appropriations provide for the following works to be done during this year:—District 1.—Lay 7.2 miles of 85 lb. rails on Megantic, Sherbrooke and Farnham Subdivisions; install 25,000 shoulder tie plates on Megantic Subdivision; install 15,488 rail anchors, 85 lb., on Megantic, Newport, Sherbrooke and Farnham Subdivisions; tile drain west ends on Megantic, Sherbrooke and Farnham Subdivisions; provide electric train staff systems, Megantic to Glen River, Megantic Subdivisions, and Lennoxville to Sherbrooke and Sherbrooke to Black Forest, on Sherbrooke Subdivision; replace old culverts with concrete pipes in 109 locations in Megantic, Sherbrooke, Newport, Drummondville, and St. Guillaume Subdivisions; replace Howe truss bridge over G.T.R. at Quebec Central Ry. connection, Sherbrooke Subdivision; provide additional yard tracks at Sherbrooke; provide a Y track at Milan; for a subway and road diversion at mileage 31, Newport Subdivision; to replace pile trestles in Notre Dame St. bridge, St. Pie branch, St. Guillaume Subdivision, with 37 ft. Howe deck plate girder; and lay 13.2 miles 85 lb. rails on Newport and Drummondville Subdivisions; install electric power and plant, equipped with motor drive, in coaling plant at Farnham; tile drain wet cuts in Farnham Subdivision.

District 2.—Lay 1.75 miles, 100 lb. rails in Montreal terminals; install 5792 rail anchors, 100 and 85 lb., in Montreal terminals; provide broken stone ballast from Windsor St. Station to Ballantyne St., Montreal terminals; provide passing sidings at St. Luc; change turning machinery at Lachine Canal swing bridge; lay 1.50 miles, 85 lb. rails on St. Luc Branch.

District 3.—Install 8,640 anchors, 85 lbs., Ottawa and Quebec Subdivisions; erect a 5 ft. arch, 6 x 9 ft., Quebec Subdivision; new bridge mileage 26.2 Pile

Subdivision; lay 5.3 miles new 85 lb. rails on Ottawa, Quebec and Laurentian Subdivisions; lay 8.0 miles of 80 lb. rails on St. Gabriel Subdivision; install 60,000 tie plates Quebec and Laurentian Subdivisions; lay 2,650 ft. tile pipes in wet cuts Laurentian Subdivision; build two concrete arches on Maurice Valley Subdivision.

District 4.—Replace pier and abutments, bridge 1.9 Prescott Subdivision, install 2,148 anchors, 85 lb., in Ottawa terminals and Montreal-Ottawa Subdivisions; lay 1 mile 85 lb. rails on Montreal and Ottawa Subdivision; construct southwest Y connection at Hurdman; tile drains for wet cuts, Prescott and Maniwaki Subdivisions; ballast Sussex St. 3.75 miles; and on Prescott Subdivision, 8.75 miles; saw and relay 6.9 miles of 80 lb. rails between Chaudiere Jct. and Kemp-ton diamond.

District 5.—Lay 1.1 miles of single head 100 lbs., and 6.2 miles of 85 lb. rails on Smiths Falls and Chalk River Subdivisions; install 25,000 tie plates on Chalk River Subdivision; install 10,976 rail anchors, Smiths Falls and Chalk River Subdivisions; renew old culverts with concrete in 6 locations on Eganville and Chalk River Subdivisions; rock ballast from mileage 2.6 to 19.00 Smiths Falls Subdivision; lay 4,861 ft. of 4 in., and 6,645 ft. of 6 in. tile in wet cuts at Smiths Falls and Chalk River Subdivisions; install electric alarm bell mileage 82.06, Chesterville, Smiths Falls Subdivision; lay 5 miles of 100 lb. rails and tie plates on westbound track, Smith's Falls Subdivision; additional track and alterations to Smiths Falls yard; ballast 28.5 miles Chalk River Subdivision and 108 single track miles on Smiths Falls Subdivision.

Ontario Division.—We are officially advised that the company is doing practically nothing but maintenance work on this division during this year, outside the building of the line to Camp Borden. At least two-thirds of the buildings between Toronto and Windsor will be repainted and a good deal of painting will be done on other subdivisions—the amount to be done will depend on the labor available—painters are being advertised for all along the division. The company is hauling ballast from Ayr as far west as Windsor, a better quality of gravel being obtainable at Ayr than at Komoka. It is expected that with the use of this gravel the dust nuisance will be abated very considerably if not got rid of altogether. The station at Guelph Jct. is being enlarged, an island platform being built for the Hamilton and Goderich lines traffic and to use in transferring to connecting trains from the main line. Two miles of track between Parkdale and West Toronto are being ballasted with broken stone; ballasting is to be done on the Elora Subdivision, and for a few miles on the St. Mary's Subdivision. Ballasting is nearly completed on 22 miles of the Toronto Subdivision, and on 12 miles of the Trenton Subdivisions.

Saskatchewan Division.—We are officially advised that a contract has been let to W. A. Dutton & Co. Winnipeg, for grading on the 7 mile extension from Vantage to Assiniboia. This extension will connect up the Moose Jaw-Expanse branch now terminating at Vantage, with the line west of Weyburn at Assiniboia. The maximum curvature is 2 degrees. The construction is light prairie work and there are no bridges. The extension will

be completed this season.

The work to be done at Gull Lake, between Swift Current and Medicine Hat, for which tenders for filling 12,500 cubic feet of earth were asked recently is the rebuilding of the dam.

Alberta Division.—We were officially sion from Paliwaki, mileage 75 east from Stirling, to Manyberries, Alta., would be built without delay. Contract for the grading of the additional portion has been awarded to Grant, Smith & Co., Vancouver, B.C. The balance of the work will be carried out by the company's own forces. (July, pg. 285.)

Grain Rates from Saskatchewan to Minnesota.

The Interstate Commerce Commission has issued its judgment in the case of the Spaulding Elevator Co., Warren, Minn., against the C.P.R. and the Minneapolis, St. Paul & Sault Ste. Marie Ry., re alleged overcharge on 2 carloads of oats from Assiniboia, Sask., to Warren, Minn. Following is the judgment:—Complainant is a corporation engaged in the grain business at Warren, Minn. By complaint filed Apr. 19, 1915, it alleges that the rate of 30.3c. per 100 lbs., charged by defendants for the transportation of two carloads of oats from Assiniboia, Sask., to Warren, Minn., was unreasonable and in violation of the long-and-short-haul rule of sec. 4 of the act to the extent that it exceeded a rate of 20c. contemporaneously applicable to Duluth, Minn. The shipments moved over defendants' lines in March and April, 1914, and \$424.80 was collected on 140,200 lbs. of oats, at a rate of 30.3c per 100 lbs. The tariff rate applicable was 29.8c per 100 lbs., composed of a rate of 20c to Duluth and 9.8c back to Warren, so that both shipments were overcharged. Warren is intermediate to Duluth from Assiniboia by the direct route over which the 20c rate to Duluth applied. The maintenance of a higher rate to Warren than to Duluth was not protected by any application of sec. 4. Effective Oct. 1, 1914, after the shipments had moved, the rate to Warren was reduced to 20c per 100 lbs., which rate is still in effect. Both defendants were represented by counsel, introduced no evidence in defence of the rate assailed, and neither one contests the case. We find that the 30.3c rate exceeded the tariff rate applicable and was unlawful; that the 29.8c rate legally applicable was unreasonable to the extent that it exceeded the present rate of 20c per 100 lbs; that complainant made the shipments involved as described and paid charges thereon at the rate found to have been unlawful; that it has been damaged to the extent of the difference between the charges paid and the charges that would have accrued at the rate herein found to have been reasonable; and that it is entitled to reparation from defendants in the sum of \$144.40, with interest from Apr. 10, 1914. The defendants are, therefore, ordered to pay to the complainants by Aug. 1, 1916, \$144.40 with interest thereon at the rate of 6% from Apr. 10, 1914, on account of unreasonable and unlawful charges collected for the transportation of two carloads of oats from Assiniboia, Sask., to Warren, Minn., and as the present rate has been in force for more than one year, no order will be entered for the future.

Electric Railway Department

Montreal & Southern Counties Ry. Extension from St. Cesaire to Granby, Que.

The Montreal & Southern Counties is a suburban and interurban railway, connecting the south shore of the St. Lawrence River with Montreal via the Victoria Jubilee Bridge. From a limited service inaugurated in 1909 between Montreal and St. Lambert, 3½ miles, extension after extension has been added, until a large majority of the municipalities of the south shore have been linked together in this chain of development and brought in such close communication with Montreal through frequent service as to make commuting a pleasure. The inter-

pendent, due to the outbreak of war, and it was not resumed again until May 19, 1915, from which date it was carried on uninterruptedly until its completion Dec. 12, 1915. As fast as the track was laid and ballasted, the overhead construction force followed, setting poles and bonding the rails. The work of electrification was carried on by the railway company's force under the direction of G. J. Meyer, Chief Engineer and General Superintendent.

The type of construction used on this section was similar to that employed on

minimum clearance of 6 ft. from gauge. On curves this clearance is increased by 6 in. Bracket type construction was used wherever possible, and consisted of a 10 ft. T iron bracket on which is mounted a malleable iron pin and porcelain insulator which carries the messenger wire. The messenger wire is allowed to ride free in the recess in the insulator, which permits of free adjustment of line between anchors which are located every half mile. Throughout the yards and on a number of the curves cross span construction is used.

Route Map, Montreal and Southern Counties Railway.

urban arm of this development stretches easterly for 47.5 miles through the counties of Chambly, Rouville and Shefford, the present terminus being Granby, to which place the line has been extended recently from St. Cesaire, 16½ miles, the extension being opened April 30 last. The new line marks a milestone in high speed electric railway development in Canada.

Construction on the new extension was commenced in Oct. 1913, when a contract was let to Ross & McComb to build the

the previously electrified extensions. The bonding consisted of 4/0 concealed type triplex bonds with ¾ in. terminals 10 in. c.c. for compressing into web of rail.

The overhead construction is of the standard catenary type with 7/16 in. Siemens Martin grade stranded galvanized steel messenger cable, from which, at intervals of 15 ft. is supported a 4/0 B & S gauge American standard grooved hard drawn trolley wire. The hangers are of the floating type, specially designed to absorb the shocks, and consist of three

Supplementing the trolley the entire distance is a 816,000 c.m. aluminum feeder. Taps are run from this feeder to the trolley every ¼ mile. The feeder is carried on glass insulators with oak pine, which in turn are carried on 3½ x 4½ x 4 ft. B.C. fir cross arms with 1¼ x ¼ in x 3 ft. galvanized iron braces. On all curves double cross arms are used, and the wooden pins are replaced by malleable iron ones. The feeder taps consist of 2/0 stranded weather proof wire terminating in a feeder ear attach-

Two Pieces of Track Before Ballasting.

concrete piers to carry the steel bridge across the Yamaska River at St. Cesaire. This bridge, which is of a deck girder type, is 240 ft. long, supported on 4 concrete piers, 80 ft. c. to c. The steel work for the bridge was supplied and erected by the Hamilton Bridge Co. In the spring of 1914 a contract was let to Grant, Campbell & Co., for grading and laying of rails. Work was commenced on May 25, 1914, and sufficient force was employed to complete it and place the road in operation by Oct. 15, 1914. On Aug. 5, however, all construction work was sus-

bolt malleable iron Detroit ear, to which is riveted a ¾ in. wide by ½ in. thick strap iron hanger.

Within the town of Granby the construction is cross span with 28 ft. steel poles set in concrete. The poles are built up of heavy tubing 5, 6 and 7 in. diameter. The remainder of the line is constructed with 40 ft. cedar poles with 7 in. top. On tangent the poles are set 150 ft. apart, while on curves the spacing is either 75, 90, or 105 ft., according to the degree of curve.

On tangent track poles are set with a

ed to the trolley, and a 4 bolt aluminum clamp attached to the feeder. A Garton Daniels lightning arrester is installed at each feeder tap.

The telephone dispatching system already in use was extended from St. Cesaire to Granby. The line wires are no. 10 B. & S. gauge hard drawn copper wire carried on side blocks. This line is transposed every third pole in order to counteract the effect of induction. The instruments are the Northern Electric Co.'s selector type.

On the top of the same poles which sup-

port the trolley feeder and telephone, is carried the 25,000 volt transmission line. The type of construction adopted for the transmission line consists of 3 1/4 in x 5 in. x 5 ft. B.C. fir cross arms spaced 5 ft. c.c. and secured to the poles with 5/8 x 14 in. galvanized machine bolts. To the arm is also bolted a 2 1/2 ft. x 2 1/2 in. x 1/4 in. angle cross arm brace. The insulators, which are for 35,000 volt service, are supported

400 k.w. 600 volt, d.c. interpole railway generator and one 6 k.w. direct connected exciter; 3 185 k.v.a. single phase o.i.s.c. 25000/2300 volt transformers; 1 25000 volt 3 phase grounded neutral electrolytic lightning arrester; 1 200 amp. 25000 volt 3 p.s.t. automatic oil switch mounted in separate cells; 2 25000 volt 20-5 amp. oil insulated self-cooled current transformers; 9 300 amp. 25000 volts discon-

necting switches; 1 200 amp. d.p.d.t. 600 volt quick break lighting switch; 1 100 amp. 600 volt s.p. field switch with discharge clips and resistance; 1 4 point receptacle; 1 rheostat; 1 volt meter, 1 ammeter.

From where the a.c. line enters the building no. 1 B & S gauge hard drawn bare copper wire is used for all busses and connections on the 25000 volt side

Stringing Overhead Work.

Trimming Poles.

Steel Tower over Yamaska River Bridge.

on steel pins with porcelain bases; these insulators are placed 4 ft. c.c. On the upper arm is carried one phase and the ground wire, while on the lower arm are the remaining two phases. No. 4 B & S gauge wire is used for transmission and no. 8 B.W.G. galvanized iron wire is used as ground wire. The ground wire is grounded every 1/4 mile.

A substation 40 x 50 x 23 ft. high, was

necting switches; 3 200 amp. 25000 volt choke coils.

On the a.c. switch board is mounted the remote control for 25000 volt oil switch. The auto starting switch for synchronous motor, combination rheostat, i.e., relays volt meter ammeter, field ammeter power factor meter and field discharge switch. The d.c. board consists of two feeder panels and one

and no. 3/0 B & S gauge r.c. wire on the 2300 volt side. All leads from switch board to motor and from switch board to generator are run under ground in clay conduits. The leads themselves are lead covered, each insulated according to its respective service.

At Abbotsford the company erected a station 17 x 46 ft. It is divided into a passenger compartment, freight and ex-

Granby Substation.

Bonding the Rails.

constructed just outside the city limits of Granby. On top of the main building is a pent house 10 x 10 x 12 ft. high, with concrete entrance hoods to admit the high tension line. The building is an all-concrete steel and brick structure. The electrical equipment of this substation is as follows: 1. 2300 volt 63 cycle, 756 r.p.m. self starting synchronous motor on a common shaft and bed plate, with one

generator panel. On each feeder panel is mounted 1-1000 amp. 600 volt s.p.s.t. overhead circuit breaker. 1-1000 amp. 600 volt is s.p.s.t. quick break knife switch one choke coil and one ammeter. On one of the feeder panels is mounted one 800 amp. 600 volt watt. hour meter.

The generator panel is equipped with 1 1000 amp. s.p. circuit breaker with inverse current relay; 2 1000 amp. s.p.s.t.

press compartment and office. At Granby the company purchased a 3 story brick block, 45 x 60 ft., utilizing the main floor and basement for passenger waiting room, express and baggage.

The officers of the company are: E. J. Chamberlin, President; Frank Scott, Vice President and Treasurer; J. E. Dalrymple, Vice President; J. A. Yates, Secretary, W. B. Powell, General Manager.

Some Difficulties of Snow Plough Operation.

A series of questions were addressed recently to the American Electric Railway Association's question box, regarding some difficulties experienced by one of the member companies in dealing with an unusually heavy fall of snow. Replies to the various questions tasked were sent in by W. G. Murrin, General Superintendent, British Columbia Electric Ry., Vancouver, which are summarized as follows: The speed of the plough is an important factor in throwing the snow over the banks that form on the sides of the track. The curvature of the moulding boards varies with the speed. A fairly high speed with a 6 in. fall of snow will require a moulding board which is curved forward at the top until the metal at the edge has assumed a horizontal position. This will result in throwing the snow, and not merely lifting it up to fall back again after the passage of the plough. There is no reason apparent for the truck frames on snow ploughs being above the journals instead of below, or vice versa, the company's standard trucks are the best to use. The motors on the snow plough should have a clearance of 2 ins. over the rail level. The nose and bottom edge of the plough usually extends down within less than 2 ins. of the rail, therefore if the motor is 2 ins. from the rail, the nose of the plough will remove the snow to a sufficient depth to allow the motors to clear. No substitute has been found for rattan on the sweepers. The best course is to find a substitute for the sweepers, viz., ploughs, which do not have rapidly wearing parts such as rattan. Ploughs with flangers and wing boards properly designed and operated promptly after snowfall begins are more reliable and will do far more work than sweepers. In the British Columbia Electric Ry. service, snow ploughs have been attached to pilots on 50 ton locomotives in regular service, and 4 ft. drifts of snow have been successfully removed. These ploughs follow the general lines of the pilot, nose type and have high moulding boards. A flanger between front and rear trucks has been tried. This is, of course, of the shear type, raised and lowered by means of chains up through the floor into the cab, and anchored by means of rods and pins to the underframing. Due to the lack of holding down weight, this flanger would rise and jump to such an extent that it was not a success.

Passenger Shelter at Sunnyside, Toronto.—R. C. Harris, Works Commissioner, Toronto, and a representative from the city's legal department, attended before the Ontario Railway and Municipal Board, to explain why the city had not carried out the Board's order to erect a passenger shelter at Sunnyside, near the point where passengers change from the Toronto Ry. to the Toronto and York Radial Ry. cars. The portion of the line affected by the order is the old Toronto and Mimico line, which was absorbed by the Toronto and York Radial Ry. and since the expiry of the franchise, has continued to be operated by that company under agreement with the city. D. M. McIntyre, K.C., the Chairman of the Board, in giving his opinion of the matter, said that "the onus for the state of affairs, as described, rests upon the City of Toronto alone, and I regret very much that I am unable to go further and order a shelter to be provided, and to which the public is entitled."

Toronto Suburban Railway's Deviation and Connection at Lambton.

The application of the Toronto Suburban Ry. Co., to the Ontario Railway and Municipal Board, for approval of the deviation of its Dundas St. line, at Lambton Mills, York Tp., near Toronto, to a private right of way, according to plans filed, in order to connect the existing line with the extension to Guelph, now under construction, was dealt with by the Board in a judgment delivered June 20, which covered the history of the company from its incorporation in 1894, under the name of the Toronto Suburban St. Ry. Co. Under its charter it acquired the City Suburban Electric Ry. and the Davenport St. Ry. with all assets and franchises, and was empowered to build railways along certain highways in the township. In 1904 the company had built and was operating certain lines, among them being the one covered by the application, along Dundas St., to, or near, Lambton Mills, from the limits of the City of Toronto. The line at Lambton Mills terminates in a loop, partly on the highway and partly on private right of way. In 1904 the company obtained legislation authorizing it to build a railway from Hamilton, with a branch from Weston to Woodbridge, and also from Weston, or Lambton Mills, to Brampton. A section of that act empowered the company to deviate its line from the highway, provided that no obstruction of the highway shall occur by reason of the deviation, and if the rails of such deviation shall not rise above, or sink below, the ground more than one inch, there shall be deemed to be no obstruction. This right to deviate the line from the highway was made subject to the consent of the municipality concerned, or if such consent is refused, or withheld for two months from the date of the application, then the consent of the Railway Committee of the Ontario Legislature must be obtained. This power was subsequently transferred from the Railway Committee to the Ontario Railway and Municipal Board. The plans filed by the company show the track along Dundas St. as it existed in 1904, and the proposed deviation from the highway to its private right of way at Lambton Mills, and also show the extension of the railway westerly along a private right of way, which is now practically completed to Guelph, and which will serve in part as a link to connect the railway in York Tp. with Brampton, as authorized by the act of incorporation. The City of Toronto, as well as York Tp. was represented at the hearing, owing to certain annexations having brought part of the track in question within the city boundaries. After consideration, the Board declared that there was no valid ground upon which it could withhold the approval sought. No language could be plainer than that of the company's act of incorporation, when the construction of certain lines was specifically authorized, and in the exercise of which authority the company has built a line from Lambton Mills to Brampton. It was urged that the power of the railway to extend its line along any highway is conditional on the consent of the municipality being gained, and that no such extension shall be made without that consent. This is met by the provisions of another section of the act which authorize the company to deviate from the highway to a private right of way, and under the act, this deviation at Lambton Mills, is, in the

Board's opinion, expressly authorized. It is also expressly provided that the deviation shall not be made without the consent of the municipality, and in the event of such permission being refused, the matter shall be decided by the Railway Committee of the Legislature, whose powers are now vested in the Ontario Railway and Municipal Board. The City of Toronto objected on the ground that the radial, or interurban cars would be operated over the street surface tracks, which are now within the city limits, and that the intermingling of the company's local and through traffic would unduly interfere with the local service and introduce conditions of danger that should not be tolerated. On this point the Board felt that if the company has under relevant agreements the legal right to operate its radial or interurban cars over its surface lines in the city, the Board has no power to deprive it of that right, and observation of street railway operation in such cities as Buffalo, Detroit and Cleveland, leads to the conclusion that interurban cars may be operated with safety and without material disturbance of the local service, over surface tracks in large cities. The Board's engineer has viewed the plans and the site of the deviation, and reports that the plan may properly be approved by the Board. At the hearing, York Tp. made no objection to the plan and suggested no alteration to it. The Board decided to issue an order approving the plan and ordering the company to make the deviation subject to the condition of sec. 7 of the Act of 1904 as to non obstruction of the highway. No costs were granted to either party, the applicant, the Toronto Suburban Ry., being ordered to pay \$15 for the stamps on the order.

Regina Municipal Ry. Earnings, Etc.

Following are statistics for June, compared with June, 1915, and the total for six months ended June 30:—

	June 1916.	June 1915.	Jan. 1 to June 30, 1916.
Total revenue ..	\$15,368.55	\$12,311.85	\$103,477.99
Expenses ..	14,044.11	13,658.56	98,970.38
Capital charges..	8,963.80	9,137.58	53,782.80
Operating surplus	1,324.44
Operating deficit	1,346.61	4,507.61
Total deficit	7,639.36	10,484.19	49,275.19
Expenses per car mile without power ..	13.65	13.93	16.56
Expenses per car mile with power	17.95	18.09	22.08
Platform wages per car hour...	70.47	74.17	72.77
Passengers carried	353,794	257,994	2,313,569
Expenses less capital charges, percentage . . .	91.38
Expenses with capital charges, percentage . . .	149.71

Freight Distribution by Trackless Trolley Cars. A press report states that the Bradford, Eng., municipality, which owns and operates the tramways and trackless trolley cars in that city, has inaugurated a general freight traffic system throughout the city, by means of trackless trolley cars. Merchandise of any description and weight is conveyed and the cars are equipped with accumulators supplied through the trolleys, so that they may be operated off the regular routes when necessary to make deliveries away from the overhead equipment.

Ottawa Electric Railway Makes New Agreement with its Men.

The Ottawa Electric Ry.'s conductors and motormen having applied to the Minister of Labor for the appointment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, the same was constituted, consisting of G. F. Henderson, K.C., representing the company; A. E. Fripp, K.C., M.P., representing the men; and H. P. Hill, who was chosen by the other two and who acted as chairman.

The Board reported July 10 as follows: "We have succeeded in working out an agreement between the company and the men, which is appended hereto. The outstanding feature of this agreement is a change from a 10 hour to a 9 hour day, coupled with an increase of 3c. an hour in the rate of wages, together with a provision for payment of Sunday rate on legal holidays. The granting of this increase by the company, of course, involves a large expenditure, and it was not without considerable difficulty that we were able to bring about this result. The change to a 9 hour day, with the increase above stated, means that the older men get the shorter day without any loss of income, while the younger men get a substantial increase of income. The company was induced to consider this increase in consideration of the fact that during this particular season their source of labor supply is the identical class of men who are expected to offer their services in the defence of the Empire, and it was therefore eminently desirable that nothing should occur that would tend to strain relations between the company and its men. We have reason to believe that the men will now appreciate the fact that the company has acted in such a way as to justify the continuance of the conspicuously harmonious relationship between this company and its men, of which the men have been in the past perhaps even more proud than the officers of the company."

Following is a comparison of the old and new rates per hour:

	Old	New
1st year	23c	26c
2nd year	24c	27c
3rd year and afterwards	27c	30c
Sundays extra	2c	4c
Legal holidays extra	4c

In their application for a board of conciliation, etc., the conductors and motormen asked for the following pay per hour: Weekday work performed between 6 a.m. and 12 midnight 32c.; weekday work performed between 12 midnight and 6 a.m., 37½c.; Sunday work, 35c. The shop and shedmen asked for pay ranging from 25c to 30c an hour.

Following is a summary of the agreement: The superintendent will receive the men's "grievance committee," at any reasonable time to discuss matters arising between the men and the company.

For motormen and conductors, all runs shall be divided into regular and relief runs, and shall conform as nearly as possible to a 9 hour day. The superintendent will post in the men's waiting room a list of employes in order of seniority, with a schedule of runs. Motormen and conductors shall then have the right, subject to the Superintendent's satisfaction, to choose such runs as they prefer, the senior men to have first choice and so from time to time until all have chosen. Any man failing to make his choice within a time satisfactory to the Superintendent shall forfeit his right to make it and may be allocated to such route as the Superintendent may think proper.

Employees who are members of any committee of the employes or who are officers of any association of the employes, or delegates to conventions of street railway men shall be entitled to leave of absence for the purpose of attending conventions or of doing such committee work or other work as may be necessary, without losing seniority.

Clothing for conductors and motormen shall consist as follows: Summer—Full suit, coat, waistcoat, and trousers. Winter—Trousers every year, overcoat every second year. The company will pay full cost of clothing for all men in service over one year, and half the cost of those in their service first year, uniforms to be supplied not later than May 1 and Oct. 15 in each year. After any article of clothing has been in the possession of a conductor or motorman for three months, it shall become his absolute property. Uniform caps and badges will be supplied by the company without charge.

An employe violating the company's rules shall be warned, when off duty, by the Superintendent, against a recurrence of the same offence, and in the event of the employe being suspended, his case shall be dealt with by the Superintendent, save that any employe suspended or discharged shall have the right to appeal to the President in person, or through the grievance committee, and any employe suspended or discharged and who, upon investigation, is found not guilty of sufficient cause to warrant such suspension or discharge, shall be reinstated to his former position and be paid in full for all lost time.

Cars shall be sent out each morning and night to convey employes to and from their work, the cars to be run on Somerset, Bank, Hull, St. Patrick, Sussex and Gladstone lines. The company shall, where practicable and subject to its regulations, provide seats for motormen and conductors on all cars. All cars shall be equipped each morning, before taken out, with sand, switch bars, brooms, dusters, or any other necessary articles, and all cars, cushions and windows shall be cleaned and in proper condition to go upon the street each morning, the equipping and cleaning of cars to be done by shed men employed for that purpose. Employes shall be given free transportation at all times and on all the company's lines.

The company will not call on any conductor or motorman to perform extra work in excess of his regular schedule day's work of 9 hours except in cases of necessity. Men will not be expected to work beyond a full day's work unless they are agreeable to do so. Motormen and conductors who consent to run extras or trippers before or after day's work shall be paid double time for same. All spare men who show up at the shed for work at 6 a.m. or 6 p.m. and who fail to procure work shall be allowed one hour for so turning up.

Any shop or shed man who works upon a Sunday and who gives at least one day's notice of his desire to be allowed off for one day during that week, shall be so allowed, if practicable, in the Superintendent's opinion. Conductors and motormen required to work on New Year's Day, May 24th, Dominion Day, Christmas Day, Civic Holiday, Thanksgiving Day, or Labor Day, will be paid at Sunday rate.

The company will supply conductors with tickets and change to the extent

of \$35. Students practising as conductors will be required to furnish their own change. The company will furnish a bulletin board in the conductors' and motormen's waiting room upon which employes are to be permitted to post notices of meetings of employes or of any other matters affecting their welfare.

Wages for conductors and motormen shall be as follows: 1st year's services, 26c an hour for week days; 2nd year's service, 27c; 3rd year's services and upwards, 30c. In addition to the foregoing rates, 4c an hour extra to be paid for Sunday work.

Nine hours shall constitute a day's work for all shop and shed men, and the schedule shall be so arranged as to allow one hour off for dinner. No shop or shed men will be required to work more than the regular day's work of 9 hours except in case of necessity. The present shop rules will not be amended except after conference with the grievance committee. Shop and shed men working on Sundays will receive 4c an hour in addition to their regular rate. No man shall work out of his regular turn unless at the request of a representative of the company, and if he works on Sunday out of his regular turn, he shall be paid time and a half. Shop and shed men will be paid Sunday rate of 4c an hour extra for work on all legal holidays. All shop and shed men will receive an increase of 3c an hour in excess of the wages which they are receiving at the date of this agreement. Any shop or shed men called upon to work for more than 9 hours in any day shall be paid at the rate of time and a half for such excess service, except in the event of his being required to work all night when he shall be paid double time from 6 p.m. to 6 a.m.

The company has no objection to any employe being a member of Division 279 Amalgamated Association of Street and Electric Railway Employes of America, and will not discriminate against any employe by reason of his being a member of that organization.

Sunday hours of conductors and motormen are to remain as they are at present. The pits in the sheds shall be equipped with board platforms. The schedule of running times shall be so rearranged as to provide for a lay over of 2 minutes at the end of each run.

All conductors and motormen shall be entitled to not more than 3 months leave of absence in any one year without losing seniority, provided that no conductor or motorman shall receive leave of absence unless his reason for applying for such leave is satisfactory to the Superintendent and is for a time which is satisfactory to the Superintendent, and that the number applying for leave of absence shall not at any time, in the Superintendent's opinion interfere with the practical working of the system.

The paying of the men shall be commenced at 2 p.m. instead of at 4 p.m. as heretofore.

The agreement shall continue in force and be binding on the respective parties until June 30, 1918, and so from year to year after unless and until either party desires a change in it, in which case such party shall notify the other party of the desired change at least 30 days prior to the ending of any year. A notice given to the Minister of Labor under the provisions of The Industrial Act, 1907, and amendments thereto, shall be treated as a notice under this section.

Lethbridge Municipal Railway Operating Results.

The following information is taken from the Commissioners' and Auditors' reports of the City of Lethbridge, Alta., for the calendar year, 1915:

	1914	1915
Expenditure	\$83,255.89	\$71,582.41
Revenue	46,053.56	41,740.51
Deficit	\$37,202.33	\$29,841.90
Gross receipts	\$45,333.00	\$41,020.51
Operating expenses	48,810.00	38,199.01
Operating expenses percentage of earnings, per cent.	108	93.12
Net earnings (exclusive of interest, sinking fund, insurance and taxes)		\$2,821.50
Net loss (exclusive of interest, sinking fund, insurance and taxes)	\$3,477.00	
Passengers carried	1,054,848	844,307
Average daily receipts	\$124.20	\$112.38
Transfers	184,481	49,938
OPERATION AND MAINTENANCE CHARGES.		
Car service	\$11,277.90	
Employees' insurance	144.21	
Electric power	14,864.80	
Track cleaning	1,516.94	
Car house expense	572.79	
Car barn shops	33.06	
Employees' uniforms	340.21	
Sundries64	
		\$28,750.55
Cars	\$3,307.18	
Motors	1,420.84	
Brakes	531.30	
Tracks	1,080.65	
Overhead	220.11	
Buildings	14.05	
Miscellaneous	106.09	
Tools	14.83

Passengers per car mile	2.95c	2.87c
Average fare per passenger	4.22c	4.77c

The auditors say in their report:—"The result of the operation of the street railway for the year is a net deficit revenue of \$29,841.90, which has been provided for as in recent years, by taxation. In spite of a diminished revenue the result is a considerable improvement over that returned in 1914. This is largely attributable to reduced operation charges resulting from the change to the one-man system of cars put into effect in the latter part of that year. It was found necessary during the year, owing to the increased cost of electrical power, to increase the charges to this department for that service from 2 to 2½c per k.w.h., which has meant an additional charge for power amounting to \$4,054.00."

The Saskatoon, Sask., City Council has approved its finance committee's recommendation to grant an increase of pay to new hands on the Municipal Ry., from 26 to 27c. an hour. The men asked for an all round return to the old schedule, but the committee decided that the rate paid for all hands, save beginners, compares favorably with that paid in the other prairie cities.

Toronto Railway Company's Rights on North Yonge Street.

As stated in Canadian Railway and Marine World for July the Judicial Committee of the Privy Council on June 23 dismissed the City of Toronto's appeal against the Ontario Railway and Municipal Board's order authorizing the Toronto Ry. to extend its tracks on Yonge St. from just south of the C.P.R. crossing at North Toronto station to Farnham Ave., so as to make close connection with the Toronto and York Radial Ry.'s Metropolitan Division. The judgment which was given out June 26 is summarized as follows:—

Their Lordships remark that the real substance of the dispute depends upon the construction of the agreement of Sept. 1891, between the corporation and the predecessors of the respondents, which granted powers creating street railways. On June 25, 1915, the rights of the Metropolitan St. Ry. ceased over that portion of Yonge St. brought within the city boundary in 1887. Respondents accordingly claimed, in virtue of their agreement, that they were then entitled for the residue of the term to use this portion of the street. Appellants deny that the agreement conferred any such right, asserting that at the date of the agreement the corporation had no power legally to grant any franchise over this portion of Yonge St., consequently the only rights conferred in respect of this area were those which would have arisen if the grant to the Metropolitan Ry. made by York County, had for any reason been found to have been invalid and void.

Their Lordships are quite unable to take this view. No question whatever existed and no doubts had arisen concerning the rights possessed by the Metropolitan. At the date of the agreement the municipal authorities had full power to deal with the franchise of these roads in such a manner as they thought would best serve the interests of the inhabitants. The grant, therefore, was to run street railways in the city for a total of 30 years, with absolute exception in respect of the Island, and a limited exception in respect of those parts of Yonge and Queen Sts. where exclusive rights had been granted by the County of York. The only color of explanation that can be given by the appellants of the distinct grant on the part of the city over the excepted portion of the street is that to which reference has already been made, namely, that the grant to the Metropolitan might be declared to be void, or to have ended before Sept., 1891, a contingency which nobody contemplated, and which there was no reason or justification to apprehend.

The only meaning, in their Lordships' opinion, which the agreement is capable of bearing is that the grant it contained, which was made for good consideration, was a grant which would take effect whenever such antecedent's rights were, for any reason, to cease. It has been suggested in argument that such grant would be beyond the powers of the corporation, as creating a reversionary interest in the franchise of the roads. No authority whatever was produced to aid this contention. Their Lordships are unaware of any principle that could be invoked in its support. It is also said that such power is open to abuse, as, doubtless, are all powers enjoyed by municipal authorities, but it would be a wrong and dangerous method of determining the true limits of such powers to consider the

mischief their improper exercise might produce.

Their Lordships consider that the agreement itself does not, when once the facts are understood, present any real difficulty. It is the manner in which these rights have been confirmed by the statute which gives rise to the only question of uncertainty. The statute, then, in their Lordships' opinion, merely expresses in clumsy and obscure language exactly the same conditions as those expressed in the original agreement. The right and privilege, if any, over the excepted portions of Queen St. which the city at the time and execution of the agreement had power to grant, were rights and privileges, to commence when the existing franchise ended. It is quite true that if that franchise ran its full length, apart from the act of Parliament, there would have been no right or privilege which the corporation could grant at all, but the statute must be read in the light of fact. That agreement was thereby validated and the right and privilege which the corporation had power to grant at the date of agreement must be construed as meaning the right and privileges which the corporation had the power to grant, assuming that the agreement itself was legalized.

The appellants urged strongly that this gave no effect to the words "if any," and that due effect can only be given to these by making the assumption that in certain circumstances no such rights could be enjoyed by the corporation, and this assumption can, they urge, only be satisfied by regarding the grant as one to take effect if existing grants were void, but if assumptions are to be made for which there is no warranty of facts, it would be just as reasonable to assume that the period of existing grants might cover, or be extended so as to cover, the whole period of 30 years. In that case the words "if any," would have just as sensible a meaning as on the other hypothesis. In truth, the words are often needlessly used by way of caution, and it would be unreasonable to give them such weight as to destroy the obvious meaning of the statute or document in which they are contained.

The view expressed by their Lordships was taken by the Ontario Railway and Municipal Board, and in the result by the Supreme Court, but their Lordships think the appellants were right in urging that the judgment of the Supreme Court did not depend upon any independent investigation of the matter, but that they regarded themselves as bound by the judgment of this board in a dispute which related to rights over the portion of Queen St. where a similar question arose in the case of Toronto Ry. v. Corporation of Toronto. In forming this view, their Lordships think the Supreme Court was in error. The judgment referred to did not proceed upon this basis, but upon a ground entirely independent, whether the grant were made subject to rights over Queen St. or no. Throughout this judgment, reference only should have been made to Yonge St. A question of principle which governs one governs others, and there is no need for separate consideration of a second street.

The work of preparing the track allowance on the length of roadway involved is being carried out by the City Works Department, and when this is completed the Toronto Ry. will lay the tracks.

Calgary Municipal Railway's Future.

The last report of the Controller shows that the deficit from the operation of the Calgary Municipal Ry. continues to pile up. In a statement to the press on July 11, Commissioner Graves is reported to have said: "There is too much false optimism. We must exercise sound business judgment. I am an optimist so far as the future of the city or of the country is concerned, yet I am sure we need to exercise the greatest caution and economy for the next four or five years. The people of Calgary are no different from the people of other cities. If they find their street railway system running \$100,000 or more behind every year they are going to protest and grow dissatisfied. While I am connected with the Calgary street railway I do not intend to have it taken over by a private corporation because it has not proved a success by civic administration. A private corporation would make a street railway pay, for it would cut off the dead lines and operate only those that warranted. It may be possible that we will cut off the dead lines in Calgary before the year is out, and if this is not sufficient to protect against a deficit we may increase the fares, the same as was done in Edmonton. But I do not intend that this shall be undertaken when it is too late. When the soldiers go away on Oct. 1, I am sure there will be a great falling off in revenue to the street railway. Then is not the time to act along lines of drastic economy. It is good business to begin economy now and lay by what store we can for the lean seasons. It might be that I am taking an unpopular stand, but it is the stand I intend to stay by if I am expected to administer the street railway department with business judgment. I am not going to allow capitalists or private corporations to take this public utility because of the protests of people who do not thoroughly realize the state of affairs."

Practicability of One-Man Cars.

D. R. Locher, Vice President and General Manager, Corpus Christi Ry. & Light Co., Corpus Christi, Texas, says:—"Experience in the cost of operating one-man cars has been interesting. Five cars were formerly operated, each equipped with two 35 h.p. motors. These cars made 737 car miles daily and used an average of 1,336 k.w.h. of current. Ten cars are now being operated, which make 1,365 car miles a day and use an average of 1,708 k.w.h. of current daily. Eight of these cars are equipped with 17½ h.p. motors and 2 of them with 35 h.p. motors, and in addition a work car was in use on construction work. However, charging all current to the passenger cars, we were able to operate 84% more car mileage with only 27% more power.

"The total result of the three months that these cars with small motors have been operated has been to increase the car mileage 84%, to decrease per car mile earnings 15%, and decrease the operating expense 37% per car mile. The car mileage has not been increased 100%, because 1,600 feet of track on one line has been torn up for the past six months. This fact, together with the increased wages paid the car men, the extra power required and the wages of one extra car cleaner, is the reason that the expenses per car mile have not decreased 50%. The cost of lubrication at journal boxes for

the five cars which were in service for Jan., Feb., and Mar., 1915, was \$45.08. The cost for the same months in 1916, but running twice as many cars and 84% more mileage, was only \$9.31. However, most of this is due to a different method of lubrication adopted on the new cars, and not to any virtue of the new one-man cars."

Preparation for Hydro Electric Railway Construction in Ontario.

T. J. Hannigan, Secretary, Hydro Electric Railway Association of Ontario, had an interview with the Premier and some other members of the Ontario Government recently, in reference to going on with the work in connection with the construction of hydro electric railways. No official statement regarding the interview has been issued, Mr. Hannigan has not responded to a request for one, and his remarks in regard to the matter have been reported in various ways. One report credits him with saying as follows: "The legislation in regard to hydro radials has been criticized on the score that it prevents us from going ahead with any work during the war. That is not the case. I have the assurance of Mr. Hearst that subject to the approval of the Lieutenant Governor in Council—which is, of course, required for all our enterprises—we can go ahead with preliminary work. That means we can complete our final surveys and plans, take options on land for right of way or purchase lands where it can be done to advantage. The Prime Minister pointed out to me that the municipalities would not want to go ahead with actual construction, but that there was nothing in the act to prevent us getting ready."

Six Day Week for Electric Railway Employees.

At the British Columbia Legislature's last session the following section was added to the British Columbia Railway Act:

"186A. (1) The Lieutenant Governor in Council may make regulations limiting the number of days in a week during which employes or any class of employes of a street railway company may be required or permitted to work.

"(2) The power conferred by the next preceding subsection may be exercised notwithstanding the provisions of any agreement respecting hours of labor between a municipal corporation and a street railway company or a street railway company and its employes.

"(3) Every street railway company contravening or committing a breach of any provision of the regulations made under the authority of subsection (1) shall be liable, upon summary conviction, to the penalty provided in section 287."

It is not expected that any regulations will be made by the Government, for the present at least, as an arrangement has been made by the company with its employes that renders Government regulations unnecessary. The company has drawn up new running schedules, which provide for motormen and conductors having one day off work in every eight days, but the company may suspend this rule on holidays, or other occasions when exceptional traffic prevails, requiring the services of all or part of the men who might be due to take a holiday on such day. The company's car barn men and other employes already work only a 5½ or 6 day week.

Jitney Traffic Notes.

Winnipeg city authorities are taking proceedings against every person who is operating a jitney without a license. A large number have been fined during the past month.

According to a statement made by an officer of the Transcona, Man., Town Council, more than \$4,000 a month is paid as fares to the railway companies and to jitney owners for carrying workmen between Winnipeg and Transcona.

A Toronto observer on a recent afternoon walked the entire length of Yonge St., from the C.P.R. North Toronto Station to Front St., during the time when the street was crowded with people, and the street cars well filled with passengers, and saw only two jitney cars in operation.

G. L. Warren, Secretary, Victoria, B.C., Jitney Association, is reported to have said June 29: "The motor traffic bylaw passed by the Esquimalt Council, has absolutely killed the jitney business in that district and there is no possibility of it being revived." The bylaw calls for the filing of a \$5,000 bond for every car used.

The Winnipeg Jitney Owners' and Drivers' Protective Association at a recent meeting discussed what were described as "the absurd bylaws framed to handicap the jitney men." A committee was appointed to engage legal aid to protect members' interests, and a deputation was appointed to wait on the city council to ask for the repeal of sections of the bylaws affecting jitney traffic which were claimed to be "oppressive and useless so far as safeguarding the interests of the travelling public are concerned." The association has over 100 members.

By Mr. Justice Gregory's decision in a British Columbia court the Vancouver City Council's resolution, by which the city license inspector was instructed to accept from jitney owners only bonds of insurance or casualty companies which have Dominion licenses, was quashed. The judge held that the resolution was passed upon an erroneous statement of the law of deposit required; and that the Legislature never intended that the council could create a monopoly or arbitrarily exclude from the position of bondsmen any person or class. The resolution had the effect of excluding one company from becoming bondsmen for the jitney owners, while the evidence showed that bonds of another company which had not a charter right to issue such bonds, were accepted.

Track Auto vs. Jitney.—The jitney of Santa Clara County, Cal., will suffer a hard blow if F. W. Chapin, General Manager, Peninsular Ry. of San Jose, puts into service his invention of an automobile on steel wheels which can be run on the tracks of the electric railway at a cost much less than that of a street car. A trial trip was made over the streets of San Jose and over the mountain route and proved highly successful. Sixteen miles on a grade were operated and only a pint and a half of gasoline and a pint of oil were used and it is thought that the total operating cost will be half of what is required to operate a street car the same distance. It is planned to install these cars which will carry from 15 to 20 passengers; no poles or trolley wires will be required, just the track, as the regular street car wheels are mounted on the automobile.

Electric Railway Projects, Construction, Betterments, Etc.

The Lake Erie and Northern Ry., pending the completion of and electrification of the line into Port Dover, Ont., has been running a steam service between Simcoe and Port Dover, to take care of the holiday traffic. On July 22 the company commenced running through electric cars from Galt to Port Dover, giving a 2 hourly service. At present the cars run only to Main St., Port Dover, but it is said the line will be complete to the lakeside in a few weeks.

In connection with the opening of the line, the development of the lake carrying trade at Port Dover is under consideration. A deputation representing the company, and residents of the district, waited on the Minister of Public Works at Ottawa, July 4, and urged the construction of piers and the doing of certain dredging at the harbor. The plans prepared some time ago for the port showed works estimated to cost \$250,000, for the commencement of which a vote of \$50,000 is available. Surveys are reported to have been made to do some temporary work the nature of which was not stated. It is said that the L. E. & N. Ry. proposes, if the necessary facilities are provided, to operate a ferry steamer between Port Dover and some U. S. port.

London & Port Stanley Ry.—The new station in London, Ont., situated just south of the G.T.R. station was opened June 29. A new ticket office has been erected, and a shelter, capable of accommodating a large number at the station platform has also been provided. The right of way of the L. & P. S. on the property adjoining the G.T.R. is protected by a long ornamental picket fence, passengers thus being afforded protection from incautious trips over the steam line tracks. Tickets for the L. & P. S. are also to be sold through the G.T.R. station ticket office and L. & P. S. passengers are entitled to the accommodation afforded at the G.T.R.. The passage way between the station and the electric line and that of the steam road is guarded by a gate, operated by the signal man in the tower at Richmond St. Another entrance to the city station is provided at Richmond St., immediately south of the G.T.R.

After the opening of the station a special train carried Sir Adam Beck and other members of the London Railway Commission, members of the city council and others to Port Stanley where the rearranged park and new lighting system were declared available for the public by Lady Beck. The Commissioners on July 11 decided to erect a band stand in the park, and a boathouse on the beach at Port Stanley. (July, pg. 295.)

Moncton Tramway, Electricity & Gas Co.—The hitch between the company and Moncton, N.B., city council, with respect to the paving of Main St., was settled at a meeting of the Board of Works, July 7, and the work will be gone on with at once. (July, pg. 295.)

The Montreal & Southern Counties Ry. is going to erect a car barn at Granby, Que.

The car barn and substation which the company is building at Granby, Que., will have a total length of 230 ft., and a maximum width of 62 ft. It will be of concrete, steel and brick construction, with storage capacity for 6 cars. One of the two tracks in the car barn section will be provided with a pit so that all necessary repair work can be carried on. The only

part of the structure which is completed is the substation which is approximately 40 ft. square. Adjoining this will be provided an office and locker room to complete the full width of 62 ft. Adjoining the car barn will be a boiler room and storage for coal. It is expected to start construction on the remainder of the building early in August, and to have it completed before winter.

The Montreal Harbor Commissioners have, we are officially advised, decided to postpone for the present the carrying out of the plans for the electrification of the harbor railway lines, on the ground that it can be held over for some time without any inconvenience being caused.

Port Arthur Electric Ry.—It is reported that considerable repair work has been completed on the North Belt line, Port Arthur, Ont. (May, pg. 200).

Quebec Ry., Light & Power Co.—A new agreement between the city and the company was approved of at a special meeting of the city council committee June 28. The matters affecting the electric car service settled by the agreement, provided for:—The granting of transfer privileges on the Sillery line as far as the city limits at Levis Ave.; to extend the car lines on St. Valier St. to St. Charles Cemetery by Dec. 31, and the connecting line along a route set out on an accompanying plan to Levis Ave. by Sept., 1918; to extend the line in Limoliou Ward on 3rd Ave., by Beauport Road to the city limits by Dec. 31, 1917; to extend other city lines by Dec. 31, 1916; to build a line on 8th Ave. to connect the present line with Beauport Road, and a line in 1st Ave. from Lamontagne Ave. to 4th St. by Dec. 31, 1917; the agreement provides a penalty of \$25 a day for default as to these matters; the total penalty not to exceed \$10,000. Another section provides that subject to the permission of the Railways Department, the company will extend its line on Champlain St.

These questions were also before the Quebec Public Utilities Commission, and the Board of Railway Commissioners, a joint session being held June 26. After hearing evidence it was decided to wait for the result of the negotiations between the city and the company before making any orders.

We are officially advised that the following new extensions are to be built:—St. Malo Ward, on St. Valier St. (C.P.R. crossing) to the west end of the St. Charles Cemetery, about half a mile. Limoliou Ward, on 3rd Ave. from the intersection of 6th St. with 3rd Ave., up to 16th St., passing through 16th St. up to 4th Ave., going east, and through 4th Ave. to the Abattoir Co.'s buildings; also on 18th St. from 3rd Ave to 1st Ave., to connect at this point with the existing line upon Lamontagne Ave. The total length of these extensions is one mile. (July, pg. 295.)

Saskatoon Municipal Ry.—A press report states that the council proposes to lay about 1,200 ft. of new double track line, in the city, at an estimated cost of \$8,000. This probably refers to the laying of the tracks across the new traffic bridge being built by the province on 25th St. Respecting this work a local paper said recently: "Before the paving of the bridge can be commenced it will be necessary for the city to carry out the work of laying the metals for the street railway across the bridge and also the standards

for carrying the lines for light and power. For this work the city is purchasing the metal from the City of Regina, otherwise some considerable delay would be caused as it would not be possible to obtain the steel from the manufacturers before September. It is estimated that the cost of laying the street railway across the bridge will be about \$9,000. Financial conditions will prevent the city from making the connection with the Second Ave. and University lines for some time. The estimated cost of this work is about \$16,000. Provision has been made underneath the roadway of the bridge for the carrying across of the sewer and water mains, but this, for similar reasons, will have to be delayed for some time." (Sept. 1915, pg. 359.)

The Sarnia St. Ry. Co. signed an agreement, July 7, to take power for the operation of its railway from the Hydro Electric Power Commission. The company will use 500 h.p., so as to have sufficient power for the proposed extensions of its lines to the southern part of the city. (Jan., pg. 30.)

Toronto Civic Ry.—The construction of the new eastern entrance to the Exhibition grounds is being rapidly gone on with and Works Commissioner Harris stated recently that the work would be completed by Aug. 26. The grading to the new bridge across the railway tracks at Bathurst St., is well forward, and gangs of men are at work on Strachan Ave., and at other points. Grading for the right of way for the street railway has been completed as far west as Strachan Ave., and some portions of it have already been ballasted. The joining of the steel bridge which is being erected by the G.T.R., and the wooden structure along the ramps at Bathurst St. require a difficult piece of trestle work, and the concrete footing for this has already gone in. The grading for the approach to the bridge at the Bathurst St. end requires a large amount of filling, the material for which has been secured from the excavations for the footings. The grading operations extend 350 ft. north on Bathurst Street and a considerable distance east on Front St. At the exhibition grounds, where a turning loop is to be provided, the old roller coaster is being taken down to make way for the loading and unloading stations. The coaster will be built on the present site of the chutes. A large portion of the grading is being done by the G.T.R. The street railway line will be operated by the Toronto Ry. (July, pg. 295.)

Transcona, Man.—The proposal to build a line between Transcona and Winnipeg is being revived. It was reported July 6, that New York people were in negotiation with Transcona Town Council. The suggestion is that \$100,000 be expended on construction during this year. The town officers estimate that \$4,000 a month is expended on jitneys and work trains between Transcona and Winnipeg, a large proportion of which would be expended on electric railway fares, provided there was a line. An engineer has gone over the route for a line from the centre of the town to a junction with the Winnipeg Electric Ry. lines. The length of line proposed to be built is 3.25 miles. (Oct., 1915, pg. 404.)

Winnipeg Electric Ry.—The Winnipeg City Council has approved of the laying of a temporary line on Talbot St.

The company is opposing the city coun-

cil's proposal for laying of a belt line from Selkirk Ave. to Logan Ave., via the McPhillip's St. subway, and also a line on McGregor St., between Selkirk and Dufferin St., on the ground that the traffic would be too light to justify the capital outlay. (July, pg. 295.)

Electric Railway Finance, Meetings, Etc.

Levis County Ry.—A copy of a trust deed in favor of the National Trust Co., dated June 12, was filed with the Provincial Secretary, Quebec, July 10.

London & Port Stanley Ry.—The first year's operation of the L. & P. S. Ry. as an electric line was completed June 30. Speaking at the opening of the new station at Port Stanley, June 30, Sir Adam Beck, Chairman London Railway Commission, said that operation of the line had been successful; the revenues being sufficient to meet operating expenses and fixed charges, and to leave a surplus. The figures for the year's operation have not yet been made public, and no reference was made to any estimated profit at the meeting of the Commission held July 11.

Mainly About Electric Railway People.

Mrs. R. R. Knox, wife of the Traffic Superintendent, Winnipeg Electric Ry., died on July 10.

E. J. Burdick, heretofore Superintendent of Power and Overhead, Detroit United Ry., Detroit, Mich., has been appointed Assistant Manager.

James D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Ry., spent a portion of July at the Gatineau Fish & Game Club, Gracefield, Que.

A. S. Davis has been appointed City Passenger Agent, Niagara, St. Catharines, and Toronto Ry., for the summer season, at Niagara Falls, N.Y.

Lt. Col. Fearman, Chief Accountant, Dominion Power & Transmission Co., is in command of the 120th Battalion (Hamilton) which was ordered to remove eastward from Niagara Camp recently.

C. J. Yorath, City Commissioner of Saskatoon, Sask., spoke on civic government, at the Saskatchewan Union of Municipalities' annual conference at Swift Current, June 30.

W. K. George, Toronto, President, London & Lake Erie Ry. & Transportation Co., and one of the Dominion Government directors of the Canadian Northern Ry., left Toronto in July for England for a short visit.

Martin N. Todd,
General Manager, Lake Erie & Northern Railway.

Lieutenant-Colonel G. C. Royce,
General Manager, Toronto Suburban Railway.

D. M. McIntyre, K.C., and A Ingram, of the Ontario Railway and Municipal Board, visited Detroit, Mich., during July, to study the arrangements for dealing with interurban cars, as well as city cars, on the streets.

G. H. Rapsey, who is one of the Port Arthur, Ont., Public Utility Commissioners and who has been acting as Secretary

of the commission since V. Shipway resigned, is to devote a larger portion of his time to the work and will be given a salary.

W. H. Radford, son of W. J. Radford, Assistant Manager, Toronto Suburban Railway, who was a corporal in the London Rifle Brigade, was killed in action at the front July 1, while helping a wounded soldier. Before enlisting he was in the oil department of Pearson & Co., contractors, etc., London, Eng.

Mrs. N. C. Pilcher, widow of the late Major Pilcher, of the 5th Mounted Rifles, and General Manager, Sherbrooke Ry. & Power Co., who fell at Ypres, and her little son have returned from England, where they were to have met Major Pilcher when he went to England on furlough. She is now at her home in Sherbrooke, Que. She received the news of her husband's death a few hours before the time she expected to meet him.

Lt. Col. Geo. Cooper Royce, Secretary-Treasurer and General Manager, Toronto Suburban Ry., who has been in the company's service since Oct. 1, 1901, has been a commissioned officer in the Queen's Own Rifles, Toronto, since Aug. 21, 1893. He was appointed a lieutenant colonel Sept. 27, 1915, and was officer commanding the alien prisoners internment camp at Kapuskasing, Ont., from Jan. 12 to July 20, 1916, when he left to command the additional battalion which is being raised in connection with the Queen's Own Rifles for overseas service.

John W. Moyes, who has been "absent" from Canada for many months, owing it is alleged, to his connection with the Ontario West Shore Ry. fiasco, applied to the Toronto City Council recently for several hundred dollars balance claimed to be due for services rendered in valuing the Toronto Ry. Co.'s property when the city was endeavoring to buy it. Subsequently an application was made at Osgoode Hall on behalf of M. G. Cameron, Goderich, Ont., a judgment creditor for \$126,000, due to shareholders in O.W.S.R., for an order that any money due to Moyes be paid into court, and this was granted.

Martin N. Todd, General Manager, Lake Erie & Northern Ry., which is now practically completed from Galt to Port Dover, Ont., was educated at Dr. Tassie's school, Galt, Ont., and in 1875 entered railway service with the New York Central Rd., and served in the freight department for two years, after which he was appointed town ticket agent for the Great Western Ry., and agent, American Express Co., Galt, Ont. On the absorption of the G.W.R. by the Grand Trunk Ry., he was appointed town ticket agent, G.T.R., and subsequently joined his father in the milling business, and assisted him during the promotion and construction of the Galt, Preston & Hespeler St. Ry., and after his father's death in 1899 he was appointed President and General Manager. In 1898 he was also appointed General Manager, Lake Erie & Northern Ry.

The Montreal Tramways Co's Franchise.

Mr. Justice McLennan on June 28, ordered the issue of a permanent injunction against the City of Montreal, forbidding it to consider proposals for the renewal of franchises submitted in the past, and ordering the city to pay the cost. This finally settles the question which has been before the courts during the past 12 months, and puts the city in a position to

begin negotiations with the company over again.

Following that decision a letter from E. A. Robert, President, Montreal Tramways Co., was submitted to the Montreal Board of Control, July 14. A press dispatch says this letter stated that in return for a 30 year franchise, and the right to carry mails and freight, the company would surrender all existing franchises; give a uniform fare of 5c, except during certain hours when workmen's tickets will be available; and pay the city \$200,000 a year for 5 years, \$300,000 a year for the next 5 years, \$400,000 a

year for the third 5 years, and \$500,000 a year for the rest of the term. Reports of the discussion in the Board of Control say that the Mayor stated that the suggested agreement was not acceptable without modifications. The matters to which objections are taken include the absence of mention of transfers, and of the sale of 6 tickets for 25c; the amounts to be paid the city by the company; and the fact that a 30 year franchise is asked for. The Board decided to make a study of the proposed agreement, and to have reports from the city officers before discussing the matter in detail.

Canadian Electric Railway Association's Annual Meeting.

The annual meeting held at the Royal Canadian Yacht Club, Toronto, July 26 and 27, was well attended by officials of member companies throughout the Dominion and was very successful in every way. The chair was occupied by the President, James D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Railway.

The Niagara Falls Park & River Railway and the Three Rivers Traction Co. were admitted to membership by unanimous vote.

The Honorary Secretary-Treasurer, Acton Burrows, Managing Director, Canadian Railway and Marine World, presented a very comprehensive report dealing with the Association's work during the past year and covering a wide range of other subjects, including the following: Membership, information for member companies, information for non member companies, representation at American Electric Railway Association's convention, transportation of postmen, standard specifications for steel rails, contributory negligence in accident cases, lavatory arrangements on interurban cars and at stations, trolley wires at crossings of railways and protection by trolley guards, regulation of vehicle traffic for protection of electric car traffic, platforms on interurban railways, coasting, experience with rotary converters and motor generator sets, inspection of trolley wires, electrolysis and system of track bonding, car mileage records, lubricating oil contracts, cost of lubricating cars and motors, wages of employees, staff of employees sufficient to meet requirements of traffic, conductors and motormen running the same cars all the time, school children's tickets, workmen's tickets, financial statement.

A report from a special committee on the standardization of steel rails for electric railways prepared by its chairman, W. F. Graves, Chief Engineer, Montreal Tramways Co., was discussed and finally adopted.

The following papers were read and discussed: Traffic conditions in Vancouver and their relation to street car traffic, by W. G. Murrin, General Superintendent, British Columbia Electric Ry. Gearing and gear ratio for railway motors, by W. G. Gordon, Transportation Engineer, Canadian General Electric Co.; Dispensing with juries in damage actions against railways, by F. B. Griffith, Superintendent, Interurban Railway Division & Claims Agent, Dominion Power & Transmission Co.; Problems confronting electric railway officials, by F. S. Livingston, Traffic Manager, Toronto & York Radial Railway. The above mentioned papers are copyrighted by the Association

and will be printed in its annual proceedings and distributed to officials of member companies.

On both days of the meeting the representatives attending took luncheon at the Royal Canadian Yacht Club, the

Director and Secretary-Treasurer, Ottawa Electric
Railway,
who presided at the Canadian Electric Railway
Association's Annual Meeting.

charming situation and surroundings of which were much enjoyed, and made it an ideal meeting place under the hot weather conditions prevailing.

After the adjournment of the afternoon session of the first day of the meeting the representatives attending were entertained by the Toronto & York Radial Ry. and the Toronto Suburban Ry. They were met at the R.C.Y.C. city wharf by C. L. Wilson, Assistant Manager, and F. S. Livingston, Traffic Manager, representing the Toronto & York Radial Ry., and by R. Gilbert, Purchasing Agent, representing the Toronto Suburban Ry., and were motored to the Lambton Golf Club, where they dined, and then returned to the city and attended a performance at the Royal Alexandra Theatre.

The list of officers elected for the current year will be found on another page in this issue.

Electric Railway Notes.

The Montreal Board of Control on July 3, decided to recommend the city council to pass a bylaw legalizing the carrying of freight over the city streets by the Montreal Tramways Co., subject to adequate restrictions.

The London Railway Commission has decided to protest against the business tax proposed to be levied by the London City Council on the ground that the commission is really only a lessee of the London & Port Stanley Ry.

A tentative agreement between the London Street Ry. and the London City Council respecting the operation of Sunday cars was reached July 15. The terms of the settlement wait final approval of the city solicitor and city council.

The Calgary, Alta., Municipal Ry. has started the operation of one man cars on the "blue line." This is one of the lines which does not meet the cost of operation, and this is an experiment in order to reduce the cost, while continuing to give a fair service.

The Brantford Railway Commission decided July 18, that the heads of departments will carry on the management of the street railway and other electric utilities pending the appointment of a successor to L. G. Ireland, who resigned to enter Hydro Electric Power Commission of Ontario service.

The London and Lake Erie Ry. and Transportation Co. has put in operation a reduced fare from London to Port Stanley and return, making the fare every day 30c, with half fare for children. The London & Port Stanley Ry. reduced its fare between the same points early in the year to 40c with a 25c rate for children every day in the week except Wednesdays and Saturdays, when a 30c rate was in operation on the lines.

The British Columbia Electric Ry. has put in operation on its English Bay line, Vancouver, a new type of open observation car which was altered from an old type at the company's shops at a cost of about \$500. All the superstructure practically has been removed and the seats have been rearranged so that the car will now seat 53 persons. One new feature is the centre entrance. The gates are of glass and are operated by levers by the conductor. The back half of the car is available for smokers and the front portion may then be used by women and children. The removal of the vestibule at the front and rear gives much more room than in an ordinary car as well as fine positions for observation as the car passes along. An ingenious arrangement connected with the gate mechanism pushes the steps out to meet the passenger. When the gates are shut and the car is travelling the steps are folded up under the car. The car is an experiment, and if it is favorably received by the public others will be built and used during the summer.

The Toronto Ry. and the Avenue Road Subway. The City of Toronto's legal department received a cable from England recently to the effect that the Privy Council had dismissed the appeal of the Toronto Ry. against the order of the Board of Railway Commissioners, assessing it for a portion of the cost of building the subway across Avenue Road. The Toronto Ry. claimed that the Board had no jurisdiction in the matter so far as the T.R. is concerned, and also that the city is obliged, according to its agreement with the company, to provide right of way for the company's tracks.

Marine Department

The Development and Future of Canada's Mercantile Marine.

By A. A. Wright, Managing Director, St. Lawrence and Chicago Steam Navigation Company.

Whenever I hear freight rates being discussed I wonder how many people realize the wonderful cheapness of present day water transportation as compared with the cost of it when men who are now middle-aged were boys. It is a curious fact that the cost per bushel of capacity was, up to the time of the outbreak of war, exactly the same for modern steel vessels as it was for the early wooden vessels that plied on the Great Lakes, namely, approximately \$1 a bushel. For example, in the early seventies, probably the schooner Bermuda, which had a capacity of about 8,000 bush., would be a fair example of the type of bulk freight boat on the Canadian side of the Great Lakes. This vessel cost to build about \$8,000, and was engaged in carrying barley from Toronto to Oswego at from 2½c. to 3c. a bush., bringing coal back from Oswego to Toronto at 60c. a ton, a distance of about 130 miles. It is the same today for the latest type of vessels. Figure out the cargo capacity in bushels of wheat and you have the standard of cost.

But while the cost of vessels per bushel capacity has remained the same, the freight charges have steadily decreased. To get an idea of the great advance which has been made in cheapening transportation by the enterprise of Canadian vessel owners it is only necessary to contrast the rates paid on long distance freight in the seventies. The present rates are 30c. a ton on coal, Cleveland or Buffalo to Fort William and Duluth, 700 to 1,000 miles, and 7c. a bush. on wheat from Fort William to Montreal, 1,273 miles. The records supply plenty of material for contrast. For instance, about 1872 the steamer Canada, owned by the late Capt. J. B. Fairgrieve, of Hamilton, with a capacity of about 14,000 bush. wheat through the Welland Canal, received 30c. a bushel on a cargo of wheat from Chicago to Montreal. About the same time the schooners Annie Mulvey and White Oak received 27c. a bushel on wheat from Chicago to Kingston.

Again, in 1877, the schooner Twilight, with a capacity of from 400 to 450 tons, received \$2.10 a ton from the Consumers' Gas Company for carrying coal from Cleveland to Toronto; the average current rate at that time being from \$1.90 to \$2 per ton; and, even at these apparently extraordinary rates to us, none of the men operating them became wealthy out of the operation of vessels.

On the completion of the present Welland Canal, allowing boats of about 256 to 260 ft. long by from 40 to 43 ft. beam to operate between Lake Ontario and the Upper Lakes, a marked change took place in the class of vessel and in the current rates. Thus, in 1888, the Canadian fleets were strengthened by the steel steamships Rosedale and Algonquin. These were built in Great Britain, the former at Sunderland and the latter at Yoker, near Glasgow, and were brought out and put in commission between Fort William, Georgian Bay, Kingston and Buffalo. The Rosedale was the first steamship to carry a cargo through from London, Eng., to Chicago. This cargo consisted of 5,000 barrels of cement. The Rosedale was built to the full size at that time of the St. Lawrence Canals, which

were not as large as the new Welland Canal, and her first cargo of wheat from Fort William to Kingston was 37,500 bush. The Algonquin was brought up through the St. Lawrence Canals in two parts and joined together, and had a capacity of 70,000 bush. wheat through the Welland Canal and 95,000 bush. on Upper Lake draught. The Rosedale was afterwards lengthened by the addition of 72 ft., when she carried about 67,000 bush. through the canals and about 80,000 bush. on Upper Lake draught. In connection these two vessels, it may be interesting to note that the Rosedale, 28 years after she came out, loaded a cargo of deals in the St. Lawrence for a British port, and the Algonquin is now being fitted out to go back to salt water.

After the Rosedale and Algonquin very little increase in Canadian tonnage took place until about 1899, when the Turrets and the package freighters Ames, Pellatt and Plummer were brought out and put in the trade between Montreal and Fort William. At this date the entire Canadian fleet of steel steamships, including the C.P.R. freight and passengers steamers Manitoba, Athabasca and Alberta, only had a carrying capacity of about 600,000 bush. wheat per trip. From 1899 forward, however, the fleet grew very rapidly until before the present war, when a very large number of the full Welland Canal sized steamers, which could get out to sea, were sent out to salt water to help out the shortage of vessels on the ocean. The capacity has grown to approximately 10,000,000 bush. of wheat per trip, consisting of vessels with a carrying capacity of from 70,000 bush. each, of the smaller Welland Canal sized boats, to steamships like the Midland Prince, Emperor, E. B. Osler, J. H. G. Hagarty, and W. Grant Morden, each with a capacity per trip of from 310,000 to 465,000 bush. of wheat, or from 9,000 to 13,000 tons of coal each trip. This remarkable development of Canadian shipping on the Great Lakes has been brought about entirely by the enterprise of private individuals and companies taking advantage of the deeper and larger channels provided by the Canadian and United States Governments. The vessel capacity for moving coarse bulk freight like coal, grain and ore has more than kept ahead of the development of the country at large.

A great deal of misapprehension exists in the public mind, and apparently in the minds of some of our legislators, regarding water transportation, and resolutions have been brought before Parliament in recent years, suggesting regulating freight rates on the lakes and putting bulk freight boats under the Board of Railway Commissioners. These men apparently fail to grasp the fact that the lakes are free to anyone who cares to build or buy and operate a steamship, and that it is impossible for any man, or body of men, to control transportation rates on the Great Lakes, so long as this freedom exists. The records show clearly that whenever exceptional conditions have arisen—and they are always cropping up every few years—whereby a larger quantity of bulk freight is offering than in normal times and rates advance, this has

been followed by an increase in tonnage, with the consequence that rates immediately drop, and probably for a year or more vessels will be carrying bulk freight at cost and often at considerable loss, and then return to fair rates as business increases.

The history of water transportation from the beginning of the world shows that free competition among individuals not only keeps rates down so that coarse, low priced products can be moved long distances cheaply, but the keenness of this competition has led to such an improvement in the size and class of ships that the tendency up to date has been steadily towards lower rates, and this, in spite of the fact that the cost of operation of vessels has been increasing annually, while the initial first cost of a vessel, according to her carrying capacity has remained comparatively stationary. The cost of operating has advanced in the last 10 years approximately 40%, and, in spite of this fact, rates by water have been reduced on the Great Lakes to the lowest point anywhere in the world. In round figures, where boats get reasonable dispatch, freight is moved on the lakes for approximately one tenth of the cost of moving by rail for the same distance.

Some discussion has taken place recently in Parliament regarding the encouragement of shipbuilding in Canada, on the ground that vessels are scarce at present, and it is very unfortunate that from the report in the press the subject did not seem to be very well understood by the men who took part in it, as they seemed to think that the only solution was the starting of shipyards. It is true there is a temporary shortage of ships on the ocean, but really none on the inland waters of Canada. In this connection, it might be interesting to note that owing to the extraordinary demand for iron ore by the smelters adjacent to the Great Lakes, there is a keen demand for vessel capacity at present, yet there is really no shortage of vessels, as is proved by the fact that ships moved through the Sault Canals in May, 1916, 66% more coal and ore and over 180% more wheat and grain than in May, 1915. The actual figures are over 10,000,000 tons of ore and coal, and over 53,000,000 bush. of wheat and other grain in one month. Even if there were twice as many vessels, practically no more could have been moved, for the docks and elevators have been working to their capacity. A mere statement of this fact should convince anyone that it is not only shipyards which are wanted to secure a larger development of Canada's mercantile marine, but encouragement for the men who have the money and ability to manage ships to employ them profitably in carrying Canadian products. One of the first steps needed in this direction is to preserve Canadian trade for Canadian vessels by intelligent coasting laws and the removal of needless restrictions.

Among other things tending to prevent the full development of Canadian shipping are our defective coasting laws. Norwegian and other ships, manned by crews which do not get half the wages which Canadian crews are paid, and which are provisioned for less than half what it

costs to feed a Canadian crew, are allowed coasting privileges in Canada, mainly carrying coal from Nova Scotia to Montreal, making it impossible to operate Canadian vessels in this trade, even if the ships could be purchased or built for less than the cost of the Norwegian ships. Again, United States vessels, whose coastwise trade is preserved to them, can virtually compete with Canadian vessels on equal terms on strictly Canadian business, as our coasting laws only forbid the carrying between two Canadian ports, and there is nothing to prevent them taking Canadian grain, which has been shipped from Winnipeg to Duluth, from Duluth to a Canadian port, whether it is designed for export or local consumption. On the other hand, United States grain, designed for United States consumption, cannot be carried from a United States port to a Canadian port in a Canadian vessel.

As regards ocean shipping and the talking of control of rates and government owned lines to compete with private enterprise, a study of the policy of Great Britain in this respect on the one side and that of the United States on the other well illustrates the two methods of dealing with shipping. In Great Britain the greatest freedom possible is allowed in the operating of their vessels. Practically the only Government interference in normal times is that necessary to see that ships are properly equipped for the safety of human life. The United States, on the contrary, by tariff imposts and absurd restrictions regarding crews—which have reached their climax apparently in the present U. S. Seamen's Bill—has practically put United States sea going shipping off the ocean, leaving them practically nothing but their coastwise shipping on the Atlantic and Pacific coasts and the Great Lakes, while Great Britain controls over two thirds of the foreign-going shipping of the world.

The policy of individual freedom which in the past has built up Canadian vessel capacity on the inland waters would do the same one the ocean, as it is only a question of giving Canadian owners an equal chance with their competitors. I am certain that any change in the way of the Government attempting to control rates, or operating, will kill off both, and leave this country at the mercy of foreign shipping. Under wise fostering plans Canada has, I am convinced, a wonderful future ahead of her on the water. But if we are to do justice to ourselves in this respect, we must largely follow the model which has made the people of Great Britain the greatest maritime nation in the world.—By-Water Magazine.

The gross registered tonnage of a vessel is arrived at by ascertaining the total internal capacity in cubic feet below the upper deck and in all enclosed spaces or deck houses above it, and dividing the result by 100; for example, 1,450,000 cubic feet divided by 100 equals 14,500 tons. At this gross registered tonnage, a vessel would at 19 ft. draught displace 19,650 tons; at 23 ft., 24,500 tons; at 30 ft., 28,550 tons. This is as a general thing, displacement tonnage being a variable quantity, depending on other factors than those mentioned.

It is reported that British shipyards at present have under construction 423 steel merchant vessels of about 1,423,335 tons, apart from handling all the Admiralty requirements. During 1915 there were launched throughout the world 743 merchant vessels with a tonnage of 1,201,638.

Car Ferry Service Between Port Maitland, Ont., and Ashtabula, Ohio.

The Interstate Commerce Association heard recently an application by the Michigan Central Rd., under the provisions of sec. 5 of the act to regulate commerce, as amended by the Panama Canal Act, in connection with the establishment of a car ferry service between Port Maitland, Ont., and Ashtabula, Ohio. It was urged that by reason of the interownership of the stock existing between the several railways involved in the application, which furnish an all rail route between the ports mentioned through which through rates are applicable, it is possible for the petitioner as a party to such through routes to compete with the proposed car ferry line in which it will have an interest within the meaning of the act; and upon the facts of record the proposed service will be in the public interest and of advantage to the convenience and commerce of the people, and will neither exclude, prevent nor reduce competition on the route by water if properly operated.

The Commission in its judgment stated that the Toronto, Hamilton & Buffalo Ry., a subsidiary of the applicant, has purchased a car ferry with capacity for 30 loaded freight cars of 50 tons each, at a cost of \$385,000. This railway is extending its line from Dunnville to Port Maitland, Ont., where slip docks are under construction. This extension of the dock facilities will be completed in July, 1916, and the car ferry will be delivered by its builders at about the same time. It is desired to institute the car ferry service between the T. H. & B. R. and the New York Central Rd., via Port Maitland and Ashtabula. A corporation will be organized under the laws of the State of Ohio, which will take over and operate the car ferry. All the stock of this corporation will be owned or held in the interest of the T.H. & B.R. The M.C.R. holds 17.9% of the T.H. & B.R. stock; 17.9% is held by the Canada Southern Ry. Co. and the petitioner in turn owns 51% of the Canada Southern Ry. stock; 27.1% is held by the New York Central, which also owns approximately 90% of the M.C.R. stock.

The T.H. & B.R. connects with the M.C.R. at Welland, and the latter has a line extending from Welland to Buffalo. The T.H. & B.R. publishes joint through rates from points on its line to destinations on the N.Y.C. via the all rail route indicated. The petitioner, as a party to this through route, participates in the joint rates so published. There is, therefore a possibility of competition established between the interested railways and the boat line which they seek to inaugurate. It appears, however, that the car ferry service proposed will greatly expedite the movement of freight from points adjacent to the south and north banks of Lake Erie and the territory tributary thereto, and relieve by so much the congestion at the Niagara frontier. Under normal conditions it is shown that it takes at least three days to get freight cars through the Buffalo terminals and a further delay is encountered in getting across the International Bridge, which is a one track structure, furnishing the only channel of rail transportation in that locality between the U. S. and Canada, and is, therefore, in great demand for passenger as well as freight traffic. The transportation of freight between the two ports all rail under the most favorable

conditions can only be accomplished in 6 or 7 days, whereas via the proposed car ferry service the maximum time required will be 8 hours. The cost of the service by ferry, it is said, will be less than half the cost by rail. While the ferry will use the N.Y.C.R. docks at Ashtabula, it will not be under exclusive contract with that road and is open to arrangement with any other road at that port desiring to use its across-lake service for the purpose of getting traffic up to Port Maitland. Since this is a new service it could not be said that in its inauguration it would have the effect of excluding, preventing, or reducing competition, but these ends might be accomplished by improper methods of operation. This contingency is within the purview of the act and if such a result should be effected, the attention of the Commission may be directed thereto upon subsequent proceedings.

From a consideration of the facts and circumstances here shown the Commission is of opinion and finds that the proposed specified service by water will be in the interest of the public and of advantage to the convenience and commerce of the people, and that it will neither exclude, prevent, nor reduce competition on the route by water under consideration, if properly operated. The corporation to be organized for the purpose of operating the car ferry service will be expected to file its tariffs stating its charges for the service which it holds itself out to the public to perform. These tariffs should be filed in accordance with the provisions of the act to become effective not less than five days after such filing. It is therefore ordered that the application of the Michigan Central Rd. for authority to institute and operate such car ferry service, is granted, subject to such further orders as may hereafter be entered by the Commission, and that the rates, fares, schedules, and regulations to be applied to the movements of such car ferry service when operated shall be established by Aug. 1, 1916, upon notice to the Commission and to the general public by not less than five days filing and posting in the manner prescribed in sec. 6 of the act to regulate commerce.

English Channel Tunnel. The British Prime Minister was asked recently to grant a day for discussing a resolution to the effect that in the opinion of the House of Commons the progress of the war has demonstrated the great advantages which would have accrued to Great Britain and the allied powers if a railway tunnel beneath the English Channel had been constructed and in operation, and that the time has arrived to support the proposal so that plans may be prepared and powers obtained to proceed with the work as soon as the war is over and the necessary labor available. The chief opposition to the scheme has always come from a certain section of the military, on fears which, throughout the war, have fortunately proved groundless.

A shipping employment registration office will be opened in Toronto shortly under the Dominion Marine Association's auspices. A small building is being erected on the water front for a sailors' institute, similar to those at Port Huron and Kingston, and the office will be located there.

The Loss of the s.s. Stormount Investigated

An investigation into the causes which led to the loss of the Montreal Transportation Co.'s s.s. Stormount at Gull Ledge, Marie Joseph Island, off the Nova Scotia coast, on June 20, was held at Halifax, N.S., June 27, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander E. Wyatt, R.N.R., and Lieutenant-Commander G. C. Holloway, R.N.R., as nautical assessors. The evidence showed the Stormount left Philadelphia June 15, for Sydney, N.S., where she was to be handed over to the Dominion Coal Co. She was equipped with the necessary navigating instruments. No deviation book was kept, and the master stated that he never looked at the log book nor signed it. He also stated that he met so many fishing boats that he had no time to devote to a more accurate navigation of his vessel, he was going at times half speed to slow, and did not refer to the sailing directions frequently, and did not take any soundings, all distances being guesses. When the vessel struck, there was a dense fog and the helm was put to port and the engines ordered full speed astern. Boats were at once put over, but no soundings were taken, as he claimed it would have been useless and no effort of any kind was made to ascertain if it was possible to extricate the vessel from her position. The master was on deck all the time from leaving Philadelphia. The second mate, who holds an inland waters master's certificate, claimed to have no responsibilities in regard to the navigation of the vessel, and the first officer, who has a mate's certificate for passenger vessels in the coasting trade, stated that he assisted the master in navigating the vessel, but never laid courses, kept a deviation book, nor took observations, but merely steered the courses given him by the master. He could not account for an erasure in the log book, nor did he know what had been written there, and was unaware what orders were given to the engine room after the vessel struck.

The court found that the master ignored ordinary precautions and steered too fine a course without making allow-

ances for the elements which were tending to bring his vessel inshore. The court could not understand how the vessel was brought as far as it was without striking some of the other reefs in the vicinity in a southerly direction. The evidence showed that a "rule of thumb" system prevailed on board, and though the log book showed that some observations were taken to ascertain the errors of the compass, they were not numerous, nor frequent enough for safe navigation. The court commented on the fact that the master only seemed to have assumed the navigation of the vessel and did not insist on his officers making themselves acquainted with the courses, compasses, etc., keeping them on the bridge simply as lookout men, therefore in view of the circumstances, including the fact that the vessel may become a total loss, and the careless manner in which it was navigated, the court suspended the certificate of the master, W. H. Blackler, No. 318, Newfoundland, for the remainder of the year. Regarding the first mate, G. R. Parsons, the court was astonished at his apparent lack of ambition to perfect himself in his profession. The chief officer must bear in mind that in the event of the master becoming ill or disabled he would be called upon to replace him and assume responsibility, but in this case he would be unequal to the task and would establish a danger to property and be detrimental to the reputation of the coast. He was therefore cautioned to waken to his responsibilities if he wishes to meet with any success in his vocation.

The permitted draught of water through the St. Lawrence canals, has, on the Dominion Marine Association's representation been increased to 14 ft. 3 ins. until further notice. As stated in Canadian Railway and Marine World for July, the permitted draught of water through the Welland canal has been increased to 14 ft. 4 ins. on account of the prevalent high water levels.

Lights will not be shown from the gas beacons at Button Islands, Hatton headland, Wales island, Ashe inlet, Charles island, Nottingham island, Digges island, Mansel island, and Coats island, in Hudson Strait and Bay, during the current navigation season.

Water Pollution on the Great Lakes.

At a meeting of the International Joint Waterways Commission at Detroit, Mich., June 26, the Dominion Marine Association was represented by its Counsel, Francis King, M.A., Kingston, Ont., and the Lake Carriers' Association by Wm. Livingstone, President. The hearing was largely devoted to discussion of the plans prepared by Prof. Phelps, the Commission's sanitary expert, for taking care of the sewage of border municipalities, but special consideration was also given to his recommendation that steps should be taken without delay to settle and put in operation some method of preventing pollution by steamboats. Under instructions, and in accordance with statements made on behalf of the Dominion Marine Association at previous sessions the attitude of vessel owners was shown to be one of cheerful willingness to comply with any reasonable requirements enacted by legislation on the advice of the Commission, provided that any device, appliance, or method proposed be first carefully and exhaustively tested in all weather conditions and for all types of boats. It was urged that such experiment is possible at small expense and that as pollution from this source is infinitesimal compared with that from land and as it may take 5 to 10 years to deal satisfactorily with land sewage systems, no undue haste should be permitted in making rules for lake vessels. The Commission apparently intends to proceed in the way suggested. L. C. Frank, Sanitary Engineer, U. S. Public Health Service, Washington, D.C., gave evidence regarding an appliance already experimented upon in the Navy Yard there, and now just installed on the s.s. D. G. Kerr at Cleveland. It consists of a small tank or sewage receptacle, the contents of which are sterilized, and automatically discharged at intervals, by the action of live steam from the ship's boilers. The cost of installation is said to be moderate and the cost of operation quite negligible. He will make several trips on the vessel and the appliance will be tried throughout the season. Similar tests will be made on vessels of other types, and experiments with this and other devices will be continued until one can be safely selected that will provide maximum efficiency at minimum cost.

Saulte Ste. Marie Canals Traffic.

The following commerce passed through the Saulte Ste. Marie Canals during June.

The St. John Dry Dock and Shipbuilding Co., the incorporation of which was mentioned in our last issue, will probably, when organized, take over the contract for improvement work in Courtenay Bay, held by the Norton Griffiths Construction Co., and upon which a considerable amount of work has been done. The contract, which was awarded in 1912, provides for a 4,600 ft. breakwater, 9,900 lin. ft. of quay walls, a dreadnought dry dock 1,000 ft. long, and the reclamation of large tracts of land. The value of the contract was estimated at \$13,000,000. Among those interested in the company are Senator W. H. Thorne, G. McAvity, J. E. Moore and W. B. Tennant, St. John, N.B.

Baldry, Yerburch, & Hutchinson, Ltd., has been incorporated under the Ontario Companies Act, with \$561,000 capital and office at St. Catharines, to carry on a general dock, railway and canal contracting business. The parent company is an English one, and was awarded a contract for one of the sections of the Welland Ship Canal, which will be taken over by the new company. G. Peterson, St. Catharines, is the company's attorney.

Atlantic and Pacific Ocean Marine.

Furness Withy & Co. assumed possession of the Dock St. municipal pier at Philadelphia, Pa., July 2, for loading outward cargoes. The company has obtained the pier under a lease at a rental of \$19,000 a year.

Canadian Pacific Ocean Services Ltd., has resumed the Montreal-Bristol steamship service which was operated for several years prior to the war, by the C.P.R. The steamships Hackness, Medora, and Montford as on the route.

The New Zealand Shipping Co., which has been operating a line of steamships from Montreal to New Zealand and Australia, for some time, is reported to have been absorbed by the Peninsular and Oriental Steam Navigation Co., a British concern with connections in various parts of the world. The shares of the New Zealand Shipping Co., with a face value of £10, are being exchanged for P. & O. N. Co.'s £10 deferred shares. The present market values of these stocks are given as £32 and £33 each respectively.

The s.s. Uranium, one of the vessels purchased recently by the Cunard Steamship Co., from Canadian Northern Steamships, Ltd., has had her name changed to Feltrie. She has been thoroughly overhauled and refitted. It is stated that the double bottom has been rebuilt, a new engine and boiler room made, and the whole machinery taken out, repaired, and brought up to date, and the whole of the internal furnishings completely remodelled. The s.s. Principello, another of the Canadian Northern vessels purchased by the Cunard Co., has had her name changed to Folia.

Maritime Provinces and Newfoundland.

A steamship service has been inaugurated between St. John's, Nfld., and St. Pierre, Miquelon and North Sydney, N.S., by the s.s. Pro Patria.

La Cie Francaise des Cables Telegraphiques has deposited with the Public Works Department, Ottawa, plans of a wharf to be built at North Dartmouth, in Halifax Harbor, N.S.

The Reid Newfoundland Co. is operating the steamships Meigle and Sagona, between St. John's, Nfld., and Labrador, this year, on a fortnightly schedule, calling at all the fishing ports between Battle Harbor and Nain. The trip takes from 12 to 15 days.

It is reported that the Newfoundland shipping industries have purchased about 30 sailing vessels of a tonnage from 150 to 200 tons, in the United States. Some of these are being fitted with auxiliary power and will be used chiefly for the fish and coal carrying trade.

The Dominion Government has presented engraved watches to the crew of the United States fishing schooner Josie and Phoebe, for rescuing the crew of the schooner Harry off Cape Sable on May 28, when the sailors had been 72 hours without food and water.

The Newfoundland s.s. Kite is reported to have sailed from St. John's to New York, where she will be dry-docked, overhauled, and refitted for an exploration trip to Baffin's Land, which is being arranged by a party in the United States.

It is reported that a Toronto company is trying to arrange a steamship service between Montreal, Quebec, Nova Scotia, Prince Edward Island, and Newfoundland ports. Vessels with accommodation for

130 first class passengers and 2,000 tons of cargo will, it is said, be used, and guarantees as to cargoes from merchants in the different places are being asked for.

Province of Quebec Marine.

An investigation into the causes of the stranding of the s.s. Arachine on Little Miquelon Island, was opened at Quebec, July 19, by Capt. L. A. Demers, Dominion Wreck Commissioner.

The Public Works Department received tenders to July 20, for dredging the River St. Maurice at Three Rivers, and to July 21, for extensions to wharf at Chandler.

The sluice walls of the waste water weirs of the Lachine Canal collapsed, July 15, causing considerable damage, apart from delaying traffic through the canal.

The Three Rivers council is offering to provide free sites, with exemption from taxation, and other inducements, to shipbuilders who are prepared to erect plants in the city.

An order in council has been passed approving the Montreal Harbor Commissioners' bylaw 96, governing the movement of cars, trains, and locomotives on the Commissioners' tracks.

Press reports state that one of the old shipbuilding yards at St. Laurent, Isle of Orleans, is being prepared for operation, and that keels of two sailing vessels will be laid there shortly.

The Chatham Steamship Co. Ltd., incorporated recently, with office at Quebec, together with five other companies, Colin W. Ltd., Howard W. Ltd., Marian W. Ltd., Richard W. Ltd., and Stuart W. Ltd., each owning one vessel, were organized in the interest of the Canadian Import Co. L. C. Webster is President, W. Q. Stobo, Vice President, and H. C. Thorn, Treasurer, all of Quebec.

Ontario and the Great Lakes.

The name of the s.s. Panther, purchased recently by the Davidson & Smith Elevator Co., registered as owned by J. R. Smith, Port Arthur, has been changed to Staples.

The Toronto Harbor Commissioners have deposited plans of a railway bridge to be built across the River Don, on the roadway under construction through the industrial district.

The name of the steamboat Alert, owned by D. B. McAulay, Southampton, Ont., has been changed to Douglass M. There are on the Canadian register 10 steamboats named Alert.

A press report states that a company has been formed at Owen Sound to operate a passenger steamboat between Owen Sound and Collingwood, calling at Meaford, during the summer.

The s.s. C. W. Hutchinson, which was raised recently after being sunk in collision at Sault Ste. Marie, while being towed to Cleveland, Ohio, July 10, sank in Lake Huron. It is expected that one of the temporary patches gave way and she filled.

The Toronto City Council has authorized the guaranteeing of \$1,500,000 of Toronto Harbor Commission's bonds, additional to the \$5,000,000 already guaranteed. The proceeds will be used on continuing the improvement works already in progress.

Work was commenced early in July on the crib and concrete head wall on the harbor improvement works between John St. and Spadina Ave., Toronto, and also

on the section between Bathurst St. and Spadina Ave. The contractors in the first case are the J. E. Russell Contracting Co., Toronto, and in the second, R. Weddell Co., Trenton, Ont.

The Montreal Transportation Co.'s barges Burma and Quebec, which went ashore in the Rapide Plat channel near Morrisburg, at the end of June, were released during July, after having had about 28,000 bush. of grain removed.

The schooner Charlie Marshall, owned in Cobourg, was reported to have sprung a leak off Gaspe Head, July 14, and to be in a sinking condition and dangerous to navigation. She had a cargo of coal on board. The vessel was abandoned by the crew.

The s.s. G. R. Crowe, owned formerly by the St. Lawrence and Chicago Steam Navigation Co., Toronto, and acquired recently by A. B. Mackay, Hamilton, Ont., and sold for salt water services in Europe, was cut in two at the end of June to allow her to pass the canals, and was rejoined at Levis, Que., prior to proceeding to England. She was built at Collingwood, Ont., in 1910.

The North Bay & French River Navigation Co., Ltd., which was incorporated recently, with office at North Bay, is operating the s.s. Northern Belle, formerly owned by the Lake Nipissing Shipping and Transportation Co., Sturgeon Falls, Ont. The route is between North Bay and French River. The capital of the company is \$10,000, of which about half has been subscribed. E. L. Banner is President and Managing Director, and H. S. Campbell is Secretary-Treasurer.

Dredging is being carried on in Toronto harbor, and the contractors, Canadian Stewart Co., have been given permission to carry a pipe line across the new western entrance channel, and to maintain it there for the current navigation season, except during August, when the channel is to be kept clear for the heavy tourist traffic. The new western channel will be closed to navigation after Aug. 31, with the exception of such days as weather conditions prevent the use of the eastern channel. In the latter event, the pipe line will be temporarily broken, the harbor master deciding when this is necessary. The line will be kept well lighted at night.

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level for June, as follows:—Superior 603.48; Michigan and Huron 580.94; Erie 573.26; Ontario 247.86. Compared with the average June levels for the past ten years, Superior was 1.28 ft. above; Michigan and Huron 0.12 ft. above; Erie 0.41 ft. above, and Ontario 0.96 ft. above. According to investigations of engineers of the Department of Railways and Canals, the June level of Lake Ontario was at the highest point since June, 1870, registering 0.77 ft. below that record. The June level was 0.73 ft. above that of May, and was 2.71 ft. above the June 1915 level.

Elsewhere in this issue is given the judgment of the Interstate Commerce Commission in connection with the operation of a car ferry service to connect the Toronto, Hamilton & Buffalo Ry. at Port Maitland, Ont., with the Michigan Central Rd., at Ashtabula, Ohio. The vessel has been built by the Great Lakes Engineering Works, Detroit, Mich., and has been named Maitland No. 1. She is entirely of steel, and of the latest type of construction for vessels of this type. She is 300 ft. long, with capacity for 2,000 tons (32 cars), and has a loaded draught

of 15 ft. and a speed of 15 miles an hour.

The Port Huron and Duluth Steamship Co., which operates four vessels between Point Edward, Ont., and Duluth, Minn., has changed its name to the North-Western Steamship Co., and it is announced that additional vessels will be placed on the route.

Manitoba, Saskatchewan and Alberta.

The Hudson's Bay Co. is operating steamboats between Peace River Crossing and Hudson Hope, and between Port Vermilion and Vermilion Chutes. It also runs the s.s. Fort McMurray between Peace River Crossing and the Chutes and Smith's Landing, and between Smith's Landing and McMurray. These vessels are not run on a regular schedule, but leave whenever sufficient cargo has been secured.

The Peace River Tramway and Navigation Co.'s s.s. D. A. Thomas, an illustration of which is given on this page, completed her first trip of 660 miles from Peace River Crossing to Vermilion Chutes and return, towards the end of June, the trip occupying 3 days and 9 hours, including all stops and the reload-

that they will leave Prince Rupert on Wednesdays at 12 noon and arrive at Skagway on Friday mornings to connect with the White Pass and Yukon Ry. trains leaving there at 9.30 a.m. They will then leave Skagway on the arrival of the W. P. & Y. R. trains on Saturdays at 7 p.m. It is also the intention to make the trip to Taku Glacier, either up or down, at the discretion of the captain, according to the available time.

The British Columbia Merchant Marine, which was incorporated recently under the British Columbia Companies Act, to promote the building and operating of steam and other vessels within, and from the province, is not to proceed with its organization. We are advised that as the B.C. Government has provided for the encouragement of shipbuilding and operation in a recent act, and a number of private concerns have already taken advantage of its terms, the objects for which the association was formed have been accomplished, and the directors decided that it was not necessary to proceed further.

An investigation into the causes of the stranding of the Harrison Line s.s. Barrister in Active Pass, was held at Victoria, July 3. The master of the vessel stated that he shaped the vessel's course

Steamship D. A. Thomas, Peace River Tramway & Navigation Company.

ing at the northern terminus. This vessel was laid down at Peace River Crossing in Aug. 1915, and was launched at the end of May this year. She is 170 ft. long by 40 ft. beam, and carries two 25 ton boilers capable of developing 1,000 h.p. Her nominal freight load is 300 tons, and she has been specially designed to push scows carrying a further 2,000 tons. There is passenger accommodation for 250 persons. The vessel contains over 40 staterooms, dining-room with seating accommodation for 100 persons, smoke room, ladies' cabin, baths, etc., and is equipped throughout with electric light and all modern conveniences. She is working on a weekly schedule, leaving Peace River every week for Vermilion Chutes, 330 miles, and Hudson's Hope, 280 miles, alternately, making the round trip in each case in four or five days. Arthur Sutcliffe is Transportation Manager, at Peace River, Alta.

British Columbia and Pacific Coast.

It is reported that five keels have been laid at Vancouver, three at Victoria, and two at New Westminster, of vessels to sail to Europe by way of the Panama Canal.

The Grand Trunk Pacific Coast Steamship Co. has altered its summer schedule for its vessels north of Prince Rupert, so

before reaching Active Pass, and as he was a stranger to the district, he accepted the pilot's assurance that Active Pass was a safe course, although he preferred the outer channel. The pilot, H. R. Jones, had signed a written statement, exonerating all the officers of the Barrister, and assuming full blame for the accident himself. He claimed however that the statement was made under duress. Judgment was reserved.

Tenders are being received for the purchase of the tug Sea Lion, formerly owned by the British Canadian Lumber Co., and at present under charter to the Young and Gore Tugboat Co., Vancouver, the charter expiring Apr. 16, 1917. She was built at Vancouver in 1905, her dimensions being, length 114 ft., breadth 22 ft., depth 19.5 ft., tonnage 218 gross, 148 register. She is equipped with triple expansion engine with cylinders 12, 20, and 32 ins. diam. by 24 ins. stroke, built in Glasgow, Scotland, and she is supplied with steam by a three furnace Scotch boiler at 180 lbs. She is fully equipped with electric lights and an electric searchlight.

Wreck Receivers.—R. Parsons and J. S. C. Watt, Managers, Hudson's Bay Co. at Lake Harbor and Fort Chimo, respectively, have been appointed by the Dominion Government as Receivers of Wrecks for Hudson Strait District.

Mainly About Marine People.

John R. Shaw, heretofore in the Passenger Department, Manila, has been appointed General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Shanghai, China, vice A. J. Blaisdell, deceased.

H. J. Cox, who was appointed assistant to the Chief Surveyor of Lloyd's Register for the United States and Canada, recently, has been engaged since 1915 on the Chief Surveyor's staff in New York, and prior to that year, had held a similar position on the Chief Surveyor's staff in London, England.

Sir Montagu Allan, of Montreal, formerly of the Allan Steamship Line Co., and Lady Allan, who have been in England since the Lusitania disaster, have taken Admiral Keppel's house at Ascot for the summer. Sir Montagu is still engaged with the Pensions Board work at Bath.

G. L. Courtney, formerly General Agent, C.P.R., Victoria, B.C., and latterly a partner in Greer, Courtney and Skene, Ltd., shipping agents, at various points in B.C., has been appointed to a position in the freight department Canadian Pacific Ocean Services, Ltd., Hong Kong, China. He left Vancouver for China early in July.

Robert C. Manson, heretofore Traffic Manager, Canadian Fairbanks Morse Co., has been appointed Soliciting Freight Agent for the eastern section of Montreal, Canada Steamship Lines Ltd., vice T. H. Meehan, resigned to accept other service. Prior to his present appointment, he occupied the positions of Travelling Freight Agent, and chief clerk to District Freight Agent, G.T.R., Montreal, consecutively.

T. H. Meehan, until recently Soliciting Freight Agent, Canada Steamship Lines, Ltd., eastern section, Montreal, is reported to have been appointed Managing Director, T. D. Downing Co., foreign freight contractors and customs brokers, of New York, Boston, and Philadelphia. He entered transportation service with the C.P.R. as an office boy, and was, later on, in G.T.R. service, in the local, divisional, and general freight departments, consecutively, and was subsequently appointed travelling tariff inspector. He resigned from railway service to enter the Richelieu & Ontario Navigation Co.'s service in 1910.

Canada Steamship Lines Notes.

The s.s. W. Grant Morden carried a cargo of grain from Fort William to Port McNicoll, during July, of 490,725 bush., which is claimed to be a record one.

The s.s. Wahcondah, which was fitted out for ocean service recently has loaded a cargo of deals, consigned to Liverpool, England. After delivery of these, she will be used in service between Great Britain and France.

The motor vessel Fordonian, which is being fitted out for salt water service, at Collingwood, is to enter Quebec Steamship Co.'s service between New York and the West Indies, to the regular trading ports on this subsidiary company's division.

The s.s. W. C. Moreland, which is being rebuilt at Duluth, Minn., after having been salvaged, was inspected by James Caruthers, President, Canada Steamship Lines, Ltd., July 18. The after part was all that was salvaged, and this is being fitted with a new fore part. She was wrecked on the Saw Tooth reef in Lake Superior in 1912.

Dock and Harbor Improvements at Port Dover, Ont.

A press dispatch of July 5, said:—"Port Dover's long deferred hope for better docking facilities is about to be realized. The Public Works Department at Ottawa has plans of proposed improvements, and Martin Todd, Manager of the L. E. & N. Ry. has made arrangements for a car ferry service across the lake if terminal facilities can be secured. A large deputation leaves for Ottawa to-day to interview the Minister of Public Works in the matter, amongst whom are M. Todd, Senator McCall, H. P. Innes, H. Ainsley, Capt. Robinson, John Fisher, M.L.A., W. Weichel, M.P., and F. S. Scott. It is hoped that the vote of \$50,000 to commence the work will be expended before the year is out."

M. N. Todd states that so far as the Lake Erie & Northern Ry. is concerned, the question as to what point on the U. S. side the proposed car ferry from Port Dover will run, when the required harbor improvements are carried out, and the question as to whether an existing car ferry will be made use of, or if a new vessel will be built, have not yet been discussed. There appears to be no doubt, however, that it is the company's intention to establish a car ferry service.

Quebec Harbor Commission.—In consequence of the resignation of Sir William Price, Chairman, Quebec Harbor Commissioners, and of J. B. Letellier, one of the commissioners, as previously announced, D. O. Lesperance, Quebec, has been appointed Chairman, and D. H. Pennington has been appointed commissioner, as from June 15. The third commissioner, A. S. Gravel, Levis, remains.

Canada West Coast Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with \$2,500,000 capital and office at Vancouver, B.C., to build, own and operate steam and other vessels, docks, wharves, warehouses, and other terminal facilities, and to carry on a general navigation business. The nominal incorporators are all connected with a Toronto legal firm.

Enormous Increases in Steamship Values.

The Liverpool Journal of Commerce, to illustrate the rise in shipping values, gives a selected list of steamships sold in May of this year and a corresponding list of vessels sold in May 1915. Ships disposed of in May 1915 fetched prices ranging from £10 to £37 9s a ton, the average working out at £20 12s. a ton. A year ago the range was only from £5 5s to £18 15s a ton, while the average was £7 12s a ton. Thus the mean value has jumped up in 12 months nearly 200%. One vessel just disposed of for £101,000 fetched £78,000 in January and £36,500 in Aug. 1915. Another now sold for £140,000 realized £100,000 last year and £26,200 in 1914, and a third, which has just fetched £62,000, was sold for £21,000 last year and for £7,800 in 1912. Four others, which were disposed of in 1915 for £177,000, have now been sold for £355,500.

Aliens as Commanders of British Vessels.—Press reports stated recently that orders had been issued forbidding the employment of men of alien birth, whether naturalized British subjects or not, in command of British steamships, but we have been officially advised that the Dominion Government has not issued such an order, nor is the Marine Department aware that such an order has been issued by the British Government. The Marine Department has instructed Canadian shipping owners that they should take all possible steps to ensure that no enemy subjects remain on board any British merchant vessel, no matter what her occupation and voyage.

Vessels Turning in the Rivers at Fort William.—A recent order in council requires all vessels desiring to turn when in the rivers at Fort William, to go into one of the turning basins for the purpose. The Dominion Marine Association has protested against the order on the ground that it works unnecessary hardship on canal sized vessels without corresponding advantage.

Breach of Rules on the Great Lakes.

At a recent meeting of the Great Lakes Protective Association's advisory committee the following resolution was adopted:—"Numerous reports of nonobservance of the outside courses downbound and inside courses upbound in Lakes Superior and Huron, make it highly necessary to take immediate and positive action to prevent this dangerous practice." A number of managers of member companies of the association have declared their intention to suspend for 30 days without pay, the master of any vessel in their fleets for failure to adopt and follow such courses, and necessary means for reporting such cases have been adopted.

Power Development on the St. Lawrence River. The Beauharnois Light, Heat and Power Co. is applying for approval of plans for power development on a large scale, and the Dominion Marine Association has filed objections and made request for an opportunity to examine the plans and express an opinion thereon before any action is taken. It is stated that the proposed works would seriously affect the levels of water in Lake St. Francis. These proposals are not connected with the Canadian Light, Heat & Power Co.'s works in the Beauharnois canal. The Minister of Public Works has given assurance that the Dominion Marine Association will be given an opportunity to examine the proposal before any action is taken.

Shipbuilding in Canada.—Various rumors are current in Montreal as to early future developments in the Canadian shipbuilding trade, and a number of British firms are spoken of as considering the question of starting yards in the Dominion. Some few years ago, when it was considered probable that the Government would order the construction of some war vessels, several of the larger shipbuilders in Great Britain had such a move in view, but as the suggested Government programme did not materialize most of the projects were dropped. However, two British firms did open plants in the Dominion, viz., Canadian Vickers Ltd., at Maisonneuve, Que., and Yarrows, Ltd., at Esquimalt, B.C.

New Steamship for Great Lakes Transportation Company.

The Great Lakes Transportation Co., Midland, Ont., of which James Playfair is President and General Manager, has ordered a steel freight steamship from Thor Iron Works, Toronto. The keel will be laid during this month, and it is expected that the vessel will be launched early in the spring of 1917. The principal dimensions will be: length over all 261 ft., length between perpendiculars 251 ft., breadth moulded 43½ ft., depth moulded 28 ft. 2 in. She will be of the single deck type with poop, bridge and forecastle, steel deckhouse on bridge and chart room on top of deckhouse with navigating bridge. The propelling machinery will be located amidships with coal bunkers in wings. There will be two large cargo holds with two hatches to each hold, one hold extending from the collision bulkhead to the boiler room bulkhead and the other from the engine room bulkhead to the after peak bulkhead, all made water tight and divided by water tight transverse floors into a suitable number of compartments. She will be built to Lloyd's specifications and to highest class of British Lloyd's ocean service, and equipped in accordance with the requirements of the British Board of Trade. The machinery space will equal as near as possible, 13% of the gross tonnage so as to attain a reduction of 32% from capacity tonnage.

The hull will be built with flat plate keel and bilge keels, the latter to extend for about 100 ft. amidships and to be of plate 9 ins. deep connected to shell with angle bars fitted on short lengths extending from butt to butt of shell, the plate to be continuous. There is to be a straight stem and elliptic stern, and channel frame is to be fitted extending from tank margin to main deck without hold stringers or 'tween deck beams. The propeller frame is to be of wrought iron or cast steel with sufficient bearing in boss for propeller tube, and the rudder post will extend to the main deck and be attached thereto with angles and deep transom plates. The rudder will be of the single plate type of wrought iron or cast steel, with arms alternately on the port and starboard sides. The hull will be divided into four water tight compartments, and a water tight sliding door will be fitted to the engine room bulkhead 36 ins. high by 21 ins. wide.

The propelling machinery will consist of triple expansion engine with surface condenser, built in type, with three cylinders each working on a separate crank at an angle of 120 degrees. The cylinders to be 20, 33, and 54 in. diam. with a common stroke of 40 in., with an average h.p. of 1,200 and a maximum of 1,300. Steam will be supplied by two Scotch boilers with return tubes, at a working pressure of 100 lbs. They will each be 14½ ft. inside diam. by 11 ft. long with interchangeable furnaces and heating surface of 5,250 sq. ft., with grate surface of 126 sq. ft., and equipped for natural draught. The machinery is being built by the John Inglis Co., Ltd., Toronto. The electrical installation will consist of one 7½ k.w. generator and complete lighting system, the sidelights being arranged for electric as well as oil light. In addition to the propelling machinery, there will be a complete system of pumps, capstans and the usual sundries, as well as all life saving apparatus and boats in accordance with the Dominion Government inspection rules.

The Loss of the Tug Frank C. Barnes.

An investigation into the loss of Canada Steamship Lines' tug, Frank C. Barnes, Nov. 2, 1915, in the neighborhood of Point Peter, Lake Ontario, when all hands were lost, was held at Toronto, July 5. The investigation was held at the request of a sister of the late engineer, on the ground that the vessel was unseaworthy when she left Port Colborne. The owners were represented by Francis King, M.A., Counsel for the Dominion Marine Association, and the enquiry was conducted by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. B. Foote and James McMaugh, as nautical assessors.

H. W. Cowan, Operating Manager, Canada Steamship Lines, stated that the equipment and general operations of vessels came under his supervision. In May, 1915, the Frank C. Barnes was purchased as an aid to other tugs for harbor work; but not needing the vessel for that season she was taken from Port Arthur to Port Colborne and tied to a dock until late in October, when Capt. Herbert LaRush, one of the most efficient masters in the company's service, was ordered to take her to Sorel, Que., where it was intended that she should undergo a thorough overhauling. The instructions issued to his representative at Port Colborne and to the master, were that the vessel was to be taken to Sorel, leaving the master absolutely free in choosing the date of departure, when weather conditions were favorable, and that there was no hurry in reaching Sorel. The company made it a point to leave these questions to the master who is the only man who should know when and how the vessel should be sailed. The general order to fit the vessel, which was issued to Capt. LaRush, included the clearing of the vessel at the customs house. With regard to the fact that the boat had not been officially inspected for two years, he stated that he was absolutely ignorant of that particular, as this was left to the master and the collector of customs. He assumed that when the tug was bought she carried the certificate of inspection, and that it was the master's duty to enquire, as his orders were to fit the vessel for the journey. Other evidence gave details of times at which the tug had been met and passed by other vessels, and also particulars of the weather conditions at the time, and none of it indicated that the tug was unseaworthy. The person at whose request the investigation was held, did not appear in person, and no witnesses were brought forward to substantiate her suppositions, or the rumors circulated. The court's judgment is summarized as follows:—

Notwithstanding the fact that the tug was old, and in need of repairs to her hull, there is nothing to show that Canada Steamship Lines, through its representatives, is in default for neglecting to take precautions to ensure the safety of the crew. The master was an able, intelligent, competent man, and in taking command of the tug to take her to Sorel he was left free to use his own judgment in navigating her. Since he left without remonstrating it shows that he did not apprehend any disaster through her possible unseaworthiness. In the absence of evidence on the crew's side, the court accepts the statements of the company's representatives, that the master requisitioned for articles needed for the trip, which were delivered without question.

As to the equipment and life saving appliances, it is said that there were at least one circular buoy and several life belts, one of which was found on the beach not far from the place where the engineer's body was recovered. There was also a metal life boat for which two oars were supplied before leaving Port Colborne. As there is no law governing the inspection of hulls of tug boats, the court cannot examine any official record, but must accept the statement given that the vessel needed repairs. While in dock from May to November she was not leaking to any extent, requiring only a little pumping once daily. On the day of the departure the weather appears to have been anything but threatening, but subsequently a fresh breeze sprang up from the westward, which increased in intensity, and the records show that on the morning the tug disappeared the wind had a velocity of 31 miles an hour, causing a heavy sea which forced the s.s. Seagun to seek shelter.

A personal log found on the body of Capt. LaRush was produced, and the court failed to note any entry indicating doubts or apprehension on his part. The company, in verbally notifying the master to take his own time, and otherwise giving him a free hand as to the manner in which he was to take the tug to Sorel, relieved itself of any blame for this deplorable casualty. With regard to the state of the boilers, though the court has on its file a memo to the effect that no inspection of the boilers had been made for the last two years—which in itself is a violation of the statutes—this cannot be accepted as a factor in bringing about this disaster, for the following reason, that the chief engineer held a first class Board of Trade certificate as engineer, and when joining the tug, if anything defective had been found with the boilers or machinery, he would naturally have requisitioned for repairs; but no request of that nature appears to have been made, other than a requisition for oils, packing, and the usual engine room necessities for every voyage.

Therefore, analysing all the facts and reports which have been submitted, and in view of the weather conditions existing that morning, when larger vessels had to seek shelter, the court cannot arrive at any other conclusion than that either one of two causes could have brought about this disaster, either the tug shipped a sea over the stern, or she broached to, and while in the trough of the sea, capsized. These are the only two theories the court can advance. Consequently in view of such conclusion it holds both the owners of the tug, her master, Captain LaRush, and her engineer, A. McG. Cummings, blameless, and finds that this disaster can be attributed to unforeseen and unavoidable circumstances, in fact, to an act of God.

The court expresses its sincere sympathy with the relatives of those who unfortunately lost their lives on this vessel.

Among the Express Companies.

R. W. Burnham has been appointed acting agent, Canadian Northern Ex. Co., Brockville, Ont., vice A. F. Schussler.

The Canadian Northern Ex. Co. has opened offices at Huberdeau, Montfort, Morin Heights, Perthuis, St. Sauveur and 16 Island, Que.; Beachburg, Ont., and Alliance and Sanguo, Alta.

The Canadian Ex. Co. has opened offices at Juneau, Ketchikan and Skagway,

Alaska. The service is operated to Prince Rupert, B.C., over the Grand Trunk Pacific Ry., and thence by the Grand Trunk Pacific Coast Steamship Co.'s vessels.

R. Chambers, heretofore clerk, Dominion Ex. Co., Brandon, Man., has been appointed cashier at Swift Current, Sask.

The Dominion Express Co. has opened offices at Aldershot, N.S.; Beaulieu, Que.; Castleford, Ont.; Elbor and Regent, Man.; and Antelope, Regina Beach and Willows, Sask.

The Canadian Northern Ex. Co. has established its service over the C.N.R. on the following routes:—between St. Jerome and Huberdeau, Que., superseding the Dominion Ex. Co.; between Ottawa and Pembroke, Ont.; between Winnipeg and Virginia Beach, Man.; between Melfort and St. Brieux, Sask., and between Peace River Jct. and Sanguo, Alta.

The Canadian Ex. Co. has opened offices at Hawkshaw, N.B.; Armagh, Damien, Fitzpatrick, St. Euphemie and Sanmaur, Que.; Falkenburg, Hudson and Quibel, Ont.; Smiley, Sask.; Spruce Grove, Alta., and Burns Lake, B.C., and has also reopened its summer offices at Elgin House, Muskoka Wharf, Port Carling, Rosseau and Windermere, Ont.

Telegraph, Telephone and Cable Matters.

M. B. Douglas, heretofore local manager, Great North Western Telegraph Co., St. Catharines, Ont., has been appointed local manager at North Bay, Ont., and has been succeeded at St. Catharines by John Frazell.

Four additional cables have been laid recently in Passamaquoddy Bay and the Bay of Fundy, N.B. The starting points of these cables is at Eastport, Me., and they connect at Deer Island, Grand Manan, and Campobello.

Edwin Pope, Superintendent of Dominion Government Telegraphs, Quebec, Que., was advised recently that his son, C. A. Pope, had been killed in action. A second son, H. B. Pope, has also been reported to have been killed in action.

The Great North Western Telegraph Co. is installing a Morkrum printing equipment on the line between Toronto and Chicago. Other circuits in operation are between Montreal and New York, Ottawa and Montreal, Toronto and Ottawa and Toronto and New York.

The annual report of the Marconi Wireless Telegraph Co., the parent concern, shows a net profit of £377,817, an increase of £145,000 over the previous year. The general reserve account stands at £967,530, and investments and temporary loans show an increase of £173,500.

The Western Union Telegraph Co. reports that for the six months ended June 30, the total revenue was \$29,125,269, an increase of \$4,909,562 over the same period in 1915. The total expenses were \$18,396,064 against \$15,550,540, and the balance \$6,846,677 against \$4,781,037. Deducting interest of \$665,825, the net income for the first half year of 1916 was \$6,180,752.

At the recent annual meeting of the Marconi International Marine Communication Co., in London, Eng., G. Isaacs, who presided, said that he was authorized to announce that in the very near future, Mr. Marconi would introduce a new, independent, and very simple apparatus, to be worked from the bridge of a vessel by an officer, which should put an end to

all danger of collision in darkness and fog.

The Dominion Telegraph Co.'s annual meeting was held at Toronto, July 12, when the report for the year ended June 30 showed total assets of \$1,310,576.28, and liabilities \$1,017,773.96, including dividend payable July 15, \$14,000. The company's property is leased to the Western Union Telegraph Co. for 99 years from July 1, 1879, and it receives a guaranteed interest of 6% a year, and this has been paid quarterly in advance for the past 37 years. Mention was made of the death during the year of Belvidere Brooks, one of the directors, and the election of G. W. E. Atkins of New York, to fill the vacancy. Following are the directors for the current year:—Sir Henry M. Pellatt, President; Aemilius Jarvis, Vice President; F. Roper, Secretary and Treasurer; G. W. E. Atkins, R. C. Clow-C. P. O'Reilly, and G. P. Schofield.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Du Pont Products.—A book with this title (111 pgs., 5 x 8 in.) has been issued, giving a list of 251 distinct commodities manufactured by the Du Pont industries, viz.:—E. I. Du Pont De Nemours & Co., Du Pont Fabrikoid Co., Du Pont Chemical Co., and the Arlington Co. at Wilmington, Del. Among the articles listed are a considerable number used by steam and electric railway and navigation companies, car and locomotive builders and contractors.

Roberts & Schaefer Co., engineers and contractors, Chicago, report the following orders. From Pennsylvania Rd., 300 ton capacity, 2-track, automatic electric counterbalanced bucket locomotive coaling station at Erie, Pa., also two Rands gravity sand plants, using the Beamer patent steam sand dryer. From Chicago, Rock Island & Pacific Ry., 2 Rands measuring coal loaders for recording locomotive coal. From Illinois Central Rd., for rebuilding a 600-ton capacity 3 track reinforced concrete locomotive coaling plant, at Effingham, Ill., using automatic electric elevating equipment and Rands silent traction hoist.

The Locomotive Superheater Co. reports that the oil tank s.s. Pearl Shell, launched recently at Wilmington, Del., for the Shell Oil Co., of San Francisco, is the first ship built in America to be equipped with fire tube superheaters. She is equipped with three Scotch marine boilers, fitted with Locomotive Superheater Co.'s fire tube superheater, supplying superheated steam to triple expansion engines developing 2,400 h.p. The superheaters were applied after the purchasers had satisfied themselves of the economy and reliability in operation, of a superheater of the same design applied to one of their existing steamships of approximately the same size. They have also ordered sufficient superheater equipment to convert five of their existing vessels. There are about 1,500 steamships, representing over 2,000,000 h.p., sailing from ports outside America which are equipped with fire tube superheaters.

CANADIAN GOVERNMENT RAILWAYS

Halifax Ocean Terminals, Railway, Halifax, N.S.

SEALED TENDERS addressed to J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., and marked on the outside: "Tenders for Halifax Ocean Terminals Passenger Station," will be received up to and including Monday, August 7, 1916, for the construction and erection of Passenger Station at Halifax, N.S.

Plans, specifications and blank form of contract may be seen on and after July 15, 1916, at the offices of the following:—

Chief Engineer, Department of Railways and Canals, Ottawa, Ont.

Chief Engineer, Canadian Government Railways, Moncton, N.B.

Superintending Engineer, Halifax Ocean Terminals, Halifax, N.S.

Ross and Macdonald, Architects, 1 Belmont Street, Montreal, P.Q.

Ross and Macdonald, Architects, 908 Royal Bank Building, Toronto, Ont.

Contractors who wish to obtain plans and specifications temporarily for their own use may obtain same from Ross and Macdonald, Montreal, on depositing with them a certified bank cheque in favor of the Canadian Government Railways for the sum of One Hundred Dollars (\$100), which will be refunded on the return of the plans and specifications to them.

All the conditions of the specifications and contract form must be complied with.

Tenders must be submitted in duplicate on the blank form of tender which may be obtained from any of the Offices at which plans are on exhibition.

A security deposit will be required as called for in tender form.

The lowest or any tender not necessarily accepted.

F. P. GUTELIUS,
General Manager,
Canadian Government Railways.

Moncton, N.B., July 10, 1916.

Every passenger steamer worth the name is now
equipped with Marconi Wireless. Over 2,000
vessels now equipped.

Canadian Marconi Company

137 McGill Street, MONTREAL

These Reinforced Brake Shoes weighed approximately
twenty pounds each when put in service. When
ready for the scrap heap, after long and satisfac-
tory use, they weighed about six pounds each.

Just compare this record with that of ordinary unrein-
forced brake shoes. Almost invariably they go
to pieces before being half worn out, and their
average scrap weight is about fifteen pounds.

No argument for ordinary shoes can meet the demon-
strated facts that stand behind Reinforced Brake
Shoes.

Manufactured in Canada.

Have you ever stopped to consider what this coupon may be worth to you? It is the offer of the largest educational institution in the world, having 25 years' experience in qualifying hundreds of thousands of people for better positions, to help YOU to obtain the advancement and promotion that you want and should have.

If YOU really want to better yourself, the International Correspondence Schools can help you, no matter how poor your circumstances, nor what your age, nor how scant your education may be. No time lost from your present work. No books to buy. Pay on terms you can afford. If you realize the worth of this coupon, mark it and mail it to the Schools. It puts you under no obligation. It is simply a free way to *find out* how to make a success of your life.

USE YOUR PASS NOW

Box-Car Un- loaders

Not as bad as it looks, for they are both laughing—but the picture will give you an idea of the strength, as well as the size, of these Box-car Unloaders.

☞ The Wheels are cast iron, running on roller-bearings with forged axles.

☞ The Tray—about 30 in. x 30 in. x 11 in. deep—is made of heavy sheet steel, the handles of pipe, making the whole Unloader very light and very strong.

☞ Can be used for unloading and carrying Coal, Grain, Sand, Cement, Gravel, Coke, etc., etc.

PRICE \$25.00 EACH
Special discounts allowed on quantities.

NOTICE.

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signaling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the fact that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

Why?

A defective signal wire might easily cause just such an awful wreck as this.

Why take the chance?

To safeguard your road against such catastrophes you should not only have the best signalling equipment but you must use

Northern Electric Railway Signal Wire

No conditions impose a severer test on wire than those used in connection with a railroad signalling system.

Northern Electric R.S.A. wire meets the R.S.A. specifications in every particular and goes a step further—it meets the more rigid Northern Electric specifications which gives you, the user, double protection.

Buy your wire and cable from the largest makers in Canada.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished and are available only by reputable wholesale jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

FAIRMONT WINS GOLD MEDAL

The excellence of FAIRMONT Railway Motor Cars is attested by their receiving the highest competitive award, a gold medal, at the Panama-Pacific International Exposition, San Francisco.

Years of good service on Canadian railroads has proven the justice of this award. When you need a motor car, specify "FAIRMONT". Instalment terms to private buyers.

FAIRMONT GAS ENGINE & RAILWAY MOTOR CAR COMPANY

Formerly Fairmont Machine Co.

445 N. MAIN ST., FAIRMONT, MINNESOTA, U.S.A.

Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

BROWNHOIST Locomotive Crane

A Big Labor Saver
on all Kinds of
Construction Work

was used in renewing the railroad bridge over Gauley River at Gauley Bridge, W. Va. The crane was used for unloading the new steel members as they were received, erecting the false work, dismantling the old bridge, erecting all steel except two 56-ft. deck plate girder spans, switching cars, and clearing the bridge for 4 train movements each way each 10-hr. day. The crane placed about 35 per cent. more steel per day than would have been possible with a traveler. The Kanawha & Michigan R. R. did the work under the direction of C. M. McVay and Paul Eberst.

It is very important that a good crane be used on such work, otherwise expensive delays may result, due to breakdowns. No risk is taken in using a Brownhoist Crane—25 years' records prove it to be a well-built machine. Ask the owners—they will tell you.

A new catalog is ready, which shows how and where this crane is used. Write for a copy of this Catalog I.

Single-Stage and Cross-Compound Air Compressors

Simple and Reliable

Westinghouse Single-Stage Compressor on Portable Stand

They occupy the smallest possible space, yet are designed with ample proportion of all wearing parts, insuring durability and low maintenance cost. They can be mounted on a boiler, or to any post, column or wall, or a stand is provided making it easy to move the compressor about. They are the same compressors recognized as standards for railway air-brake systems.

Style No. 200

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

Capitalize Your Crossing Delays

THE G-R-S- Electric Interlocking Machine, due to its ease of operation, its safety made possible by dynamic indication and its reliable system of cross protection, is exactly suited to small crossing installations where it can be operated by the station agent or other attendant without interfering with his regular duties, thereby eliminating one of the principal items in the annual operating cost of an interlocking plant.

Stopping for the unprotected crossing not only means delay, but a cost of from fifty cents to one dollar or more per stop.

The elimination of a few train-stops per day, together with the elimination of the lever-man's wages alone are sufficient to show a profit on an installation of G-R-S Electric Interlocking.

When you can capitalize your crossing delays by means of their elimination, show an annual saving and an improvement in present train service, is it not time to install a small G-R-S Electric Interlocking Plant?

Nova Scotia Steel & Coal Company

LIMITED

Manufacturers of Steel for Shrapnel Shells and Admiralty Forgings

Only Company in Canada producing Steel Ingots by the "Harmet" liquid process

Can supply Forgings up to 40 Tons in weight to all Admiralty and Lloyd's Tests and Specifications

FORGING A RUDDER FRAME

Why "Harmet" Liquid Process Steel Ingots are Superior to Ordinary Steel Ingots:—

1. Prevention of cracks due to shrinkage; of internal stresses and resulting cracks and fissures.
2. Early cessation in the crystallization of the metal, and the production of fine crystallization without cleavage planes.
3. Lessening of segregation, i.e., reduction of tendency of carbon and other impurities to concentrate in the central and upper parts of the ingot.
4. Prevention of "pipes" or interior cavities, and thus preservation of absolute solidity in the ingot.
5. Improvement in physical properties.
6. Reduction in waste of ingot.

OUR modern Steam Hydraulic Forge Shop at New Glasgow, N.S., part of which is shown above, and our large Steel Plant at Sydney Mines, N.S., equal the very best in America.

On the shortest notice, we can supply forgings of all shapes and sizes, made of ordinary or "Harmet" fluid compressed open-hearth steel, and satisfying the most severe specifications.

Our forges are modern in every respect—designed and installed after close study of the latest developments in all countries. Moreover, we produce the highest grades of steel by the most approved methods. It has always been the policy of "Scotia" to hold a position in the front rank of trade, and by the recent additions to plant, this policy has been maintained in a practical manner, bringing "Scotia's" equipment abreast of the best foreign forges.

Starting Right

A large property bought some O-B Trolley Bases to try out.

After a thorough trial in service they ordered 24 O-B Bases with which to equip new cars they were building.

They realized the wisdom of beginning with good equipment.

Listed in Catalog No. 16.

The Ohio Brass Co.

Mansfield, Ohio

Form 1
O-B TROLLEY BASE

Why Don't You Find Out More About Fabrikoid ?

Every square inch of Du Pont FABRIKOID is as good as the inch next to it. Examination of a leather hide in various places shows plainly that the strength is seldom the same in any two places in the hide.

Every Master Car Builder should acquaint himself with the superior qualities of FABRIKOID for railroad uses before specifying materials for the work in hand.

Uniformity in strength of materials used by railroads for car seats, cab and caboose cushions is an absolute essential when you consider the extremely hard wear to which this class of material is subjected.

A TRIAL ORDER

AND YOU WILL BUY DU PONT FABRIKOID REGULARLY.

WIRES and CABLES for STEAM and ELECTRIC RAILWAYS

THE fact that most of the steam and electric railroads in this country are using our products and continue from year to year to send in their repeat orders, is the best indication of what users think of Northern Electric quality.

No manufacturer pays more painstaking attention to the wire and cable requirements of the railroads; and the manufacturing and shipping facilities of our new Montreal plant are unsurpassed.

Here are some of the lines we make:—

- Railway Signal Wire, bare and rubber covered.
- Rubber-Covered Wire for round houses and repair shops.
- Asbestos Insulated Wire for Headlights.
- Reinforced Weatherproof Cables and Armored Cables for use in car shops.
- Magnet Wire for rewinding motors.
- Car Wire for electric light, fan, annunciator, motor and control circuits.
- Trolley Wire.
- Bare Weatherproof and Paper Insulated Feeder Cables.
- Bonding Cables.
- Paper-insulated, Lead-covered Telephone Cables and Bare Wires for Train Dispatching.
- Paper-insulated and Rubber-insulated Telegraph Cables.
- Armored Cables for bridge installations.

Fairbanks Dial Scale

FULL CAPACITY
DIRECT READING

This is the most highly developed machine of its type for modern, quick-weighing Service.

To simply place a load upon a platform, and immediately read its correct weight from a plainly graduated dial, is undoubtedly, the closest approach imaginable to 100 per cent weighing efficiency.

The FAIRBANKS DIAL INDICATOR does all this, and combines exclusive features that have taken years of experience to develop. It is the logical indicator for every-day service requiring quantity weighing with speed and accuracy.

The FAIRBANKS DIAL INDICATOR can be applied to any Dormant type of Scale that is in good working order.

Write for Bulletin.

Berry Brothers' Railway Varnishes

Need no introduction to experienced railway men. For nearly 60 years they have been the standard of railway varnish quality and their constantly increasing sale is undisputable testimony of their great efficiency.

Here are a few valuable finishes for railway use.

Inside Coach Finishing

A high grade varnish, very pale, heavy bodied and well matured. It is an easy working, free flowing varnish and dries quickly and hard with an attractive lustre.

Outside Coach Rubbing

A very pale, easy working varnish, dries quickly and can be rubbed in two days.

Inside Coach Rubbing

A superior rubbing varnish, is light in color, dries and hardens quickly, rubs easily and makes an ideal surface for the finishing coats.

Luxeberry Wood Finish

A high grade interior varnish for Stations, etc. Can be rubbed and polished if desired.

Outside Coach Finishing

A pale full-bodied varnish that dries dust free quickly. It is very durable, resisting wear and tear and dries with an attractive lustre.

If you have not already received a copy of our new catalog of Railway Varnishes, write us today, for the best catalog of its kind ever published.

Superintendents of Motive Power, Fuel Agents, Officials in Charge of Operation

Should investigate the merits of the Dearborn Method of Water Treatment.

It is inexpensive—costs less than any other method.

It is effective—the waters requiring treatment are analyzed, and the treatment made to meet the actual requirements.

It accomplishes—the removal and prevention of scale—stops leaks—prevents corrosion—overcomes all foaming trouble.

The benefits—life of boiler tubes greatly lengthened—expense for boiler work reduced to minimum—mileage between boiler washings increased—large saving in fuel effected by having boilers free from scale. All the troubles due to bad water overcome and service generally improved.

Experts furnished to instruct in application of treatment.

Now used on more than 100 American railways.

Dearborn Chemical Company of Canada, Limited

Office and Works: 1220-1230 Dundas Street, Toronto, Canada

Cut Filing Costs in Half

Filing is like drilling. The moment the file wears smooth, it takes twice, or three times, the energy to accomplish the desired result. Engineers have got it down to a scientific basis in drilling. The moment a drill reaches its "inefficient point" it is discarded and this "efficient point" is determined by the amount of power used to drill a certain dimension.

Workmen are not machinery; consequently you have to depend upon

the personal element and educate your men up to the point where they will know at once when their files have reached the "inefficient point". If you can educate your men to do this you will get double the results at the bench, compared by results when men have been working with files that are inefficient.

The Famous Five are: Kearney & Foote, Great Western, American, Arcade, Globe
(MADE IN CANADA)

Write for our booklet "File Philosophy." It is well worth reading by any manufacturer, shop superintendent, shop foreman or workman who is concerned with the use of files.

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE—INTERCOLONIAL RAILWAY

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2 $\frac{1}{2}$ wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

Lighting Carbons for all Purposes

We are prepared to supply you with arc lamp carbons to fit all types of open, enclosed and flame arc lamps—also carbons for projection work.

We are pioneers in the lighting carbon field. We made carbons for the first arc lamps used in this country and are now furnishing carbons for the most highly developed flaming arc lamps.

Head-lights—Carbons of any size or shape for any make or type of head-light. Our head-light carbons are used by the largest railroads on the continent.

Large area lighting—Railroad yards, wharves, shops and factories using arc lamps of any type will be better lighted if our carbons are used. Write us your requirements and we will make recommendations.

If you use carbons in any form for any purpose, it will pay you to get in touch with us.

Welding carbons, electric furnace electrodes and carbon brushes to meet all conditions of operation.

Write for samples and prices.

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

September, 1916.

The Engineering Department's Plan Room, Canadian Pacific Railway, Montreal.

The plan room in the C.P.R. Chief Engineer's office on the fourth floor of Windsor Street Station, Montreal, is one of the most modern and efficient in America. In a concrete and steel fire-proof vault, some 90 ft. long, 30 ft. wide, and 11 ft. high, over 80,000 maps and plans, a large number of engineering reference books, current engineering magazines, catalogues and special reports are filed in steel cabinets in such a manner as to be instantly available at any time. The accompanying plan shows the layout of the room and equipment.

When a new plan is to be placed on file, a detachable stub slip, shown in accompanying fig. 1, filled out with all the information necessary for filing purposes, accompanies it to the plan room.

own consecutive sub number. Record is kept of these sub numbers so that it is readily ascertained at any time whether the plan is complete, and if not just what sheet is missing. It is then indexed in the proper places and is ready for issue on demand. The detached portion of the filing slip is finally returned to the marker for his record.

Rolled plans which do not exceed 54 in. in width are assigned consecutive numbers and placed in tiers of numerically arranged horizontal dropend sliding steel pigeonholes, which contain 10 plans each; maps and other rolled plans exceeding this dimension are assigned special numbers and filed vertically in the map cases. Special provision is also made for track profiles, which are all of one size, are

standing open practically all the time and collecting an almost inconceivable amount of dust and dirt. The plans were filthy in spite of persistent use of a vacuum cleaner. At present they accumulate more dirt while in use than while in the files. The pigeonholes and drawers are always closed and during three years of service have required no cleaning. This is a large saving in operating cost, as well as a vital factor in the preservation of the plans themselves.

For indexing, both card and book systems, with extensive cross indexing, are in use. Yard, bridge building, standard, foreign and miscellaneous plans, as well as books, magazines, etc., are recorded in separate portions of the card index cases. They are listed under station

15. Tonnage tables, eastern and western lines.

33. Track profiles, eastern and western lines.

19. Yard plans, eastern lines.

22. Yard plans, western lines.

The stub is signed by the attendant in charge and returned at once to the maker. This serves as a receipt, which makes the signer responsible thereafter for producing the plan. He assigns the plan a number, under which it is recorded in the plan number journal in consecutive numerical order. If it is a rolled plan, he attaches a tag bearing the assigned number and places it in the proper pigeonhole; if it is a flat plan the number is placed in the corner of the plan, which is filed in a drawer. If the plan consists of two or more sheets, each sheet bears the assigned number and in addition its

filed flat in special drawers under special serial standard plan numbers. Small land plans, as well as yard plans, and all Militia, Interior Department and other government maps, are also filed flat in drawers; while magazines, books, and reports are filed on the shelves. All are under cover, thoroughly protected from dust and dirt.

Prior to the installation of steel cabinets, the plans which were filed in pigeon holes were protected by asbestos curtains. To uncover one pigeon hole, it was necessary to uncover one whole section, which resulted in the cases

names, bridge numbers or general subject headings. Property, resurvey, and generally all extensive plans, which cannot be definitely classified as to location under the card index headings are recorded in the book indexes. These are practically straight line diagrams of the entire system, at a scale of 1 in. to the mile, bound in loose leaf binders in consecutive geographical order. Under the diagrammatic headings, plans are recorded in chronological order, and their location, extent and kind indicated by the location, extent and color of the underlining below the description, as well

missioners, underlined with red and blue. "As constructed" plans and profiles, certified by Board of Railway Commissioners, underlined with double blue lines.

Any further revision of a certified plan and profile will be denoted by an additional line.

To withdraw a plan from the files, the applicant, after looking it up in the proper index, applies for it by number at

Charge No. 28403

May 15th 1916

Location Plan Mile 25-30 E.L.S. & A. Ry.

R. Simcox Signature

General Drafting DEPARTMENT

Fig. 4—Receipt for plan taken from plan room.

the counter, and an attendant delivers it. Its use in the plan room is unrestricted, ample counter space being provided for unrolling large plans. In order to take it from the plan room, a receipt showing the plan number, date, description of plan and the applicant's signature and department, as shown in the accompanying fig. 4, must be left with the Check desk attendant. This card is filed in a numerical index and withdrawn and destroyed when the plan is returned. The actual plan, or a full receipt for it, is thus at all times in the plan room.

To illustrate the efficiency of the sys-

and handled an average of 250 plans a day. This is probably the economic minimum for this type of handling, although one attendant could, no doubt, handle from 75 to 100 plans with little

difficulty or delay. It may be stated, generally, that this plan room is giving entire satisfaction as to the four essentials, safety, cleanliness, efficiency, and economy.

An Analysis of the Increases in Railway Operating Expenses.

By Sir Henry L. Drayton, Chief Railway Commissioner for Canada.

A large proportion of railway expenses is represented in the salary and wages account. The governmental statistics for all railways give the amount of salaries and wages for each year since 1907; and, what is more important, the ratio of salaries and wages each year to gross earnings and operating expenses. The statement is as follows:—

Year.	Salaries and Wages.	Ratio to Gross Earnings.	Ratio to Operating Expenses.
1907	\$58,719,493	40.01	56.70
1908	60,376,607	41.09	56.26
1909	63,216,662	43.58	60.43
1910	67,167,793	38.61	55.78
1911	74,613,738	39.53	56.94
1912	94,237,623	39.79	57.92
1913	115,749,825	45.09	63.59
1914	111,762,972	45.97	62.43

Salaries and wages, therefore, now represent more than three fifths of the total railway expenses and have increased at a more rapid ratio than the sum of other expenses, as evidenced by the above returns. A comparison of earnings and expenses per train mile is given from 1899

effective loading, as well as the benefit of a largely increased traffic, are reflected in these figures, the percentage of increase in expenses exceeds that in earnings by 23.96%. Taking the last five year period and comparing the results of 1910 with those of 1914, the earnings have increased 10.65%, and the expenses 17.74%.

The recently published statistics for 1915 give for the year ending June 30, 1915, similar earnings and expenses at \$2.144 and \$1.585 respectively, resulting in a ratio of 74 for the train mile expenses as compared with the train mile earnings. As compared with 1910 the increase in earnings is but 5.3% and the increase in expense 12.42%. In this case the percentage of increase in expenses more than doubles that of receipts. The year, however, including as it does 11 months of operations under war conditions cannot be accepted as a fair example of the earnings of the railways based on the present rates.

CANADIAN PACIFIC RAILWAY

OFFICE OF THE CHIEF ENGINEER

MONTREAL, September 1913

R. Simcox General Drafting Dept.

For your information, 1 sheet Tracing have been indexed under No. 54683

and described as As Constructed Plan Lake Simcoe Sub-division

C. E. Office,
May 15th 1913
Cert. Ry. Com.
Aug. 22nd 1913

N. Willard
Recorder of plans.

Fig. 2—Stub slip for filing plans.

in the Government statistics as follow:—

	Earnings per Train Mile.	Expenses per Train Mile.
1899	\$1.192	\$0.779
1900	1.282	0.864
1901	1.366	0.944
1902	1.501	1.028
1903	1.591	1.117
1904	1.634	1.216
1905	1.614	1.213
1906	1.723	1.198
1907	1.953	1.381
1908	1.869	1.364
1909	1.816	1.309
1910	2.036	1.409
1911	2.103	1.460
1912	2.173	1.493
1913	2.263	1.604
1914	2.253	1.659

This return shows that, while earnings per train mile have been increased by 89.00% since 1899 and down to June 30, 1914, the cost of service per train mile has increased by 112.96%. While the many economies effected by increased locomotive power, better grades, and more

The statistics indicate in different directions the causes of this increase.

That the increased ratio is the result of a higher wage scale rather than improvident railway managership in unnecessarily increasing the number of their employes, is quite evident from the fact that the number of railway employes per 100 miles of line operated in 1913 was 609; in 1914 the number amounted to only 517; in 1907, when the ratio was but 56.70, 551 employes are shown per 100 miles; in 1908, where the ratio fell by 0.44, 463 were employed per 100 miles of line. Notwithstanding the resultant economies effected in the wage account by employing 19,510 less men in 1914 than in 1913, a reduction of approximately 11%, the resultant economy expressed in ratio to other operating expenses is but 1.16, while the ratio of salary and wage account to gross earn-

tem, an actual instance, which is only typical, may be cited, which occurred recently in the presence of a prominent official of another railway, who was viewing the plan room and its operation. A member of the Bridge Engineer's staff entered the plan room, referred to the bridge index, and requested a plan. An attendant started for it and stopped when the check desk attendant announced, "Out to Mr. —, in the Building Department." The applicant left the plan room less than a minute after he had entered it, with full information as to where he could find the plan. If the plan had been in the files, he would have taken it with him inside of another minute.

In busy times a staff of 5 attendants has recorded and handled over 1,000 plans across the counter in an 8-hour day. In slack times a staff of 2 has recorded

ings shows an increase of 0.88, notwithstanding the great economy worked in the reduction of the force of men employed. Illustrating the situation by percentages, both of men and salaries and wages per 100 miles of line, the following is the result, taking the year 1907 as the basis of comparison:—

	Salaries and Wages.	Percent- age Increase.	Em- ployes.	Percentage
1907...	\$268,000	551
1913...	391,636	48%	609	10% increase
1914...	364,048	38%	517	10% decrease

The result is apparent; notwithstanding a decrease in the number of employes per mile of line in 1914 of 10%, the cost of employment on the same basis rises to 38%.

The government statistics also show that the cost of railway ties has advanced steadily for a number of years, the average cost per tie in 1914 being shown as 49.7c as against 47.8c in 1913, while the average cost in 1907 is shown as 36.7c; 1911, 43.8c; and in 1912, 44.7c. The cost in 1915 is given as 53.7c. The increased cost in 1914 is 38% over the cost in 1907, and in 1915, 46%.

In the same statistics it appears that the cost of fuel per 100 miles of operation has also increased. The cost of running a freight locomotive in 1907, for 100 miles, was \$19.61; in 1908, \$23.20; in 1909, \$22.65; in 1910, \$22.48; in 1911, \$22.17; in 1912, \$24.46; in 1913, \$25.51; in 1914, \$25.64. The resultant cost in 1915 over 1907 is 30%. The average cost of fuel is given for the year as \$3.12 per ton, and for 1909, \$2.56 per ton. The price of coal varies, of course, from time to time, being sometimes higher and sometimes lower, but the general trend is to the higher figure. It may be observed that the percentage of increase of cost of coal between 1909 and 1914 amounts to 21.8% while the cost of running a freight locomotive 100 miles in the like period, notwithstanding the fact that the tendency is in the direction of heavier engines, is but 13.25%. The difference in the ratio of increase is an indication of the increase of engine efficiency.

The railway earnings as expressed in the average receipts per ton per mile on the above traffic are given as:—

1907	0.815
1908	0.723
1909	0.727
1910	0.739
1911	0.777
1912	0.757
1913	0.758
1914	0.742

The tax bill of the railways is shown for 1914 as \$2,822,774.35, and for 1915, \$3,049,727.62, as against \$1,581,336.59 for 1909, or an increase of 78.5% for 1914, and of 92.2 for 1915.

On the question of the freight traffic itself indicating the volume of business done by the railways expressed in the number of tons hauled one mile, the figures are as follows:—

1907	11,687,711,830
1908	12,961,512,519
1909	13,160,567,550
1910	15,712,127,701
1911	16,048,478,295
1912	19,558,190,327
1913	23,032,951,596
1914	22,063,294,685

The returns of 1915 only show 17,661,309,723 ton miles. In view, however, of the exceptional conditions then obtaining the returns of that year cannot be regarded as characteristic.

The above figures have reference to railway operations for Canada as a whole, and cover the activities of all rail-

way companies, under the act, as reported to the Department of Railways and Canals. They are compiled from returns made in the ordinary course of business. The returns were not made for the purpose of any rate increase or for any object, except to show the shareholders and the public the position of the different railway companies, and to conform with the statute. The results are of value as constituting a check for and standard by which the evidence given and exhibits filed in this case for the purpose of obtaining higher rates may, to some extent, be measured.

On the side of expenses, the Grand Trunk figures show that hardwood ties purchased by that company in 1909 averaged 61.68c, softwood ties 39.4c, while the average price of hardwood ties in 1914 was 69.2c, and for softwood 44.9c, resulting in an increase in hardwood of 12.15% and for softwood 13.95%. The prices here again vary. For example, the average cost of hardwood ties to the Grand Trunk in 1910 was 62.55; so that the percentage of 1914 over 1910 is but 10.63%, while on the other hand, softwood ties were lower in 1910, the percentage increase in average cost in 1914 over that of 1910 amounted to 15.15%. The general trend is, however, higher.

The average rate of pay on the Grand Trunk varies in detail from the figures paid by lines generally in Canada, but in general conform to the conclusions to be drawn therefrom. In some instances, the wages paid by the Grand Trunk System are lower than the general average, in other instances higher; but the general result, however, is that the increase in the average rate of pay on the Grand Trunk System, comparing the year 1914 with 1909, amounted to 23.19%, or a total advance in the rate of pay of \$3,005,238.64.

I think it was only suggested by one opponent to any increase that wages should be reduced. In my view this is not possible. As a matter of fact, increases have been given in some instances by the company since the hearing. These increases, which individually may be small, nevertheless amount to a total percentage increase of 4.3%. I think it may be taken for granted that the company is paying no larger wages than it finds itself compelled to pay and that it is not being extravagant on this head. On the other hand, the company is economizing in connection with its labor expenses as well as on other items. The figures in this connection are as follows:—

Year.	Number.	Compensation.	Earnings per man.
1913	27,434	\$18,127,745.12	\$660.77
1914	25,663	17,861,294.66	695.99
1915	22,969	16,914,374.85	736.40

It will be observed that on this return there is an increase of 11.4% in earnings per man in 1915 over 1913, with a further result that, although there was a reduction of no less than 16.27% in the number of men employed, owing to the increased cost of wages, the net reduction in wages paid only amounted to 6.69%.

The company's coal figures may be said to agree with the general results of a sharp increase in the price of coal which has taken place in the last year. The increased cost to the company approximated \$600,000.

(EDITOR'S NOTE.—The foregoing is reproduced from Sir Henry Drayton's judgment in the Eastern Freight Rates case, recently, a summary of which was published in Canadian Railway and Marine World for August.)

Bridge Floor With Old Rails for Outside Guards.

Steel guard rails for bridge floors, placed outside the track rails and used instead of the usual guard timbers, are standard practice for bridges and trestles on the Atlanta and West Point Rd. and the Western Ry. of Alabama. Old rails are used, laid on their sides, with the base 10 in. clear from the base of

Old Rail Guard on Railway Bridge.

track rails, as shown in the accompanying drawing. At the ends of the bridge the guard rails are flared away from the track. Each guard rail is fastened to every tie by a $\frac{3}{4}$ in. lagscrew 8 in. long. No inside guard rails are used. This construction has been followed for some years with satisfactory results, and in cases of derailed trucks it has guided them safely across the structure.

South African Railways are administered by a newly constituted railway board, which came into existence June 1. In addition to the railways previously operated by the Union of South Africa, those running through the recently acquired territory, formerly known as German Southwest Africa, are subject to the Board's jurisdiction, subject to military authority, which still obtains in the conquered territory. The former German lines total 1,319 miles, and there are also 315 miles of privately owned lines. These are all of a variety of gauges, from 2 to $3\frac{1}{2}$ ft. The Board meets once a month, the Minister of Railways presiding, and acts chiefly in an advisory capacity. Should the Minister not follow the advice tendered by the Board, on matters within its competence, he must state his reasons for not doing so to Parliament. Opinion is expressed that as these latter railways will be operated at a loss for some time, they should be at the cost of the Defence Department, until a settlement is arrived at as to the terms on which they shall be incorporated in the South African railway system.

Thunder Bay Terminal Elevator Co., Ltd., has been incorporated under the Dominion Companies Act, with \$1,000,000 capital, and offices at Winnipeg, to carry on a general elevator and grain warehouse business, and to own and operate steam and other vessels, docks, wharves, etc. C. B. Piper, H. Phillips, C. S. A. Rogers, W. M. Shaw, and K. B. Armstrong, Winnipeg, are the incorporators.

Canadian Car Service Bureau.—At the recent annual meeting at Montreal, the C.P.R., G.T.R., Central Vermont Ry., Toronto, Hamilton & Buffalo Ry., Quebec Central Ry. and Canadian Government Railways, were elected members of the executive board, and W. J. Collins was reappointed Manager for the current year.

Among the kinds of trespass on railways complained of by the Intercolonial Ry. is the practice of driving horses along the track. Near Campbellton, N.B., recently, a freight train was wrecked in stopping to prevent it running into a number of horses which were being driven on the track. The trespassers are being prosecuted.

Thermit Welding and its Application at Transcona Shops, National Transcontinental Railway.

By S. Lewis, Master Blacksmith, National Transcontinental Railway.

The technological aspect and importance of thermit reaction can hardly be over-estimated, being a branch of aluminothermics, a science only in its infancy, and which has been taken up so rapidly by the steel industries of Canada and

stand great changes in temperature.

Thermit may be well termed a new kind of fire, a fire that is different from all other varieties of fire. In its combustion thermit is not air consumed, nor is there any gas evolved, as in the case

of thermit, that a heat density is produced unattainable otherwise. Thermit would therefore be of no practical use were it not for these peculiarities in its behavior.

The thermit process of welding as ap-

Fig. 1.—Cast iron boring bar of vertical boring mill.

Fig. 2.—Quadrant of vertical boring mill.

the United States that a knowledge of it is nowadays indispensable. Already thermit reaction serves for the preparation of a number of pure metals and alloys of considerable value in the iron and steel and allied industries. Among

of wood, coal, gas, or any other kind of flammable combustion. Its heat density is also high and violent, and of such a peculiar nature that its application for welding purposes has been determined for industrial use with success. Then

plied to railway locomotive and machine repair, particularly in the welding of frames, and other heavy sections, maintains its advantage in the factors of time, portability in manipulation, simplicity of apparatus required, and its convenience in the smaller outlying points of modern facilities. At the Transcona shops ordinary locomotive frame fractures are thermit welded in from about 4½ to 6 hours, from start to pour, and mould boxes to accommodate all required shapes are built up from adjustable scrap boiler plate specially designed to suit the job, and which form part of the welding outfit. The thermit process is one of the oldest of autogenous welding in the railway shop, although there have even here, been recent improvements and changes affecting details, which have brought about further improvements and economy. Special railway thermit can now be obtained, already mixed with proper proportions, thus relieving the individual

Fig. 3.—Welding of locomotive 427.

the alloys I may mention chromium (98 to 99% pure), which is used extensively in the manufacture of high speed tool steel and armor plate. Other alloys I may mention are chromium-manganese, manganese-titanium, ferro-titanium, ferro-vanadium, and ferro-boron.

In foundry work thermit, containing a small quantity of titanium-oxide, is used to prevent blowholes, and to give clean, dense castings. The fluidity of the metal is increased, producing a finer grain and decreasing the sulphur contents, the slag rising to the top can be removed very easily. It has also been discovered that, from the reaction of chromium under thermit, minute rubies are found in the slag, but being so small, they are of no commercial value. The slag itself, being free from metallic impurities, is mixed with certain clay, burned and manufactured into chemical apparatus, which can

Fig. 4.—Welding of locomotives 405 and 634.

again, that the actual amount of heat obtainable from a given weight of thermit is much less than that from the same weight of anthracite has been demonstrated, but the reaction between quantities of iron oxide and aluminum is so instantaneous, caused by the combustion

in charge entirely from what previously was one of the most important features in securing good results.

Too much emphasis cannot be placed on the value of using good moulding material. It should always be remembered that on account of the high tem-

perature of the thermit steel, it being 5400 deg. Fahr., it will cut the moulding material if the ingredients are of poor quality, or if they are not carefully selected and properly mixed together. Even in cases where the moulding material, while poor in quality is yet sufficiently refractory to prevent the thermit from running out, the resulting weld will be anything but satisfactory. Upon close inspection it will be found that the moulding material has been carried into the metal, impairing its value and possibly spoiling the weld. Sand containing from 96 to 98½ silica, such as used

tice they cannot expect to obtain satisfactory results. It should be remembered also that the same precautions should be taken in thermit welding as are observed in the best regulated steel foundries, especially in regard to the construction of venting, gating, providing the proper number of risers and the mould properly arranged, so that the parts may be preheated evenly and thoroughly and the crucible properly tapped. Let me point out that this is a decided advantage that does not hold for any other class of autogenous welding, as results are always dependent on the skill of the operator, as

and a tensile strength of about 60,000 lb. per sq. in., with elongation of from 11 to 15%, which is considered very good for cast steel.

The question of expansion and contraction, not only on locomotive frames but on all other sections where the contraction is affected by thermit welding, is one of great importance. A great many men regard the words "expansion and contraction" purely as relative, and they do not give the matter the consideration it should have. There is no fixed law regarding the exact amount of expansion on any piece of work, be it iron, steel,

by the steel foundries, when available, should be mixed, two parts of sand and one part of good fire clay.

Although great importance is attached to the moulding material, no less attention should be given to the preheating system. From personal observation sometimes I have found, upon machining thermit welds, that the metal is not perfectly solid, containing blowholes, impairing the strength of the weld greatly. Now from experience I have found this can be avoided. Do not assume for one moment that this fact is peculiar to the thermit process and cannot be avoided. Welding with thermit is essentially the same as making a steel casting, the process of reasoning will apply to both cases in so far as the conditions are the same. The chief cause of blowholes in steel castings is the presence of ferrous oxide in the metal, this is removed by adding some very active deoxidizer such as aluminum manganese or silica. Thermit itself is a mixture of iron oxide and aluminum, in such relative proportions as to reduce the oxide, and the manganese added to the thermit is to reduce all oxides which may be present in or on the parts to be welded, so it is evident that blowholes which may occur in thermit welds cannot arise from this cause. I am satisfied from past experience that if the parts that are to be welded are not heated or brought to a high temperature before the thermit steel is poured, the small portion of thermit steel coming in contact with the larger amount of comparatively cold metal, which at once conducts away the heat of the former so rapidly at the junction of the two metals, it becomes so thick and the shrinkage so severe that it results in blowholes. These precautions I make mention of, as the tendency by a great number of men doing this class of work is to overlook the fact that unless all the work done be in accordance with standard thermit prac-

there are no fixed rules laid down, such as there are in thermit welding.

Let us consider the reinforcement provided around the welded section. I have heard a great deal of comment about this reinforcement, as if it was something to help the welded part, which was not satisfactory and could not be depended upon without it. If I understand thermit at all, this reinforcement is simply put on in order that sufficient heat may be concentrated around the part to be adhered or welded with thermit steel. This may be cut away providing it is neces-

or cast iron, but practical knowledge and experience is just as safe a guide as will ever be needed along this line.

We will take the following locomotives which have recently been welded at Transcona shops: On locomotive 427 four welds were made. See fig. 3. Following are particulars of the locations of the fractures and of the methods adopted:—

Top zone A. When the 3rd weld was made the zone at E was heated after crucible had been tapped.

Bottom zone C. First weld was made at zone C, zone B was cut open 1 in.

sary, without affecting or impairing the strength of the welded parts. This is not an assumption on my part.

The accompanying fig. 1 is a cast iron boring bar of a 6 ft. vertical boring mill which was repaired in 1913, under my own care, and fig. 2 is a quadrant belonging to the same, which had to be machined and cleaned before assembling. This mill has been doing heavy work, such as boring steel tires and cylinder rings since repaired. A recent test on a riser that was cut off, which is considered the poorest part of any resulting thermit steel weld, showed a fine granular structure

wide, front end was jacked up, expanding from 3/16 in. After 3 hours jack was lowered to normal condition.

Zone at D. In welding D heat was applied at C.

Top zone B. Second weld was made at zone B, jacks were lowered at front of locomotive and secured an expansion of 3/32.

Following are particulars of work on locomotives 405 and 634. See fig. 4. On locomotive 405 zone B was heated. On locomotive 634 zone A was heated.

Experience has already shown the advantage of the thermit process over other

methods and the future alone will doubtless draw still more distinct lines around this individual field of usefulness and economy. Following is a statement of comparative cost of thermit welds:—

Locomotive 405.—Labor \$5.00, one weld; material \$15.60; total \$20.60.

Locomotive 212.—Labor \$14.64, four welds; material \$38.00; total \$52.64.

Locomotive 427.—Labor \$15.60, four welds, material \$40.00, total \$55.64.

Locomotive 634.—Labor \$5, one weld; material \$15.60, total \$20.60.

(EDITOR'S NOTE.—The other illustrations, not particularly referred to in the foregoing article, show thermit welds done by S. Lewis, at Transcona.

Canadian Government Railways' Elevator at St. John.—Plans for an elevator to be erected in St. John, N.B., by Canadian Government Railways, were considered by the city council recently. Some objection had been taken to the original plans, as it was claimed that traffic on Water St. would be blocked and access to the Lower Cove Basin prevented. J. K. McNeillie, General Superintendent, stated that it was the intention to provide an elevator of 500,000 bush. capacity, so arranged that it could be increased to 1,000,000 bush. when desirable. New wharves will be built, and later, the grain conveyors will be removed from their present location.

The Minneapolis, St. Paul & Sault Ste. Marie Ry. has awarded contracts for the construction of a reinforced concrete ore dock at Ashland, Wis., for a total capacity of 60,000 tons. It will be 900 ft. long with four tracks 80 ft. above water level. Including the dock head, the reinforced concrete portion of the structure will be 1,132 ft. long.

The Mutual Grain Co., Ltd., has been incorporated under the Dominion Companies Act, with \$199,000 authorized capital and office at Winnipeg, to carry on a general grain elevator, warehouse and milling business, and in connection therewith to own and operate grain elevators, steam and other vessels, etc.

The C.P.R. has increased the wages paid to machinists, boiler makers, pipe fitters, car men, electrical and sheet metal workers, on its lines east of Fort William, Ont., by 8%, and has also granted improved working conditions which it is said are equal to a further 25%.

Many happy returns of the day to:—

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were drawn.

General order 167. July 3.—Authorizing railway companies operating in Eastern Canada to increase freight rates on various classes of general merchandise and commodities between points east of Port Arthur, Ont., in accordance with judgment dated June 9. Summary of which was published in our August issue.

General order 169, July 27.—Ordering that railway companies subject to Board's jurisdiction furnish Board and bodies enumerated in general order 153, Nov. 4, 1915, with statement showing all changes made in rules of proposed Canadian Freight Classification 17, grounds upon which they are sought to be justified, and results such changes would make on traffic in eastern and western Canada respectively.

25171. July 17.—Authorizing G.T.R. to build spur for St. Catharines Steel & Metal Co., St. Catharines, Ont.

25172. July 17.—Amending order 25085, June 19, re C.P.R. spur in Lots 56 to 58, Kildonan Parish, Man.

25173. July 18.—Approving changes in Canadian Northern Ry., location at Osgood, Sask.

25174. July 18.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for Laidlaw Bale Tie Co., Hamilton, Ont.

25175. July 18.—Authorizing C.P.R. to build road diversion on its Swift Current Southeasterly Branch in s.w. ¼ Sec. 29-15-13 w. 3 m. Sask., and to close within its right of way the existing roadway at mileage 0.2, Vanguard Subdivision.

25176. July 17.—Authorizing C.P.R. to build spur at mileage 67.6 on London Subdivision, crossing Ayr and Waterloo road by bridge, and to divert highway and use same for one month from date.

25177. July 17.—Ordering Bell Telephone Co. to lay conduit on Queen St., Berlin, Ont., from Queen St. South, between Church St. and Schneider's Creek; to be completed by Sept. 15, and within 3 years from date, poles to be removed from said street and wires placed upon private right of way provided by City of Berlin, on both sides of Queen St.

25178. July 24.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to open for traffic its Grande Prairie branch from mileage 0 to 50.19; trains not to exceed 15 miles an hour.

25179. July 24.—Amending order 25063, June 13, re road building at Canadian Northern Ry. station at Menzie, Man.

25180. July 24.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. to connect its line with Canadian Northern Pacific Ry. at Sumas Landing, B.C.

25181. July 24.—Dismissing application Ben-Nevis Collieries, Nevis, Alta., for order directing C.P.R. to continue service on spur formerly operated by Turnbull & Cousins.

25182. July 24.—Dismissing Crawford Bay Farmers' Institute's complaint against C.P.R. rates and service to Crawford Bay, B.C.

25183. July 24.—Ordering C.P.R. to build highway crossing at mileage 69 west of Moose Jaw, Sask., in accordance with Board's standard regulations.

25184. July 24.—Ordering C.P.R., within 60 days to install improved type automatic bells at Crawford's and Pardy's crossings, at mileage 13.55, between Westfield and Hillandale, N.B., 20% of cost to be paid out of railway grade crossing fund.

25185. July 25.—Authorizing C.P.R., temporarily, to build extension to lead spur at Port Arthur, Ont., for taking in construction material for Grain Growers' Elevator Co.'s and Saskatchewan Co-operative Elevator Co.'s elevators.

25186. July 22.—Authorizing C.P.R. to build spur for Roelofs Machine Tool Co., Galt, Ont.

25187. July 22.—Authorizing C.P.R. to build connection to Imperial Oil Co.'s siding which connects with G.T.R. at boundary between n.w. ¼ Sec. 29 and s.w. ¼ Sec. 32-17-19, w.2m., Sask.

25188. July 24.—Dismissing application of Great West Coal Co., Edmonton, Alta., for order directing Grand Trunk Pacific Ry. to rebate \$31,189.30.

25189. July 24.—Dismissing complaint of Clover Bar Coal Co., Edmonton, Alta., against Grand Trunk Pacific Ry. rates on eastbound coal from Clover Bar mine.

25190. July 22.—Authorizing G.T.R. to build spur for Beachville White Lime Co., Oxford North Tp., Ont.

25191. July 25.—Extending to Aug. 10 time within which Grand Trunk Pacific Branch Lines Co. shall complete transfer and storage track at Battleford, Sask., with Canadian Northern Ry.

25192. July 25.—Ordering Canadian Northern Ry. to appoint station agent at Merid, Sask., by Sept. 1; agent to be retained until further order.

25193. July 22.—Approving Canadian Northern Ontario Ry. location through McGregor Tp., Thunder Bay District, mileage 548.45 to 568.13.

25194. July 25.—Dismissing Saskatchewan Department of Agriculture's complaint against charge made by Canadian Northern Express Co. on shipments of cream in cans.

25195. July 22.—Authorizing Canadian Northern Ontario Ry. to build spur for Graves, Bigwood Co., Hennessy Tp.

25196. July 24.—Rescinding order 23955, June 22, 1915, re Canadian Northern Ry. standard wire stock pen.

25197, 25198. July 24.—Approving agreements between Bell Telephone Co. and Stormont Telephone Co., July 5, and Euphrasia Tp., Ont., June 30.

25199, 25200. July 21, 22.—Authorizing City of Hamilton, Ont., to widen Dewey St., from 30 to 66 ft. across Hamilton Radial Ry. and G.T.R., in Lot 6, Con. 1, Barton Tp.

25201. July 22.—Authorizing C.P.R. and St. John Ry. to operate trains and cars over crossing on Douglas Ave., St. John, N.B., without first stopping; speed not to exceed 10 miles an hour.

25202. July 24.—Authorizing City of Edmonton, Alta., to build its street railway across Grand Trunk Pacific Ry. at intersection of 27th St., between Armstrong and Cochrane Ave., under supervision of G.T.P.R. engineer, and to insert diamond in G.T.P.R. at said crossing; half interlocking plant to be installed, question of maintenance cost reserved.

25203, July 24.—Ordering G.T.R. to stop west-bound train 37 at Malton, Ont., on flag, for passengers from Toronto or points east.

25204. July 26.—Authorizing C.P.R. to put into effect by Aug. 1, following train service,—train 615, Kingston to Renfrew, Mondays, Wednesdays and Fridays; 616, Renfrew to Kingston, Tuesdays, Thursdays and Saturdays—on same time schedule as published in summer timetables.

25205. July 26.—Ordering railway companies which, on May 18, increased minimum carload weight applicable to lumber and articles taking lumber rates from points of shipment in British Columbia and Alberta, when loaded in cars under 36 ft. long, from 30,000 to 35,000 lbs., to modify increased minimum by providing minimum weight of 30,000 lbs., for cars of 2050 cub. ft. or less capacity; said modification to be published and filed immediately upon receipt of this order, and, to destinations in Canada, to be made effective forthwith.

25206. July 26.—Approving clearances at siding for Seaman Kent Co., Meaford, Ont.

25207. July 26.—Authorizing Mackenzie, Mann & Co., to build Third St. West over Canadian Northern Ry. at Eston, Sask.

25208. July 22.—Ordering Grand Trunk Pacific Ry. forthwith to build siding for elevator site at St. Louis, Sask., in substitution of siding referred to in order 22784, Oct. 30, 1914.

25209. July 22.—Authorizing Canadian Northern Ontario Ry. to build spur from mileage 26.8, Parry Sound Subdivision, southeasterly through Lot 13, Con. 4, Burton Tp., for 772 ft.

25210. July 22.—Ordering Esquimalt & Nanaimo Ry. within three months to install improved type of automatic bell at Lampton St., Esquimalt Tp., 20% of cost to be paid out of railway grade crossing fund.

25211. July 27.—Suspending, until further order, increased rates on ores and concentrates, in C.P.R. Tariff C.R.C. no. W-2168, effective Aug. 1, from points in British Columbia.

25212. July 22.—Dismissing application of farmers in the vicinity of Greenshields and Wainwright, Alta., for order directing Grand Trunk Pacific Ry. to build siding at crossing near mileage 659, n.e.¼ Sec. 7-44-5.

25213. July 27.—Amending order 25083, June 17, re City of Toronto's overhead crossing of C.P.R. east of Strachan Ave.

25214. July 27.—Authorizing G.T.R. to cancel slow order at crossing of public road near Lyn, Ont.

25215. July 22.—Authorizing G.T.R. to build branch with spurs and team tracks and Y connecting with main line, near Angus, thence about 4 miles to Camp Borden, and approving span diagram carrying Y over Pine River, and also location of station at camp.

25216. July 28.—Authorizing C.P.R. to build diversion in lieu of original road allowance between Secs. 17 and 18-39-2, w.4m., near Provost, Alta.

25217. July 26.—Relieving Canadian Northern Ry. from providing further protection at highway crossing near Camrose Jet., Alta.

25218. July 26.—Authorizing Grand Trunk Pacific Ry. to build highway over its track in s.w.¼ Sec. 29-53-8, w.5m., Alta.

25219. July 26.—Authorizing Ontario Government to build highway on trunk road across C. P. R. west of North Bay, near Meadowsdale.

25220. July 29.—Authorizing Kett'e Valley Ry. to open for traffic its line from Brodie, 13.2 miles east of Coquihalla Summit, to a connection with C.P.R. main line at Petain, west of Hope station, B.C., mileage 112.3 to 165.2; speed of trains between mileage 130 and 136 not to exceed 15 miles an hour.

25221. July 29.—Authorizing G.T.R. to build siding for Canadian Milk Products, Ltd., Burford Tp.

25222. July 29.—Authorizing G.T.R. to lay additional track across South St., Preston, Ont.

25223. July 29.—Authorizing Kettle Valley Ry. and Canadian Northern Pacific Ry. to operate over crossing at Hope, B.C., without first stopping trains.

25224. July 31. Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to join with Kettle Valley Ry. and Canadian Northern Pacific Ry. at places shown on plan and to cross and divert certain avenues and streets in Hope, B.C.

25225. July 31.—Ordering that Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) pay to City of Vancouver, B.C., \$50,000 on account of work done under orders relating to construction of Pender and Hastings St. viaducts, without prejudice to railway company or any objection it may desire to make to any of items of the account.

25226. July 31.—Approving agreement between Bell Telephone Co. and South Crosby Rural Telephone Co., Leeds, Ont., July 20.

25227. July 27.—Amending order of Oct. 12, 1904, re G.T.R. crossing of C.P.R. near Woodstock, Ont.

25228. July 31.—Ordering C.P.R. to stop trains before crossing Twelfth St., New Westminster, B.C., trains to be flagged over crossing by trainmen.

25229. July 31.—Authorizing C.P.R. to build 1,000 ft. spur and 500 ft. switching track for Wentworth Orchard Co., and 210 ft. extension to spur for Slater & Copp, Flamboro Tp., Ont.

25230. Aug. 1.—Authorizing C.P.R., Canadian Northern Ry. and Grand Trunk Pacific Ry. to revise distributing or "town" tariff rates from Winnipeg, Portage la Prairie and Brandon, to conform to basis laid down in Board's judgment, Apr. 6, 1914, as applicable from distributing centres in Saskatchewan and Alberta.

25231. July 29.—Ordering Pere Marquette Rd. to change time of train leaving Chatham, Ont., at 8.05 p.m. and arriving at Sarnia, Ont., at 10.15 p.m., daily, except Sunday, to leave Chatham at 6.35 p.m. and arrive at Sarnia at 8.45 p.m.; time at intermediate stations to be changed accordingly; service to be in effect Aug. 14, and P. M. R. to report result to Board by Nov. 15.

25232. July 31.—Ordering Great North Western Telegraph Co., pending further order, to restore telegraph tolls charged prior to July 1, from Pas. Man., and to file amendments to its tariff accordingly.

25233. Aug. 1.—Extending for three months from date time within which Canadian Northern Ry. shall complete spur to serve block B, plan B, Prince Albert, Sask.

25234. July 31.—Authorizing Winnipeg Electric Ry. to build across C.P.R. spur to Hero Mfg. Co., on Levis St., Winnipeg.

25235. July 25.—Authorizing Saskatchewan Highway Commissioners to build highway over Grand Trunk Pacific Ry. Regina-Boundary Branch in s.e.¼ Sec. 22-12-16, w.2m.

25236. Aug. 3.—Ordering Grand Trunk Pacific Ry. to appoint station agent at Lawson, Sask., by Sept. 1.

25237. July 31.—Authorizing Canadian Northern Ry. to remove station agent at Stoco, Ont., pending further order, caretaker to be appointed to meet passenger trains, keep station clean and heated, and see that l.c.l. freight and express matter is properly housed.

25238. July 18.—Authorizing Toronto and Hamilton Highway Commissioners to cross G.T.R. at Burlington, Ont.; Hamilton Radial Ry. at Maple Ave., and to divert highway along Water St. and across G.T.R., and Toronto & Niagara Power Co.'s wires.

25239. Aug. 1.—Ordering Grand Trunk Pacific Branch Lines Co., pending further order to stop its trains before crossing Twelfth St., Calgary, Alta.

25240. Aug. 2.—Authorizing C.P.R. and Canadian Northern Ontario Ry. to operate over crossing at Russell Road, Gloucester Tp., without first stopping trains.

25241. Aug. 2.—Authorizing City of Port Moody, B.C., to extend Fraser St. across C.P.R. at mileage 115.2, Cascade Subdivision.

25242. Aug. 1.—Ordering Canadian Northern Ry. to build roadway to Woodnorth, Man., C.N.R. to be liable for acquisition of necessary property to extent of \$25 an acre, and to build fence on south boundary; any sum over \$25 an acre that C.N.R. is put to by acquisition of property to be paid by Pipestone rural municipality, Man.

25243. Aug. 1.—Rescinding order 24733, Feb. 17, re clearances at country elevators on railways.

25244. July 28.—Ordering Quebec & Lake St. John Ry. (C.N.R.) to build station at Chicoutimi, Que., within one year from date.

25245. Aug. 3.—Authorizing Canadian Northern Ry. to build transfer track with C.P.R. at Basque, B.C.

25246. July 27.—Ordering Quebec Oriental Ry., by Oct. 15, to build shelter, with waiting and freight rooms, about midway between Caplin and Bonaventure, Que.

25247. July 26.—Dismissing application of City of St. Hyacinthe, Que., to open St. Joseph St. across G.T.R.

25248. Aug. 2.—Approving re-numbered Supplement 8 to Express Classification for Canada 3, applying on shipments of ale, beer, wine, whiskey, and other alcoholic liquors or beverages packed in barrels, kegs, or wooden or corrugated board boxes.

25249. Aug. 3.—Ordering C.P.R. and Canadian Northern Ry. to refund Doucet & Freres, Grand Piles, Que., $\frac{1}{2}$ ¢. per 100 lbs., on shipments of brick to Shawinigan Falls and Grand Mere, on which 4¢. per 100 lbs. has been charged.

25250. Aug. 3.—Dismissing complaint of F. L. Getzler, Montreal, against 10th class rate of 16¢. on pig iron in carloads from Welland, Ont., to Montreal.

25251. Aug. 5.—Rescinding order 24994, May 22, which suspended certain tariffs showing charges for heated refrigerator cars provided that sec. 3 shall apply only when loading is done by shippers and that sec. 4 be eliminated.

25252. Aug. 4.—Approving Chatham, Wallaceburg and Lake Erie Ry. bylaw 12, authorizing W. J. Curle, General Superintendent, to issue tariffs of tolls.

25253. Aug. 8.—Authorizing Canadian Northern Ontario Ry. to build spur for Toronto Builders Supplies, Ltd., Toronto.

25254. Aug. 11.—Suspending until further order, item 8-B in Supplement 5, to F. G. Airy's tariff C.R.C. 1972, which provides for the cancellation of the arrangement whereby fish in carloads is carried by express at net weight from Edmonton, Alta., to U. S. points and continuing in effect item 8-A in Supplement 4, to C.R.C. 1972.

25255. Aug. 11.—Suspending until further order increased rates on crushed stone from Hagersville to Windsor and Pelton, Ont., shown in supplement 12, to Michigan Central Rd. tariff C.R.C. 2490.

25256. Aug. 10.—Approving Grand Trunk Pacific Ry. station and site at Riverhurst, Sask.

25257. Aug. 11.—Rescinding order 23231, Feb. 2, 1915, suspending certain New York Central Rd. and Ottawa & New York Ry. tariffs and authorizing companies to publish tariffs between points in Canada in accordance with the recent judgment in the so-called Eastern Rates Case.

25258. Aug. 11.—Approving location of new G.T.R. station at Mimico, Ont.

25259. Aug. 5.—Ordering G.T.R. to protect crossing of Drouillard Road, Walkerville, Ont., by day and night watchmen.

25260. Aug. 10.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to make certain changes in its railway near Sapperton, B.C.

25261. Aug. 11.—Approving agreement between Bell Telephone Co. and Bethesda & Stouffville Telephone Co., July 28.

25262. Aug. 16.—Suspending Supplement 15, to C.P.R. tariff E 2847, disallowing rates on pulpwood to Mechanicville.

25263. Aug. 15.—Authorizing Canadian Northern Ontario Ry. to build branch line for Cobourg Dyeing Co., Cobourg, Ont.

25264. Aug. 15.—Authorizing Canadian Northern Ontario Ry. to build spur to water front in Port Arthur.

25265. Aug. 15.—Authorizing G.T.R. to change position of one track across Albert St., Oshawa, Ont., and to build two additional tracks.

25266. Aug. 15.—Authorizing Canadian Northern Ontario Ry. to build spur for Field Lumber Co. Field Tp., Ont.

25267. Aug. 15.—Authorizing C.P.R. to build 65 ft. extension to Barrett's siding for C. H. Cochrane, Ottawa.

25268. Aug. 14.—Authorizing C.P.R. to make road diversions in s.e. $\frac{1}{4}$ Sec. 13, Tp. 34, R. 23, w.3.m., Sask., and at mileage 102.12 Kerrobert Subdivision, Sask.

25269. Aug. 14.—Relieving Niagara, St. Catharines & Toronto Ry. from providing further protection at crossing between lots 90 and 91, Stamford Tp., Ont.

25270. Aug. 14.—Authorizing Alberta Government to build two crossings over Grand Trunk Pacific Ry. at Cooking Lake.

25271. Aug. 15.—Ordering Canadian Northern Ry. to appoint station agent at Browning, Sask., by Sept. 1.

25272. Aug. 14.—Authorizing C.P.R. to build branch for Godson Contracting Co., Toronto.

25273. Aug. 8.—Authorizing G.T.R. to build branches for Hodgson Bros. Chemical Co., Lindsay, Ont.

25274. Aug. 14.—Authorizing C.P.R. to build switching lead and to re-arrange present switch lead across the main street in Farnham, Que.

25275. Aug. 14.—Extending for 3 months from date, time for completion of G.T.R. branch for B. Blair Co., Woodstock, Ont.

25276. Aug. 15.—Authorizing C.P.R. to build lead switch and 4 spurs also new spur for St. Maurice Paper Co., Cap de la Madeleine Parish, Que., also to build 2 tracks across public highway for same company.

25277. Aug. 14.—Authorizing Canadian Northern Ontario Ry. to cross Kingston St., Harrow-smith, Ont.

25278. Aug. 10.—Ordering C.P.R. within 60 days to install improved type of automatic bell at Antoine St. crossing, Rigaud, Que.

25279. Aug. 14.—Approving amendment to ex-

press classification 3, re shipment of fruit in baskets, to be effective Sept. 1, 1916.

25280. Aug. 16.—Recommending to Governor in Council for sanction agreement between C.P.R. and Canadian Northern Ry., Oct. 1, 1915.

25281. Aug. 17.—Authorizing Canadian Northern Ry. to build across highway between river lots 224 and 223, St. Andrew's Parish, Man.

25282. Aug. 17.—Ordering Canadian Northern Ry. to erect station at Krydor, Sask.

25283. Aug. 17.—Authorizing Canadian Northern Ry. to cross highway in river lot 79, St. Clement Parish, Man.

25284. Aug. 17.—Approving C.P.R. station and tower location and plans at Adirondack Jct.

25285. Aug. 18.—Authorizing G.T.R. to charge \$1 a car a day or part thereof, after three days, and \$2 a car a day for each succeeding day or part thereof, for detention of cars containing lumber and forest products at Sarnia, Ont., in addition to ordinary demurrage toll prescribed by general order 1.

25286. Aug. 18.—Relieving C.P.R. from providing further protection at crossing at Elmhurst Ave., Montreal West.

25287. Aug. 17.—Extending to Oct. 1, time within which the C.P.R. shall install gates at crossing of Dorchester St., Quebec.

25288. Aug. 17.—Approving C.P.R. plan of revision of interlocking plant at junction of St. Lawrence and Adirondack Ry. mileage 40.66 Farnham Subdivision, Que.

25289. Aug. 17.—Approving C.P.R. plan of changes in interlocking plant at Arnprior, Ont.

25290. Aug. 18.—Ordering Canadian Northern Ry. to build siding to hold not less than 7 cars at Alderdale, Ont., and a 10-car loading siding at Wasing, Ont.

25292. Aug. 18.—Authorizing City of Ft. William, Ont., to build crossing over Canadian Northern Ry., at Kingsway, Ont.

25293. Aug. 17.—Authorizing Canadian Northern Ry. to build transfer track with National Transcontinental Ry. at Empire Ave., Fort William, Ont.

25294. Aug. 18.—Authorizing G.T.R. to build two spurs for Dominion Government in Lindsay, Ont., south of Hamilton Street.

25295. Aug. 18.—Ordering G.T.R. to rebuild fence along its right of way in lot 134, Con. A and lots 134, 135, and 136 Con. B. Foley Tp., Ont.

25296. Aug. 17.—Authorizing Wainfleet Tp., Ont., to divert road so as to cross G.T.R. between east and west halves of lot 1, Con. 1.

25297. Aug. 18.—Approving Toronto, Hamilton & Buffalo Ry. bylaw authorizing G. C. Martin, G. F. & P. A., and R. F. Hill, A. G. F. & P. A., to issue tariffs of tolls.

General order 170, Aug. 5.—Rescinding after Sept. 1, general order 148, Sept. 1, 1915, which authorized railway companies in Alberta and Saskatchewan to endorse upon bills of lading amount of advances for seed grain, fodder for animals and other goods.

The Esquimalt & Nanaimo Ry.—The pioneer railway on Vancouver Island—was opened for traffic in the autumn of 1886, the last spike having been driven at Shawnigan Lake, Aug. 13, 1886. Construction was commenced in 1883, and was carried out under the charge of Joseph Hunter as Chief Engineer. He is now President of the Wellington Collieries Co., and of the Wellington Collieries' Ry.

Imperial Rolling Stock Co.—An agreement dated Aug. 1, made between the Imperial Rolling Stock Co., the Fidelity Trust Co., Philadelphia, Pa., and the Canadian Northern Ry., has been filed with the Provincial Secretary at Toronto. Under the agreement the Imperial Rolling Stock Co. assigns to the Fidelity Trust Co., the railway rolling stock and equipment issued to the Canadian Northern Ry. under a lease and agreement dated Aug. 1.

Rogers Pass Tunnel Suit.—We are advised that Foley, Welch and Stewart have deposited in court an accepted cheque for \$600,000 as directed by Justice Morrison. This is the necessary preliminary to the firm prosecuting an appeal against the amount of damages, \$576,155.98, found by the court as due to McIlwee & Sons, in the suit for breach of contract over the boring of the C.P.R. tunnel at Rogers Pass.

The Pere Marquette Rd., is reported to be negotiating with the St. Thomas, Ont., Hydro Electric Power Commission for the use of 160 h.p. of hydro electric power to replace its present steam plant.

Freight and Passenger Traffic Notes.

The first through train over the Kettle Valley Ry. arrived in Vancouver, B.C., Aug. 1.

"Resorts of the Canadian Rockies," is the title of a handsome tourist folder issued recently by the C.P.R.

The Canadian Northern Quebec Ry. through service which was stopped by the burning of the bridge at St. Ursule recently was restarted Aug. 17.

The Great Northern Ry. local ticket office has been removed to 918 Government St., Victoria, B.C., from its former location at the corner of View and Douglas Streets.

Geo. Porter has been appointed to handle the Canadian Northern Ry. cartage and distribution business in Saskatoon, Sask., in place of the Western Distribution Co.

The Union Pacific Rd., has arranged to give considerable attention to Victoria and Vancouver Island, in the publicity campaign now being carried on by its passenger department.

Local freight agents from the various Canadian railways met in Vancouver, B.C., recently and decided to organize the Canadian Association of Local Freight Agents.

The C.P.R., the Grand Trunk Pacific Ry., and the Canadian Northern Ry. are giving a 1¢ a mile rate for harvest hands from British Columbia to Alberta and Saskatchewan points, Aug. 1 to 18.

The C.P.R. is arranging for the provision of considerable special advertising matter descriptive of the attractions of the British Columbia coast, as reached by its railways and steamship lines.

The Victoria and Island Development Association carried out during the autumn of 1915 and the spring of 1916, a publicity campaign through the passenger and ticket agents of U. S. railways. The association now reports that good results have been achieved therefrom.

The Hamilton, Ont., City Council claims that the Grand Trunk Ry., under some old agreement, must provide a passenger service on its line from Hamilton to Burlington Beach. An application is to be made to the Beach Commissioners asking them to apply to the company to put on such a service, and in the event of refusal to make application to the Board of Railway Commissioners. The matter affects the summer traffic and the council desires to get it settled before the summer of 1917.

The Transportation Club of Vancouver has secured quarters at 553 Granville St., Vancouver. The officers are: Honorary President, R. Marpole; Honorary 1st Vice President, D. E. Brown; Honorary 2nd Vice President, H. W. Brodie; President, J. A. M. Faulds; Vice President, K. J. Burns; 2nd Vice President, C. E. Lang; 3rd Vice President, W. D. Power; Secretary Treasurer, H. W. Schofield.

Alaska Northern Ry.—Seward, Alaska, press dispatch, July 7:—"Final payment of \$650,000 has been made by the United States Government to Canadian bondholders for the old Alaska Northern Ry., thus completing the Government's title to this property, which was taken over as part of the federal railways between Seward and Fairbanks."

The Timiskaming & Northern Ontario Ry. Patriotic Association has, up to date, contributed \$27,358.11 to various patriotic funds, about a quarter of which was sent direct to men at the front.

Canadian Northern Railway Station for Vancouver.

The Vancouver City Council has granted a permit to the C.N.R. for the erection of its station buildings. The estimated cost of the work proposed to be done under the permit is given as \$574,929. When the contract price for the station building was first mentioned the city council made a protest, calling attention to the fact that the agreement called for the expenditure of \$1,000,000 on the building. A letter was subsequently received from M. H. MacLeod, General Manager and Chief Engineer, stating that the difference covered the cost of train sheds, platforms, and station equipment which were not included in the contract, as well as architects' fees and other costs.

The accompanying illustration shows the street front of the new building. It will be of fireproof construction throughout, and has been designed along dignified classic lines, with a strong arched feature and supporting features at the extreme corners. The total frontage will be 321 ft. with a depth of 105 ft. It will contain a basement and 3 stories above street grade. Twelve Corinthian columns will stand at intervals across the entire front. The centre portion of the proposed structure will reach to a height of 100 ft. from the ground, the

constable, and a telephone booth. Passing through the vestibule door, the main lobby will be reached, this will be 41 ft. 9 in. x 27 ft. 9 in., to the right being the elevator hall, and stairway leading to the upper stories. The lobby will open on to the general waiting room, 148 ft. 9 in. x 48 ft. 8 in. deep. Right opposite the entrance lobby will be another lobby, 41 ft. 9 in. x 20 ft. 11 in., leading to a covered concourse 50 ft. wide, running along the entire length of the rear of building. From this concourse access to the various train platforms will be had. These platforms will also be covered. In all there will be 16 tracks leading into the station and the average of the platforms will be about 1,200 ft.

Opening off the general waiting room,

Vancouver Station, Canadian Northern Railway.

tower proper being 96 ft. high. The ends of the building will stand 64 ft. high, and the portions between the centre and the ends, 60 ft. high. These sections will be 3 stories high, and the ends and the centre portion 4 stories high.

Externally the front and both side walls will be constructed of granite up to base, and above, in stone, both of which materials will be procured locally. The general waiting room will be finished in marble about 6 ft. up, above which Caen stone will be used to ceiling, the latter to be panelled in ornamental plaster. The floors will be finished in terazzo. Marble will also be used in all corridors and lavatories, with terazzo floors. It is the intention as far as practicable to use British Columbia materials in the construction.

The building will be amply supplied at all points with natural light and ventilation, the form of the building on the upper floors permitting of direct light and air to all rooms and corridors. The large waiting room, which will have a lofty ceiling, will be lit not only from the top but also by means of clerestory lights on three sides, which will also afford splendid natural ventilation.

The part of the building set apart for public service will be the ground floor, the main entrance to which will be up a flight of steps in the centre of the block, leading into a vestibule 28 ft. 9 in. x 12 ft. 2 in. On the right of the vestibule will be located a room for the station

to the right will be arranged in the following order:—Train enquiry office, Y. W. C. A. travellers' aid office, barber shop; men's waiting room with lavatory, 54 ft. x 27 ft. 9 in. The women's waiting room, retiring room and lavatory will be on the opposite side, and will occupy a total space of 64 x 29 ft. Adjoining this will be the lunch counters and dining room, 70 x 29 ft., with serving room about half the size to the rear. Adjoining this will be the baggage room, transfer and customs office, 70 x 30 ft., the public counter being in the general waiting room, with receiving and dispatching sections, to the street and train platforms. At the platform ends of the general waiting room, to the right of the lobby will be the company's mail room, parcel checking room, drug store, and news stand. Inside the lobby will be a room for first aid purposes. The ticket office will be to the left of the lobby, and will be provided with four wickets. The entire end of the building to the right of the men's waiting room and the general waiting room will be devoted to the sleeping and dining car supplies department, the entrance to which will be from the platform; and to the company's express department. The section to the street front of the building, 40 x 29 ft. 8 in., will be used for general office purposes, and the remaining section, 52 x 72 ft., will be devoted to express traffic, with a portion of the area set apart for Government mail room. The two upper

floors will accommodate the company's general offices in Vancouver. There will be elevator service to all floors.

The general scheme also calls for the construction at once of freight offices, with freight shed, and the usual trackage and teamway facilities for the rapid handling of this branch of the business.

The cost of the passenger station, with its concourse and platforms, will be about \$1,000,000. The architects are Pratt & Ross, of Winnipeg and Vancouver. The contract for the building has been let to Carter, Halls, Aldinger & Co., and the Northern Construction Co., Winnipeg, who tendered jointly.

Litigation Over Aid to Pacific Great Eastern Railway.

The action brought by H. C. Brewster, leader of the Liberal party in the British Columbia Legislature, against Premier Bowser, representing the Government, in connection with the Pacific Great Eastern Ry. financing, was ordered by the court on Aug. 3 to stand over for hearing when the courts resume sitting after the long vacation. S. S. Taylor, K.C., counsel for Mr. Brewster, is reported to have said in an interview that the action is strictly in accordance with the present legal practice—the former practice required the presentation of a petition of right, or

the securing of a fiat. The action is to secure a declaration that certain acts done by Mr. Bowser as Attorney General were illegal. Mr. Taylor continued: "The case falls under four main headings. The first and principal of these is the payment by the government of \$18,000,000 to the contractors contrary to statute. These payments, according to law, should only have been made as the work progressed and the full amount should not have been paid out until the line was completed. We seek a declaration to this effect. The second part upon which we base our case is the payment of \$300,000 by the government as interest on the guaranteed bonds. This, we contend, should not have been done, and the government had no right to do it under the law until the railway was finished. We ask a declaration on this point also. The third part of our case deals with the issue of \$25,000,000 worth of stock to Foley, Welch & Stewart, which we claim should be restored to the P. G. E. Ry. And the fourth asks for a declaration that the new loan to the P. G. E. Ry. passed by the last legislature is illegal, it having been passed after the expiration of the legal session of the House."

It appeared from the proceedings before the judge, Aug. 3, that the Attorney General had not filed any defence, and did not propose to do so. The judge held that the case should be tried thoroughly as it involves important questions.

Canadian Pacific Railway Earnings for Year Ended June 30, 1916.

After a C.P.R. directors' meeting in Montreal, Aug. 14, a preliminary statement of earnings and expenses for the year ended June 30 was given out. Following are the figures, with a comparison for the three previous years:

Fixed charges are slightly lower; the usual \$125,000 is set aside for pension fund; the amount transferred from general railway account to special income account as net earnings of coastal steamers, commercial telegraph and news de-

	1915-16.	1914-15.	1913-14.	1912-13.
Gross earnings	\$129,481,885	\$98,865,210	\$129,814,824	\$139,395,699
Working expenses	80,255,965	65,290,582	87,388,896	93,149,825
Net earnings	\$49,225,920	\$33,574,628	\$42,425,928	\$46,245,874
From steamship dept.				1,245,563
Total net earnings	\$49,225,920	\$33,574,628	\$42,425,928	\$47,491,437
Fixed charges	10,306,196	10,446,510	10,227,311	10,876,352
Surplus	\$38,919,724	\$23,128,118	\$32,198,617	\$36,615,085
Steamship replace				1,000,000
Balance	\$38,919,724	\$23,128,118	\$32,198,617	\$35,615,085
Pension fund	125,000	125,000	125,000	125,000
Balance	\$38,794,724	\$23,003,118	\$32,073,617	\$35,490,085
To special income	1,923,289	1,494,152	2,115,842	
Available for dividends	\$36,871,435	\$21,508,966	\$29,957,774	\$35,490,085
Dividends for year	21,427,277	21,419,051	20,259,521	17,179,828
Net surplus for year	\$15,444,158	\$89,915	\$9,698,254	\$18,310,257
SPECIAL INCOME ACCOUNT.				
Special income	\$9,940,955	\$10,969,392	\$8,587,870	\$6,598,151
Dividends	7,800,000	7,800,000	7,350,000	5,850,000
Surplus	\$2,140,955	\$3,169,332	\$1,237,870	\$748,151
Previous surplus	6,266,144	3,096,812	1,858,941	1,110,790
Total surplus special income	\$8,407,099	\$6,266,144	\$3,096,812	\$1,858,941

*After making allowance for contingent reserves.

The chief feature of interest in the statement was the special income account, in view of the fact that the principal features of the regular railway earnings had been previously announced. The special income consists of interest on the proceeds of land sales, interest on deposits and loans, earnings from ocean steamships and hotels, net earnings of Pacific Coast steamships, commercial telegraph, and news department, interest on railway and other bonds and dividends on railway and other stocks held by the company, revenue from interest in coal mine properties, etc. The amount announced as being derived from this source for year ended June 30, \$9,940,955, was smaller than early estimates, but it is stated that it is arrived at "after making allowances for contingent reserves." The presumption is that the estimates of a larger amount for this fund out of the year's operations may not have been far wrong, but that the management has made some special appropriations from the total for purposes which may be more fully explained in the annual report or at the annual meeting. While the special income is over \$1,000,000 under the figures of the preceding year, it is larger than any other previous year. It is considered certain, however, that this department of the company's income is one that will grow.

The general statement of railway earnings shows that the net this year of \$49,225,920 creates a new record, although the gross is nearly \$10,000,000 under the record created in 1912-13. Working expenses in 1915-16 were nearly \$13,000,000 below the 1912-13 record.

The railway surplus of \$15,444,156 against the narrow one of \$89,915 in the preceding year, together with the special income surplus of \$2,140,955 create a total of \$17,585,113. This shows that the company earned from all sources 6.76% over and above the 10% distributed during the year to the shareholders from the combined accounts.

partment is \$1,923,289, or nearly \$500,000 more than a year ago.

After allowing for the preference dividend, which would take \$3,227,277, the balance remaining for the common stock is \$33,644,158, equal to 12.93% earned, against the 7% paid in dividends under railway account. The special income account, out of which the additional 3% common stock dividend is paid, yielded \$9,940,955, or 3.83% earned. After payment of the 7% dividend out of one account and the 3% out of the other, there was a net surplus of \$15,444,158 in the one case and of \$2,140,955 in the other, or a total net surplus for the year of \$17,585,113, against a corresponding surplus of only \$3,186,727 the previous year.

The 239th Railway Construction Battalion, Canadian Expeditionary Force, which is being recruited under Lt. Col. J. W. Stewart, Vancouver, B.C., has opened recruiting offices in Toronto and London, Ont. The battalion is being organized to do railway construction work only at the front; and only men experienced in railway construction are being enlisted. About 500 have already enlisted and are now training at Valcartier Camp, Que. The battalion will, it is said, go direct to the front as soon as it is recruited to strength.

Royal Commission on Canadian Railway Situation. We are officially advised that the work of investigation by the commission has already commenced and is well under way, and that as soon as outside work has advanced sufficiently and office work becomes necessary an office will be opened in Ottawa and a secretary will be appointed.

The Canadian Northern Quebec Ry. applied to the Quebec Courts recently for a writ directing the Montreal Stockyards Co. to accept at its stockyards the care of cattle brought into the city over the company's line. The order asked for was made by Judge Mercier, Aug. 15.

Railway Finance Meetings, Etc.

Algoma Central & Hudson Bay Ry.—A meeting of shareholders will be held at Sault Ste. Marie, Ont., Sept. 20, to elect directors, receive the report of the directors for the year ended June 30, and ratify the acts of the board done since the last meeting of shareholders. The shareholders of the Ontario, Hudson Bay and Western Ry., and of the Algoma Eastern Ry. will also meet on the same day for the same purposes. T. J. Kennedy is President and Alex. Taylor, Secretary of each of the companies.

Canadian Northern Ry.—A lease of rolling stock from the Imperial Rolling Stock Co. to the Canadian Northern Ry., dated Aug. 1, has been deposited with the Secretary of State at Ottawa.

Grand Trunk Pacific Ry.—There has been deposited with the Secretary of State at Ottawa a mortgage dated June 28, made between the company and the Minister of Finance, representing the King, to secure a loan not exceeding \$8,000,000. The granting of this loan was authorized at the Dominion Parliament last session.

Inverness Ry. and Coal Co.—An unconfirmed press report from Nova Scotia states that negotiations are in progress between the Railways Department and the company, which is controlled by Mackenzie, Mann interests, for the sale of the company's railway line to be used as a branch of the Intercolonial Ry. The railway extends from Inverness Jct., 1.5 miles from Point Tupper, to Inverness, N.S., 60.9 miles.

Quebec & Saguenay Ry.—A press report states that the proposal, authorized last session of the Dominion Parliament, for the purchasing of this line was ratified by the Government Aug. 4.

Temiscouata Ry.—The net earnings for May were \$4,105, and for 11 months ended May 31, \$32,248.

Toronto, Hamilton & Buffalo Ry.—There has been deposited with the Secretary of State at Ottawa duplicate original of consolidated mortgage dated Aug. 1, between the T. H. & B. Ry., and the Guaranty Fund Co. of New York, as trustee, securing the company's bonds to an amount not exceeding \$10,000,000.

White Pass & Yukon Ry.—In pursuance of an agreement adopted at a meeting of holders of the 5% consolidated first mortgage debenture stock, and 6% debentures, held in London, Eng., Feb. 16, the interest payable on these securities for the year ended June 30, is being paid by the issue of income debenture stock.

White Pass and Yukon Route. Gross earnings from Jan. 1 to July 14, \$719,353 against \$581,307, for same period 1915.

Railway Lands Patented. Letters patent were issued during July, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta, and British Columbia, as follows:—

	Area.
Calgary & Edmonton Ry.	656.18
Canadian Northern Ry.	2,200.00
Canadian Pacific Ry.	1.00
Grand Trunk Pacific Ry.	81
Grand Trunk Pacific Branch Lines Co.	33.65
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	1,280.00
Total	4,729.57

C.P.R. Experimenting with Pulverized Coal.—A press report states that the C.P.R. is conducting experiments with the view of using Crow's Nest Pass coal in a pulverized state in its locomotives.

Canadian Pacific Railway Union Station at Quebec.

The recently completed union station at Quebec, was formally opened to the public, Aug. 10, the ceremony being performed by the Mayor. After the customary proceedings, a luncheon was provided in the waiting room for about 150 invited guests, among whom were F. L. Wanklyn, General Executive Assistant, C.P.R.; A. D. MacTier, General Manager, Eastern Lines, C.P.R.; Sir Lomer Gouin, Premier of Quebec; Hon. J. D. Reid, acting Minister of Railways and Canals; Hon. T. C. Casgrain, Postmaster General, and a number of others interested in transportation generally.

The building is L shaped, the main block being 142 by 65 ft., and the baggage and express wing is 130 x 44 ft. The main entrance vestibule is 24 ft. wide, and opens into the ticket lobby, 65 by 45 ft., and 60 ft. high. This is composed of grey tapestry brick with

the lock of a 10c piece.

The handling of baggage and express is provided for in a separate wing with covered trucking platform on each side. The upper floor of the main building is reached by a stairway from the main entrance vestibule, and is devoted to the company's offices, and a museum in which are exhibited an interesting and instructive collection of Canada's natural resources. The offices and museum overlook the main ticket lobby through open arches and balustrades. On this floor are also located rooms for the train men, which are reached by a separate stairway direct from the midway.

Accommodation is provided for the Canadian Government Railways, trains of the National Transcontinental Ry. running into and out of the station.

The building rests on 430 concrete piles, and 400 tons of structural steel were used in the construction, as well as 2,000 yards of reinforced concrete, 400,000 common brick, 75,000 face brick, exterior, and 125,000 face brick, interior,

Railway Rolling Stock Notes.

The Northern Ry. of Spain has ordered 15 locomotives from the American Locomotive Co.

The Eastern Car Co. has completed delivery of 1,000 gondola cars for the French State Railways.

The Duluth, South Shore and Atlantic Ry. is obtaining prices on one Pacific and 2 consolidation locomotives, 2 first class cars, 2 second class cars, and 2 baggage cars.

The Eastern Car Co. has shipped 325 freight cars, being the last of an order for 1,000 for the French State Railways. A description of them was given in a previous issue.

The Canadian Northern Ry., during July and August, received 2 compartment cars, nos. 9950 and 9951, and 3 tourist cars, nos. 9407, 9410 and 9412, from Canadian Car and Foundry Co.

The Russian Government has ordered 9 mogul locomotives from the American

Canadian Pacific Railway Union Station, Quebec.

marble base, faience cornices, cartouches and balustrades, with sloping mosaic ceiling and leaded glass ceiling lights. On the right of the ticket lobby are the ticket offices, information office, women's rest room and news stand, and on the left are the baggage and parcel checking counters, customs office, telephone booths and telegraph counter, and the transfer company's office opens out of the entrance vestibule. The concourse, entrance to which is gained through seven doors opposite the main entrance, is 125 by 62 ft. and 40 ft. high, similarly finished to the lobby. On the left, three sets of gates open to the midway and track platforms, and on each side of each gateway there is a mechanical indicator which shows the track number, time, and destination of the outgoing trains. On the right hand side of the concourse there is an exit to the street. The men's smoking room, lavatories, etc., are located in the north end of the concourse. The lavatory accommodation includes dressing rooms and toilets equipped with coin locks operated by the insertion in

and 10,000 cub. ft. of exterior cut stone. In every case possible Canadian materials were used. The building was designed by M. H. E. Prindel, Architect, Montreal, and the construction was supervised by D. H. Mapes, Engineer of Building Construction, C.P.R., under the direction of J. M. R. Fairbairn, Assistant Chief Engineer, C.P.R., and by T. E. Vidette, for the contractors, the Downing-Cook Co., Montreal.

Grand Trunk Western Ry. Rates.—The Interstate Commerce Commission has decided in the case of Michigan Seating Co. vs. G. T. Western Ry. that rating of fibre furniture in less than carloads as provided in official classification prior to April 15, 1914, is found upon rehearing not to be unreasonable, unjustly discriminatory, or unduly prejudicial when applied to shipments of fibre furniture in less than carloads from Jackson, Mich., to points in other states where rates are governed by official classification. Previous findings are vacated and complaint dismissed.

Locomotive Co. They will have 11 x 16 in. cylinders, 33½ in. driving wheels and a total weight in working order, of 37,000 lbs.

The Canadian Car and Foundry Co. has delivered 100 bogie wagons for the Nigerian Ry., West Africa; 125 all steel dump cars, for Hart-Otis Car Co.; 25 two compartment tank cars, and 20 three compartment tank cars, for Imperial Oil Co.

It is reported that the Imperial Munitions Board is placing orders on behalf of the Russian Government, for freight cars, and that an order for 7,000 has been divided between the National Steel Car Co., and the Canadian Car and Foundry Co.

A press report from New York states that an announcement has been made there by bankers recently returned from Russia, that a new Russian loan will be issued, and that contracts will be placed by Russia for 40,000 to 50,000 freight cars and 500 to 1,000 locomotives.

Canadian Government Railways, between June 15 and Aug. 12, received the

following additions to rolling stock: 2 steel sleeping cars from the National Steel Car Co.; 97 stock cars from Canadian Car and Foundry Co.; 25 vans from C. G. R. shops at Moncton, N.B., and 11 consolidation locomotives from Canadian Locomotive Co.

Canadian Northern Railway Construction, Betterments, Etc

Canadian Northern Ontario Ry.—A plan, profile and book of reference of the C. N. O. R. location through the township of McGregor, Thunder Bay District, mileage 548.45 to 568.13 has been filed in the Registry office at Port Arthur, Ont., The Board of Railway Commissioners has approved of this location.

Canadian Northern Ry.—A press report states that the company's officials are considering plans for the electrification of the line to Victoria Beach, Man. The suggestion is to make connection with the main line at Elmwood or Kildonan, and run to and from Winnipeg by Elmwood bridge. The present route to Victoria Beach is via Transcona, the total distance being 75 miles. The report states that work is to be started in the spring of 1917, and will necessitate the relaying of the track with 85 lb. rails.

Work is in progress on the alterations of St. Marys Hall, corner of Eighteenth Ave. and First St. Calgary, Alta., necessary to make it suitable for station purposes. An addition 70 ft. long is being built on the south side for freight and express purposes. The line which now terminates on the south side of the Elbow River is to be carried across the river to the hall by the time the alterations are completed. The work of remodelling the hall is estimated to cost \$10,000, and is expected to be completed early in October. M. H. MacLeod, General Manager and Chief Engineer, is reported to have advised residents of Red Deer, Alta., that the Red Deer River bridge will be completed at once so as to permit the extension of the Brazeau line into the place this year. The grading has been completed, and it was reported Aug. 4, that men were putting in the culverts along the eight miles of grade. A large quantity of timber for the bridge is also reported to have been delivered on the site.

Work is reported to have been started on the building of a new machine shop and store building in the yards at Edmonton, Alta. The machine shop will be a one story building, 61 x 118 ft., and is estimated to cost \$20,000, while the store building will be two stories high, 80 x 48 ft., and is estimated to cost \$5,700. The foundations for both buildings will be of concrete, and the superstructures of brick.

A press report states that the early extension of the line at present terminating at Sangudo—known as the Peace River Branch—to White Court, 40 miles, is being contemplated.

Canadian Northern Pacific Ry.—A press report states that a contract has been let for the building of the projected branch line from Kamloops to Kelowna, B.C.

M. H. MacLeod, General Manager and Chief Engineer, had an interview with the New Westminster City Council Aug. 7, respecting the right of way in the city to the proposed terminal west of the C.P.R. station.

M. H. MacLeod, General Manager and Chief Engineer, met the Vancouver City Council Aug. 2 to discuss matters connected with the station building, on

which work is now in progress, and as to the location of a hotel which is to be built on a site other than False Creek. A proposition as to a site on Main St., owned by the city, is to be submitted at an early meeting of the civic bridges and

railways committee. While the company, Mr. MacLeod said, was ready to carry out its agreement to put up a 250 room hotel away from False Creek, it would rather put up a larger hotel on its own property at False Creek.

Canadian Pacific Ry. Construction, Betterments, Etc.

Montreal Terminals.—The Board of Railway Commissioners has amended the plans for the proposed tunnel under the C.P.R. tracks at Melrose Ave., Notre Dame de Grace, so that it will be 6 ft. wide and 8 ft. high instead of 4 ft. wide and 7 ft. high. The estimated cost of the work under the amended plan is \$5,200.

Saskatchewan Division.—Rapid progress is reported to have been made to

the approach work is being completed, and everything is being got ready for the regular operation of trains through it.

A Vancouver press report states that a contract has been let to W. D. Grant for the carrying out of a comprehensive dredging scheme at the waterfront there, between sheds 3 and 7. This area includes the berth in front of the station shed, and the berths immediately east of that part now used by the Pacific

North Toronto Station, Canadian Pacific Railway.

The illustration published in Canadian Railway and Marine World for July, in connection with the article on the opening of North Toronto station, was made, as stated, from the architect's drawing, and did not show the butterfly roofs over the platforms. The above illustration, made from a photograph, shows the station as completed, together with the butterfly roofs. Under the Yonge St. subway, to the left of the illustration, are shown the tracks which are being built to extend the Toronto Railway from its present terminus on Yonge St., just south of the C.P.R. crossing, to the city's old north limits, between Woodlawn and Farnham Avenues, where the Toronto & York Radial Ry. Metropolitan Division's present southerly terminus is. There will, however, be no physical connection, as the city of Toronto would not consent to it and also because the two electric railways have different gauges.

date with the construction of the seven-mile extension from Vantage to Assiniboine. A press report says the line will be ready for operation by Nov. 1.

British Columbia Division.—The company is reported to be utilizing the rock spread over the valley by the slide of Turtle Mountain at Frank, B.C. some years ago, to fill in washouts, and to reduce the gradient on the new line which was built over the slide, and so do away with the necessity of using a further locomotive to take trains over.

A press report from Montreal, Aug. 10, stated that the Duke of Connaught had, at the request of Baron Shaughnessy, authorized the company to name the double track tunnel at Rogers Pass, B.C., which he formally opened July 17 and named the Selkirk, to be called the Connaught tunnel. The permanent tracks are being laid through the tunnel,

Coast Steamship Co.'s steamers. The area will, it is said, be dredged so as to give a depth of 33 ft. and the estimated cost of the work is given as \$200,000. It is reported that this work is being undertaken in preparation for the erection of additional docks to which reference was made in our July issue, pg. 285. D. C. Coleman, Assistant General Manager, Western Lines, was reported to have said on Aug. 5 that work would be started almost immediately on building of another pier for trans-Pacific traffic. The pier it is said will be a double decked one, about 850 ft. long, extending out to the harbor line, and is estimated to cost \$1,500,000. Up to Aug. 14, no definite official announcement had been made, but it was expected some statement would be made by F. W. Peters, General Superintendent British Columbia Division, on his return from the east. (Aug., pg. 330.)

Mainly About Railway People Throughout Canada.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, was visiting in England during August.

W. R. Boucher, Train Master, C.P.R., Assiniboia, Sask., has been undergoing treatment in a Montreal hospital.

J. E. Dalrymple, Vice President, G.T.R. and Grand Trunk Pacific Ry., completed a tour of the G. T. P. R. system recently.

Edward Canfield, General Superintendent, New York, Ontario & Western Rd., died at his home at Middleton, N.Y., Aug. 18.

Mrs. J. A. MacGregor, wife of the Superintendent, C.P.R., Edmonton, Alta., is in British Columbia convalescing after illness.

W. P. Clough, Chairman of the Board of Directors, Northern Pacific Rd., died at his home in New York, N.Y., Aug. 18, aged 71.

Sir James A. M. Aikins, who has been appointed Lieutenant-Governor of Manitoba, was formerly solicitor for the C.P. R. in Winnipeg.

P. D. LeBlanc, car inspector, Intercolonial Ry., Moncton, N.B., died there, July 31, aged 65. Three of his sons are in I.R.C. service.

G. H. Duggan, M.Can.Soc.C.E., Vice President and General Manager, Dominion Bridge Co., has been elected a director of the Royal Bank of Canada.

H. M. Bird, who was for a time acting Trainmaster National Transcontinental Ry., Graham, Ont., has resigned on his enlistment for active military service overseas.

Clarke Gordon, of Sherbrooke, Que., who died at North Hatley, July 31, aged 80, was, some years ago, a railway contractor, and built a section of the Intercolonial Ry.

R. B. Angus, director, C.P.R., Montreal, and Sir Thomas Tait, President, Fredericton and Grand Lake Ry. and Coal Co., have been elected Fellows of the Royal Colonial Institute.

C. P. VanNorman, Resident Engineer, Toronto and York Radial Ry., Toronto, is attached to the 127th Battalion (York Rangers), with the rank of lieutenant, and is stationed at Camp Borden.

Sir William D. Reid, President, Reid Newfoundland Co., St. John's, Nfld., is head of a company which is being organized for the establishment of a patent fertilizer plant in Newfoundland.

Lieut. J. K. Kennedy, who is reported as seriously wounded in Flanders, is the only surviving son of Sir John Kennedy, Hon. M. Can.Soc.C.E., Consulting Engineer, Montreal Harbor Commission.

Lt. Col. H. N. Ruttan, M.Can.Soc.C.E., Consulting Engineer for the City of Winnipeg, and formerly City Engineer, who has been for some time District Officer Commanding at Winnipeg, has been promoted to Brigadier General.

Sir George Paish, who was named recently as one of the commission appointed by the Dominion Government to enquire into the general railway situation, is stated to have declined the appointment on account of ill health.

A. A. Bourgeois, J.P., who died at Moncton, N.B., Aug. 6, was father of B. A. Bourgeois, Assistant to the Comptroller and Treasurer, and C. J. Bourgeois, chief clerk, Insurance Department, Canadian Government Railways, Moncton, N.B.

William Phillips, until recently European Traffic Manager, Canadian Northern Ry., London, England, returned to Toronto, Aug. 23, and is taking a holiday, after which he will be appointed to an important position in the Traffic Department.

T. J. Drummond, who died at Castine, Me., Aug. 5, was a partner in Drummond, McCall & Co., Montreal, formerly selling agents for the Algoma Steel Corporation, and was intimately known by many railway men. The funeral took place at Montreal, Aug. 8.

W. N. Ingram, whose appointment as acting Master Mechanic, District 5, National Transcontinental Ry., Edmundston, N.B., as announced in our last issue, was since Jan. 1, travelling locomotive man, and prior to that was a locomotive man. His present position is a new one.

Lieut. H. A. Lumsden, Canadian Overseas Railway Construction Corps, B.E.F., eldest son of H. D. Lumsden, M.Can.Soc. C.E., ex-Chief Engineer, National Transcontinental Ry., will be married in England in September, to Miss G. M. Dunsstan, of Brantford.

Michael Heenan, detective for Michigan Central Rd., with headquarters at St. Thomas, Ont., will be superannuated on Oct. 1. He joined the Royal Irish Constabulary in 1866, became a G.T.R. detective at Stratford in 1872 and went to St. Thomas in 1881.

Sir William Mackenzie, President, Canadian Northern Ry., Miss Ethel Mackenzie, Mrs. Scott Griffin, D. B. Hanna, Third Vice President C.N.R., Mrs. and Miss Hanna, left Toronto Aug. 24 and sailed by the s.s. St. Paul from New York for England on Aug. 26, expecting to be away about five weeks.

Lloyd E. Omer, who has been appointed Travelling-Freight and Passenger Agent, Union Pacific System, Calgary, Alta., was formerly Travelling Freight Agent at Spokane, Wash., and prior to that was assistant rate clerk in the Passenger Department at Portland, Ore.

F. E. Dewey, who was appointed General Manager, Wellsville and Buffalo Rd. Corporation, Buffalo, N.Y., recently, on that company assuming separate operation of the road, has, at his own request, been relieved of the position, the duties being assumed by the Vice President.

J. E. Dalrymple, Vice President, Grand Trunk Pacific Ry., arrived in Victoria, B.C., Aug. 12, in the course of his annual tour of the railway and the points reached by its steamships. After visiting Seattle, Wash., Mr. Dalrymple and party sailed for Prince Rupert, and returned east via the G. T. P. R.

H. L. Petrie, who has been promoted from Staff Sergeant to temporary Lieutenant, Army Service Corps, Canadian Expeditionary Force, after being in France and Flanders for 18 months, is son of J. J. Petrie, Traffic Manager, Midland and Great Northern joint railways, King's Lynn, Norfolk, Eng.

W. D. Robb, Superintendent of Motive Power, G.T.R., returned to Montreal, early in August, from England, where he had been visiting his son, J. B. Robb, who was wounded in action. During his stay in London, he was, with F. C. Salter, European Traffic Manager, G.T.R., entertained at the Mansion House, by the Lord Mayor.

R. Home Smith, of Toronto, has been elected President, Mexico North Western

Ry., with offices at Toronto, and at El Paso, Tex., vice F. S. Pearson, deceased. Its main line runs from El Paso, Texas, to Chihuahua, Mexico, 472 miles, and it also has a 14 mile branch. Walter Gow, barrister, Toronto, is one of the vice presidents.

Hon. Frank Cochrane, Minister of Railways, who is spending some time at St. Andrews, N.B., spent Aug. 18 in making an inspection of the work in progress on the new ocean terminals at Halifax, N.S., previous to which he made an inspection of the Prince Edward Island car ferry terminal work in progress at Cape Tormentine, N.B.

James Farrar Speakman, who has been appointed City Ticket Agent, C.P.R., Winnipeg, was born at Dundee Scotland, Aug. 28, 1878, and entered C.P.R. service, May 1, 1908, since when he has been, to Jan. 1909, report clerk, Winnipeg station; Jan. 1909 to March 1910, ticket clerk, same place, and March 1910 to July 1916, chief clerk, District Passenger Agent's office, Winnipeg.

Baron Shaughnessy, who was at his summer home, St. Andrews, N.B., during August, visited Halifax, Aug. 16, to meet relatives returning from Europe. These were Capt. and Hon. Mrs. Rene Redmond and Mrs. A. F. Shaughnessy and her children. Capt. Redmond is on short leave from the front, and Mrs. Shaughnessy is the widow of the late Capt. Hon. A. F. Shaughnessy, killed in action recently.

John A. McGill, whose appointment as City Passenger Agent, C.P.R., Ottawa, Ont., was announced in our last issue, was born at Acton, Ont., Dec. 23, 1880, and entered railway service in Oct. 1896, since when he has been, to Oct. 1897, assistant agent, G.T.R., at Guelph and Acton, Ont.; Feb. 1900 to April 1913, not in railway service; April 1913 to Sept. 1915 to Jan. 1916, City Passenger Agent, C.P.R., Cleveland, Ohio; Jan. to July 1916, Travelling Passenger Agent, C.P.R. Chicago, Ill.

J. A. Metivier, who has been appointed City Passenger Agent, C.P.R., Sherbrooke, Que., entered Great North Western Telegraph Co.'s service as messenger boy, in 1906. From 1907 to 1909, he was operator and assistant agent, G.T.R.; 1909 to 1910, operator Great North Western Telegraph Co.; Jan. 3, 1910 to 1911, commercial operator, C.P.R., Calgary, Alta.; 1911, commercial operator, C.P.R., Montreal; 1911 to May 30, 1916, commercial operator and assistant ticket agent, C.P.R., Sherbrooke, Que.

Argee J. Roy, who has been appointed City Ticket Agent, Canadian Government Railways, Montreal, was born at St. Anaclet, Rimouski County, Que., June 5, 1874, and entered Canadian Government Railways service in April 1897, since when he has been, to Oct. 1898, telegraph operator, St. Fabien, Que.; Oct. 1898 to March 1905, ticket clerk, Levis station, Que.; March 1905 to April 1912, ticket agent, Riviere du Loup, Que.; April 1912 to Oct. 1913, train agent on passenger trains, Levis, Que.; Oct. 1913 to July 1, 1916, ticket agent, Levis, Que.

Aage Oscar Wolff, whose appointment as Resident Engineer, District 2, Lake Superior Division, C.P.R., Chapleau, Ont., was announced in our last issue, was born at Copenhagen, Denmark, May 14, 1887, and entered railway service Oct. 1, 1908, since when he has been, to Mar.

15, 1909, rodman, C.P.R., Montreal; Mar. 15 to Sept. 1, 1909, draughtsman, C.P.R., Montreal; Sept. 1, 1909 to April 1, 1913, transitman, C.P.R., Montreal; April 1, 1913, to Oct. 15, 1915, to May 1, 1916, Assistant Engineer to Consulting Engineer, Public Service Corporation of New Jersey, Newark, N.J.

Joseph Madill, who has been appointed District Passenger Agent, Canadian Northern Ry., Edmonton, Alta., was born at Port Hope, Ont., May 23, 1890, and entered railway service May 23, 1890, since when he has been, to Aug. 1893, assistant agent, C.P.R., Fergus, Ont.; 1893 to 1894, operator at various points, Ontario Division, C.P.R.; 1894 to 1902, ticket clerk, C.P.R., Union Station and City Ticket Office, Toronto; 1902 to 1911, ticket agent, telegraph agent, C.P.R., and agent, Dominion Express Co., Windsor, Ont.; 1911 to Aug. 1916, City Passenger and Ticket Agent, Canadian Northern Ry., Edmonton, Alta.

Donald McDonald, District Passenger Agent, Canadian Government Railways, Montreal, died there, Aug. 18, after a three months illness due to heart affection. He was born at Ste. Hyacinthe, Que., Feb. 28, 1862, and entered railway service in 1880, since when he was, to 1882, night agent and operator, Intercolonial Ry., Ste. Anne, Que.; 1882 to 1885, operator, I.R.C., Ste. Flavie, Que.; 1885 to Jan. 1912, joint ticket agent, I.R.C. and G.T.R., Levis, Que.; Jan. 1912 to July 1913, Superintendent, Montreal and Ste. Flavie District, I.R.C., Levis, Que.; July 1913 to the date of his death, District Passenger Agent, Canadian Government Railways, Montreal.

G. W. Groom, whose appointment as Assistant Superintendent, Central Vermont Ry., St. Albans, Vt., was announced in a recent issue, was born at Rossville, Ill., Aug. 26, 1872, and entered railway been, to Nov. 1899, telegraph operator, Chicago and Eastern Illinois Rd., and New York, Chicago and St. Louis Rd.; Nov. 1899 to Dec. 1904, dispatcher, Pennsylvania Rd., Buffalo, N.Y.; Dec. 1904 to June 1908, dispatcher, G.T.R., Belleville and St. Thomas, Ont., and Pere Marquette Rd., Detroit, Mich.; June 1908, to July 1912, dispatcher, Central Vermont Ry., St. Albans, Vt.; July 1912 to May 1915, Chief Dispatcher, same road; May 1915 to June 22, 1916, Assistant to Superintendent, same road.

E. D. Toye, who has resigned as Division Storekeeper Canadian Northern Ry., Trenton, Ont., on his appointment as Quartermaster Sergeant, No. 1 Construction Battalion, was born at Dalston, Ont., Apr. 27, 1891, and entered railway service July 1909, since when he has been, to May 1910, storeman, Canadian Northern Ontario Ry., Parry Sound; May 1910 to Nov. 1911, assistant, Stores Department, same road, Toronto; Nov. 1911 to July 1914, chief clerk, same department, Toronto; July to Oct. 23, 1914, Storekeeper, same road, Toronto, at which latter date he was appointed Storekeeper, Ontario Grand Division, Canadian Northern Ry., Toronto, and later removed to Trenton.

E. G. Barrow, who died at Toronto recently, was born at Bristol, Eng., in 1846, and after graduating from Taunton College entered the service of the Bristol and Exeter Ry.; now Great Western Ry., as an articulated pupil under the Chief Engineer, and was later appointed Assistant Engineer at Bristol. He came to Canada in 1871 and was engineer on the Midland Ry. and the Hamilton and Northwestern Ry., now forming portions

of the G.T.R. In 1877 he commenced private practice and later engaged considerably in municipal engineering, and a few years ago was City Engineer of Hamilton, Ont. He was a member of the Canadian Society of Civil Engineers from 1893, and was also an Ontario land surveyor.

Double Bogie Locomotives for French Government.

The accompanying illustration shows a double-bogie locomotive of the Pechot type, of which the Baldwin Locomotive Works has built 180 for the French Government and now has 100 additional on order. They are built throughout to the metric system, from drawings and specifications furnished by the purchaser. They are generally similar in construction to the Fairlie type, being carried

Double Bogie Locomotive for French Government Railways.

on two 4-wheeled steam driven bogies, and having a boiler with 2 barrels and 2 centrally located fireboxes. The fireboxes are placed in a common outside shell, which is surmounted by a large steam dome. The throttle valves and levers are so arranged that steam can be used in the cylinders of both bogies, or in those of one bogie only, as desired. The live steam supply passes through the bogie centre pins. This plan permits a minimum number of flexible joints to be used in the live steam piping. All the cylinders are equipped with balanced slide valves, which are driven by Walschaerts motion. The 4 gears are simultaneously controlled by a hand lever. The illustration shows the fireman's side of the locomotive, and the location of the 2 fire doors. There is a coal bunker at each side of the cab, the water tanks being cut away, as shown by the sloping row of rivets, to provide the necessary room. The general dimensions, etc., are as follows:

Gauge	0 m 600
Cylinders (4)	0 m 175 x 0 m 240
Valves	Balanced side
Boiler	
Type	Wagon-top
Diameter	0 m 632
Thickness of sheets	0 m 009
Work press	12 kg. per cm ²
Fuel	Coal
Staying	Crown-bar
Fire Boxes (2)—	
Material	Copper
Length, each	0 m 415

CANADIAN GOVERNMENT RAILWAYS.

Tenders.

Sealed Tenders, addressed to J. W. Pugsley, Secretary Department of Railways and Canals, Ottawa, Ont., and marked on the outside "Tender for Elevator Foundations, St. John," will be received up to and including Twelve O'clock Noon, Monday, September 18th, 1916, for the construction of foundation for a 1,000-ton capacity Grain Elevator, Working House and Truck Shed at St. John, N.B.

Plans, Specifications and blank form of Contract may be seen on and after Monday, August 28th, at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa; at the office of the Chief Engineer, Moncton, N.B.; at the office of the Terminal Agent, St. John, N.B.; and at the office of the John S. Metcalf Company, Limited, Engineers, Montreal, P.Q.

All the conditions of the Specifications and Contract form must be complied with.

Tenders must be put in on the blank form of tender, which may be obtained from any of the offices at which plans and specifications are on file. Each tender must be accompanied by a certified bank cheque, payable to the Receiver General of the Railways and Canals, for the sum of \$10,000.00.

The lowest or any tender not necessarily accepted.

F. P. GUTELIUS,
General Manager.

Dated at Moncton, N.B.,
August 23rd, 1916.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Cape Breton Ry.—An unconfirmed press report states that the Railway Department is negotiating with the R. W. Leonard Co., Boston, Mass., for the purchase of the Cape Breton Ry., extending from Point Tupper to St. Peters, N.S., 30 miles, to be used as a branch of the Intercolonial Ry. In the event of this line being acquired, the report adds, it will be extended round the coast as far as Sydney. The surveys for this extension are reported to be completed to East Bay, and it is said they will be finished early in September.

Dominion Atlantic Ry.—Tenders are under consideration for building a new passenger station and freight shed at Middleton, N.S. G. E. Graham, Kentville, N.S., General Manager. (Sept., 1915, pg. 314.)

Dominion Government Railway to Hudson Bay.—Chief Engineer Porter is reported to have stated, in an interview Aug. 7 at Pas, Man., that construction was being pushed ahead as fast as possible. It is expected that steel will be laid to the Kettle Rapids of the Nelson River, about 30 miles from Port Nelson, by the end of September. At the date of the interview track had been laid to mileage 278, leaving about 54 miles of practically completed grading on which to lay steel before reaching Kettle Rapids. The line is being ballasted as track laying is progressed with. The preliminary work for the erection of the steel bridge across the Nelson River at Kettle Rapids is well forward, and supplies are being taken forward so as to be in readiness as soon as track laying has reached the rapids. The contract for the erection of the piers has been let to the Hudson's Bay Construction Co., and R. A. Hazlewood is engineer in charge of the work. The bridge is expected to be completed next spring, so that the steel can be laid into Port Nelson during the summer of 1917.

According to the statement credited to the Chief Engineer tenders are to be called for during the winter for the construction of the southern terminals of the line at Pas. There are at least a dozen buildings to be erected, the largest being the station and executive offices. Plans for this building are not complete, though draughtsmen are working on them. In addition to this building there will be a locomotive house, with pits, machine shop, round house, freight sheds, ice house and other buildings. At the north front a 90 ft. turntable will be built, to be operated electrically. (July, pg. 281.)

Edmonton, Dunvegan & British Columbia Ry.—The Board of Railway Commissioners has authorized the opening for traffic, at a speed not to exceed 15 miles an hour, of the Grand Prairie branch from Spirit River to Grand Prairie, Alta., 50.19 miles. (Aug., p. 317.)

Grand Trunk Ry.—A press report states that work is to be started upon the new car shops at Port Huron, Mich., at an early date. The estimated cost of the new shops is \$750,000. Their erection has been under consideration since 1915, when Port Huron citizens raised \$100,000 for the purchase of certain properties necessary to the carrying out of the plan for providing the site for the shops, which adjoins the entrance to the tunnel. (Aug., pg. 317.)

Grand Trunk Pacific Ry.—Sir Collingwood Schreiber, who supervised the build-

ing of the G.T.P.R. on behalf of the Dominion Government, returned to Ottawa at the beginning of Aug., accompanied by Lady Shreiber, after making a trip of inspection over the line. In the course of an interview at Vancouver, he is reported to have said the line is ballasted with a full lift of ballast—1 ft. under the tracks—for over half its mileage, and to a depth of 6 in. for the rest of the mileage. Ballasting is still being proceeded with.

A Prince Albert, Sask., press report of Aug. 16 states that officers of the company met the Prince Albert City Council that day and arranged for the immediate starting of construction of the branch line from Young, which now is in operation to St. Louis, 88 miles, into the city. A press report a few days previously said that the company had given a promise to the Saskatchewan Government that this construction would be started at once. The bridge over the Saskatchewan River at the present terminus of the line was completed, and the tracks laid over it in 1915. This line is one of those being constructed under a guarantee of bonds by the province. (July, pg. 281.)

Great Northern Ry.—The Board of Railway Commissioners has authorized the Vancouver, Victoria & Eastern Ry. & Navigation Co. to make connection with the Kettle Valley Ry. and with the Canadian Northern Pacific Ry. at certain points, and to cross and divert certain streets and avenues in Hope, B.C. This work is necessary to connect up the company's lines in the vicinity of Vancouver with the section of the Kettle Valley Ry. from Coquihalla Summit to Hope, over which the V. V. & E. Ry. & N. Co. operates its trains by agreement. The British Columbia Department of Railways has also approved of plans for the connection of the V. V. & E. Ry. & N. Co.'s lines with those of the C. N. P. Ry. The Board of Railway Commissioners has also authorized the company to connect its line with the C. N. P. Ry. at Sumas Landing.

The Vancouver City Council has granted the company a permit for the erection of its station on the False Creek flats. The building is to be erected in close proximity to the Canadian Northern Pacific Ry. station. (Aug., pg. 317.)

Intercolonial Ry.—The new steel bridge over the Bartholomew River was completed Aug. 3, and work is now being gone on with on the concrete arch at Passiac, N.B.

The Sackville, N.B., locomotive house was destroyed by fire Aug. 15, together with a locomotive. (Aug., p. 317.)

See also Cape Breton Ry.

Kettle Valley Lines.—The Board of Railway Commissioners has authorized the opening for traffic of the line from Brodie, 13.2 miles east of Coquihalla Summit, B.C., to its connection with the C.P.R. main transcontinental line at Peltain, west of Hope Station, 52.9 miles. (Aug., pg. 317.)

National Transcontinental Ry.—Tenders are under consideration for the erection of the superstructure of a reinforced concrete elevator of 1,000,000 bush capacity at Transcona, Man. (Aug., pg. 317.)

Pacific Great Eastern Ry.—The company has settled its long standing difference with North Vancouver municipality respecting the location of the line there. The company secures a five-year lease of the Y at Chesterfield Ave., and

agrees to operate a car ferry service to connect North Vancouver with the C.P.R. terminals in Vancouver.

With respect to construction from the present end of track at Clinton to Prince George, it is reported that work on the big steel bridge near Clinton is being pushed ahead, and that men are being taken in for grading and track laying. There is, however, a great scarcity of men, and it is difficult to say just what work will be done. (Aug., pg. 317.)

Hon L. Campbell, representing the B.C. Government, accompanied by D'Arcy Tate, Vice President and General Counsel, and P. Welch, the general contractor, went over the line from Squamish to Clinton, Aug. 12, to arrange as to the prosecution of construction to Prince George.

Prince Edward Island Ry.—Tracklaying is reported to have been completed at the car ferry terminals at Cape Tormentine, N.B., and work is reported to have been started on laying track at the ferry terminals at Carleton Point, P.E.I. W. W. Brownell is reported to be in charge of the work. (June, pg. 222.)

Quebec Bridge.—It is expected that the central span of the bridge across the St. Lawrence River near Quebec will be placed in position between Sept. 14 and 16. This span which will connect the ends of the north and south cantilever arms is 640 ft. long, 88 ft. wide, and 110 ft. high at the centre, weighs about 8,000 tons. It will be towed into position on 6 pontoons on scows, each 160 ft. long and 32 ft. wide. When towed into position it will be attached to long hangers from the ends of the cantilever arms and jacked into place by means of heavy jacks. The operation, it is expected, will not take more than 24 hours. (Aug., pg. 217.)

Regal Collieries, Taber, Alta.—A contract is reported to have been let to H. Thacker for building a spur line from Taber to the Regal Collieries, the White Ash Mine and other collieries north of the town. (July, pg. 282.)

St. John and Quebec Ry.—There has been deposited with the Minister of Public Works at Ottawa plans and descriptions of the site of the proposed bridges on the extension of the line, now under construction, between Gagetown and Westfield, N.B.; the location of the bridges being as follows: Mileage 41.2, Otnabog Lake outlet, Hampstead, Queen's County; and mileage 64.49, Devil's Back Creek, Greenwich, King's County. (Aug., pg. 318.)

We are officially advised with reference to construction work on the extension from Georgetown to Westfield, N.B., 40 miles, that the general contract has been let to the Nova Scotia Construction Co. The route is along the westerly bank of the St. John River, passing through or near Central Hampstead, Hampstead to Upper Greenwich, thence along the banks of the Long Reach to a junction with the C.P.R. at Westfield. The point at which this route deviates from the original survey is near Upper Greenwich. The original route crosses the river near here at the Mistake, and a little further on crossed the Kennebecasis River and ran along the easterly bank of that stream into St. John. The change was made owing to the cost of the construction of the bridges and the desire to give accommodation as speedily as possible to the residents of the district through which the completed line from Centreville to Gage-

town, 130 miles, runs. The contract is for gradini bridging, track laying, etc., the company reserving the right to supply rails, spikes, etc. Directors of the company, who represent the New Brunswick Government, together with Dominion Government Engineer Taylor and the Company's officers made an inspection

trip over the route from Gagetown to Hampstead, Aug. 16, to see the work being done.

The extension of the line northerly from Centreville to Grand Falls, 50 miles, has been located. Nothing is settled as to when construction on this section will be undertaken.

The Selection and Education of Section Forces.

By J. W. McManama, Supervisor B. & M. Rd.

Section foremen are the most important noncommissioned officers in the maintenance of way organization of any railway. The proper upkeep of good track and right of way absolutely depends on their efforts. For their best interests and for the good of the road, they should be trained and selected men who are given the greatest help in the shape of tools, forces, and instruction, that their superiors can procure.

The type of man who is to be a section foreman is the first important consideration. On our road, we are very fortunate in having excellent men; and undoubtedly many other roads are equally fortunate. But it is usually pure luck or chance, because very few systematic methods are employed to get good men.

I don't expect a man whom I pick as section foreman to be a good foreman the day he assumes the job. I am usually careful to tell him so. But I do expect him to become a good one after the first year; and that means that some mistakes are possible on his part—and even probable—but the same one not more than twice. It has occurred to me that some plan could be devised to present the outline of the section foreman's work, responsibilities and rewards to such men as would be considered likely.

When a man becomes a section foreman after his apprenticeship on track, and in rare cases does not make good, I am tempted to blame his training, or rather lack of training, rather than the man himself, in nine cases out of ten. As I have said, I don't expect to have a good section foreman the minute a man becomes one. But it is certainly essential that he be educated and trained in the best possible fashion. And I would recommend, wherever it is possible, that this training be continuous and co-operative.

Staff meetings of executive officers are a big success on railways. The same idea is carried out in our safety first meetings and results are apparent there. A certain number of foreman could be called together once every two months and exchange views in regard to the work, also receive instructions and have them get familiar with one another in regard to handling work and explain to them how important it is to look closely after the work and material. State to them the cost of the material and show them the expense and layout of their sections so as to make them familiar with the cost of running their part of the road—showing them that each day there is a large layout for labor besides the material which is used.

You often see a large express train going over the road, representing quite a large amount of money. The engine-men feel that they are responsible for pulling this train over the line in safety. The section foreman should likewise feel that he is responsible to a certain extent for having his track in a safe and good condition so as to allow this traffic to pass over in safety. Therefore, I think

it is well to impress it on their minds by calling their attention to these facts thereby illustrating the position they hold and the responsibility which goes with it.

A thing which should be explained to each one, is the cost of all material, washers, spikes, bolts, nuts, joints, etc., each part to be specified so that they will know when they see the stuff scattered or lying around, how much can be wasted if left without being looked after properly. Take the labor. The expense of the section crew should be figured out and the foreman's attention called to it now and then, showing him the amount that is paid each day by the company to maintain his crew.

I feel that section foremen are sensitive in this matter and all they want is to be recognized for work; but if let go when their work is performed in good shape and no notice taken of it, it is apt to cause a lack of feeling. However, we should take notice of and encourage them if they are right and if wrong show them their error and they are willing at all times to try and do their best for the improvement of the road, as I know there is no class of men who try harder to keep their work up and look after the value of a dollar which is expended to see that it is put to good advantage to keep their track up, than the section foremen; and, I am sorry to say, in a great many cases they do not get the credit due them, thereby making it harder to keep foremen. On our road, foremen are recognized for the work they perform and encouraged in every way from the highest officer down. All recognize their value and try to encourage them and this policy is giving great results.

There is one thing which I would strongly recommend in dealing with foremen. A foreman should receive his orders from his roadmaster, supervisor or division engineer. To allow station agents or men from other departments to call on the foreman for certain jobs, unless of course in emergency, is a practice which should be stopped; for where a foreman receives an order from someone other than his division engineer, supervisor, or roadmaster he gets somewhat careless, feeling that he is to be ordered by everybody and that his department does not demand the respect it should. This causes a lack of interest. Where work is called for it should be understood that it is to be put through its proper channel. That will place responsibility on the supervisor and the section foreman, so that it cannot be shifted, saying that they are called off on other work by other parties. It will make each one hold himself responsible for his part of the work. It will also, I think, give the section foreman more confidence and a feeling that he has equal rights with other men holding positions on the road. In my opinion, all reports from foremen should go to the supervisor whom they should report to.

With some such means of instruction and thereafter such intercourse of ideas as would be valuable, team work on the track is easily secured. And good team work will deliver more goods than any other single force. If we can have the opportunity of telling a man exactly how we want a certain piece of work done, and the best way of doing it, together with such explanation as will convince him that this is the best way, he will approach his work with twice as much enthusiasm as he would if it were being done mechanically on his part. His interest and intelligent co-operation with us will be a big help in track maintenance.

My most important thought is the establishment of a means of instruction for section foremen by seeing them often and walking over their section with them, presenting to them at frequent intervals the best methods of doing their work and the reasons therefor. The results, I am sure, will far outweigh the effort and time this plan would call for.—Maintenance of Way Bulletin.

Canadian Society of Civil Engineers Reorganization.—E. W. Oliver, Assistant Engineer, Canadian Northern Ry., Toronto, has been elected secretary of the committee appointed to enquire into and report on a policy for increasing the society's prestige and influence. H. E. T. Haultain, Professor, University of Toronto, is chairman of the committee and R. W. Leonard, St. Catharines, Ont., is vice chairman. Among the other members of the committee are Phelps Johnson, President, Dominion Bridge Co., Montreal; H. H. Vaughan, Consulting Engineer, C.P.R., Montreal; W. F. Tye, Consulting Engineer, Montreal; D. H. McDougall, General Manager, Dominion Coal Co., Sydney, N.S.; L. H. Wheaton, Railways and Canals Department, Dartmouth, N.S.; A. E. Doucet, ex-District Engineer, National Transcontinental Railway, Quebec; John Murphy, Electrical Engineer, Board of Railway Commissioners; H. B. Muckleston, C.P.R. Engineering Department, Brooks, Alta.; W. L. Mackenzie, Engineering Department, Canadian Northern Ry., Winnipeg; D. O. Lewis, District Engineer, Canadian Northern Pacific Railway, Victoria, B.C.

Saskatoon Stockyards.—An agreement has been reached under which the railway companies entering Saskatoon, Sask., will operate the stockyards to be laid out by the city council, until the city is in a position to do the work itself. The Saskatchewan Provincial Government has appropriated \$30,000 in aid of the laying out of the yards. It is expected that they will be ready for operation during September.

C.P.R. British Columbia Medical Association.—Following are the officers elected for the current year:—President, F. W. Peters; Vice President, G. R. Thompson; Secretary-Treasurer, A. M. Innes; Executive Committee:—A. S. Munro, Vancouver; R. H. Urquhart, Revelstoke; F. R. McCharles, Nelson. Dr. J. A. MacDonald has been appointed Medical Health Officer of the association.

The Togoland Military Ry., West Africa, is reported to have ordered 2 Mikado locomotives, 15 x 20 in. cylinders, 38 in. driving wheels, 96,000 lbs. total weight in working order, from the American Locomotive Co. Togoland is on the west coast of Africa, in the Gulf of Guinea, between the British Crown colonies of Gold Coast and Nigeria, and until recently was a German colony, but is now under British military rule.

Canadian Pacific Ry. Officials' Meeting at Winnipeg.

Canadian Railway and Marine World's last issue contained a brief mention of the meeting of C.P.R. officials held in Winnipeg July 17 to 20, at the instance of George Bury, Vice President, to discuss various topics relating to operation, etc. The committee of arrangements consisted of C. E. E. Ussher, Passenger Traffic Manager, as general chairman; A. Price, Assistant General Manager, A. C. MacKenzie, Engineer, Maintenance of Way, and H. J. Humphrey, Superintendent of Car Service, representing the Eastern Lines; D. C. Coleman, Assistant General Manager, F. Lee, Principal Assistant Engineer, and C. E. Stockdill, Assistant to Vice President and General Manager, representing the Western Lines. C. E. E. Ussher presided and C. E. Stockdill and H. J. Humphrey acted as joint secretaries. The following officials were present: J. D. Altimas, Car Accountant, Montreal; J. O. Apps, General Baggage Agent, Montreal; R. Armstrong, Superintendent, Souris; T. G. Armstrong, Master Car Builder, Winnipeg; R. Barnwell, Asst. Purchasing Agent, Winnipeg; J. M. Barrett, Superintendent of Terminals, Montreal; T. M. Barrett, Chief Commissary Agent, Montreal; J. E. Beatty, Division Engineer, Montreal; D. H. Bowen, Superintendent, of Telegraphs, Sudbury; H. H. Boyd, Superintendent, Vancouver; F. M. Breen, Superintendent, Montreal; T. Britt, General Fuel Agent, Montreal; H. W. Brodie, General Passenger Agent, Vancouver; M. H. Brown, Division Freight Agent, Toronto; J. M. Cameron, General Superintendent, Calgary; E. Choyce, Publicity Department, Montreal; D. C. Coleman, Asst. General Manager, Winnipeg; G. T. Coleman, Car Service Agent, Toronto; T. Collins, Superintendent, London; D. gineer, Montreal; J. M. Woodman, Superintendent of Terminals, Winnipeg.

The morning of July 17 was devoted to organizing the meeting and to committee meetings, after which the officials were entertained at luncheon at the Royal Alexandra Hotel, by A. M. Nanton, of Winnipeg, one of the company's directors. The afternoon of July 17 and the whole of July 18 were devoted to discussing the subjects on the agenda. At night the officials left by special train for Camp Hughes which was gone over, partly in automobiles, on July 19. The afternoon and evening of that day were spent at the Brandon Exhibition. July 19 and 20 were devoted to further discussions at Winnipeg, an intermission being taken on the afternoon of July 20 to go over the company's Winnipeg terminals, in charge of J. Woodman, Superintendent of Terminals. While the party was at Transcona a train of 57 cars was switched over the hump in 11½ minutes, 23 cuts being made. The meeting closed on July 20 at 10.30 p.m. after which the officials enjoyed a couple of hours in social intercourse.

The agenda contained 26 subjects for discussion, as follows:—

Criticism various standards, types, etc. Maintenance of way standards. Equipment standards in relation to patrons of the road and regulating bodies. Equipment standards in relation to economical operation.

Distribution of power and cars: Between Eastern and Western Lines. Between General Superintendent's Divisions. Between Superintendent's Districts.

Freight Handling.—Terminal delays, rip track. Time elapsing between arrival in terminal and delivery to consignee. Loading of freight, carload and less than carload with view to maximum loading. Practice of advising consignees and shippers regarding movement of carload freight. Slow time made by freight trains. Continuous home route card. Overcoming errors and omissions in agents' interchange report form no. 65 and conductors' train journal form no. 125. Advisability of refusing to accept perishable shipments account frost during Dec., Jan., Feb., and March.

Locomotives.—System of numbering. Assignment of various types to territory for which they are best adapted. Type of freight locomotive to be constructed in future. Type of passenger locomotive to be constructed in future. Analysis of methods arriving at economical loads for freight locomotive engines.

Efficiency tests.

Regulation speed freight and mixed trains.

Stores.—Handling, Requisitions. Surplus and obsolete material.

Unnecessary duplication of work and correspondence. Under this head the district and divisional office organization system was considered.

Relations with the public.

Relations with employees, organized and unorganized, handling discipline and welfare of the staff.

Mental tests and examination for promotion.

Passenger train service. — Passenger service next winter. Smooth handling of trains. Instructions to new passenger conductors. Observation cars on special and regular trains. Uniformed trainmen on special passenger trains. Reduction of damage to passenger equipment account scraping and rubbing by station trucks. Time lost at way stations. Collection of tickets and fares. Locomotive and car defects and failures.

Time and time tables.—Twenty-four hour system, vs. a.m. and p.m. Information to the public re late trains. Permanent time at Fort William for transcontinental trains. Furnishing proofs of working time tables sufficiently ahead to admit of proper advertising.

Relations between railway lines and steamship lines.

Fuel. Handling and consumption at stations, at stationary boilers, on locomotives, and on steamships. Utilizing old ties for fuel. Fuel tickets furnished fuel department, not giving correct information.

tion.

Types of snow fighting equipment.

Necessity alterations in certain series of 40 ton steel frame box cars.

Discussion of sleeping and dining car service in relation to public and operation of road.

Freight claims.

Stations and staff.—General appearance, station gardens, etc. Providing fences and gates to control public. Inspection of tickets prior to passengers entraining. Prizes to stations for increased receipts.

Relations between traffic department and operating officers.

Economy in use Pintsch gas and electric light on cars.

Telegraph service.—Shortening of telegrams. Handling of important business in telegraph offices.

Economical handling of passenger cars. —Discussion as to allotment of this work to one department.

Handling of insurance survey reports.

Handling cinders and ice in terminals.

Uniform system of reporting accidents, slides and washouts. Industrial sites.

Unique Engineering Features of C.P.R. Bridge in British Columbia.

By E. B. Skeels, Resident Engineer, C.P.R., Lethbridge, Alta.

The C.P.R.'s Granby Subdivision is a spur from the Boundary Subdivision to Granby smelter, over which ore and coke are hauled to the smelter. The old crossing of the Kettle River at Bude, mileage 1.3, consisted of a 160 ft. dock Howe truss, with a 20 degree curve approaching one end and a 22 degree curve on the other end. The new structure (bridge 1.3) consists of one 30 ft. deck plate girder, one 120 deck lattice span, 2 skew deck plate girders spans of a total length of 150 ft., on a change of line eliminating the heavy curves and permitting erection without interruption to traffic.

was done, two base lines were laid out, one on each bank, so that one would be used as a check on the other in assuring accuracy. The result of the first triangulation gave a check of half a tenth of a foot. This was not considered accurate enough, but as there was other urgent work to be done, the rechecking was postponed. It was a month before the opportunity was presented to recheck the work, and again a check of half a tenth was made on the day's work, but the result was practically one tenth longer than the previous month's results. The angles were added four times in reading them,

tween hubs on this date was found to be one tenth longer than the previous month and two tenths longer than two months previous. The work was gone over carefully the following day, but the distance was practically the same. It was then arranged to have another instrument man check the work with other chain men, although chain men had been changed around on the work previously, and various methods of chaining the base lines were carried out, distance and elevation between points being taken and true distance computed. Chains were also checked and different chains used in measurements of base lines. When piers 2 and 3 were built two base lines were checked separately.

It was again a month after that when the work was all gone over by the second instrument man, angles being added six times to give accuracy. The results showed the nearest checks to be one half thousandths and the greatest difference to be twenty-eight thousandths.

It was after this last check had been made that it was decided that the contraction of the rock of the canyon walls was responsible for the differences, due to cold weather, there having been a period when the thermometer registered from 20 to 35 degrees below zero daily. The matter was then referred to the Division Engineer and to the Chief Engineer, J. G. Sullivan, who arranged to have larger rollers placed under one end of the 120 ft. deck lattice span, which rested on a pier built on the south side of the river.

Checks were made of the distances monthly, covering a period of 15 months, which showed an expansion and contraction difference of approximately six tenths of a foot, or about $7\frac{1}{4}$ in. in the year. The temperature varies from 35 degrees below zero to 102 above in the shade. The figures given are approximate, and are as close as can be remembered.

The old Howe truss span had always given considerable trouble, it being necessary to line it, as it shifted on its end bearings. No reason could be given, as there were wooden trestle approaches to the span which received the thrust of trains on the curves, until the facts above recorded were found. The rock is of a very hard formation, being of a flinty granite, the hardest encountered in the Boundary district.

The writer is indebted to John R. Grant, M. Can. Soc. C.E., of Cartwright, Matheson & Co., Vancouver, for the suggestion as to the solution of the cause of the canyon apparently widening, and for searching for information showing that a similar case had been found in Mexico, where

Bridge 1.3, Granby Division, C.P.R., over Kettle River.

When laying out the work for building the granite masonry piers and abutments it was necessary to triangulate to determine the distance across the canyon, the walls being too precipitous to permit of chaining. Triangulation hubs consisted of 1 in. holes drilled in the solid rock and plugged with wooden plugs, finishing nails of 1 in. length being used as points, and small, round hardwood toothpicks being held on these points for back and foresights.

The distance between hubs on the centre line of bridge was approximately 341 ft. When the first triangulation work

so that the average angles were reduced to seconds. When the result was found to be one tenth longer than the previous work the work was rechecked, but the result was the same.

Again, a month elapsed before a check was made, and this time two more base lines were laid out, one on each bank, thus having four triangulations for checking purposes. The excavation for the piers was proceeding during this past month. When the results of the four triangulations were compared the check showed the greatest difference to be twenty-five thousandths, but the length be-

there is a wide range in temperature.

EDITOR'S NOTE—We are indebted to D. C. Fraser, Bridge and Building Master, C.P.R., Nelson, who brought the in-

teresting facts above mentioned to our notice, as a result of which we obtained the interesting article which Mr. Skeels has kindly contributed.]

High Level Air Pump on National Transcontinental Railway at Quebec.

An interesting air lift plant has been installed for supplying the National Transcontinental Ry. locomotive house, power house and yards at the Quebec bridge. The neighborhood of the St. Lawrence River would seem to be an anomalous location, but several considerations operated to determine the installation. The rise and fall of the tide, the height of the embankment and the unsuitability of the river water, were important points, and besides this the use of the river water would have necessitated the construction of a pumping plant at a distance from the power house, and would have increased the cost of attendance.

Work was started in Sept. 1912. Forty-three feet of 8 in. wrought iron

The air-lift system was adopted owing to its numerous advantages over other systems of deep well pumping, as with this system there are no moving or wearing parts in the water, and the air compressor may be located at any distance from the well. In lowering the pipes and footpiece, which were extra heavy, great care was required because of the weight; but there was no mishap of any kind.

The air-compressor is a Canadian Ingersoll-Rand tandem compound steam driven machine, designed for a terminal pressure of 250 lb. and the air cylinders are fitted with the circo-leaf valve, which is noiseless in operation. The frame is fully enclosed, and the moving parts work in a constant flood of oil. A com-

power house. A gauge over each line shows the pressure and indicates the fall of the water in the well.

Air discharges from the compressor into a high pressure air receiver and from there to the well. The first air line starts the water flowing and continues to pump until the well lowers as far as this line is capable of lowering it. Then the first air line is gradually turned off until the second line begins to act. When this line has lowered the water as far as it is capable of lowering it, the work is taken up by the third line and the second line is closed. The third line, which is the main pump line, then continues to furnish air as long as the system is in operation. The object of the first two lines is to enable the accumulation of water in the well to be pumped away without resorting to an abnormally high air pressure. These lines are only used in starting the system.

The yield of the well is 5,400 imp. gal. per hour delivered into the tank, and under continuous operation the air pressure at the receiver is about 160 lb. When the system is first started the yield reaches a total of about 6,000 imp. gal. per hour, this being due to the accumulation of water filling the well to the surface. The yield gradually decreases under continuous operation until the normal capacity and pumping head are reached.

At the surface the water has to be pumped horizontally a distance of 60 ft., and subsequently to a height of 90 ft. into the top of the steel tank. For this work a booster operates in conjunction with the airlift. This booster consists of a steel tank resting on the top of the well casing and receiving the water as it discharges from the well. The operating parts consist of a float and valve located inside the tank. The water and air are separated in this tank, the air rising to the top and maintaining sufficient pressure to force the water to the elevated tank. As the solid column of water discharges the float drops, allowing the surplus air to exhaust from the tank. This whole operation requires only a few seconds, as a discharge takes place every time the booster is about two-thirds full. In fact, practically a constant flow is maintained.

The surplus air may be piped back to the compressor intake or discharged into the vertical riser to lighten the column of water and reduce the operating pressure. This latter plan was followed for the Quebec plant. The booster is automatic in operation and requires no attention. It also operates without noise. This apparatus is located in a concrete sump below the ground and is reached through a door in the roof. A by-pass is connected to the main drain so that the well can be pumped directly into the sewer for cleaning purposes.

The plant was operated by the contractors for several days under the supervision of Alex. D. Porter, who was then Assistant Engineer of the National Transcontinental Ry., and who at the completion of the test said the plant was entirely satisfactory, and one of the most reliable of the various railway divisional pumping units.

The high lift in this case is a noticeable feature, amounting to about 500 ft. vertical and 60 ft. horizontal. It demonstrates as far as it goes that there is practically no limit to the height to which the air lift will raise water if a fair amount of submergence is obtainable. On a test recently the plant pumped nearly 6,000 gal. per hour, but this

Bridge 1.3, Granby Division C.P.R., over Kettle River.

pipe was driven from the surface to the rock, and from that point a 5-in. bore hole was started. The well was drilled entirely in shale, red and grey alternating. On Sept. 30 a depth of 400 ft. had been reached, and a rough pumping test yielded 200 imp. gal. per hour. At 280, 520, and 700 ft. respectively, dry crevices were encountered, while at 775 ft. water was struck in considerable quantity. The hole was then reamed to a diameter of 8 in., and a subsequent test yielded 3,200 imp. gal. per hour. At a depth of 980 ft. and at a depth of 1,012 ft. drilling was discontinued. The whole well was then reamed out to 8 in. diameter. A large plunger pump was used for a 24-hour test, and with 400 ft. of rods in the well a yield of 5,400 imp. gal. per hour was maintained. The pump was afterwards operated for eight days to clean out the well, and a sample of water was analyzed and reported satisfactory for both boiler and domestic purposes. When the well is not being pumped water rises to the surface; when being pumped to capacity it drops, however, to a depth of 400 ft. from the surface.

bined speed and pressure governor controls the compressor. The volume of water is carried by an air jet situated below a choker, which arrangement eliminates slippage and causes the air to be distributed through the water in small bubbles. Water is discharged into a steel tank 24 ft. in diameter, and the total capacity, including the leg, is 61,170 imp. gal. The level of the water in feet is indicated by a marker on the outside of the tank, and by this means it is possible to accurately gauge the capacity of the plant. The tank is supported by a steel frame resting on a concrete base, in which are located the valves and connections to the service mains and to the main drain. Steam is furnished to the compressor at 130 lb. pressure.

Owing to the depth to which the water drops in the well, air lines are used, 2 being tapped into the water discharge line at different depths, and the third entering the foot-piece. Each of these three air lines is controlled by a globe valve in the power house, and the engineer operates the system without going near the well, which is 250 ft. from the

The Canadian Northern Quebec Ry. accounting office is being removed to Toronto, in connection with the work of centralizing the C. N. R.'s entire office system in Toronto.

capacity was due to accumulated water near the well. The normal capacity (5,000 gal. per hour) was developed continuously after the level dropped to 400 ft. At this point the running pressure was 160 lb. per sq. in. The highest pressure required for starting was 225 lb.

Canadian Import Co's Vessels.

The names of the steamships Collinge, John Duncan, and Pueblo, registered under nos. 138,096, 133,821 and 133,822, respectively, by L. C. Webster, Montreal, have been changed to Stuart W., Howard W., and Richard W. Companies have been incorporated in connection with each vessel, and the vessels are being operated in the interests of the Canadian Import Co., of which L. C. Webster is President. The s.s. Collinge was formerly owned by F. Peterson, Oswego, N.Y., and was built at Cleveland, Ohio, in 1881. She is of oak with diagonal strapping on framing, bow sheathed for ice, and with steel boiler house; dimensions,—length 251 ft., breadth 38 ft., depth 21¼ ft.; tonnage, 1,601 gross, 1,280 register. She is equipped with fore and aft compound engine with cylinders 21 and 44 ins. diam. by 48 ins. stroke, 700 i.h.p. at 70 r.p.m., and supplied with steam by a Scotch boiler, 12½ by 11½ ft., at 140 lbs. pressure. The s.s. John Duncan was formerly owned by the Canada Cement Transportation Co., Montreal, and was built at Fort Howard, Wis., in 1891, and rebuilt in 1913. She is of oak with diagonal strapping on framing and iron lined boiler house; dimensions,—length 225 ft., breadth 38 ft., depth 20¼ ft.; tonnage, 1,517 gross, 924 register. She is equipped with fore and aft compound engine with cylinders 24 and 48 ins. diam., by 40 ins. stroke, 600 i.h.p. at 92 r.p.m., and supplied with steam by a firebox boiler 10½ by 16 ft., at 130 lbs. The s.s. Pueblo was formerly owned by the Canada Cement Transportation Co., and was built at Milwaukee, Wis., in 1891 and rebuilt in 1913. She is of oak with diagonal strapping on framing, bow sheathed for ice, steel boiler house, two non-water-tight bulkheads, and steam pump wells; dimensions,—length 228 ft., breadth 36¼ ft., depth 16 ft.; tonnage, 1,493 gross, 905 register. She is equipped with fore and aft compound engine with cylinders 23 and 46 ins. diam. by 42 ins. stroke, 500 i.h.p. at 75 r.p.m., and supplied with steam by a Scotch boiler 12 by 12½ ft., at 127 lbs.

Railway Laborers "Jumping" Jobs.—

During the present season the C.P.R. has suffered considerable loss at Western points owing to men engaged on summer gangs "jumping their jobs," after they had been provided with transportation. The contract called for the men remaining during the season, or paying the cost of transportation if they left before its expiry. Ten men have been fined—in two cases the fines were \$20 each—for

The Dominion Contracting Co., Vancouver, B.C., is being voluntarily liquidated, W. S. Lane, having been appointed liquidator by the shareholders.

Boston & Maine Rd. Receivership. Application has been made at Boston, Mass., for the appointment of a receiver for the Boston & Maine Rd.

The Quebec Ry. Light & Power Co. is building 3 double truck payee cars, at its own shops. They will be similar to one completed recently and numbered 650, the new ones being numbered 651 to 653.

Grounding of the s.s. English Monarch.

An investigation into the grounding of the British s.s. English Monarch at or near Bird Rock, N.S., July 24, was held at Sydney, N.S., Aug. 1, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. J. Morrison and R. Macdonald, as nautical assessors. The court, after considering the evidence, which was slightly contradictory on some points, most of which had no material bearing on the case, found that the master, from the time he left Father Point until he reached Fame Point, navigated his vessel in a very careful manner, that he obtained his proper position off Fame Point, and that the weather became thick shortly after and he steered a course which would have brought him some 10 miles from Bird Rock on the north side. Being a stranger on the coast he received advice and counsel from experienced navigators, who are acquainted with this neighborhood, and was warned to be careful of a possible current which might throw him off to the north of his course leading to Bird Rock. He followed this advice to a certain extent, but had he been left to his own devices and read the Sailing Directions, he would have found that there is a current from Cape Race flowing into Cabot Strait, which has a tendency to bring vessels to the south instead of the north, to the shores of Newfoundland. A good lookout was kept and soundings were taken. Immediately before the whistle at Bird Rock was heard a sounding of 19 fathoms was obtained and the helm was put hard astarboard, the vessel going about 5 to 6 knots an hour. After proceeding in this manner for a short time, she struck. The vessel was kept going at full speed for three minutes, when he succeeded in releasing it from the point where it struck, and finding that the vessel was not making too much water, a course was shaped for St. Pauls, and he got into wireless communication with the shore, being subsequently met by a patrol boat and conveyed into Sydney. The court expressed the opinion that the master, R. H. Potter, did not take enough soundings, as he was a stranger in those waters. When he obtained a sounding of 60 fathoms, if he had continued taking frequent casts, he would have found out that he was in the bank of shallow water lying northerly from Bird Rock, and therefore in a dangerous position. The main point, however, to which the court directed its criticism was that the master, when he got the sounding of 19 fathoms, did not go full speed astern until he deepened his soundings, and then navigated cautiously until he ascertained his position exactly. The court took into consideration his excellent career and his methodical manner of navigating his vessel previously, and in making entries in his log, even showing every figure entering into his calculations which he had made to obtain the position of his vessel for days and months before the accident, which the court stated it had not the good fortune to see frequently. In view of these facts and his clean record, the court would not deal with his certificate but severely reprimanded and censured him for his error of judgment, and cautioned him to be more careful in the future. Prior to taking command of the s.s. English Monarch, the master, Capt. R. H. Potter, was master of the s.s. Scottish Monarch, which was torpedoed by a German submarine after a fight, 12 of the crew being killed.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.
